Technology Licenses

The hardware and/or software described in this document are furnished under a license and may be used or copied only in accordance with the terms of such license.

U.S. Government Rights

The Software is "commercial computer software," as defined by Federal Acquisition Regulation ("FAR") 2.101. Pursuant to FAR 12.212 and 27.405-3 and Department of Defense FAR Supplement ("DFARS") 227.7202, the US government acquires commercial computer software under the same terms by which the software is customarily provided to the public. Accordingly, Keysight provides the Software to US government customers under its standard commercial license, which is embodied in its End User License Agreement (EULA), a copy of which can be found at <http://www.keysight.com/find/sweula>. The license set forth in the EULA represents the exclusive authority by which the US government may use, modify, distribute, or disclose the Software. The EULA and the license set forth therein, does not require or permit, among other things, that Keysight: (1) Furnish technical information related to commercial computer software or commercial computer software documentation that is not customarily provided to the public; or (2) Relinquish to, or otherwise provide, the government rights in excess of these rights customarily provided to the public to use, modify, reproduce, release, perform, display, or disclose commercial computer software or commercial computer software documentation. No additional government requirements beyond those set forth in the EULA shall apply, except to the extent that those terms, rights, or licenses are explicitly required from all providers of commercial computer software pursuant to the FAR and the DFARS and are set forth specifically in writing elsewhere in the EULA. Keysight shall be under no obligation to update, revise or otherwise modify the Software. With respect to any technical data as defined by FAR 2.101, pursuant to FAR 12.211 and 27.404.2 and DFARS 227.7102, the US government acquires no greater than Limited Rights as defined in FAR 27.401 or DFAR 227.7103-5 (c), as applicable in any technical data.

Warranty

THE MATERIAL CONTAINED IN THIS DOCUMENT IS PROVIDED "AS IS," AND IS SUBJECT TO BEING CHANGED, WITHOUT NOTICE, IN FUTURE EDITIONS. FURTHER, TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, KEYSIGHT DISCLAIMS ALL WARRANTIES, EITHER EXPRESS OR IMPLIED, WITH REGARD TO THIS MANUAL AND ANY INFORMATION CONTAINED HEREIN, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. KEYSIGHT SHALL NOT BE LIABLE FOR ERRORS OR FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES IN CONNECTION WITH THE FURNISHING, USE, OR PERFORMANCE OF THIS DOCUMENT OR OF ANY INFORMATION CONTAINED HEREIN. SHOULD KEYSIGHT AND THE USER HAVE A SEPARATE WRITTEN AGREEMENT WITH WARRANTY TERMS COVERING THE MATERIAL IN THIS DOCUMENT THAT CONFLICT WITH THESE TERMS, THE WARRANTY TERMS IN THE SEPARATE AGREEMENT SHALL CONTROL.

Safety Information

CAUTION

A CAUTION notice denotes a hazard. It calls attention to an operating procedure, practice, or the like that, if not correctly performed or adhered to, could result in damage to the product or loss of important data. Do not proceed beyond a CAUTION notice until the indicated conditions are fully understood and met.

WARNING

A WARNING notice denotes a hazard. It calls attention to an operating procedure, practice, or the like that, if not correctly performed or adhered to, could result in personal injury or death. Do not proceed beyond a WARNING notice until the indicated conditions are fully understood and met.

1 Product Support & Documentation Roadmap

This section describes the Keysight products covered by this document, and provides links to available support resources and related documentation.

- ["Products Covered by this Document" on page 132](#)
- ["Where to Find the Latest Information" on page 133](#)
- ["Product and Solution Cybersecurity" on page 134](#)
- ["Additional Documentation" on page 135](#)

- 1 Product Support & Documentation Roadmap
- 1.1 Products Covered by this Document

1.1 Products Covered by this Document

For the full list of instrument models covered by this documentation, see the title page: ["5G NR/5G-A Mode User's & Programmer's Reference" on page 1](#).

Where to Find the Latest Information

Periodically, Keysight releases software updates to fix known defects and incorporate product enhancements. To search for software updates for your product, go to the Keysight Technical Support website at:

<http://www.keysight.com/find/techsupport>

Documentation is updated periodically. For the latest information about these products, including instrument software upgrades, application information, and product information, navigate to the URL above, then in the Support by Product Model Number box, enter the Product Number of your instrument (for example, N9040B) and click **Find**:

To receive the latest updates by email, subscribe to Keysight Email Updates:

<http://www.keysight.com/find/emailupdates>

Information on preventing instrument damage can be found at:

<http://www.keysight.com/find/PreventingInstrumentRepair>

Is your product software up-to-date?

Periodically, Keysight releases software updates to fix known defects and incorporate product enhancements. To search for software updates for your product, go to the Keysight Technical Support website at:

<http://www.keysight.com/find/techsupport>

1.2 Product and Solution Cybersecurity

Keysight complies with multinational regulations for the cybersecurity of its own products and is committed to providing information to assist you in protecting your products and solutions from external cyberthreats. For more information, see:

<https://www.keysight.com/us/en/about/quality-and-security/security/product-and-solution-cyber-security.html>

Keysight also recommends that you secure your IT environments using appropriate third-party tools. For instruments that run the Microsoft Windows operating system, Keysight concurs with Microsoft's recommendations for ensuring that the instrument is protected:

- Get the latest critical Windows updates
- For network-connected instruments, use an internet firewall (in Keysight instruments, Windows Firewall is enabled by default)
- For network-connected instruments, use up-to-date antivirus and anti-spyware software

1.2.1 Responsible Disclosure Program

Keysight recommends that security researchers share the details of any suspected vulnerabilities across any asset owned, controlled, or operated by Keysight (or that would reasonably impact the security of Keysight and our users) using this form:

<https://www.keysight.com/us/en/contact/responsible-disclosure-program.html>

1.2.2 Report a Product Cybersecurity Issue

If you discover a cybersecurity issue that you suspect may involve Keysight's proprietary software, or third-party software supplied by Keysight as part of a product, or that may affect the operation of Keysight products, we encourage you to report it to us using this form:

<https://www.keysight.com/us/en/about/quality-and-security/security/product-and-solution-cyber-security/report-a-product-cybersecurity-issue.html>

1.3 Additional Documentation

If your instrument or computer has an internet connection, then you can access the latest editions of all relevant X-Series documentation via the links below.

This document is available in 3 formats:

- **Embedded Help**, in the instrument
- **Online Help**, at Keysight's web site

For information on this Mode, browse to:

<http://rfmw.em.keysight.com/wireless/helpfiles/5GNRMode/FlexUI.htm>

- **Users & Programmers Reference**, in downloadable PDF format

For information on this Mode, download from:

<http://literature.cdn.keysight.com/litweb/pdf/N9085-90001.pdf>

- N9092EM0E Avionics X-Series Measurement Application

2 User Interface

Here are the basic elements of the Multitouch User Interface. For more information, tap a topic.

Included in this section are also topics for several front panel keys not described in other topics. Tap one of these topics for more information.

"Cancel key" on
page 185

"Onscreen Keyboard key" on
page 186

"Touch On/Off Key" on
page 187

"Tab key" on
page 188

2.1 Screen Tabs

In the X-Series Multitouch User Interface (or Multitouch UI), you can run many different Measurement Applications, or “Modes”. Examples are Spectrum Analyzer Mode, LTE-A FDD Mode, IQ Analyzer Mode, and Real Time Spectrum Analyzer Mode. Each Mode has its own set of controls, windows and SCPI commands.

Each Mode runs within a “Screen”. The Multitouch UI supports multiple “Screens” (see ["Multiscreen" on page 229](#) for more information). Each screen displays one Measurement in one Mode. The set of configured screens is shown across the top of the display as a set of Screen Tabs, with a + tab at the right for adding new Screens:

You can see up to six tabs at a time on the UXA, and 4 at a time on the CXA, EXA, MXA and PXA. If there are more Screens configured than this, arrows appear to the left and right of the Screen Tabs; pressing the arrows scrolls the Screen Tabs to the left or right. A scroll bar also appears at the bottom of the Screen Tabs, indicating that you can scroll the tabs by dragging them with your finger; you can also scroll them by dragging the scroll bar.

Pressing a Screen Tab selects that screen for operation. Pressing the blue (selected) Screen Tab is the same as pressing the Mode/Meas front panel key.

Both actions open the ["Mode/Meas/View Dialog" on page 141](#). In addition, if you have a PC keyboard plugged in, the sequence CTL-SHIFT-M will open up this dialog.

The + tab at the right of the Screen Tabs bar adds a new Screen by cloning the current screen. The new Screen has the identical setup and settings as the current Screen. You can then change the Mode, Measurement and/or settings of the new Screen.

You can define up to 16 screens at once.

Example Multiscreen View

The example below shows a four-screen display in Multiscreen view.

The Screen called “Real-Time SA 2” is selected, as indicated by its blue tab. Touching any other screen or tab selects the screen for that tab and brings it to the foreground.

The following topics provide more information:

- "Mode/Meas/View Dialog" on page 141
- "Add Screen" on page 158
- "Multiscreen" on page 229

2.1.1 Mode/Meas/View Dialog

The Mode/Meas/View dialog opens when you press the selected (blue) Screen tab (see "Screen Tabs" on page 140) or the **Mode/Meas** front panel key.

This dialog displays lists of available Modes, Measurements and Views, as well as the "Sequencer" on page 152 control for configuring Screens.

2 User Interface

2.1 Screen Tabs

2.1.1.1 Mode

The first column in the Mode/Meas/View dialog allows you to select the desired Mode from those currently licensed in your instrument.

Modes, also known as “measurement applications”, are collections of measurement capabilities packaged together to provide you with an instrument personality specific to your measurement needs. Each Mode is ordered separately by Model Number and must be licensed in order for it to be available in the instrument.

You select the Mode you want to run using the Mode/Meas/View dialog. Once a Mode is selected, only the commands that are valid for that mode can be executed

For more information on Modes, preloading Modes, and memory requirements for Modes, see ["More Information" on page 145](#)

The `:INSTRument[:SElect]` command is used to remotely select a Mode by sending the instrument a parameter which represents the name of the desired Mode. The Mode Names may be found in the table under ["Index to Modes" on page 144](#).

The `:INSTRument:NSElect` command is used to remotely select a Mode by sending the Mode Number of the desired Mode. See ["Instrument Number Select" on page 143](#). The Mode Numbers may be found in the table under ["Index to Modes" on page 144](#).

The `:INSTRument:CONFIgure` command causes a Mode and Measurement switch at the same time. This generally results in faster overall switching than sending the `:INSTRument:SElect` and `CONFIgure` commands separately. See "[Mode and Measurement Select](#)" on page 143.

Remote Command	<code>:INSTRument[:SElect] <mode_id></code> where <code><mode_id></code> is one of the values listed in " Index to Modes " on page 144 below <code>:INSTRument[:SElect]?</code>
Example	<code>:INST SA</code>
Notes	A list of the valid mode choices is returned by the <code>:INST:CAT?</code> query
Preset	The default Mode is set to <code>SA</code> on Restore System Defaults->All , unless noted below: For N8973B, N8974B, N8975B, or N8976B: <code>NFIG</code>
State Saved	Saved in instrument state
Annunciation	Application Title is in the Screen Tab

Instrument Number Select

Remote Command	<code>:INSTRument:NSElect <integer></code> <code>:INSTRument:NSElect?</code>
Example	<code>:INST:NSEL 1</code>
Notes	The Mode Numbers may be found in the table under " Index to Modes " on page 144 SA mode is number 1 The command is sequential: that is, continued parsing of commands cannot proceed until the instrument select is complete and the resultant SCPI trees are available
Preset	The default Mode is set to <code>1</code> by Restore System Defaults->All , unless noted in the table above
State Saved	Saved in instrument state

Mode and Measurement Select

Remote Command	<code>:INSTRument:CONFIgure:<mode_id>:<meas></code> where <code><mode_id></code> is a valid parameter for the <code>:INST:SEL</code> command and <code><meas></code> is a valid parameter for the <code>:CONF</code> command in the Mode specified by <code><mode></code>
Example	<code>:INST:CONF:SA:SAN</code> selects the Spectrum Analyzer mode and the Swept SA measurement <code>:INST:CONF:WCDMA:RHO</code> selects the WCDMA mode and the Mod Accuracy measurement
Notes	The available parameters for <code><mode_id></code> are dependent upon installed and licensed applications resident in the instrument. The available parameters for <code><meas></code> are dependent on the <code><mode_id></code> parameter and the valid measurements available for that mode, which can depend on model numbers

and installed options

In general this command will execute more quickly than sending the equivalent separate `:INST:SEL` and `:CONF` commands

Index to Modes

The Mode Number in the table below is the parameter for use with the `:INSTrument:NSElect` command. The Mode Parameter is the parameter for use with the `:INSTrument[:SElect]` command. Your actual choices will depend upon which applications are installed in your instrument.

Mode	Mode Number	Mode Parameter <mode_id>
5G NR	109	NR5G
89601 VSA	101	VSA89601
Analog Demod	234	ADEMOD
Avionics	232	AVIONIC
Bluetooth	228	BT00th
Channel Quality / Group Delay	161	CQM
EMI Receiver	141	EMI
GSM/EDGE/EDGE Evo	13	EDGE GSM
I/Q Analyzer (Basic)	8	BASIC
LTE FDD & LTE-A FDD	107	LTEAFDD
LTE TDD & LTE-A TDD	108	LTEATDD
Measuring Receiver	233	MRECEIVE
MSR	106	MSR
Noise Figure	219	NFIGure
Phase Noise	14	PNOISE
Power Amplifier	81	PA
Pulse	151	PULSEX
Radio Test	300	RTS
Real Time Spectrum Analyzer	2	RTSA
Remote Language Compatibility	266	RLC
SCPI Language Compatibility	270	SCPILC
Sequence Analyzer	123	SEQAN
Short Range Comms	218	SRCOMMS
Spectrum Analyzer	1	SA
Vector Modulation Analyzer	200	VMA
WCDMA with HSPA+	9	WCDMA
WLAN	217	WLAN

More Information

The Mode name appears on the Screen Tab, followed by a number identifying which instance of the Mode appears on that screen. Each Screen contains one Mode. For example, in the image below, there is one Real-Time Spectrum Analyzer screen, and two Spectrum Analyzer screens. The current Screen contains **Real-Time SA 1**.

It is possible to specify the order in which the Modes appear in the Mode menu, using the **Configure Applications** utility on the Desktop. Using the same utility, it is also possible to specify a subset of the available applications to load into memory at startup time, which can decrease the startup time of the instrument and the amount of memory consumed.

Each application (Mode) that runs in an X-Series instrument consumes virtual memory. The various applications consume varying amounts of virtual memory, and as more applications run, the memory consumption increases. Keysight characterizes each Mode and assigns a memory usage quantity based on a conservative estimate. The **Configure Applications** utility shows an estimate for how much memory each Mode will consume.

You can still run a Mode even if it is not preloaded into memory – during runtime, the first time an application that is not loaded into memory is selected (either by pressing that application's **Mode** key or by sending that application's **:INST:SEL** command), the Application will be loaded, but this takes a few seconds. The instrument will pause while loading the application while displaying a message box that says “Loading application, please wait...” Preloading the application eliminates this wait time *but* consumes additional memory.

2.1.1.2 Application Mode Remote Commands

This section contains a number of remote commands that are provided for programming convenience and remote compatibility.

Application Mode Catalog Query (Remote Command Only)

Returns a string containing a comma-separated list of names of all the installed and licensed measurement modes (applications). These names can only be used with **:INSTrument[:SElect]**.

Remote Command **:INSTrument:CATAlog?**

Example	<code>:INST:CAT?</code>
Notes	Query returns a quoted string of the installed and licensed modes separated with a comma. Example: <code>"SA,PNOISE,WCDMA"</code>
Backwards Compatibility Notes	VSA (E4406A): <code>:INSTrument:CATalog?</code> returned a list of installed <code>INSTrument:SELECT</code> items as a comma separated list of string values, for example: <code>"BASIC", "GSM", "EDGE GSM", "CDMA", "SERVICE"</code> X-Series uses the ESA/PSA compatible query of a string contain comma separated values: <code>"SA,PNOISE,NFIG,BASIC"</code>

Current Application Model (Remote Command Only)

Returns a string that is the Model Number of the currently selected application (mode). This information is also displayed in the **Show System** screen.

Remote Command	<code>:SYSTem:APPLication[:CURRent][:NAME]?</code>
Example	<code>:SYST:APPL?</code>
Notes	Query returns a quoted string that is the Model Number of the currently selected application (Mode). Example: <code>"N9060A"</code> String length between 6 to 9 characters.
Preset	Not affected by Preset
State Saved	Not saved in state, the value will be the selected application when a Save is done.

Current Application Revision (Remote Command Only)

Returns a string that is the Revision of the currently selected application (mode). This information is also displayed in the Show System screen

Remote Command	<code>:SYSTem:APPLication[:CURRent]:REVIsion?</code>
Example	<code>:SYST:APPL:REV?</code>
Notes	Query returns a quoted string that is the Revision of the currently selected application (Mode). Example: <code>"1.0.0.0"</code> String length is a maximum of 23 characters. (each numeral can be an integer + 3 decimal points) The format is Major.Minor.Build.Compile, where Major must correspond to the Integer portion of the Version in the license file for the application.
Preset	Not affected by a Preset
State Saved	Not saved in state, the value will be the selected application when a Save is done.

Current Application Options (Remote Command Only)

Returns a string that is the Options list of the currently selected application (Mode). This information is also displayed in the Show System screen

Remote Command	<code>:SYSTem:APPLication[:CURRent]:OPTion?</code>
Example	<code>:SYST:APPL:OPT?</code>
Notes	Query returns a quoted string that is the Option list of the currently selected application (Mode). The format is the name as the *OPT? or SYSTem:OPTion command: a comma separated list of option identifiers. Example: "1FP,2FP" String length is a maximum of 255 characters.
Preset	Not affected by a Preset
State Saved	Not saved in state per se, the value will be the selected application when a Save is invoked.

Application Catalog Number of Entries (Remote Command Only)

Returns the number of installed and licensed applications (Modes).

Remote Command	<code>:SYSTem:APPLication:CATalog[:NAME]:COUNT?</code>
Example	<code>:SYST:APPL:CAT:COUNT?</code>
Preset	Not affected by Preset
State Saved	Not saved in instrument state.

Application Catalog Model Numbers (Remote Command Only)

Returns a list of Model Numbers for the installed and licensed applications (Modes).

Remote Command	<code>:SYSTem:APPLication:CATalog[:NAME]?</code>
Example	<code>:SYST:APPL:CAT?</code>
Notes	Returned value is a quoted string of a comma separated list of Model Numbers. Example, if SAMS and Phase Noise are installed and licensed: "N9060A,N9068A" String length varies based on licenses. Licenses are between 6 and 9 characters. So the string length will be between COUNT * 7 - 1 and COUNT * 10 - 1. (7 & 10 = Model Number length + 1 for comma. -1 = no comma for the 1st entry.)
Preset	Not affected by a Preset
State Saved	Not saved in instrument state.

Application Catalog Revision (Remote Command Only)

Returns the Revision of the provided Model Number.

Remote Command	<code>:SYSTem:APPLication:CATalog:REVision? <model></code>
Example	<code>:SYST:APPL:CAT:REV? 'N9060A'</code>
Notes	Returned value is a quoted string of revision for the provided Model Number. The revision will be a null-string ("") if the provided Model Number is not installed, licensed, and loaded. Example, if SAMS is installed and licensed: "1.0.0.0" String length is a maximum of 23 characters. (each numeral can be an integer + 3 decimal points)
Preset	Not affected by a Preset.
State Saved	Not saved in instrument state.

Application Catalog Options (Remote Command Only)

Returns a list of Options for the provided Model Number

Remote Command	<code>:SYSTem:APPLication:CATalog:OPTion? <model></code>
Example	<code>:SYST:APPL:CAT:OPT? 'N9060A'</code>
Notes	Returned value is a quoted string of a comma separated list of Options, in the same format as *OPT? or :SYSTem:OPTion?. If the provided Model Number is not installed and licensed a null-string ("") will be returned. Example, if SAMS is installed and licensed: "2FP" String length is a maximum of 255 characters.
Preset	Not affected by a Preset
State Saved	Not saved in instrument state.

ESA SA compatibility command (Remote Command only)

Provided for backwards compatibility with ESA. When this command is received, the analyzer aliases it to the appropriate Mode.

Remote Command	<code>:INSTrument[:SElect] 'SA' 'PNOISE' 'EDGE' 'GSM' 'BASIC'</code>
Example	<code>:INST 'SA'</code>
Notes	The query is not a quoted string. It is an enumeration as indicated in the Instrument Select table above

GSM Mode compatibility command (Remote Command only)

Provided for backwards compatibility. When this command is received, the analyzer aliases it to the following:

```
:INST:SEL EDGE GSM
```

Remote Command	:INSTrument[:SElect] GSM
----------------	--------------------------

Example	:INST GSM
---------	-----------

SA compatibility command for EMC (Remote Command only)

Provided for ESU compatibility. When this command is received, the analyzer aliases it to the following:

```
:INST:SEL SCPI LC
```

This results in the analyzer being placed in SCPI Language Compatibility Mode, in order to emulate the ESU Spectrum Analyzer Mode.

Remote Command	:INSTrument[:SElect] SANalyzer
----------------	--------------------------------

Example	:INST SAN
---------	-----------

Receiver compatibility command for EMC (Remote Command only)

Provided for ESU compatibility. When this command is received, the instrument aliases it to the following:

```
:INST:SEL EMI
```

```
:CONF FSC
```

This results in the instrument being placed in the EMI Receiver Mode, running the Frequency Scan measurement, in order to emulate the ESU Receiver Mode.

Remote Command	:INSTrument[:SElect] REceiver
----------------	-------------------------------

Example	:INST REC
---------	-----------

APD compatibility command for EMC (Remote Command only)

Provided for ESU compatibility. When this command is received, the analyzer aliases it to the following:

```
:INST:SEL EMI
```

```
:CONF APD
```

2 User Interface

2.1 Screen Tabs

This results in the analyzer being placed in the EMI Receiver Mode, running the APD measurement, in order to emulate the ESU APD Mode.

Remote Command	<code>:INSTrument[:SElect] APDistribution</code>
----------------	--

Example	<code>:INST APD</code>
---------	------------------------

IF Mode compatibility command for EMC (Remote Command only)

Provided for ESU compatibility. When this command is received, the analyzer aliases it to the following:

```
:INST:SEL EMI
```

```
:CONF MON
```

This results in the analyzer being placed in the EMI Receiver Mode, running the Monitor Spectrum measurement, in order to emulate the ESU IF Mode.

Remote Command	<code>:INSTrument[:SElect] IFANalyzer</code>
----------------	--

Example	<code>:INST IFAN</code>
---------	-------------------------

2.1.1.3 Measurement

The Measurement column of the Mode/Meas/View dialog shows all the Measurements available for the Mode which is selected in the first column. Select a Measurement in the second column and the View column will show all the Views available for that measurement. Once you have the Mode, Measurement and View selected, press OK to change the current Screen to that Mode, Measurement and View.

2.1.1.4 View

A View is a collection of Result Windows. The View column of the ["Mode/Meas/View Dialog" on page 141](#) shows all the Views available for the Measurement which is selected in the second column. Once you have the Mode, Measurement and View selected, press OK to change the current Screen to that Mode, Measurement and View.

The View may also be set by using the View tab on the Display menu. The View tab is the last tab on the Display menu for every measurement. The Views are the same as those listed in the ["Mode/Meas/View Dialog" on page 141](#).

2.1.1.5 Sequencer

Allows multiple Screens to update sequentially while in "Multiscreen" on page 229 display mode. Each Screen updates in sequence, and when all have updated, the sequence will start again.

To start the Sequencer, you must have more than one Screen defined, and you must have Multiscreen selected (see "Screen Tabs" on page 140).

If you want each Screen to use a different input, you must turn off **All Screens Use Same Input** under **Input/Output**, **Input**.

CAUTION

Differences in hardware settings between the Screens may cause switches and/or attenuators to cycle as you go from one Screen to another. This could potentially reduce the life of these components. To avoid this, make sure **Attenuation**, **μW Path Control** and other switch settings are the same in each Screen.

NOTE

When the Sequencer is running, the destination of remote commands is unpredictable, so you should stop the Sequencer before sending any measurement-related commands. Once the Sequencer has stopped, select a specific Screen using `:INSTrument:SCReen:SElect`, before sending any further commands. See "Select Screen" on page 231

NOTE

When the Sequencer is running, Auto alignment is temporarily disabled. A pending auto alignment might be executed when the sequencer is stopped.

See "More Information" on page 152

Remote Command	<code>:SYSTem:SEQuencer ON OFF 1 0</code> <code>:SYSTem:SEQuencer?</code>
Example	<code>:SYST:SEQ ON</code>
Notes	If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; Screen SCPI cannot be used when Display is disabled" is generated
Dependencies	To start the Sequencer, you must have more than one Screen defined and you must have Multiscreen selected
Preset	<code>OFF</code>

More Information

To start the Sequencer, tap the current (blue) Screen tab to go into the Mode/Meas/View Dialog:

In the Sequencer block in the upper left hand corner, tap the Sequencing switch to turn it On:

Mode / Measurement / View Selector

Screen Name: Spectrum Analyzer 1 Delete This Screen Delete All But This Screen ?

Sequencer

Sequencing

On

Off

When Sequencing is On and there are multiple Screens, all Screens update in sequence. When Sequencing is Off, only the selected Screen updates.

TAP HERE

To launch 89600 VSA press the button below.

Launch VSA

Mode	Measurement	View
Spectrum Analyzer	Swept SA	Normal
EMI Receiver	Channel Power	Spectrogram
IQ Analyzer (Basic)	Occupied BW	Trace Zoom
W-CDMA with HSPA+	ACP	Zone Span
GSM/EDGE /EDGE Evo	Power Stat CCDF	User View
Phase Noise	Burst Power	Normal 1
Noise Figure	Spurious Emissions	Normal 2
Analog Demod	SEM	
Bluetooth	TOI	
LTE FDD & LTE-A FDD	Harmonics	
LTE TDD & LTE-A TDD	List Sweep	
WLAN		

OK Cancel

2 User Interface
2.1 Screen Tabs

The instrument will immediately exit the Mode/Meas/View Dialog and begin making measurements in each of the screens, one after the other. When a measurement is being made in a particular Screen, that Screen's tab will be blue.

Measurement being made in Screen 1:

Measurement being made in Screen 2:

Touching any key or control on the display will cause the Sequencer to stop, so that you can make desired changes. When this happens, the message “Sequencer stopped” is displayed.

When the Sequencer is running, the screens update in the order in which they were created.

Each Screen takes one measurement then passes control to the next Screen. Each Screen updates as though it were in Single Sweep or Single Measurement mode. Thus, if Averaging is on, a Screen may take multiple sweeps before moving on to the next Screen.

2.1.1.6 Screen Name

By default, the screen name is the Mode (Application) name followed by a number indicating the instance of the application.

You may change the name displayed on the Screen Tab of any screen. The control to do this appears in the ["Mode/Meas/View Dialog" on page 141](#):

When you touch this control an onscreen keyboard appears, allowing you to change the name. Whatever you change it to appears on the Tab, even if you subsequently change the screen to a different Mode.

To reset the name, delete the screen name entirely.

Each Screen Name must be unique; you cannot give the same name to more than one screen.

Remote Command	<code>:INSTrument:SCReen:REName <alphanumeric></code>
Example	<code>:INST:SCR:REN "Baseband"</code>
Notes	<p>The currently active screen is renamed.</p> <p>If the <code><alphanumeric></code> specifying the new name is already present in the list of screen names, the error message “-224, Illegal parameter value; New name <name> already exists” appears</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” appears</p>

2.1.1.7 Delete This Screen

Pressing this button deletes the current Screen (the one with the blue tab). Deleting a screen removes it from view and selects the next lower screen in the list of screens. If only one screen is configured, it cannot be deleted.

If you press the **Delete This Screen** button, a prompt appears:

“This function will delete the current screen and its settings. This action cannot be undone. Do you want to proceed?”

Pressing **OK** or Enter deletes the screen, pressing **Cancel** or **ESC** does not.

Remote Command	<code>:INSTrument:SCReen:DELeTe</code>
Example	<code>:INST:SCR:DEL</code>
Notes	<p>The currently active screen is deleted</p> <p>If the screen you are attempting to delete is the only configured screen, the error message “-221, Settings conflict; Last screen cannot be deleted” is displayed</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” is generated</p>

2.1.1.8 Delete All But This Screen

Pressing this control deletes all the Screens except the current Screen (the one with the blue tab).

If you press the **Delete All But This Screen** button, a prompt appears:

“This function will delete all defined screens and their settings, except for the current screen. This action cannot be undone. Do you want to proceed?”

Pressing **OK** or Enter deletes the screen, pressing **Cancel** or ESC does not.

Remote Command	<code>:INSTrument:SCReen:DELeTe:ALL</code>
Example	<code>:INST:SCR:DEL:ALL</code>
Notes	<p>You can reset the instrument to the power-on configuration by invoking <code>:INST:SCR:DEL:ALL</code> followed by <code>:SYSTem:DEFault ALL</code></p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” appears</p>

2.1.1.9 89600 VSA

Pressing this button launches the 89600 VSA software. The 89600 VSA software is powerful, PC-based software, offering the industry's most sophisticated general purpose and standards specific signal evaluation and troubleshooting tools for R&D engineers. Even for proprietary and non-standard signals in SATCOM or MILCOM applications, you can make signal quality measurements with customized IQ constellation.

The 89600 VSA software offers the following features:

- Over 35 general-purpose analog and digital demodulators ranging from 2FSK to 4096QAM
- Flexible and custom IQ and OFDM signal analysis for single carrier
- Standards specific modulation analysis including:
 - Cellular: GSM/EDGE, cdma2000, W-CDMA, TD-SCDMA, LTE(FDD/TDD),
 - LTE-Advanced and more
 - Wireless networking: 802.11a/b/g, 802.11n, 802.ac, 802.16 WiMAX (fixed/mobile), WiSUN (MR-FSK PHY)
 - RFID
 - Digital satellite video and other satellite signals, radar, LMDS
- Up to 400K bin FFT, for the highest resolution spectrum analysis
- A full suite of time domain analysis tools, including signal capture and playback, time gating, and CCDF measurements
- 20 simultaneous trace displays and the industry's most complete set of marker

functions

- Easy-to-use Microsoft Windows graphical user interface

For more information see the Keysight 89600 Series VSA web site at www.keysight.com/find/89600vsa

To learn more about how to use the 89600 VSA in the instrument, start the 89600 VSA software, then open the 89600 VSA Help and navigate to the topic "About Keysight X-Series Signal Analyzer with 89600 VSA Software".

Example `:INST:SEL VSA89601`
 `:INST:NSEL 101`

2.1.2 Add Screen

On X-Series analyzers you can configure up to 16 different Screens at one time. Each Screen contains one Mode, each Mode contains one Measurement, and each Measurement contains a number of Windows.

You can add screens by pressing the “+” icon in the ["Screen Tabs" on page 140](#) panel. The icon is shown below:

Every time you add a Screen, the instrument “clones” or “copies” the current Screen into the new Screen. If desired, you can then use the ["Mode/Meas/View Dialog" on page 141](#) to change the Mode, Measurement and/or View of the new Screen, or simply operate a second copy of your previous Screen, thus preserving the settings of your previous Screen.

When you have defined the maximum number of Screens (16), the “+” icon disappears.

For more information about operating the instrument with multiple screens configured, see ["Multiscreen" on page 229](#).

Remote Command `:INSTrument:SCReen:CREate`

Example `:INST:SCR:CRE`

Notes The maximum number of screens is 16. If an attempt to add a screen occurs when the maximum have been defined, the error message “-221, Settings conflict; Screen limit reached” appears
When you create a new screen the Screen Name is the current Mode name followed by a number indicating the instance of the Mode.

If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” appears

2.2 Meas Bar

The Meas Bar is used to display annotation for the current measurement. There are three primary uses for the Meas Bar:

1. To show annotation for the most important parameters in the measurement so you can see them at a glance
2. To show the annotation that you will most want to have recorded in a screen dump
3. To give you quick access to settings.

The Meas Bar is made up of a number of annotation panels, each of which, when pressed, opens up a dialog below it which contains controls for those settings.

For example, here is what the display looks like when you touch one of the regions of the Meas Bar:

Touching anywhere off the hotspot panel or pressing any hardkey except **Save** or **Quick Save** closes the hotspot panel.

In a hotspot panel, the control in black with the blue border is the active function. Each panel may have its own default active function.

Settings that are colored amber are those that you need to be particularly aware of; for example, if Alignments are off, this is shown in amber, so you will know that you may not be meeting spec. Similarly, if DC coupling is on, this is shown amber, to alert you to be careful what voltage you put on the input.

You can turn the Meas Bar on and off with a switch on the Annotation tab of the Display menu.

System Control Panel

The leftmost panel holds the GPIB/Remote annunciators, the Single/Continuous symbol/control, the LXI indicator and the PASS/FAIL indicator. Tapping this panel drops down controls for Single/Continuous, Pause/Resume and restart.

GPIB/Remote annunciators

The GPIB/Remote annunciators are shown as the letters **KRLTS**. Each letter is shown if the state is true and is not shown if the state is false, as follows:

K	Keylock indicator	This is shown when the instrument is in the Keylock state (turned on and off by the SYST:KLOCK command)
R	Remote annunciator	Shown when the instrument is in the remote state, as when being controlled via the IEEE-488 bus (GPIB) or TCP/IP connections
L	GPIB Listen annunciator	Shown when addressed to listen via GPIB or TCP/IP
T	GPIB Talk annunciator	Shown when addressed to talk via GPIB or TCP/IP
S	GPIB SRQ annunciator	Shown when the instrument is asserting SRQ on GPIB. This annunciator is an amber color

Single/Continuous symbol/control

This annunciator shows as an arrow on an oval line when in Continuous, or an arrow on a straight line when in Single.

LXI indicator

This indicator displays in green when LAN is connected, in white when LAN is not connected, and in red when LAN is connected but has a connection problem.

PASS/FAIL indicator

This annunciator displays when Limits are turned on. It is green if all Limits are passing, and a red FAIL if any limit is not passing.

The following command queries the status of the current measurement limit testing. It returns a 0 if the measured results pass when compared with the current limits. It returns a 1 if the measured results fail any limit tests.

Remote Command	<code>:CALCulate:CLIMits:FAIL?</code>
Example	<code>:CALC:CLIM:FAIL?</code> queries the current measurement to see if it fails the defined limits Returns a 0 or 1: 0 it passes, 1 it fails

Trace Detector Settings Panel

In the Swept SA and some other measurements, there is a special panel summarizing the settings for the traces in the measurement:

There is one column for each trace. The rows are as follows:

- The top row shows the Trace Number, in the trace color.
- The second row shows the Trace Type for each trace (W=Clear/Write, A=Trace Average, M=Max Hold, m=Min Hold); this letter is in white if the trace is Active, in gray if the trace is inactive; there is a bar through the letter if the trace is not being displayed
- The third row shows the detector for each trace (N=Normal, S=Sample, A=Average, P=peak, p=negative peak, Q=Quasi Peak, E=EMI Average, R=RMS Average, f=math function)

In the example above, trace 1 is active, visible, and in Average using the Sample detector, the other traces are inactive, blanked and in Clear/Write using the Normal detector.

Tapping this panel drops down controls for the Traces.

2.3 Measurement Display

The Measurement Display contains one or more data windows displaying the result of the current measurement. These may be graphical or textual windows.

Each window in the Measurement display contains a "Window Title" on page 164, "Measurement Data" on page 168, and graphical windows also may contain "Annotation Hotspot" on page 171.

The selected window in the Measurement Display is indicated by a blue border. Window-dependent controls in the menu panel always refer to the selected window.

2.3.1 Window Title

The Window Title appears in the upper left hand corner of the window, and includes a title describing the measurement data currently being displayed in the window. The title may also contain additional information about the data in the window, for example in the LTE measurement supplication, the component carrier being displayed in the window will be indicated (e.g., "CC0").

Measurements that support User Views (see "View Editor" on page 208) also display the Window Number in the Window Title, to enable window addressing from SCPI. The number is the number that will be used in the SCPI command to address that window, for example, in the WCDMA Mod Accuracy measurement, Code Domain Power is assigned window number 6, so you address it with the following SCPI command:

```
:DISP:RHO:WIND6:TRAC:Y:RLEV 0.0
```

Note the arrow pointing down on the right side of the Window Title. This indicates that touching the Window Title will display a dropdown, which enables you to select the Measurement Data to be displayed in the window.

For example, if we wish to assign the results of the upper window in the display below to the Marker Table, we would touch the window title and then the "Data" control that is revealed, as shown:

And then select Marker Table, yielding the result below:

2 User Interface
 2.3 Measurement Display

Note also that the Window Data dropdown can be a cascaded list, if the number of available results requires categorization to hold them all:

Note also that the Window Data dropdown sometimes includes controls for further configuring the window, for example, in LTE choosing the desired Component Carrier and Data format.

2 User Interface
 2.3 Measurement Display

Touching a window's title dropdown also selects the window.

2.3.2 Measurement Data

The Measurement Data region shows graphical or textual data for the Data selected in the Window Title Data control. Below you can see examples of both graphical and textual windows in a four-window display.

There are many gestures which you can use to interact with a measurement display window. They are detailed below.

Swipe

There are several swipe actions, as listed below. One of the most important actions is swiping a spectrum window to the left or right, or up or down, to adjust the frequency and level of the spectrum, as shown below.

Swipe actions are summarized in the table below. Not all of these may be available, depending on the measurement.

Object	Action
Spectrum Trace Left/Right	Drag trace (change Center Frequency)
Spectrum Trace up/down	Drag trace (change Ref Level)
Marker Left/Right	Drag marker along trace
Fixed Marker Left/Right/Up/Down	Drag marker in space
Scrollable area	Scroll vertically or horizontally. Scrollable areas include the Menu Panel (if overfull), tables and lists. A scrollable area is indicated by a vertical or horizontal translucent white bar which can also be dragged by a mouse When scrolling a table: <ul style="list-style-type: none"> – Row headers remain in place when the table is scrolled horizontally, and scroll with the table when the table is scrolled vertically – Column headers remain in place when the table is scrolled vertically, and scroll with the table when the table is scrolled horizontally

2 User Interface
 2.3 Measurement Display

Object	Action
Toggle control	Toggle in that direction

Pinch

You can also pinch in or out either horizontally or vertically to zoom in the x-axis or y-axis dimension. For example, a pinch horizontally lets you adjust the Span of the Spectrum window. Also, pinching on the wings of a Band Power or other Band Function allows you to widen or narrow that Band Function.

Pinching may sometimes be easier if you use the index finger of each hand, rather than pinching with one hand.

Touch-and-Hold

You can also touch-and-hold the display, that is, touch it and hold your finger on the display. A circle is drawn, and when the drawing completes, a right-click gesture is performed that depends on the screen feature touched, as listed in the table below.

Right Click on the Background	Lets you select Help
Right Click on a Menu Panel control	Lets you add or remove that control from the User Menu or get Help on that control

Tap

Tapping an object causes the actions defined in the table below:

Object	Action
Marker	Select
Marker (repeated taps on stacked)	Cycle through stacked markers
Trace	Select. In addition if Marker is the active function, move the selected marker to the point where you tapped
Trace (repeated taps on stacked)	Cycle through stacked traces
Window	Select if unselected
Screen	Select if unselected

Double Tap

Double-tapping an object causes the actions defined in the table below:

Object	Action
Window	Zoom/Unzoom

2.3.3 Annotation Hotspot

You can tap on a graticule annotation to modify one of the fields in that annotation. For example if you tap on the region with Center Freq and Res BW in it, a menu panel pops up with just those settings on it.

2 User Interface
2.3 Measurement Display

Touching anywhere off the hotspot panel or pressing any hardkey except **Save** or **Quick Save** closes the hotspot panel.

Annotation which is not currently able to be adjusted is not grayed out on the display, but the control in the hotspot that drops down or pops up is grayed out.

In a hotspot panel, the control in black with the blue border is the active function. Each panel may have its own default active function

2.4 Menu Panel

The menu panel is the main focus of the X-Series Multitouch user interface. The controls include active functions, dropdowns, action buttons, radio buttons and toggles.

The menu panel normally appears on the right side of the display and consists of a rectangular panel with multiple “sub-panels” lying on top of each other, each sub-panel being accessed by a tab on the right.

You press a front panel key (or “hardkey”) to access a particular menu. On the front panel there are twelve “measurement hardkeys” (the ones in the shaded region in the figures below) – these are the hardkeys that open up menus in the menu panel.

With a menu open, tap a tab to access the controls on its sub-panel. Whenever you press the front panel key associated with a menu, the default (top) tab is selected.

If the number of controls on a panel exceeds the height of the panel, scrolling is enabled, which is indicated by a white bar on the left that fades away after a few seconds. You swipe up or down with your finger to scroll the panel, or you can grab the white bar with a mouse.

If you move to a different menu panel or sub-panel and then come back to a previous panel, the previous panel is always reset to be scrolled all the way back to the top.

Accessing Menus Without Using Front-Panel Keys

You can access the menu panels without using the front panel keys, as you would need to do if you were operating the instrument using Remote Desktop. Touch or click on the menu title, as shown below. A dropdown containing the twelve measurement hardkeys appears. Selecting a hardkey from the dropdown displays the corresponding menu, and the dropdown disappears.

Entering Numeric Values

Many controls on the menu panel allow you to enter numeric values. These are called “active functions.” An active function control displays a number and a suffix,

2 User Interface

2.4 Menu Panel

for example 13.255 GHz, as in the example below:

An active function is “active” if the numeric value is surrounded by a black background with a blue border, as below. In this state, it is ready to receive numeric input from the number pad on the front panel, the knob, or the step keys.

When an active function is in the active state, you can start typing or pressing the number keys on the front panel, which causes the Numeric Entry Panel to appear, as shown below. The Numeric Entry Panel displays the typed value, and the terminators to complete the entry.

Here we see a UXA with an active function control in the active state. Although no Numeric Entry Panel is displayed, you can just touch the “2” key:

This causes the Numeric Entry Panel to pop up to receive the numbers you are typing:

Type in as many digits as required, then touch one of the unit terminator buttons in the Numeric Entry Panel to complete the entry. In this case, 2 GHz was the desired entry, so you just touch the “GHz” terminator:

2 User Interface
2.4 Menu Panel

The Numeric Entry Panel disappears and, in the example, the active function value becomes 2 GHz.

It is important to note that you can always pop up the Numeric Entry Panel by touching an active function control while it is active; for example, if you were to touch it in the figure above, the Numeric Entry Panel would pop up right next to the control:

2 User Interface
2.4 Menu Panel

You can display the Numeric Entry Panel by touching any active function control while it is active, but you don't have to pop up the Numeric Entry Panel first, you can just start typing and it will pop up on its own, thus saving you a keystroke.

You can also adjust a value without displaying the Numeric Entry panel by turning the knob or using the step keys while an active function is active. If you turn the knob or use the step keys while the Numeric Entry Panel is displayed, it disappears, allowing you to see the entire screen while you are making the adjustment.

You can also drag the Numeric Entry Panel to another part of the display if it is covering something that you wish to see while it is on the screen.

2.4.1 Right-Click Menu

If you click with the right mouse button on any of the menus in measurements, a popup menu appears, which includes:

The items in this menu are:

- ["Add to User Menu" on page 183](#)
- ["Help on this setting" on page 183](#)
- ["Show SCPI Command" on page 183](#)
- ["Add to SCPI Recorder" on page 184](#)
- ["Start/Stop SCPI Recorder" on page 184](#)
- ["Show SCPI Recorder" on page 184](#)

2.4.1.1 Add to User Menu

For details, see ["User Menu" on page 184](#).

2.4.1.2 Help on this setting

For details, see ["Help" on page 197](#).

2.4.1.3 Show SCPI Command

Enabled/visible when the currently-active feature has an associated SCPI command or query. Displays a popup dialog that shows the active GUI selection's SCPI command.

To close the popup dialog, click **OK**

2.4.1.4 Add to SCPI Recorder

Adds SCPI to the recorder from User Interface features that have equivalent SCPI.

This is the manual mode for adding SCPI to the recorder when you do not wish to add SCPI continuously. This control is enabled only when the current active feature has an associated SCPI command or query.

Irrespective of the continuous recording state, clicking this control adds the active entry into the recorder, including the active value if it is a setting.

2.4.1.5 Start/Stop SCPI Recorder

Starts or stops continuous recording mode. After starting the recording, any changes to settings will be recorded.

After continuous recording is enabled, the button label changes to **Stop SCPI Recorder**, which is displayed while recording is in progress. Clicking **Stop SCPI Recorder** halts recording and switches the control label back to **Start SCPI Recorder**.

2.4.1.6 Show SCPI Recorder

This shortcut opens the dialog ["SCPI Recorder" on page 3245](#).

2.4.2 User Menu

Lets you create your own menu, to include controls that you frequently use. You can have one **User Menu** for each measurement, and all User Menus survive a power cycle.

You add a control to the User Menu for the current measurement by right-clicking on the control, then selecting ["Add to User Menu" on page 183](#). You can also remove the control from the User Menu using the same right-click menu item.

User Menu appears at the bottom of the menu drop-down panel.

2.5 Cancel key

This front-panel key has the same functions as the Windows **Esc** (Escape) key. It does the following:

- Cancels dialogs
- Cancels active functions (unless there is an entry in progress, in which case it cancels that, and reverts to the previous value)
- Resets input overloads
- Aborts print operations
- Cancels certain other operations (such as alignments)
- Returns you to Local Control (if in Remote)
- If the backlight is off, turns on the backlight, and does nothing else

Most of this functionality is the same as earlier X-Series models and similar to ESA and PSA operation.

When the instrument is in Remote, any hardkey that is pressed on the front panel displays this message:

`Analyzer is in Remote. Press ESC to return to Local`

The exception is the **Cancel (ESC)** key, which takes the instrument out of Remote.

When the instrument is also in the LLO (local lockout state), the **Local** key is locked out as well. When this is the case, and the **Local** key is pressed, this message is displayed:

`Local key is locked out by remote computer. Cancel Local Lockout on computer or release remote control`

When you see this message, you should disconnect the remote computer, or use it to take the instrument out of the Local Lockout state.

2.6 Onscreen Keyboard key

This key turns the onscreen alpha keyboard (OSK) on and off.

There are two onscreen keyboards:

- The Multitouch OSK, which pops up automatically if, while using the analyzer application, a text field becomes the active function
- The Windows OSK, which you must open manually when a text field must be entered while interacting with Windows or other apps

2.7 Touch On/Off Key

This front-panel key turns the display touch functionality on and off. If off, you can turn it back on using the front panel **Touch On/Off** key. When the touch functionality is off, you can still use a mouse as a pointer.

When toggled, a dialog box appears midscreen that confirms “Touchscreen On” or “Touchscreen Off”.

This function remains in effect until it is turned off or until the app shuts down. The app always starts up with Touch enabled.

2.8 Tab key

This key has the same function as the **Tab** key on a PC keyboard. You can use this key to display the Windows Taskbar, as follows.

- Alt-Tab to the Desktop
- Touch the desktop
- Touch **TAB**
- The Taskbar appears

2.9 Local Button

Appears in the Menu Panel when the instrument is in remote, and can be brought back to local via the **Local (ESC)** Key. See also "[Cancel key](#)" on page 185.

2.10 Control Bar

The Control Bar contains controls and readouts that let you control instrument functions independent of the current measurement.

2.11 Windows

Pressing the Windows icon on the "Control Bar" on page 190 has the same effect as pressing the Windows icon on the Windows taskbar. It displays the Windows taskbar and Start Menu, which allows you to launch Windows programs and access features such as the Control Panel.

2.12 Undo/Redo

The Undo button in the "Control Bar" on page 190,

and the Undo front panel key,

Ctrl=Redo

are used to undo the most recently executed function.

If you Undo a function, and then decide you should not have done so, you can use the **Redo** button in the "Control Bar" on page 190 to put it back the way it was. The Redo function may also be executed by pressing **Ctrl+Undo** (holding the **Ctrl** key down while pressing the **Undo** front panel key).

Undo allows you to restore a setting, which you had previously set, back to its value before you changed it. When you press the Undo button or front panel key, the last setting you changed is "undone", that is, its previous setting is restored. You are notified of this fact with an advisory pop up message; for example, if the Center Frequency had been 300 MHz, and you changed it to 1 GHz and then pressed **Undo**, the message would show:

UNDO: Center Freq 1 GHz -> 300 MHz

The instrument can store 5 levels of action for Undo.

To truly understand Undo and Redo, it helps to think of two "stacks", an Undo stack and a Redo stack,

UNDO stack

REDO stack

Whenever you perform an action, it is placed on the Undo stack. So for example, if you set the Center Frequency to 1 GHz, then set the RBW to 1 MHz, then set the Detector to Peak, each of these actions gets "pushed" onto the Undo stack:

UNDO stack	REDO stack
Det = Peak	
RBW = 1MHz	
CF = 1 GHz	

When you press **Undo**, the top item on the Undo stack is removed, the action represented by that item is undone, and the item is placed on the Redo stack. So pressing **Undo** once in the above case would undo the setting of the peak detector, and the stacks would look like this:

UNDO stack	REDO stack
RBW = 1MHz	Det = Peak
CF = 1 GHz	

Now pressing **Undo** again would undo the RBW = 1 MHz action, and the stacks would look like this:

UNDO stack	REDO stack
CF = 1 GHz	RBW = 1MHz
	Det = Peak

Now pressing Redo would Redo the RBW = 1 MHz action, and the stacks would again look like this:

UNDO stack	REDO stack
RBW = 1MHz	Det = Peak
CF = 1 GHz	

Also, whenever you set a value, the Redo stack is cleared; you can't redo an action once you have interrupted the original flow of actions. Think of the Undo stack as the past, and the Redo stack as the future; if you have items in both stacks it means you have gone back to a time in the past; if you then *do* something you have changed the future, so the old future (the Redo stack) gets cleared.

For example, in the example above, if you now were to change another setting, such as VBW = 1 kHz, the Redo stack gets cleared, and the stacks would look like this:

UNDO stack	REDO stack
VBW = 1 kHz	
RBW = 1MHz	
CF = 1 GHz	

Undo can undo changes you make with the knob or step keys, however all contiguous events that affect the same parameter are aggregated into one event for the sake of Undo. For example, if CF is the active function and is 1 GHz, and you turn the knob back and forth, then enter a value, then use the step keys, when you press **Undo**, the instrument returns to CF = 1 GHz.

Actions that Cannot be Undone

There are some actions that cannot be undone, because these clear the Undo/Redo stack:

- Restore Mode Defaults clears the stack for that Mode in that Screen
- Sending SCPI commands clears the stack for that Mode in that Screen
- Loading a state file (including User Preset) clears the stack for that Mode in that Screen
- Deleting a Screen clears all the stacks in that screen
- Changing Views

Undo/Redo works within the context of a Mode. Each Mode in each Screen keeps its own record. Settings in the Control Panel or System Settings menus are not undoable.

There are several actions that may change many parameters. Among these are Auto Tune, and Adjust Atten for Min Clipping. After executing such a function, Undo sets all parameters back to their value before the function was selected. Auto Tune appears to be a single action, even though the instrument executes it in several steps.

Redo reverses the effect of the last Undo action, assuming that no other settings have been changed since the last Undo. Changing a setting after an Undo clears memory of all settings after that Undo, that is, it clears the Redo stack, as explained above.

When you press the **Redo** icon or **Ctrl** and the **Undo** hardkey, you are notified with an advisory popup message; for example, if the Center Frequency had been 300 MHz, and you changed it to 1 GHz and then pressed **Undo**, the message would say:

UNDO: Center Freq 1 GHz -> 300 MHz

If you then press **Redo**, the message will say:

REDO: Center Freq 300 MHz -> 1 GHz

Neither **Undo** nor **Redo** perform any navigation, and have no effect on which menu panel is displayed nor which function is active.

2.13 File Functions

The File Functions popup contains controls for executing Save, Recall, File and Print operations. You display the File Functions popup by tapping the File Functions icon in the "Control Bar" on page 190.

For more information on a control, tap an icon in the image below.

Tapping this folder icon displays the File Functions popup

2.13.1 File Explorer

Pressing the File Explorer button in the "File Functions" on page 196 dialog opens the Windows File Explorer, which allows you to perform operating system file functions such as Move, Copy and Delete.

File Explorer also allows you to map network drives to drive letters on your PC or intranet, in order to more easily save screen images, states and other data, and load them back into the instrument.

2.14 Help

Pressing the **Help** button in the "Control Bar" on page 190, the **Help** front panel key, or the **F1** key if you have a PC keyboard connected, opens the context-sensitive help system. The **Help** button appears in the "Control Bar" on page 190 and in the banner of full-screen dialogs

You can also use the Help window's Contents pane to navigate to Help for any function in the instrument

You can also touch-and-hold a specific control to display a "right-click" menu, in which one of the choices is **Help on this setting**

2.15 Status Bar

The Status Panel (or Status Bar) appears at the bottom of the display and contains three fields:

The Message Balloon appears on the left side of the Status Panel and lets you know when there is an unread message in the queue.

No unread messages

Unread messages

The Message Balloon has a gray outline and no fill if there are no unread messages; it has a gray fill and a white outline and displays a white ellipsis in the middle if there are unread messages.

The Condition Indicator appears to the right of the Message Balloon and shows the current number of open conditions. Below are some examples of what the Condition Indicator can look like:

The triangle is unfilled if there are no open conditions, filled with yellow if all open conditions are warnings, and filled with red if at least one open condition is an error. The number displayed is the total number of open conditions.

Touching the Condition Indicator opens up the Show Status dialog (see below) with the Current Conditions tab selected. Touching anywhere else on the Status Bar opens up the Show Status dialog with the History tab selected.

The Condition Message appears to the right of the Condition Indicator. In the example below, the Condition Message is “Align All, Now required”:

Warning condition messages display in yellow, error condition messages display in red.

If there is more than 1 open condition, the Condition Message cycles through the display of all of the open conditions, one at a time. Each message is displayed for 2 seconds, then the next for 2 seconds, and so on.

Show Status Dialog

The Show Status dialog appears if you tap anywhere in the Status Bar. Touching the Condition Indicator (the triangle in the Status Bar) opens up the Show Status dialog with the Current Conditions tab selected. Touching anywhere else on the Status Bar opens up the Show Status dialog with the History tab selected.

2 User Interface

2.15 Status Bar

Status	History				
History	Type	ID	Message	Repeats	Time
Current Conditions	✓	1064	Align Now All required - CLEARED		6:37:49 PM 2/24/2015
Settings	✓	1301	Meas Uncal - CLEARED		6:37:37 PM 2/24/2015
	✗	64	Align Now All required - DETECTED		6:36:59 PM 2/24/2015
	⚠	301	Meas Uncal - DETECTED		6:33:27 PM 2/24/2015
	✓	1301	Meas Uncal - CLEARED		6:31:27 PM 2/24/2015
	⚠	301	Meas Uncal - DETECTED		6:33:27 PM 2/24/2015
	✓	1141	Input Overload - CLEARED,ADC over range	47	1:07:56 PM 2/24/2015
	✗	141	Input Overload - DETECTED,ADC over range	47	1:07:56 PM 2/24/2015
	✗	780	No Peak Found		1:03:55 PM 2/24/2015
	ℹ Informational ⚠ Warning ✗ Error				
	<small>Press any row for more info about that Message</small>				
<input type="button" value="Clear Message Queue"/>					

If the display fills up, scrolling is enabled just as in other X-Series Multi-touch UI displays.

The Status dialog automatically refreshes as new messages and conditions occur.

At the bottom of the screen is a Clear Message Queue button. This button clears all errors in all error queues.

Note the following:

- Clear Message Queue does not affect the current status conditions
- Mode Preset does not clear the message queue
- Restore System Defaults (Super Preset) will clear all message queues
- *CLS only clears the queue if it is sent remotely and *RST does not affect any error queue
- Switching Modes does not affect any error queues

See "[More Information](#)" on page 201

Remote Command	<code>:SYSTEM:ERRor[:NEXT]?</code>
----------------	------------------------------------

Example	<code>:SYST:ERR?</code>
---------	-------------------------

Notes	The return string has the format:
-------	-----------------------------------

<Error Number>, <Error>

Where <Error Number> and <Error> are those shown on the Show Errors screen

Backwards
Compatibility
Notes

In some legacy analyzers, the Repeat field shows the number of times the message has repeated since the last time the error queue was cleared. In the X-Series, the Repeat field shows the number of times the error has repeated since the last intervening error. So the count may very well be different than in the past even for identical signal conditions

Unlike previous analyzers, in the X-Series all errors are reported through the Message or Status lines and are logged to the event queue. They never appear as text in the graticule area (as they sometimes do in previous analyzers) and they are never displayed in the settings panel at the top of the screen (as they sometimes do, by changing color, in previous analyzers)

As a consequence of the above, the user can only see one status condition (the most recently generated) without looking at the queue. In the past, at least in the Spectrum Analyzer, multiple status conditions might display on the right side of the graticule

In general, there is no backwards compatibility specified or guaranteed between the error numbers in the X-Series and those of earlier products. Error, event, and status processing code in customers' software will probably need to be rewritten to work with X-Series

In the legacy analyzers, some conditions report as errors and others simply turn on status bits. Conditions that report as errors often report over and over as long as the condition exists. In the X-series, all conditions report as start and stop events. Consequently, software that repeatedly queries for a condition error until it stops reporting will have to be rewritten for the X-series

More Information

The Status Dialog has two screens, selectable by the tabs on the right: **History** and **Current Conditions**:

History

History brings up a screen displaying the front panel message queue in chronological order, with the newest event at the top. Remember that the front panel queue contains all of the events generated by front panel actions as well as error events from all of the SCPI queues. A typical History display appears below:

2 User Interface

2.15 Status Bar

Status		History			
History	Type	ID	Message	Repeats	Time
Current Conditions		301	Meas Uncal - DETECTED		5:36:35 PM 2/24/2015
Settings		1141	Input Overload - CLEARED,ADC over range	49	1:07:56 PM 2/24/2015
		141	Input Overload - DETECTED,ADC over range	49	1:07:56 PM 2/24/2015
		1141	Input Overload - CLEARED,ADC over range		1:07:53 PM 2/24/2015

Legend:  Informational  Warning  Error

Press any row for more info about that Message

Clear Message Queue

The fields on the History display are:

Type	Displays the icon identifying the event or condition as an error or warning
ID	Displays the error number
Message	Displays the message text
Repeat (RPT)	<p>This field shows the number of consecutive instances of the event, uninterrupted by other events. In other words, if an event occurs 5 times with no other intervening event, the value of repeat will be 5</p> <p>If the value of Repeat is 1 the field does not display. If the value of Repeat is >1, the time and date shown are those of the most recent occurrence. If the value of repeat reaches 999,999 it stops there. The Repeat field can run into some pretty large numbers when apps (like the GSM app) report things like “GSM sync burst not found” as events rather than conditions, which is actually fairly common</p> <p>Note that the repeat count is unavailable over SCPI</p>
Time	Shows the most recent time (including the date) at which the event occurred. Time is displayed to the second

To understand the History dialog, and to properly program the instrument’s messaging system, remember that there are two types of occurrences, events and conditions:

- An event is an occurrence of zero duration. Events generate messages which are displayed in the center of the display for a period of time and then fade away. These may be of an advisory nature or may represent errors, for example “No

peak found”

- A condition is an occurrence of finite duration, that is, it has a start and an end. Conditions are states of the analyzer characterized by some combination of settings or some kind of failure that the user needs to be told about while it is happening, but then can stop being told once it goes away; for example “Input overload; ADC over range”

The error queue contains error events as well as the DETECTED and CLEARED events for condition errors, as seen in the figure above.

DETECTED events have numbers less than 1000 and CLEARED events have the same number plus 1000. For example,

301, Meas Uncal – DETECTED

and later

1301, Meas Uncal – CLEARED

To detect a condition error over SCPI, you should read the error queue and note any DETECTED error which is not followed eventually by an associated CLEARED error. This means the condition is still in effect. It is not sufficient to simply read the error queue until you get “No Errors” back. You may still have the condition error; the condition may still be in effect, and if that is the case, all you have done by clearing the error queue is to remove the first event (the DETECTED event) from the queue. For a condition error, you have to read the error queue until you see the CLEARED event for that condition. THEN you know that the condition is gone.

Current Conditions

The **Current Conditions** display shows all of the open conditions in the instrument. An open condition is a condition error or warning for which a start (detected) event has occurred but for which no corresponding stop (cleared) event has occurred.

An example of the Current Conditions screen appears below:

2 User Interface

2.15 Status Bar

Type	ID	Message	Time
	64	Align Now All required	6:36:59 PM 2/24/2015
	301	Meas Uncal	6:33:27 PM 2/24/2015

Informational Warning Error

Press any row for more info about that Message

The fields on the Current Conditions display are:

Type	Displays the icon identifying the event or condition as an error or warning or informational
ID	Displays the error number
Message	Displays the message text
Time	Shows the most recent time (including the date) at which the event occurred. Time is displayed to the second

Touching a condition message expands the display of that message. Touching again collapses it. The description is the same as the one that appears on the message dialog. An example of this is shown in the History section, below.

When there are no open conditions, the display is as shown below:

2.16 Block Diagram

When you press the Block Diagram button in the "Control Bar" on page 190, the display changes to a stylized pictorial representation of the current internal hardware setup and signal processing path. When you touch one of the blocks on the Block Diagram, the corresponding menu panel opens.

When you press the Block Diagram button, the display changes to a stylized pictorial representation of the current internal hardware setup and signal processing path. When you touch one of the blocks on the Block Diagram, the corresponding menu panel opens.

While in the Block Diagram display, the button is blue colored, as:

To exit the Block Diagram display, tap the button again.

The Block Diagram display is not meant to be a completely accurate representation, but one which can show differences as you change the hardware setup. For example, here is the basic RF Block Diagram:

And here is the Block Diagram when External Mixing is selected:

And here is the Block Diagram when the I/Q inputs are selected:

2.17 View Editor

This section describes the use of the View Editor, which allows you to:

- Add windows to and delete windows from the current measurement
- Resize and rearrange windows
- Create User Views

User Views are custom Views that you create by adding, deleting, rearranging, resizing, or changing the contents of the windows in an existing View, and then saving the edited View as a new View. The instrument lists the current User Views for a measurement after the Predefined Views, in the Mode/Meas dialog and on the View menu panel under Display:

ent	View
	Basic Meas Summary RB Slot Meas Subcarrier Meas MIMO Summary Cross Carriers Summary
	User View
	My New View

You can save an edited View using the **Save Layout as New View** control in the View menu (see ["To Save a User View" on page 221](#)).

On occasion, the instrument may automatically save an edited View for you. If you have edited a View, so that the * is displaying next to the View name, you must save that View as a User View before you save State or switch measurements. If you forget that you have made changes to a View, then to keep from losing your edited View when you switch measurements, the instrument will save it for you. If you have an edited View that has not been saved and you try to do any of the following:

- Enter the "Save" menu
- Switch Measurements
- Switch Modes
- Switch Screens

the edited view will be saved for you with the name "Autosaved". When this happens, you will receive the following message:

If an Autosaved User View already exists, the User View called "Autosaved" will be overwritten with the currently edited view. If you have multiple edited views, the selected edited view will be Autosaved. If there is not an edited view selected the last selected edited view will be Autosaved.

To Open the View Editor

Pressing the View Editor button (shown above) in the ["Control Bar" on page 190](#), at the bottom right of the screen, opens the View Editor.

While in the View Editor, the icon is blue colored, as:

Pressing the View Editor button again exits the View Editor.

To Close the View Editor

Tap the View Editor button again.

The user chooses the desired View through the use of the Mode/Meas/View dialog (see ["Mode/Meas/View Dialog" on page 141](#)) or the View menu (a tab under the **Display** key). The View menu allows the user to browse the views in the current measurement. The View menu contains a list of Predefined Views for you to use. If you wish to modify a Predefined View or create your own, new View, you use the View Editor.

User Views & Predefined Views

A User View is any View that is not in the list of predefined Views for the current measurement. For example, the Swept SA measurement has four predefined Views: Normal, Spectrogram, Zone Span, and Trace Zoom.

User Views allow you to add, delete, change and rearrange the windows of a predefined View, creating a new custom view.

2.17.1 To Create a User View

Whenever you add or delete a window to/from a predefined View, or change what is being displayed in a Predefined View's window, the Predefined View is marked with an asterisk (*), to show that it has been modified.

For example, to edit the View shown below, you press the Edit View icon.

When you do this, you get the View Editor screen, which appears as below. The menu panel switches to the View menu. Here we see that we are in the Predefined View called “Basic”.

Each window has two arrows containing + signs. Pressing either of the “+” symbols adds a new window on that side. For example, let’s say you press the + symbol on the right of the lower left window:

You would then see this:

2 User Interface

2.17 View Editor

A fifth window has been added, and is automatically assigned the number 5. (The window number, which is displayed in the Window Title region, is used when sending SCPI commands to that window).

Note the * that now appears next to Basic in the View menu, indicating that you are now in the **modified** Basic View. You see the * if you add, delete or rearrange windows, but simply resizing windows does not display the *. The * means you are in a modified View, which must be saved as a User View before you leave the measurement (if you don't save it, the instrument will save it for you).

Note also that the Restore Layout to Default control is no longer grayed out. If you press this control it restores the Basic View to its default state. Restore Layout to Default becomes available when you add, delete or rearrange windows **and** when you resize them; otherwise it is grayed out.

You can add more windows with the "+" arrow symbols. Note that the "+" arrow symbols only appear if the current measurement has more windows available to display. If you are already displaying all the measurement's windows, the "+" symbols disappear.

You can exit the View Editor by again tapping the Edit View icon.

You can specify which result you want to see in the new window by tapping its title region.

A panel drops down, containing a Data control for specifying window results. Some measurements, such as LTE-A in this example, also provide controls on this dropdown for specifying other window parameters, such as the Component Carrier and Data Format, Tap the Data control and you will see a list of available results for the window. In some cases, as in LTE-A, this will be a cascading list, due to the number of results available:

2 User Interface

2.17 View Editor

Choose the result you want and tap OK. Here we have chosen IQ Meas Time from the Demod group:

Your new, edited User View is now ready to use.

2.17.2 To Resize or Rearrange Windows in a View

Sometimes you may wish to resize a window. To do this go back into the View Editor and note the large, translucent white circles along the edges of the draggable borders. These are the “resize handles”. You can resize the windows by dragging these handles. Note that in their quiescent state they are slightly translucent; when you touch one it turns solid white, indicating that it is draggable. If you touch and drag one of them it moves the axis to which it is attached.

Another feature that comes with the View Editor is the ability to move windows around. You do this by dragging the four-arrow objects in the center of the window; the whole window goes along. Actually you can touch and drag anywhere in the window (except on one of the arrows or the delete circle) and it will drag, but the four-arrow objects give you an indication and a convenient finger target.

2 User Interface

2.17 View Editor

The outline of the window appears as it is being dragged. When you start to drag a window, target symbols appear in the other windows:

If you drop a window on one of the targets, it swaps positions with the target window. If you drag a window's center into another window, green stripes appear on the edges to show you where the window will go when you release it:

When you hover over one of the stripes it gets dimmer, to show the position the window being dragged will take on. If you release a window over an inner stripe, the window you are dragging and the window over which you were hovering resize to share the space the target window originally occupied. If you release a window over an outer stripe, as shown below, the window you are dragging takes on a new position outside the array of other windows:

In either case, one or more of the remaining windows resize to occupy the space formerly occupied by the window you were dragging.

2.17.3 To Delete a Window from a View

The View Editor also lets you delete a window. To do this, tap one of the circled red X's, as shown below.

There has to be more than one window for you to see the circled red Xs.

Now press the View Editor button (the blue hand) to exit the View Editor. At this point, you have an edited Predefined View, as shown by the * next to Basic:

When you are finished with it, you can restore the Layout to the default for Basic by pressing “Restore Layout to Default”. Or you can save your edited View as a “User View” (if you exit the measurement without saving the edited View, the instrument will save it for you as a User View called “Autosaved”).

If you clone the current Screen by pressing the “+” tab, the modified Predefined View will be saved as a User View called “Autosaved”, and it will be available in the new Screen.

2.17.4 To Save a User View

See also ["Transferring User Views Between Instruments" on page 223](#)

To save your new View as a User View, tap the “Save Layout as New View” control. You will get an alpha keyboard that lets you name your new View; the default is the old View name with a number. Below, we have typed in “My New View”:

2 User Interface

2.17 View Editor

When you tap “Done”, the View is saved:

Notice the User View region which has appeared on the menu panel above, with the new User View called “My New View. Notice also that “Basic” has returned to its original, unedited state and the * is gone from its name. Note also that “Restore

Layout to Default” is grayed out. Note also that if you go to the Mode/Meas dialog, you will see the User View there as well:

When naming a new View, you must choose a name that is not already in use for any User View in any measurement; this is because User Views get written to permanent memory and are available to all instances of the Measurement in any screen. They survive a Mode Preset and also survive shutdown and restart of the application.

Transferring User Views Between Instruments

To transfer a User View to another instrument, you must copy the desired file to a portable drive or to your network and then copy it to the target instrument.

When you save a User View, a file is created (or updated if it already exists) containing all the User Views for the current measurement. All of these files are saved on the D: drive in the instrument, in the folder:

`D:\Users\Instrument\My Documents\UserViews`

(assuming you are logged in as Instrument, which is the default).

Look for the file for your measurement. The file naming convention is:

`ModeName.MeasName.layout`

Where **ModeName** is the long-form SCPI parameter for the `:INST:SEL` command for your Mode, and **MeasName** is the long-form SCPI parameter for the `:CONF` command for your Measurement.

For a full list of all **ModeName** parameters, see **Index to Modes** in "Mode" on page 142.

The following is a full list of all **MeasName** parameters.

Measurement Name	SCPI ID
ACP, Adjacent Channel Power	ACPower
AM	AM
AM Depth	AMD
Amplitude Probability Distribution	APD
Audio Distortion	AUDDist
Audio Frequency	AUDFreq
Audio Level	AUDLevel
Audio SINAD	AUDSinad
Automatic Direction Finder	ADF
Channel Power	CHPower
Code Domain	CDPower
Combined GSM	CGSM
Combined WCDMA	CWCDma
Complex Spectrum	SPECTrum
Conformance EVM	CEVM
Custom OFDM	OFDM
Digital Demod	DDEMod
Disturbance Analyzer	DANalyzer
EDR In-band Spurious Emissions	IBSPurious
EVM	EEVM
Fast Capture	FCAPture
Fast Spectrum	FSpectrum
FM	FM
FM Deviation	FMDeviation
FM Stereo	FMStereo
Frequency Counter	FCounter
Frequency Scan	FSCan
GMSK Phase & Freq Error	PFError
Group Delay	GDElay
Harmonics	HARMonics
HRP UWB Demodulation	HUWB
Instrument Landing System	ILS

Measurement Name	SCPI ID
IQ Waveform	WAVeform
LE In-band Emissions	IBEMissions
List Power Step	LPSTep
List Sequencer	LSEQuencer
List Sweep	LIST
Log Plot	LPLot
LoRa (CSS) Demodulation	LORA
Marker Beacon	MBE
Mod Accuracy	RHO
Modulation Analysis	EVM
Modulation Distortion	MODDist
Modulation Rate	MODRate
Modulation SINAD	MODSinad
Monitor Spectrum	MONitor
Noise Figure	NFIGure
Occupied BW /	OBWidth
Output Spectrum BW	
Output RF Spectrum	EORFspectr
Phase and Amplitude vs Time	PAVTime
PM	PM
PM Deviation	PMDeviation
Power Amplifier	PAMPlifier
Power Control	PCONtrol
Power Stat CCDF	PStatistic
Power vs Time	EPVTime
Pulse	PULSe
QPSK EVM	EVMQpsk
Real Time Scan	RTSC
RF Power	RFPower
SEM	SEMask
Spectral Flatness	FLATness
Spectrum & PvT	RTSA
Spot Frequency	SFRequency
Spurious Emissions	SPURious
Streaming	STReaming

Measurement Name	SCPI ID
Strip Chart	SCHart
Swept SA	SANalyzer
TOI	TOI
Transmit Analysis	TX
Transmit On/Off Power	PVTime
Transmit Power (Burst Power)	TXPower
Tuned RF Level	TRFLevel
Tuned RF Level with Tracking	TTRF
Tx Band Spur	ETSPur
VHF Omni-Directional Range	VOR

Examples:

- The User View file for the Swept SA measurement is [SA.SANalyzer.layout](#)
- The User View file for the ACP measurement in the WCDMA mode is [WCDMA.ACPower.layout](#)

Copy the desired file to a thumb drive or to your network. Then go to the target instrument and copy the file into the [D:\Users\Instrument\My Documents\UserViews](#) directory on that instrument (again, assuming you are logged in as Instrument).

Note that copying this file to another instrument will overwrite the file already in that instrument, if any, and will destroy any User Views that might have been created on that instrument.

Note that when you delete the last User View for a measurement, the file is removed.

2.17.5 To Rename a User View

You can rename a User View by selecting that View and tapping “Rename User View.” You can also re-edit a User View; if you do this, an asterisk will appear next to the User View’s name. You can then tap “Re-Save User View to save it back to its existing name, or “Save Layout as New View” to add another, new User View.

2.17.6 To Delete a User View

You can delete a User View by doing the following:

1. From the "Mode/Meas/View Dialog" on page 141, or from the **View** menu, select the User View that you want to delete
2. Switch to the **Display** menu
3. Select the **View** tab
4. Tap **Delete User View**

2.17.7 To Delete All User Views

You can delete all User Views by tapping "Delete All User Views." The default view becomes the current view for the Measurement if a User View was the current view when this control was pressed.

2.17.8 Use Case: Displaying Marker and Peak Tables

One common application for User Views is to create a View that allows the Spectrum Analyzer to display both a Marker Table and a Peak Table at the same time. To do this, simply add a Marker Table Window and a Peak Table window to the Spectrum window of the Swept SA measurement. The result is shown below; note that the new View has been named "Marker Table & Peak Table":

NOTE: There are legacy displays like Marker Table, Peak Table, Measure at Marker and Gate View, which are not Views but special display modes. These are retained for backwards compatibility, however they are turned on and off with switches and do not use the View system. Turning on one of these switches does not create a modified View, it merely adds the specified window to the current View; turning the switch back off removes the window. While the switch is on, NO View shows as selected in the View menu. These switches are grayed out if you are in a modified View or a User View. Since only one of these switches can be on at a time, and because these switches turn off on a Preset, User Views offer a superior way of adding windows than using the switches.

Some measurements do not support User Views; these do not allow adding, deleting or rearranging windows, however they do allow resizing windows. In these measurements you can get into the View Editor but the Add icons, Delete icons and Move icons will not appear. You can still resize the windows and in some cases (e.g. Noise Figure) you can still change window contents.

2.17.9 View Editor Remote Commands

Remote Commands for User Views can be found in the documentation for the **Display, View** tab.

2.18 Multiscreen

You can configure up to 16 different Screens at a time. Normally, you only see one Screen, and the set of configured screens is shown across the top of the display in a series of "Screen Tabs" on page 140. Touching any screen's tab brings it to the foreground, makes it the current Screen and starts it updating.

Multiscreen view lets you display all of the configured Screens at once.

You can switch to Multiscreen View by pressing this button in the "Control Bar" on page 190 at the bottom right of the screen:

Multiscreen View looks like this:

2 User Interface

2.18 Multiscreen

While in Multiscreen View, the button changes from a black background to a blue background:

To exit Multiscreen view, tap the button again.

Multiscreen View cannot be activated if only one screen is configured.

Each Screen contains one Mode, each Mode contains one Measurement, and each Measurement contains a number of Windows arranged in Views. You can configure multiple instances of the same Mode along with any combination of other Modes.

In Multiscreen View, just as in Single Screen View, only one screen is active.

You switch Screens by tapping the Screen Tab you want, or when in Multiscreen View, you can tap the Screen itself. When you switch Screens, the current Screen's state and measurement results are preserved, the new Screen's previous state and data are loaded, and the new Screen starts running its Mode.

In Multiscreen View:

- The Meas Bar does not display
- The Screens are presented in an array of equal size boxes, except where the number of Screens means some have to be different sizes (as when you have 3 Screens, 5 Screens, etc.).

- Each Screen has a tab that contains the name of the Mode and Measurement in the box and a number associated with the instance of that Mode. You can enter a custom Screen name that replaces the Mode name, by going into the Mode/Meas dialog
- There is always one and only one selected Screen. It is indicated by a blue tab. Only the selected Screen is actually running a measurement and updating its display
- The selected window in the selected screen is the context for the current menus. It is the only window on the display with a blue border
- As you go from screen to screen, each screen remembers the last menu that was active in that screen and restores it as the active menu

In Multiscreen View, as in Single Screen View, tapping the blue tab or pressing the Mode/Meas front panel key opens the ["Mode/Meas/View Dialog" on page 141](#) which allows you to change the Mode (or Measurement or View) being displayed in that Screen.

Remote Command	<code>:INSTrument:SCReen:MuLTiple[:STATe] OFF ON 0 1</code> <code>:INSTrument:SCReen:MuLTiple?</code>
Example	<code>:INST:SCR:MuLT ON</code>
Notes	If only one screen is configured, attempting to set Multi-Screen ON generates the error “-221, Settings conflict; Multi-Screen requires >1 screen”
Preset	OFF

For more information, see the following:

- ["Select Screen" on page 231](#)
- ["Screen List \(Remote only command\)" on page 232](#)

2.18.1 Select Screen

You can select a screen by touching its tab or, in ["Multiscreen" on page 229](#) mode, touching the screen itself. Selecting the Screen activates the screen and suspends the previously selected screen (if any).

Remote Command	<code>:INSTrument:SCReen:SElect <screen name></code> <code>:INSTrument:SCReen:SElect?</code>
Example	<code>:INST:SCR:SEL "Baseband"</code>
Notes	If the <screen name> is specified but not found in the list of Screens, the error message “-224, Illegal parameter value; Screen Name not found” is generated If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” is generated

Preset	Returns the name of the active screen
--------	---------------------------------------

2.18.2 Screen List (Remote only command)

You can obtain a list of currently configured Screens. This permits your remote program to manage screens for selection, renaming, or deletion.

Remote Command	<code>:INSTRument:SCReen:CATalog?</code>
----------------	--

Example	<code>:INST:SCR:CAT?</code>
---------	-----------------------------

Notes	The query response is a comma separated list of Screen Names. If only 1 Screen is configured, there is no trailing comma
-------	--

For R&S compatibility, the following query is also available:

`:INSTRument:SCReen:LIST?`

Preset	Returns list of currently configured Screens
--------	--

2.19 Fullscreen

The Fullscreen button is in the "Control Bar" on page 190, at the lower right corner of the display.

When **Full Screen** is pressed the measurement window expands horizontally over the entire instrument display. The screen graticule area expands to fill the available display area.

It turns off the display of the menu panel, however the controls that drop down from the Meas Bar and on-screen annotation are still available, and you can still drag the trace and markers and perform a pinch zoom, so you can still operate the instrument.

Pressing **Full Screen** again while Full Screen is in effect cancels Full Screen.

You can get even more screen area for your data display by turning off the Meas Bar using the Annotation tab of the Display menu)

Full Screen is canceled by the **Preset** key.

Remote Command	<code>:DISPlay:FSCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:FSCReen[:STATe]?</code>
Notes	This was set to Off by :SYST:DEF MISC in MXA1, but not by Preset. It is no longer set Off by :SYST:DEF MISC, since it is now meas global instead of mode global
Preset	Unaffected by Preset but set to Off by Restore Misc Defaults or shutdown and restart
State Saved	Not saved in instrument state
Backwards Compatibility SCPI	<code>:DISPlay:MENU[:STATe] OFF ON 0 1</code> This emulates ESA full screen functionality, which is the same as the FSCReen command in PSA except that the sense of on/off is reversed (that is, OFF means the menus are OFF, so Fullscreen is ON) and the default is ON (meaning Fullscreen is OFF)
Backwards Compatibility Notes	In ESA/PSA, Full Screen was turned on with a softkey, so pressing any other key turned Full Screen off. In the X-Series, because a hardkey is provided to turn this function on and off, pressing any other key no longer turns off Full Screen

3 5G NR/5G-A Mode

The 5G NR/5G-A Mode is targeted for testing the transmitter of both the Base Station and User Equipment according to following 3GPP standards.

The UE and BS radio transmission and reception definitions and their conformance testing requirements are listed in the specifications of the following table.

Standards	Version	Date
38.141-1 (gNB Conformance for Conducted)	18.5.0	2024-03
38.141-2 (gNB Conformance for Radiated)	18.5.0	2024-03
38.521-1 (UE Conformance for FR1)	18.2.0	2024-03
38.521-2 (UE Conformance for FR2)	18.2.0	2024-03

The 5G NR Modulation Analysis measurement refers to the following standards to support the demodulation of the signals.

Standards	Version	Date
38.211 (NR; Physical channels and modulation)	18.2.0	2024-03
38.212 (NR; Multiplexing and channel coding)	18.2.0	2024-03
38.213 (NR; Physical layer procedures for control)	18.2.0	2024-03
38.214 (NR; Physical layer procedures for data)	18.2.0	2024-03
38.215 (NR; Physical layer measurements)	18.2.0	2024-03

NOTE

If you are using the Help feature, this mode must be currently active to access its detailed information. If it is not active, exit the Help feature (Esc control), select this mode, and re-access Help.

Example `:INSTRument[:SElect] NR5G`
 `:INSTRument[:SElect]?`
 `:INSTRument:NSElect 109`
 `:INSTRument:NSElect?`

Dependencies The mode must be installed and licensed with option N9085EM0E in your instrument before it is available for use

Status Bits/OPC dependencies Changing modes resets all SCPI status registers and mask registers to their power-on defaults. Therefore, event or condition register masks must be re-established after a mode change

When you select 5G NR/5G-A Mode, the default Measurement is the Preset Measurement; the first View listed under each measurement is the Preset View for that measurement; and the first Window listed under each View is the window selected after a Preset.

3.1 Measurement Commands

The commands for selecting each measurement are shown below. Normally `:CONFigure` presets the measurement after selecting it, but if sent with the `NDEFault` parameter (for example, `:CONF:CHP:NDEF`), the measurement is selected without performing a Preset.

Commands relating to the Views and Windows for each measurement are described in the documentation for each measurement.

Example	Select Measurement	Command
	Adjacent Channel Power	<code>:CONFigure:ACPower</code>
	Channel Power	<code>:CONFigure:CHPower</code>
	IQ Waveform	<code>:CONFigure:WAV</code>
	Modulation Analysis	<code>:CONFigure:EVM</code>
	Monitor Spectrum	<code>:CONFigure:MON</code>
	Occupied Bandwidth	<code>:CONFigure:OBwidth</code>
	Phase and Amplitude vs Time	<code>:CONFigure:PAVTime</code>
	Power Statistics CCDF	<code>:CONFigure:PStatistic</code>
	Spectrum Emissions Mask	<code>:CONFigure:SEMask</code>
	Spurious Emissions	<code>:CONFigure:SPURious</code>
	Transmit On/Off Power	<code>:CONFigure:PVTime</code>
	Query the current measurement:	<code>:CONFigure?</code>
Preset	<code>MONitor</code>	
State Saved	Instrument State	

3.2 Channel Power Measurement

This measurement is used to find the total power present in a specified bandwidth. Power Spectral Density (signal power normalized to 1 Hz) is also reported.

When in WLAN Mode, or when WLAN radio standard is selected in SA Mode, the peak Power Spectral Density for 1 MHz is reported.

Measurement Commands

The general functionality of "CONFigure" on page 3824, "INITiate" on page 3825, "FETCh" on page 3825, "MEASure" on page 3827, and "READ" on page 3826 are described in the section **SCPI Operation and Results Query** in the topic **Programming the Instrument**.

Note that, in general, `:CONF: <Measurement>` resets the specified measurement settings to their defaults. X-Series permits the addition of the `NDEFault` node to the command, which prevents a measurement preset after a measurement switch.

The tables below list setup commands for this measurement and queries to retrieve results.

Command	Function
<code>:INITiate:CHPower</code>	Initiates a trigger cycle for the CHP measurement, but does not return any data. You must then use <code>:FETC:CHP[n]?</code> to retrieve data Does not change any measurement settings
<code>:CONFigure?</code>	Returns the long form name of current measurement, in this case, CHPower
<code>:CONFigure:CHPower</code>	Selects CHP measurement with Meas Setup settings in preset state – same as "Meas Preset" on page 327
<code>:CONFigure:CHPower:NDEFault</code>	Selects CHP measurement <i>without</i> affecting settings

The following queries are used to retrieve data. The type of data returned depends on the value of `n`.

Query	Function
<code>:FETCh:CHPower[n]?</code>	Retrieves the data defined by <code>n</code>
<code>:MEASure:CHPower[n]?</code>	Switches to CHP measurement, restores default values, starts the measurement, then retrieves the data defined by <code>n</code>
<code>:READ:CHPower[n]?</code>	Starts the measurement, then retrieves the data defined by <code>n</code>

Backwards Compatibility Queries

Query	Return Value
:FETCh:CHPower:CHPower?	Returns the Channel Power (dBm)
:MEASure:CHPower:CHPower?	
:READ:CHPower:CHPower?	
:FETCh:CHPower:DENSity?	Returns the Power Spectral Density (dBm/Hz)
:MEASure:CHPower:DENSity?	
:READ:CHPower:DENSity?	

The results returned by the queries depend on the currently-selected Mode and the value of *n* (where required). The sections below provide mode-specific details for each Mode.

SA Mode Measurement Results

n	Results Returned						
1 or not specified	Returns scalar results: <table border="1"> <tr> <td>1</td> <td>Channel Power</td> <td>A floating-point number representing the total channel power in the specified integration bandwidth</td> </tr> <tr> <td>2</td> <td>PSD (Power Spectral Density)</td> <td>The power in the specified unit bandwidth. The unit bandwidth is selected by "PSD Unit" on page 323; either dBm/Hz or dBm/MHz</td> </tr> </table>	1	Channel Power	A floating-point number representing the total channel power in the specified integration bandwidth	2	PSD (Power Spectral Density)	The power in the specified unit bandwidth. The unit bandwidth is selected by "PSD Unit" on page 323; either dBm/Hz or dBm/MHz
1	Channel Power	A floating-point number representing the total channel power in the specified integration bandwidth					
2	PSD (Power Spectral Density)	The power in the specified unit bandwidth. The unit bandwidth is selected by "PSD Unit" on page 323; either dBm/Hz or dBm/MHz					
2	Returns floating point numbers that are the captured trace data of the power (in dBm/resolution BW) of the signal for Trace 1. The frequency span of the captured trace data is specified by Span on page 309						
3	n/a						
4	n/a						
5	Returns floating point numbers that are the captured trace data of the power (in dBm/resolution BW) of the signal for Trace 2. The frequency span of the captured trace data is specified by Span						
6	Returns floating point numbers that are the captured trace data of the power (in dBm/resolution BW) of the signal for Trace 3. The frequency span of the captured trace data is specified by Span						
7	Returns Marker Table data as a series of comma separated values in the following form: <Marker Number>,<Marker Trace>,<X>,<Y>,<Reserved>,<Reserved> Only markers that are enabled are included. <Reserved> are returned as NaN ("Not a Number", 9.91e+37). The data is returned in the current sort order as displayed in the Marker Table						

MSR Mode Measurement Results

n	Results Returned
1 or not specified	Returns scalar results:

n Results Returned

- 1 Channel Power A floating-point number representing the total channel power in the specified integration bandwidth
- 2 PSD (Power Spectral Density) The power in the specified unit bandwidth. The unit bandwidth is selected by "PSD Unit" on page 323; either dBm/Hz or dBm/MHz
- 2 Returns floating point numbers that are the captured trace data of the power (in dBm/resolution BW) of the signal for Trace 1. The frequency span of the captured trace data is specified by "Span" on page 309
- 3 Returns [Carriers] comma-separated scalar results, in the following order

#	Item	Unit
1	Total Power of Carrier 1	dBm
2	Total Power of Carrier 2	dBm
...	...	
[Carriers]	Total Power of Carrier [Carriers]	dBm

If the result is not available, NaN (9.91E+37) is returned. Number of returned values might be changed in future releases

- 4 Returns comma-separated scalar results, in the following order

#	Item	Unit
1	Total Power of LTE FDD carriers	dBm
2	Total Power of W-CDMA carriers	dBm
3	Total Power of GSM/EDGE carriers	dBm
4	Total Power of cdma2000 carriers	dBm
5	Total Power of 1xEV-DO carriers	dBm
6	...	

The number of results is incremented by one when a new format is supported

If the result is not available, NaN (9.91E+37) is returned. Number of returned values will be changed in future releases if the number of supported radio format is increased

- 5 Returns floating point numbers that are the captured trace data of the power (in dBm/resolution BW) of the signal for Trace 2. The frequency span of the captured trace data is specified by the Span control
- 6 Returns floating point numbers that are the captured trace data of the power (in dBm/resolution BW) of the signal for Trace 3. The frequency span of the captured trace data is specified by the Span control
- 7 Returns Marker Table data as a series of comma separated values in the following form:
<Marker Number>,<Marker Trace>,<X>,<Y>,<Reserved>,<Reserved>
Only markers that are enabled are included. <Reserved> are returned as NaN ("Not a Number", 9.91e+37). The data is returned in the current sort order as displayed in the Marker Table

LTE-Advanced FDD/TDD Mode Measurement Results

n	Results Returned																		
1 or not specified	Returns scalar results: <table border="1"> <tr> <td>1</td> <td>Channel Power</td> <td>A floating-point number representing the total channel power in the specified integration bandwidth</td> </tr> <tr> <td>2</td> <td>PSD (Power Spectral Density)</td> <td>The power in the specified unit bandwidth. The unit bandwidth is selected by "PSD Unit" on page 323; either dBm/Hz or dBm/MHz</td> </tr> </table>	1	Channel Power	A floating-point number representing the total channel power in the specified integration bandwidth	2	PSD (Power Spectral Density)	The power in the specified unit bandwidth. The unit bandwidth is selected by "PSD Unit" on page 323; either dBm/Hz or dBm/MHz												
1	Channel Power	A floating-point number representing the total channel power in the specified integration bandwidth																	
2	PSD (Power Spectral Density)	The power in the specified unit bandwidth. The unit bandwidth is selected by "PSD Unit" on page 323; either dBm/Hz or dBm/MHz																	
2	Returns floating point numbers that are the captured trace data of the power (in dBm/resolution BW) of the signal for Trace 1. The frequency span of the captured trace data is specified by "Span" on page 309

WLAN Channel Power Measurement Results

n	Results Returned
1 or not specified	<p>Returns scalar results:</p> <p>When the radio standard is <i>not</i> 802.11ac 80 + 80 MHz or 802.11ax 80 + 80 MHz:</p> <p>Channel Power A floating-point number representing the total channel power in the specified integration bandwidth</p> <p>Peak PSD (Power Spectral Density) The peak PSD over the integration bandwidth. The unit bandwidth is selected by "PSD Unit" on page 323 in either dBm/Hz or dBm/MHz</p> <p>Mean PSD (Power Spectral Density) The mean PSD over the integration bandwidth. The unit bandwidth is selected by PSD Unit in either dBm/Hz or dBm/MHz</p> <p>When the radio standard is 802.11ac 80 + 80 MHz or 802.11ax 80 + 80 MHz:</p> <p>Channel Power of the carrier of which the center frequency is indicated by Freq Segment 1 A floating-point number representing the total channel power of the first segment in the specified integration bandwidth</p> <p>Peak PSD (Power Spectral Density) of the carrier of which the center frequency is indicated by Freq Segment 1 The power in the specified unit bandwidth of the first segment. The unit bandwidth is selected by PSD Unit in either dBm/Hz or dBm/MHz</p> <p>Channel Power of the carrier of which the center frequency is indicated by Freq Segment 2 A floating-point number representing the total channel power of the second segment in the specified integration bandwidth</p> <p>Peak PSD (Power Spectral Density) of the carrier of which the center frequency is indicated by Freq Segment 2 The power in the specified unit bandwidth of the second segment. The unit bandwidth is selected by PSD Unit in either dBm/Hz or dBm/MHz</p> <p>Mean PSD (Power Spectral Density) of the carrier of which the center frequency is indicated by Freq Segment 1 The power in the specified unit bandwidth of the first segment. The unit bandwidth is selected by PSD Unit in either dBm/Hz or dBm/MHz</p> <p>Mean PSD (Power Spectral Density) of the carrier of which the center frequency is indicated by Freq Segment 2 The power in the specified unit bandwidth of the second segment. The unit bandwidth is selected by PSD Unit in either dBm/Hz or dBm/MHz</p>
2	Returns floating point numbers that are the captured trace data of the power (in dBm/resolution BW) of the signal for Trace 1. The frequency span of the captured trace data is specified by "Span" on page 309
3	n/a
4	n/a

n	Results Returned
5	Returns floating point numbers that are the captured trace data of the power (in dBm/resolution BW) of the signal for Trace 2. The frequency span of the captured trace data is specified by Span
6	Returns floating point numbers that are the captured trace data of the power (in dBm/resolution BW) of the signal for Trace 3. The frequency span of the captured trace data is specified by Span
7	Returns Marker Table data as a series of comma separated values in the following form: <Marker Number>,<Marker Trace>,<X>,<Y>,<Reserved>,<Reserved> Only markers that are enabled are included. <Reserved> are returned as NaN ("Not a Number", 9.91e+37). The data is returned in the current sort order as displayed in the Marker Table Additionally, WLAN Mode supports an n parameter for the following queries: :FETCh:CHPower:DENSity[n]? :MEASure:CHPower:DENSity[n]? :READ:CHPower:DENSity[n]? For these queries <i>in WLAN Mode only</i> , the results returned depend on the value of n as follows:

n	Radio Standard	Results Returned
1 or not specified	Not 802.11ac 80 +80 MHz or 802.11ax80 +80 MHz	Peak PSD (Power Spectral Density) The Peak PSD over the integration bandwidth. The unit bandwidth is selected by "PSD Unit" on page 323 in either dBm/Hz or dBm/MHz
	802.11ac 80 +80 MHz or 802.11ax80 +80 MHz	The first value is the peak PSD for segment 1, the second value is the peak PSD for segment 2
2	Not 802.11ac 80 +80 MHz or 802.11ax80 +80 MHz	Mean PSD (Power Spectral Density) The Mean PSD over the integration bandwidth. The unit bandwidth is selected by PSD Unit in either dBm/Hz or dBm/MHz
	802.11ac 80 +80 MHz or 802.11ax80 +80 MHz	The first value is the mean PSD for segment 1, the second value is the mean PSD for segment 2

3.2.1 Views

In SA, WCDMA, WLAN, SRCOMMS, and VMA Modes, there is only one predefined view, the "Normal" on page 243 view.

In MSR, LTEAFDD, LTEATDD, and 5GNR Modes, this measurement has two predefined views:

View	SCPI	View Number
"Normal" on page 243	PREsult	1
"Carrier Info" on page 243	CINformation	2

View selection by name

Selects the results view by specifying the View name.

Remote Command	<code>:DISPlay:CHPower:VIEW[:SElect] PRESult CINformation</code> <code>:DISPlay:CHPower:VIEW[:SElect]?</code>
Example	<code>:DISP:CHP:VIEW PRES</code> <code>:DISP:CHP:VIEW?</code>
Preset	<code>PRESult</code>
State Saved	Saved in instrument state
Range	Power Results Carrier Info

View selection by number

Selects the results view by specifying the View number.

Remote Command	<code>:DISPlay:CHPower:VIEW:NSElect <integer></code> <code>:DISPlay:CHPower:VIEW:NSElect?</code>
Example	<code>:DISP:CHP:VIEW:NSEL 1</code> <code>:DISP:CHP:VIEW:NSEL?</code>
Preset	1
State Saved	Saved in instrument state
Min/Max	1 / 2

3.2.1.1 Normal

Windows: ["Graph" on page 244](#), ["Metrics" on page 245](#)

Dual window view: Channel Power graph and Channel Power metrics.

Example	<code>:DISP:CHP:VIEW PRES</code>
---------	----------------------------------

3.2.1.2 Carrier Info

Windows: ["Graph" on page 244](#), ["Metrics" on page 245](#)

Dual window view: Channel Power graph and Carrier Info table.

Example	<code>:DISP:CHP:VIEW CINF</code>
Dependencies	Only available in MSR, LTE-A FDD/TDD and 5G NR Modes

3.2.2 Windows

This section describes the windows that are available in the Channel Power measurement:

Window	Number
"Graph" on page 244	1
"Metrics" on page 245	2
"Gate" on page 248	3
"Marker Table" on page 249	4

3.2.2.1 Graph

Window #1

Used to display the spectrum trace and power bars.

The results of the measurement can be displayed as a single spectrum trace view or displayed with a Bar Graph trace on the spectrum trace. The Bar Graph appears between the markers that indicate the measured output power level. The bar graph is activated when the "Bar Graph" control is set to ON under the Display menu. The Graph window appears in the following views.

View	Size	Position
Normal	Two thirds, full width	Top
Gate View	One third, full width	Middle

Spectrum View with Bar Graph Off

Spectrum View with Bar Graph On

3 5G NR/5G-A Mode
 3.2 Channel Power Measurement

This is the same as the **Spectrum** view, but has a blue bar between the markers that indicates the measured output power level. The bar graph is activated when the “Bar Graph” control is set to **ON** under the **Display** hardkey. The actual measured output power level is displayed on the display at the top of the bar.

If the current Mode is WLAN and the format is WLAN 802.11ac 80+80 MHz, Spectrum View is slightly different so that the results of both carrier segments can be displayed.

3.2.2.2 Metrics

Window #2

The actual measured output power level is displayed in the Metrics window

The **Metrics** window appears in the following Views.

View	Size	Position
Normal	One third, full width	Bottom
Gate View	One third, full width	Bottom

Measure Trace

See: "[Measure Trace](#)" on page 3025.

Power Results

Total carrier power, total PSD and total format carrier power are displayed in the lower window. Total format carrier power is total power of carriers of the same Radio Format. If there is no carrier of the corresponding format, it is not displayed. Thus, items in the total format power table changes depending on the carrier configuration. Since the metrics window of MSR, LTE-Advanced FDD/TDD and 5G NR is slightly denser than that for common CHP, the vertical positions of total power and power spectral density are raised.

Carrier Info: LTE-Advanced FDD/TDD and 5G NR Modes

The following diagram shows the Metrics Window in the Carrier Info view for LTE-Advanced FDD/TDD and 5G NR. The Power Results window is replaced by the carrier info table.

2 Carrier Info	
Total Car Pwr	-6.70 dBm/500.000 MHz
Total PSD	-93.69 dBm/Hz
RF-BW	99.970 MHz

	Carrier Power	Carrier PSD	Integ BW	Filter	Offset Freq	Measure
CC0	-13.69 dBm	-93.69 dBm/Hz	100.000 MHz	OFF	0.0 Hz	On
CC1	-13.69 dBm	-93.69 dBm/Hz	100.000 MHz	OFF	0.0 Hz	On
CC2	-13.69 dBm	-93.69 dBm/Hz	100.000 MHz	OFF	0.0 Hz	On
CC3	-13.69 dBm	-93.69 dBm/Hz	100.000 MHz	OFF	0.0 Hz	On
CC4	-13.69 dBm	-93.69 dBm/Hz	100.000 MHz	OFF	0.0 Hz	On

The text window displays the following results:

Total Carrier Power

This is the total power of all the carriers with carrier measure state setting to On. The power is calculated by integrating across the bandwidth declared by the Carrier Integ Bw parameter for each carrier and then totaling the sums. The total integration bandwidth is shown as part of the result. This will be the total of the Carrier Integ Bw of the carriers used in calculating the total carrier power. If the RRC Filter is on, then the integration bandwidth used is $(1 + \alpha)/T$ where $T = 1/(\text{Carrier Integ Bw})$ multiplied by the number of carriers with carrier measure state setting to yes.

RF-BW

Displays the total bandwidth from the lowest carrier to the highest carrier, whether their measurement states are on or off.

Carrier Power

This is the power in all the currently defined carriers. If the carrier is with measurement state being on, the power will be absolute. If the carrier is defined as

3 5G NR/5G-A Mode

3.2 Channel Power Measurement

not having power present, the power will be shown up as dash. The power is calculated by integrating across the bandwidth declared by the Carrier Integ Bw parameter. The integration bandwidth is shown as part of the result. This is the value of the Carrier Integ Bw for the carrier unless the RRC Filter is on, then the integration.

Integration Bandwidth

Displays the channel bandwidth of each carrier.

Filter

Displays whether RRC filter is used or not.

Offset Frequency

Shows the offset frequency from the carrier reference frequency in multi-carrier measurements. The carrier frequency display type determines whether the relative frequency or absolute frequency will be displayed.

Sub-block (LTE-Advanced FDD/TDD Modes only)

For intra-band non-contiguous spectrum operation, the sub-block concept is introduced, which refers to one contiguous allocated block of spectrum for transmission and reception in the intra-band non-contiguous aggregation mode. We support two sub-blocks. It displays which sub-block the carrier belongs to in the intra-band non-contiguous aggregation mode. The column is displayed when the carrier allocation mode is non-contiguous.

Measure

Shows whether the carrier power presents or not.

The highlighted row changes as either Carrier Result or Select Carrier is changed. The highlighted row and these keys are not coupled.

Carrier Info: MSR Mode

The text window displays the following results:

Total Carrier Power

This is the total power of all the carriers with carrier measure state setting to On. The power is calculated by integrating across the bandwidth declared by the Carrier Integ Bw parameter for each carrier and then totaling the sums. The total integration bandwidth is shown as part of the result. This will be the total of the Carrier Integ Bw of the carriers used in calculating the total carrier power. If the RRC Filter is on, then the integration bandwidth used is $(1 + \alpha)/T$ where $T = 1/(\text{Carrier Integ Bw})$ multiplied by the number of carriers with carrier measure state setting to yes.

RF-BW

Displays the total bandwidth from the lowest carrier to the highest carrier, whether their measurement states are on or off.

Carrier Power

This is the power in all the currently defined carriers. If the carrier is with measurement state being on, the power will be absolute. If the carrier is defined as not having power present, the power will be shown up as dash. The power is calculated by integrating across the bandwidth declared by the Carrier Integ Bw parameter. The integration bandwidth is shown as part of the result. This is the value of the Carrier Integ Bw for the carrier unless the RRC Filter is on, then the integration.

Integration Bandwidth

Displays the channel bandwidth of each carrier.

Filter

Displays whether RRC filter is used or not.

Offset Frequency

Shows the offset frequency from the carrier reference frequency in multi-carrier measurements. The carrier frequency display type determines whether the relative frequency or absolute frequency will be displayed.

Sub-block

For intra-band non-contiguous spectrum operation, the sub-block concept is introduced, which refers to one contiguous allocated block of spectrum for transmission and reception in the intra-band non-contiguous aggregation mode. We support two sub-blocks. It displays which sub-block the carrier belongs to in the intra-band non-contiguous aggregation mode. The column is displayed when the carrier allocation mode is non-contiguous.

Measure

Shows whether the carrier power presents or not.

The highlighted row changes according to whether Carrier Result or Select Carrier is changed. The highlighted row and these keys are not coupled.

Parameter Set

Displays which format parameter set is selected.

3.2.2.3 Gate

Window #3

Turning on **Gate** View displays the **Gate** Window, which allows you to see your gating signal at the same time as the measured data. See the description under "[Gate View On/Off](#)" on page 3745 in **Trigger, Gate Settings**.

View	Size	Position
Gate View	One third, full width	Top

3.2.2.4 Marker Table

Window #4

Displays a table containing detailed information about all the markers in the current measurement. It can be selected from the Data control on the Window Title. There is no specific view in which the **Marker Table** window turns on, it is on by demand.

3.2.3 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.2.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The reference line is at the top, center, or bottom of the graticule, depending on the value of "[Ref Position](#)" on page 251.

Remote Command	<code>:DISPlay:CHPower:WINDow[1]:TRACe:Y[:SCALE]:RLEVel <real></code> <code>:DISPlay:CHPower:WINDow[1]:TRACe:Y[:SCALE]:RLEVel?</code>
Example	<code>:DISP:CHP:WIND:TRAC:Y:RLEV 10 dBm</code> <code>:DISP:CHP:WIND:TRAC:Y:RLEV?</code>
Couplings	When " Auto Scaling " on page 251 is ON (default), this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling changes to OFF Attenuation is not coupled to Ref Value

Preset	10.00 dBm
State Saved	Saved in instrument state
Min/Max	-/+250.00 dBm
Annotation	Ref <value> top left of graph
Backwards Compatibility SCPI	<code>:DISPlay:CHPower:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVel</code>

Scale/Div

Sets the height of one division of the graticule in the current Y-Axis unit.

Scale/Div also determines the displayed amplitude range in the log plot graph. Since there are usually 10 vertical graticule divisions on the display, the total amplitude range of the graph is typically 10x this amount. For example, if **Scale/Div** is 10 dB, then the total range of the graph is 100 dB.

Remote Command	<code>:DISPlay:CHPower:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <rel_amp1></code> <code>:DISPlay:CHPower:WINDow[1]:TRACe:Y[:SCALe]:PDIVision?</code>
Example	<code>:DISP:CHP:WIND:TRAC:Y:PDIV 5</code> <code>:DISP:CHP:WIND:TRAC:Y:PDIV?</code>
Couplings	Coupled to "Scale Range" on page 1244 as follows: Scale/Div = Scale Range/10 (number of divisions) When "Auto Scaling" on page 251 is ON , this value is automatically determined by the measurement result When you change a value, Auto Scaling automatically changes to OFF
Preset	10.00 dB / Div
State Saved	Saved in instrument state
Min	0.10 dB
Max	20 dB
Annotation	<value> dB/ left upper of graph
Backwards Compatibility SCPI	<code>:DISPlay:CHPower:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision</code>

Scale Range

Sets the Y-Axis scale range.

Remote Command	Replace <meas> with the identifier for the current measurement <code>:DISPlay:<meas>:WINDow[1]:TRACe:Y[:SCALe]:RANGe <rel_amp1></code>
----------------	---

	<code>:DISPlay:<meas>:WINDow[1]:TRACe:Y[:SCALe]:RANGe?</code>
Example	<code>:DISP:CHP:WIND:TRAC:Y:RANG 100</code> <code>:DISP:CHP:WIND:TRAC:Y:RANG?</code>
Couplings	Coupled to Scale/Div as follows Scale Range = Scale/Div * 10 (number of divisions) When you change this value, Auto Scaling automatically changes to OFF
Preset	100 dB
State Saved	Saved in instrument state
Min	1
Max	200

Ref Position

Positions the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

Remote Command	<code>:DISPlay:CHPower:WINDow[1]:TRACe:Y[:SCALe]:RPOSition TOP CENTer BOTTom</code> <code>:DISPlay:CHPower:WINDow[1]:TRACe:Y[:SCALe]:RPOSition?</code>
Example	<code>:DISP:CHP:WIND:TRAC:Y:RPOS CENT</code> <code>:DISP:CHP:WIND:TRAC:Y:RPOS?</code>
Preset	TOP
State Saved	Saved in instrument state
Range	TOP CENTer BOTTom
Annotation	The greater than (>) and less than (<) symbols are displayed on both sides of the graph to indicate the Reference Position
Backwards Compatibility SCPI	<code>:DISPlay:CHPower:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition</code>

Auto Scaling

Toggles **Auto Scaling** On or Off.

Remote Command	<code>:DISPlay:CHPower:WINDow[1]:TRACe:Y[:SCALe]:COUPlE 0 1 OFF ON</code> <code>:DISPlay:CHPower:WINDow[1]:TRACe:Y[:SCALe]:COUPlE?</code>
Example	<code>:DISP:CHP:WIND:TRAC:Y:COUP OFF</code> <code>:DISP:CHP:WIND:TRAC:Y:COUP?</code>
Couplings	When Auto Scaling is ON , and the Restart front-panel key is pressed, this function automatically sets the scale per division to 10 dB and determines the reference values based on the measurement results

	When you change the value of Scale/Div , Ref Value , or Scale Range , Auto Scaling automatically changes to OFF
Preset	1
State Saved	Saved in instrument state
Range	OFF ON
Backwards Compatibility SCPI	:DISPlay:CHPower:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:COUPlE

3.2.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See ["Dual-Attenuator Configurations" on page 252](#)
- See ["Single-Attenuator Configuration" on page 253](#)

Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

Dependencies	In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the Range tab in that case
--------------	--

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

3 5G NR/5G-A Mode
 3.2 Channel Power Measurement

Configuration 2: Mechanical attenuator, no optional electronic attenuator

Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

Dual Attenuator

Single Attenuator

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	<code>[:SENSe] :POWer [:RF] :FRATten <rel_amp1></code> <code>[:SENSe] :POWer [:RF] :FRATten?</code> Note that this is the same command as that for " Atten >50 GHz " on page 2961 in N9042B
Example	<code>:POW:FRAT 14</code> <code>:POW:FRAT?</code>
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Available on N9041B UXA Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See Reference Level and " Mech Atten " on page 2954 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	When the Input is RF , and the Input Port is RF Input 2 , and the Full Range Attenuator is installed: On the Meas Bar, the field "Atten" displays as follows: <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten + Full Range Atten - If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Full Range Atten

- If the sweep straddles 50 GHz, the value shown after "Atten:" is preceded by the symbol ">=" and is equal to Full Range Atten

In the **Amplitude**, "**Y Scale**" on page 2948 menu, and the Atten **Meas Bar** dropdown menu panel, a summary is displayed as follows:

"Total Atten below 50 GHz" followed by the value of Full Range Atten + Mech Atten + Elec Atten

"Total Atten above 50 GHz" followed by the value of Full Range Atten

For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:

- Attenuator summary:
- Total Atten below 50 GHz: 30 dB
- Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "**Internal Preamp**" on page 2979, and any External Gain that is entered, as described in the table below.

See "**Attenuator Configurations and Auto/Man**" on page 257

Remote Command	<code>[:SENSe]:POWer[:RF]:ATTenuation <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:ATTenuation?</code>
Example	<code>:POW:ATT 20</code> Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of "main" attenuation) In either case, if the attenuator was in Auto, it is set to Manual
Dependencies	Available on benchtop models. Some measurements do not support Auto setting of Mech Atten . In these measurements, the Auto/Man selection is not available, and the Auto/Man toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the Auto/Man toggle function is not available. The state of Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in " Elec Atten " on page 2957 See " Attenuator Configurations and Auto/Man " on page 257 for more information on the Auto/Man functionality
Couplings	If the RF Input Port is the RF Input:

- If the USB Preamp is connected to USB, use 0 dB for **Mech Atten**
- Otherwise compute the auto-selected value of **Mech Atten** based on **Reference Level, Int Preamp, External Gain, Ref Level Offset, Max Mixer Level, μ W Path Control** and **IF Gain** settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto)
- In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "**Full Range Atten**" on page 2953 from the result to determine the **Mech Atten**. Limit the value so that it is never lower than 0 dB and so that total attenuation, including **Full Range Atten**, is never less than 6 dB (total attenuation, including **Full Range Atten** below 6 dB, can never be chosen by Auto)

In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when **Mech Atten** is in **Auto**, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input

For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is ≤ 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB

Preset	Auto value if Auto/Manual function is supported The Auto value is various 10 dB if Auto/Manual function is not supported	
State Saved	Saved in instrument state	
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased	
Max	CXA Option 503 or 507	50 dB
	EXA	60 dB
	All other models	70 dB
	Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB	
Annotation	The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as: <i>Atten: <total> dB (e<elec>)</i> The letter e is in amber in Single-Attenuator configurations For example: Dual-Attenuator configuration: <i>Atten: 24 dB (e14)</i> Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB	

Single-Attenuator configuration:
A: 24 dB (e14)
 Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)
 When in Manual, a # sign appears in front of Atten in the annotation

Auto Function

Remote Command	<code>[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF ON 0 1 [:SENSe]:POWer[:RF]:ATTenuation:AUTO?</code>
Example	Turn Auto Mech Atten ON: <code>:POW:ATT:AUTO ON</code>
Dependencies	Available on benchtop models. Available in: <ul style="list-style-type: none"> Spectrum Analyzer Mode – Swept SA measurement Real-Time Spectrum Analyzer Mode – Spectrum & PVT measurement Remote Language Compatibility Mode – Swept SA measurement (Remote command depends on Compatibility Model setting) SCPI Language Compatibility Mode – Swept SA measurement (Remote command depends on Compatibility Model setting) Avionics Mode – all measurements Measuring Receiver Mode – all measurements except for Audio measurements
Preset	<code>ON</code>

Attenuator Configurations and Auto/Man

As described under ["Attenuation" on page 2951](#), there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using **Mech Atten** (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See ["Elec Atten" on page 2957](#) for more about “soft” attenuation.

NOTE

In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see ["More Information" on page 260](#)

Remote Command	<code>[:SENSe]:POWer[:RF]:EATTenuation <rel_ampl></code> <code>[:SENSe]:POWer[:RF]:EATTenuation?</code>
Example	<code>:POW:EATT 10</code> <code>:POW:EATT?</code>
Notes	Electronic Attenuation's specification is defined only when Mech Atten is 6 dB
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the Attenuation control or <code>:POW:ATT</code> , and affects the total attenuation displayed on the Attenuation

control and the Meas Bar

The electronic attenuator, and the “soft” attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be **OFF** and grayed-out

If **"Internal Preamp" on page 2979** is **ON** (that is, set to Low Band or Full), the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be **OFF** and grayed-out

If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned

If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence

If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable

If **"LNA" on page 2981** is **ON**, the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be **OFF** and grayed-out. This coupling works in the following modes/measurements:

- Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes
- Transmit On|Off Power measurement in 5GNR Mode
- Power vs. Time and Transmit Power measurement in GSM/EDGE Mode
- Burst Power measurement in Spectrum Analyzer Mode

The SCPI-only “soft” electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement

Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator Transition Rules" on page 260
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the Mech Atten control description

Auto Function

Remote Command	<code>[:SENSe] :POWer [:RF] :EATTenuation :STATe OFF ON 0 1</code> <code>[:SENSe] :POWer [:RF] :EATTenuation :STATe?</code>
Example	<code>:POW:EATT:STAT ON</code>

: POW: EATT: STAT?

Preset **OFF** (Disabled) for Swept SA measurement
ON (Enabled) for all other measurements that support the electronic attenuator

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See ["Using the Electronic Attenuator: Pros and Cons" on page 261](#) for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See ["Attenuator Configurations and Auto/Man" on page 2956](#)

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled

- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the

electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Atten >50 GHz

Only appears in N9042B with Option 575 installed.

Modifies the attenuation applied to the internal frequency extender's frequency path above 50 GHz to 75 GHz. This setting is applicable without an external frequency extender connected.

Remote Command	<code>[:SENSe]:POWer[:RF]:FRATten <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:FRATten?</code> Note that this is the same command as that for "Full Range Atten" on page 2953 in N9041B
Example	<code>:POW:FRAT 14</code> <code>:POW:FRAT?</code>
Dependencies	Only appears in N9042B with Option 575, if input RF is selected, and RF Input Port is selected
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB
Max	26 dB
Annotation	<p>When Input is RF, Input Port is RF Input, and the Option 575 Internal Frequency Extender is present: On the Meas Bar, the field "Atten" displays as follows:</p> <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten - If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Atten > 50 GHz - If the sweep straddles 50 GHz, the value shown after "Atten:" is the Mech Atten + Elec Atten value, followed by " " then the Atten >50 GHz. Example "Atten: 20 dB 24 dB" <p>In the Amplitude, "Y Scale" on page 2948 menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows:</p> <p>"Attenuation below 50 GHz" followed by the value of Mech Atten + Elec Atten "Attenuation above 50 GHz" followed by the value of Atten > 50 GHz</p> <p>For example, if "Mech Atten" on page 2954 = 6 dB, Elec Atten = 4 dB, Atten > 50 GHz = 20 dB, the summary below is shown:</p> <ul style="list-style-type: none"> - Attenuator summary:

- Attenuation below 50 GHz: 10 dB
- Attenuation above 50 GHz: 20 dB

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "[Pre-Adjust for Min Clipping](#)" on page 2963.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code>
Example	<code>:POW:RANG:OPT IMM</code>
Notes	Executing Adjust Atten for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes

Restart Meas on Adjust Atten

Toggles the force restart switch for the "[Adjust Atten for Min Clipping](#)" on page 2962 function.

When **ON**, pressing **Adjust Atten for Min Clipping**, or sending `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` restarts the measurement and then executes the function.

When **OFF**, pressing the control or sending the command neither restarts the measurement nor executes the function until you restart or continue averaging. In this case, pressing the control generates the following advisory message:

"Adjust Atten is deferred until "Restart" or "Continue Averaging" is executed"

This message is *not* generated if the command is sent.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:REStart OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:REStart?</code>
Example	<code>:POW:RANG:OPT:REST OFF</code> <code>:POW:RANG:OPT:REST?</code>
Dependencies	Available only in measurements that support continuous averaging
Preset	ON
State Saved	Saved

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` is executed.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLY COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?</code>
Example	<code>:POW:RANG:OPT:TYPE EONL</code> <code>:POW:RANG:OPT:TYPE?</code>
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	<code>COMBined</code>
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under "[Adjust Atten for Min Clipping](#)" on page 2962 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "[Adjustment Algorithm](#)" on page 265

Selection	SCPI	Note
Off	<code>OFF</code>	This is the default setting
On	<code>ON</code>	Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the <code>ON</code> parameter is supported and mapped to <code>COMBined</code>
Elec Atten Only	<code>ELECTrical</code>	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Elec+Mech Atten	<code>COMBined</code>	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

3 5G NR/5G-A Mode
3.2 Channel Power Measurement

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code>
Example	<code>:POW:RANG:OPT:ATT OFF</code> <code>:POW:RANG:OPT:ATT?</code>
Notes	The parameter option ELECTrical sets this function to ON in Single-Attenuator models The parameter option COMBined is mapped to ELECTrical in Single-Attenuator models. If you send COMBined , it sets the function to ON and returns ELEC to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 2957 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 264 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	OFF when Elec Atten is Disabled at preset, otherwise ELEC
State Saved	Saved in instrument state
Range	Dual-Attenuator models: Off Elec Atten Only Mech + Elec Atten Single-Attenuator models: Off On

Backwards Compatibility Command

Notes	ON aliases to "Elec Atten Only" (<code>:POW:RANG:OPT:ATT ELEC</code>) OFF aliases to "Off" (<code>:POW:RANG:OPT:ATT OFF</code>) <code>:POW:RANG:AUTO?</code> returns true if <code>:POW:RANG:OPT:ATT</code> is not OFF
Backwards Compatibility SCPI	<code>[:SENSe]:POWer[:RF]:RANGe:AUTO ON OFF 1 0</code> <code>[:SENSe]:POWer[:RF]:RANGe:AUTO?</code>

Adjustment Algorithm

The algorithms for the adjustment are documented below:

Single-Attenuator Models

Dual-Attenuator models

"Adjust Atten for Min Clipping" on page 2962 or "Pre-Adjust for Min Clipping" on page 264 selection is Mech + Elec Atten:

3 5G NR/5G-A Mode
 3.2 Channel Power Measurement

vsd04

"Pre-Adjust for Min Clipping" on page 264 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.

Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command `[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

	<code>[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?</code>
Example	<code>:POW:ATT:STEP 2</code> <code>:POW:ATT:STEP?</code>
Notes	Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.2.3.3 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved	No
-------------	----

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe <real></code> <code>[:SENSe]:POWer[:RF]:RANGe?</code>
Example	<code>:POW:RANG 10 dBm</code> <code>:POW:RANG?</code>
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min/Max	-/+100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code>
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements

Restart Meas on Adjust Range

The same as ["Restart Meas on Adjust Atten" on page 2962](#) under ["Attenuation" on page 2951](#).

Min Acq Time for Adjust Range

The acquisition time of auto range is set up internally, based on application/Mode. For a low-duty-cycle TDD signal, the acquisition of auto range would only capture the noise part, and the calculated range value will be unreasonable. So, in the low-duty-cycle TDD signal case, set **Min Acq Time for Adjust Range** to limit the min acquisition time of auto range. **Min Acq Time for Adjust Range** should be set to a value to make sure the auto range acquisition always covers the signal part.

The default value, 0 s, specifies that there is no user-set **Min Acq Time for Adjust Range**, and the internal calculated time will be used for acquisition. If the user-set **Min Acq Time for Adjust Range** is less than the internally calculated time, it will still result in using the internally calculated time.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TIME:MINimum <time></code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TIME:MINimum?</code>
Example	Set the Min Adjust time to 95 ms: <code>:POW:RANG:OPT:TIME:MIN 95 ms</code> <code>:POW:RANG:OPT:TIME:MIN?</code>
Preset	0 s
State Saved	Saved in instrument state

Offset for Adjust Range

Used when additional optimization is needed to the result of **Adjust Range for Min Clipping**.

When you set **Offset for Adjust Range**, then perform **Adjust Range for Min Clipping**, the new range is as follows:

Range = result of **Adjust Range for Min Clipping** + entered **Offset for Adjust Range**

Remote Command	<code>[:SENSe] :POWer [:RF] :RANGe :OPTimize :OFFSet <real></code> <code>[:SENSe] :POWer [:RF] :RANGe :OPTimize :OFFSet ?</code>
Example	<code>:POW:RANG:OPT:OFFS 10 dB</code> <code>:POW:RANG:OPT:OFFS ?</code>
Notes	Set Offset for Adjust Range before performing Adjust Range for Min Clipping , otherwise the result will not be applied "Input Overload" error might be reported with inappropriate negative value of Offset for Adjust Range
Preset	0 dB
State Saved	Saved in instrument state
Min/Max	-/+20 dB

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under **Adjust Range For Min Clipping** each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	<code>[:SENSe] :POWer [:RF] :RANGe :OPTimize :ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe] :POWer [:RF] :RANGe :OPTimize :ATTenuation ?</code>
Notes	Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELECTrical , COMBined , and ON) are honored and all are mapped to ELECTrical , so if any of these three parameters is sent, a subsequent query will return ELEC
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements
Preset	OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 2972 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:PARatio <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:PARatio?</code>	
Example	<code>:POW:RANG:PAR 12 dB</code>	
Notes	In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated	
Dependencies	Does not appear in Spectrum Analyzer Mode	
Preset	VXT Models M9410A/11A	0 dB
	All Others	10 dB
State Saved	Saved in instrument state	

Min	0 dB	
Max	VXT Models M9410A/11A	50 dB
	All Others	20 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 2975. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?</code>	
Example	<code>:POW:RANG:MIX:OFFS -5 dB</code>	
Preset	0 dB	
State Saved	Saved in instrument state	
Min	VXT Models M9410A/11A	-34 dB
	All Others	-35 dB
Max	30 dB	

3.2.3.4 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "[Software Preselection](#)" on page 2992 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy. When **Presel Center** is pressed, the instrument performs centering on the

measurements center frequency.

For the Swept SA measurement of the Spectrum Analyzer mode, Presel Center adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on **"Preselector Adjust" on page 2978** changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in **"Proper Preselector Operation" on page 275**.

Remote Command	<code>[:SENSe] :POWer [:RF] :PCENter</code>
Example	<code>:POW:PCEN</code>
Notes	The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command
Dependencies	Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off <ul style="list-style-type: none"> - If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken - Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz - Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in "Preselector Adjust" on page 2978
Status Bits/OPC dependencies	When centering the preselector, *OPC does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to <code>:READ</code> or <code>:MEASure</code> queries The Measuring bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "[Presel Center](#)" on page 2977 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	<code>[:SENSe]:POWer[:RF]:PADJust <freq></code> <code>[:SENSe]:POWer[:RF]:PADJust?</code>
Example	<code>:POW:PADJ 100KHz</code> <code>:POW:PADJ?</code>
Notes	The value on the control is displayed to 0.1 MHz resolution
Dependencies	<ul style="list-style-type: none"> - Does not appear in CXA-m - Does not appear in VXT Models M9410A/11A/15A/16A - Does not appear in M9410E/11E/15E/16E - Grayed-out if microwave preselector is off

	<ul style="list-style-type: none"> - Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz - Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz - Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Preset	0 MHz
State Saved	The Preselector Adjust value set by " Presel Center " on page 2977, or by manually adjusting Preselector Adjust Not saved in instrument state, and does not survive a Preset or power cycle
Min/Max	-/+500 MHz
Backwards Compatibility SCPI	<code>[:SENSe] :POWer [:RF] :MW :PADJust</code> <code>[:SENSe] :POWer [:RF] :MMW :PADJust</code> Backwards Compatibility Command
Notes	The command has no effect, and the query always returns <code>MWAVE</code>
Backwards Compatibility SCPI	<code>[:SENSe] :POWer [:RF] :PADJust :PRESelector MWAVE MMWave EXTERNAL</code> <code>[:SENSe] :POWer [:RF] :PADJust :PRESelector?</code>

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	<code>:POW:GAIN OFF</code>	
Low Band	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND LOW</code>	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown

3 5G NR/5G-A Mode
3.2 Channel Power Measurement

Selection	Example	Note
Full Range	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND FULL</code>	<p>Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp</p> <p>The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear</p>

NOTE

The maximum **Center Frequency for Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:BAND LOW FULL</code> <code>[:SENSe]:POWer[:RF]:GAIN:BAND?</code>
Example	<code>:POW:GAIN:BAND LOW</code> <code>:POW:GAIN:BAND?</code>
Dependencies	<p>Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown</p> <p>Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E</p> <p>If <code>:POW:GAIN:BAND FULL</code> is sent when a low band preamp is available, the preamp band parameter is set to LOW instead of FULL, and an "Option not installed" message is generated</p> <p>Not available when the electronic/soft attenuator is enabled</p>
Preset	LOW
State Saved	Saved in instrument state
Annotation	<p>When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz"</p> <p>When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp)</p>
Auto Function	

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN[:STATe]?</code>
Example	<code>:POW:GAIN OFF</code> <code>:POW:GAIN?</code>
Preset	OFF

LNA

Lets you turn the Low Noise Amplifier (LNA) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to ["Internal Preamp" on page 2979](#). LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, LNA can be turned on *together* with ["Internal Preamp" on page 2979](#), although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see ["More Information" on page 278](#)

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?</code>
Example	<code>:POW:GAIN:LNA ON</code>
Dependencies	Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled
Preset	OFF
State Saved	Saved in State

More Information

When LNA is installed, the preamp annotation changes to show the state of both LNA and **Internal Preamp**. Below is an example:

```
Atten: 8 dB
Pre: Int on, LNA on
µW Path: LNP, On
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to **ON**). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```
Atten: 8 dB
Pre: Int off, LNA on
μW Path: LNP, On
Source: Off
```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	SCPI	Note
Standard Path	<code>STD</code>	Normal setting for most measurements. μ W Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	<code>LNPath</code>	See " Low Noise Path Enable " on page 283
μ W Preselector Bypass	<code>MPBypass</code>	See " μW Preselector Bypass " on page 285
Full Bypass Enable	<code>FULL</code>	See " Full Bypass Enable " on page 286
Remote Command	<code>[:SENSe]:POWer[:RF]:MW:PATH STD LNPath MPBypass FULL</code> <code>[:SENSe]:POWer[:RF]:MW:PATH?</code>	
Example	<code>:POW:MW:PATH LNP</code> Selects Low Noise Path Enable	
Notes	<p>When "Presel Center" on page 2977 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of μW Path Control</p> <p>The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is Low Noise Path Enable or Full Bypass Enable. In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled</p> <p>Alignment switching ignores the settings in this menu, and restores them when finished</p>	
Dependencies	<p>Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing</p> <ul style="list-style-type: none"> - The Low Noise Path Enable selection does not appear unless Option LNP is present and licensed - The μW Preselector Bypass selection does not appear unless Option MPB is present and licensed - The Full Bypass Enable selection does not appear unless options LNP and MPB are both present as well as option FBP <p>In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated</p> <p>Low Noise Path Enable and Full Bypass Enable are grayed-out if the current measurement does not support them</p> <p>Low Noise Path Enable and Full Bypass Enable are not supported in Avionics and MMR Modes (non-modulation measurements). Couplings	See " μW Path Control Auto " on page 281 above
Preset	ON
Range	ON OFF

Low Noise Path Enable

SCPI: [LNPath](#)

Provides a lower noise floor under some circumstances, particularly when operating in the 21 – 26.5 GHz region. With the Low Noise Path enabled, the low band/high

band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

μW Preselector Bypass

SCPI: [MPBypass](#)

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

SCPI: **FULL**

The microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user

interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 2948 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar: "Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

Notes	Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (:POW:MW:PATH STD) The OFF parameter sets path MPB (:POW:MW:PATH MPB)
Preset	ON
Backwards Compatibility SCPI	[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON OFF 0 1 [:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender

Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

Type	ID	
	159	Settings Alert - DETECTED; Presel/Meas BW conflict

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 2982.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 2982 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 2948 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar: "Full Bypass Enabled, maximum safe input power reduced"

Remote Command	<code>[:SENSe] :POWer [:RF] :MW :PATH :AUTO :FULL ON OFF 1 0</code> <code>[:SENSe] :POWer [:RF] :MW :PATH :AUTO :FULL ?</code>

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M941xA and M941xE

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPreSel:STATe 0 1 ON OFF</code> <code>[:SENSe]:POWer[:RF]:SWPreSel:STAT?</code>
Example	<code>:POW:SWPR:STAT 1</code> <code>:POW:SWPR:STAT?</code>
Dependencies	Only appears in N9041B, N9042B+V2050A, VXT models M941xA and M941xE. Does not appear in all measurements
Couplings	Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state
Preset	N9041B OFF N9042B+V3050A ON M941xA and M941xE ON
State Saved	Saved in instrument state

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are

images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel NORMa1 ADVanced</code> <code>[:SENSe]:POWer[:RF]:SWPResel?</code>
Example	<code>:POW:SWPR NORM</code> <code>:POW:SWPR?</code>
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 2992 is OFF. The grayout message is “Unavailable unless SW Presel enabled”
Preset	N9041B ADVanced N9042B+V3050A NORMa1
State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)
- **NARRow**– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel:BW NORMa1 NARRow</code> <code>[:SENSe]:POWer[:RF]:SWPResel:BW?</code>
----------------	---

Example	<code>:POW:SWPR:BW NARR</code>	
Dependencies	<p>Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method</p> <p>Grayed-out when "Software Preselection" on page 2992 is OFF. The grayout message is "Unavailable unless SW Presel enabled"</p> <p>For N9042B+V3050A, the parameter is SCPI-only, and always set to NARRow when Software Preselection is enabled</p>	
Preset	N9041B	NORMa1
	N9042B+V3050A	NARRow
State Saved	Saved in instrument state	

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A, M9410E/11E and S9110E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	<code>[:SENSe] : <measurement> : PFILter [:STATe] ON OFF 1 0</code> <code>[:SENSe] : <measurement> : PFILter [:STATe] ?</code>							
Example	<p>Enable High Freq Prefilter for the Complex Spectrum Measurement in BASIC Mode: <code>:SPEC:PFIL ON</code></p> <p>Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes: <code>:WAV:PFIL ON</code></p> <p>Enable High Freq Prefilter for the Swept SA Measurement in SA Mode: <code>:SAN:PFIL ON</code></p>							
Dependencies	<p>Only appears in instruments based on M9410A/11A, e.g. M9411E, S9110E and S9110A. This control is only functional in limited frequency ranges:</p> <table border="1"> <thead> <tr> <th>Frequency range</th> <th>Products or Port</th> </tr> </thead> <tbody> <tr> <td>Above 1310 MHz</td> <td>M9410A/11A</td> </tr> <tr> <td>1310 MHz to 5000 MHz</td> <td>M9410E/11E RF port on S9110E</td> </tr> </tbody> </table>		Frequency range	Products or Port	Above 1310 MHz	M9410A/11A	1310 MHz to 5000 MHz	M9410E/11E RF port on S9110E

3.2.4 BW

Opens the Bandwidth (**BW**) menu, which contains controls for the Resolution Bandwidth and Video Bandwidth functions of the instrument.

The Resolution BW functions control filter bandwidth and filter type. There are two filter types, Gaussian and Flattop. The Gaussian filters have a response curve that is parabolic on a log scale. The Flattop filter shape is a close approximation of a rectangular filter.

3.2.4.1 Settings

Contains the basic bandwidth functions. In most measurements it is the only tab under Bandwidth.

Res BW

Activates the resolution bandwidth active function, which allows you to manually set the resolution bandwidth (RBW) of the instrument.

Normally, **Res BW (Auto)** selects automatic coupling of **Res BW** to **"Span"** on page 309, using the ratio set by **Span:3 dB RBW** (some measurements do not have a Span:3 dB RBW control, in which case the measurement chooses the optimal ratio). To decouple the resolution bandwidth, press the **Auto/Man** toggle on **Res BW**, or simply enter a different value for **Res BW**.

When **Res BW** is manually selected, you can return it to the coupled state by pressing the **Auto/Man** toggle on **Res BW**. This may also be done by pressing **"Auto Couple"** on page 3017 or by performing a **Preset**.

For more details, see **"More Information"** on page 295

Note that RBW of this setting is -3dB RBW, which means that the named RBW can actually exceed the specified value.

Remote Command	<code>[:SENSe]:CHPower:BANDwidth[:RESolution] <bandwidth></code> <code>[:SENSe]:CHPower:BANDwidth[:RESolution]?</code>
Example	<code>:CHP:BAND 5 MHz</code> <code>:CHP:BAND?</code>
Notes	For numeric entries, all RBW Types choose the nearest (arithmetically, on a linear scale, rounding up) available RBW to the value entered The setting and querying of values depend on the current bandwidth type
Couplings	Sweep time is coupled to RBW. As RBW changes, the sweep time (if set to Auto) is changed to maintain amplitude calibration Video bandwidth (VBW) is coupled to RBW. As the resolution bandwidth changes, the video bandwidth (if set to Auto) changes to maintain the ratio of VBW/RBW (10:1) When Res BW is set to Auto , the resolution bandwidth is auto-coupled to the span. The ratio of Span/RBW is approximately 106:1 when auto coupled. When Res BW is set to Man, and the bandwidths are entered manually, these bandwidths are used regardless of other instrument settings
Preset	See "RBW Presets" on page 295
State Saved	Saved in instrument state
Min	1 Hz
Max	When Option FS1 or FS2 is installed: 10 MHz Otherwise: 8 MHz For VXT, the current span or 8 MHz, whichever is smaller
Annotation	A "#" mark appears before "RBW" in the annotation when it is switched from Auto to Manual coupling
Backwards Compatibility Notes	For backwards compatibility, this command supports both the BANDwidth and BWIDth forms

Auto Function

Remote Command	<code>[:SENSe]:CHPower:BANDwidth[:RESolution]:AUTO ON OFF 1 0</code>
Example	<code>:CHP:BAND:AUTO ON</code> <code>:CHP:BAND:AUTO?</code>

RBW Presets

Mode	Preset Value
LTEAFDD	Auto
LTEATDD	Auto
MSR	100 kHz
NR5G	Auto
SA	Auto
SRCOMMS	3.9 kHz
VMA	240 kHz
WCDMA	240 kHz
WLAN	100 kHz

More Information

When **Res BW** is set to **Auto**, the bandwidth selected depends on "**RBW Filter Type**" on page 298.

Only certain discrete resolution bandwidths are available. The available bandwidths are dependent on **Filter Type** or **EMC Standard**. If an unavailable bandwidth is entered with the numeric keypad, the closest available bandwidth is selected.

In some PowerSuite measurements, in the LTE-Advanced (both FDD and TDD) and 5G NR modes, when **Res BW** is in **Auto**, the resolution bandwidth is predefined based on the corresponding bandwidth of the single carrier, as shown in the table below. In the Multi-carrier case, the narrowest RBW among the active carriers is used.

LTE-A FDD/TDD Modes

Carrier BW	Auto RBW, kHz
1.4 MHz	20
3 MHz	43
5 MHz	68
10 MHz	150
15 MHz	220
20 MHz	270
200 kHz (NB-IoT in FDD)	10

5G NR Mode

Bandwidth	Auto RBW, kHz
3 MHz	43
5 MHz	68
10 MHz	150
15 MHz	220
20 MHz	270
25 MHz	360
30 MHz	430
35 MHz	510
40 MHz	560
45 MHz	620
50 MHz	680
60 MHz	820
70 MHz	1000
80 MHz	1100
90 MHz	1300
100 MHz	1500
200 MHz	2700
400 MHz	3000
800 MHz	3000
1600 MHz	3000
2000 MHz	3000

Video BW

Lets you change the instrument post-detection filter (VBW or “Video Bandwidth”) from 1 Hz to 8 MHz in approximately 10% steps. In addition, a wide-open video filter bandwidth may be chosen by selecting 50 MHz. The VBW is annotated at the bottom of the display, in the center.

Normally, **Video BW (Auto)** selects automatic coupling of the Video BW to RBW using the ratio set by **VBW:3 dB RBW**. To decouple the resolution bandwidth, press the **Auto/Man** toggle on **Video BW**, or simply enter a different value for **Video BW**.

When the **Video BW** is manually selected, it may be returned to the coupled state by pressing the **Auto/Man** toggle on **Video BW**. This may also be done by pressing **"Auto Couple"** on page 3017 or by performing a **Preset**.

Remote Command `[:SENSe]:CHPower:BANDwidth:VIDeo <bandwidth>`

3 5G NR/5G-A Mode
3.2 Channel Power Measurement

	<code>[:SENSe]:CHPower:BAWdwidth:VIDeo?</code>
Example	<code>:CHP:BAWd:VID 2.4 MHz</code> <code>:CHP:BAWd:VID?</code>
Notes	For numeric entries, the instrument chooses the nearest (arithmetically, on a linear scale, rounding up) available VBW to the value entered. The 50 MHz VBW is defined to mean “wide open” The values shown in this table reflect the conditions after a Mode Preset
Dependencies	Sometimes the displayed Video BW is not actually used to process the trace data: When the Average Detector is selected and Sweep Type is set to Swept , the video bandwidth filter cannot be used, because it uses the same hardware as the Average Detector When the Quasi-Peak, EMI Average or RMS Average detector is selected the VBW is implemented by the digital IF as part of the detector When this is the case, VBW still acts to change the Sweep Time, if “ Sweep Time ” on page 2720 is in Auto , and still affects the data on other traces for which this is not the case
Couplings	Video bandwidth (VBW) is normally coupled to “ Res BW ” on page 294. If VBW is set to Auto , then VBW is changed as RBW changes, to maintain the ratio set by VBW:3 dB RBW (usually 10:1 for measurements that do not have a VBW:3 dB RBW control)
Preset	Auto (unless noted in table below)
State Saved	Saved in instrument state
Min	1 Hz
Max	50 MHz
Annunciation	A “#” mark appears before “VBW” in the annotation when it is not coupled
Annotation	In the bottom center of the screen, “VBW <value> <units>” indicates the current video bandwidth value. Note that for some detectors this is not the value actually used for VBW (see above)
Backwards Compatibility Notes	For backwards compatibility, this command supports both the BAWdwidth and BWIDth forms

Auto Function

Remote Command	<code>[:SENSe]:CHPower:BAWdwidth:VIDeo:AUTO ON OFF 1 0</code> <code>[:SENSe]:CHPower:BAWdwidth:VIDeo:AUTO?</code>
Example	<code>:CHP:BAWd:VID:AUTO OFF</code> <code>:CHP:BAWd:VID:AUTO?</code>
Preset	ON

VBW Presets

Unless noted in the table below, the Preset value of VBW is **Auto**.

Mode	Preset Value
WCDMA	2.40 MHz

RBW Filter Type

Selects the type for the resolution bandwidth filters. Historically, the Res BW filters in HP/Agilent/Keysight spectrum instruments were Gaussian filters, specified using the -3 dB bandwidth of the filter. That is, a 10 MHz Res BW filter was a Gaussian shape with its -3 dB points 10 MHz apart. In X-Series, the **RBW Filter BW** menu lets you choose between a Gaussian and Flat Top filter shape, for varying measurement conditions.

	Filter Type	SCPI Example														
	Gaussian	<code>:BAND:SHAP GAUS</code>														
	Flattop	<code>:BAND:SHAP FLAT</code>														
Remote Command	<code>[:SENSe] :CHPower :BANDwidth :SHApe GAUSSian FLATtop</code>															
	<code>[:SENSe] :CHPower :BANDwidth :SHApe?</code>															
Example	<code>:CHP :BAND :SHAP GAUS</code>															
	<code>:CHP :BAND :SHAP?</code>															
Notes	<p><code>GAUSSian</code> = Gaussian</p> <p><code>FLATtop</code> = Flattop</p> <p>We use <code>SHApe</code> instead of <code>TYPE</code> (even though the control name uses Type) because <code>TYPE</code> is used for backwards compatibility</p>															
Preset	"Auto Couple" on page 3017 selects the preset value															
State Saved	Saved in instrument state															
Annotation	<p>The annotation under RBW in the bottom left of the screen shows the type of filter or bandwidth that is being used. The following examples illustrate this:</p> <table border="1"> <tbody> <tr> <td>-3 dB (Normal) filter BW</td> <td>Res BW 300 Hz</td> </tr> <tr> <td>-6 dB filter BW</td> <td>Res BW (-6 dB) 422 Hz</td> </tr> <tr> <td>Noise filter BW</td> <td>Res BW (Noise) 317 Hz</td> </tr> <tr> <td>Impulse filter BW</td> <td>Res BW (Impulse) 444 Hz</td> </tr> <tr> <td>CISPR filter BW</td> <td>Res BW (CISPR) 200 Hz</td> </tr> <tr> <td>MIL filter BW</td> <td>Res BW (MIL) 1 kHz</td> </tr> <tr> <td>Flattop filter type</td> <td>Res BW (Flattop) 300 Hz</td> </tr> </tbody> </table>		-3 dB (Normal) filter BW	Res BW 300 Hz	-6 dB filter BW	Res BW (-6 dB) 422 Hz	Noise filter BW	Res BW (Noise) 317 Hz	Impulse filter BW	Res BW (Impulse) 444 Hz	CISPR filter BW	Res BW (CISPR) 200 Hz	MIL filter BW	Res BW (MIL) 1 kHz	Flattop filter type	Res BW (Flattop) 300 Hz
-3 dB (Normal) filter BW	Res BW 300 Hz															
-6 dB filter BW	Res BW (-6 dB) 422 Hz															
Noise filter BW	Res BW (Noise) 317 Hz															
Impulse filter BW	Res BW (Impulse) 444 Hz															
CISPR filter BW	Res BW (CISPR) 200 Hz															
MIL filter BW	Res BW (MIL) 1 kHz															
Flattop filter type	Res BW (Flattop) 300 Hz															
Backwards Compatibility SCPI	<code>[:SENSe] :CHPower :BWIDth :SHApe</code>															

3.2.5 Display

Lets you configure display items for the current Mode, Measurement View or Window.

3.2.5.1 Meas Display

Contains controls for setting up the display for the current Measurement, View or Window.

Bar Graph On/Off

Turns the Bar Graph On or Off.

Remote Command	<code>:DISPlay:CHPower:WINDow[1]:BGRaph ON OFF 1 0</code> <code>:DISPlay:CHPower:WINDow[1]:BGRaph?</code>
Example	<code>:DISP:CHP:WIND:BGR ON</code> <code>:DISP:CHP:WIND:BGR?</code>
Preset	<code>OFF</code>
State Saved	Saved in instrument state
Range	<code>ON OFF</code>
Backwards Compatibility SCPI	<code>:DISPlay:CHPower:VIEW[1]:WINDow[1]:BGRaph</code>

Carrier Frequency Type

Set the carrier frequency display type:

- **OFFSet**- The carrier center frequencies are displayed as offsets from Carrier Ref Freq
- **ABSolute**- The carrier center frequencies are displayed as absolute frequencies

Remote Command	<code>:DISPlay:CHPower:VIEW:WINDow:CINformation:FREQuency OFFSet ABSolute</code> <code>:DISPlay:CHPower:VIEW:WINDow:CINformation:FREQuency?</code>
Example	<code>:DISP:CHP:VIEW:WIND:CINF:FREQ ABS</code> <code>:DISP:CHP:VIEW:WIND:CINF:FREQ?</code>
Dependencies	Only available in MSR, LTE-Advanced FDD/TDD and 5G NR Modes
Preset	<code>OFFSet</code>

State Saved	Saved in instrument state
Range	<code>OFFSet ABSolute</code>

3.2.5.2 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See "[Views](#)" on page 242.

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:SElect <alphanumeric></code> <code>:DISPlay:VIEW:ADVanced:SElect?</code>
Example	Select Baseband as the current View <code>:DISP:VIEW:ADV:SEL "Baseband"</code>
Notes	<p>You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command</p> <p>For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <p>because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu</p> <p>You <i>cannot</i> use the legacy View parameter (which in this case would be <code>TZOOM</code>) with</p> <pre>:DISP:VIEW:ADV:SEL</pre> <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom" :DISP:VIEW:ADV:SEL "TRACE ZOOM"</pre> <p>If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p>
Backwards Compatibility SCPI	The legacy node <code>:DISPlay:VIEW[:SElect]</code> is retained for backwards compatibility, but it only supports predefined views

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a “User View”.

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	<code>:DISPlay:VIEW:ADVanced:NAME <alphanumeric></code>
Example	<code>:DISP:VIEW:ADV:NAME "Baseband"</code> Creates a new View named Baseband from the current View, and selects it as the current View
Notes	<code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If <code><alphanumeric></code> name already exists as a View, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; User View SCPI cannot be used while Display is disabled” is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View’s name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	<code>:DISPlay:VIEW:ADVanced:REName <alphanumeric></code>
----------------	---

Example	<code>:DISP:VIEW:ADV:REN "Baseband"</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> specifying the new name is already present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot rename a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p>

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DELeTe</code>
Example	<code>:DISP:VIEW:ADV:DEL</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> is not present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> does not exist” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot delete a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p>

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DELeTe:ALL</code>
Example	<code>:DISP:VIEW:ADV:DEL:ALL</code>
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The

legacy nodes, `:DISPlay:VIEW[:SElect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:CATalog?</code>
Example	<code>:DISP:VIEW:ADV:CAT?</code>
Notes	Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for <i>all</i> the Views, including User Views, available for the current Measurement Example: <code>"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"</code> No distinction is made between Predefined and User Views If you switch measurements with the display disabled (via <code>:DISP:ENAB OFF</code>), then query the list of available Views, the result is undefined

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:USER:CATalog?</code>
Example	<code>:DISP:VIEW:ADV:USER:CAT?</code>
Notes	Returns a quoted string of the available User Views for the current measurement, separated by commas. Example: <code>"Baseband,myView1,yourView1"</code> If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 3004), then query the list of available Views, the result is undefined

3.2.5.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	<code>:DISPlay:GRATicule[:STATe] OFF ON 0 1</code> <code>:DISPlay:GRATicule[:STATe]?</code>
Example	<code>:DISP:GRAT OFF</code>
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	ON
State Saved	Saved in instrument state
Backwards Compatibility SCPI	<code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1</code> <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?</code> This command is accepted for backwards compatibility with older instruments, but the WINDow , TRACe and GRID parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	<code>:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:SCReen[:STATe]?</code>
Example	<code>:DISP:ANN:SCR OFF</code>
Dependencies	Grayed-out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

Remote Command	<code>:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0</code> <code>:DISPlay:ANNotation:TRACe[:STATe]?</code>
Example	<code>:DISP:ANN:TRAC OFF</code>
Preset	<code>OFF</code>
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	<code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code>
Example	<code>:DISP:ACT OFF</code>
Dependencies	Grayed out and forced to <code>OFF</code> when System Display Settings, Annotation is <code>OFF</code>
Preset	<code>ON</code> This remains <code>OFF</code> through a Preset when System Display Settings, Annotation is set to <code>OFF</code>
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When `OFF`, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	<code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code>
----------------	--

Example	<code>:DISP:ANN:MBAR OFF</code>
Dependencies	Grayed out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTEM:DEFAULTS MISC` or `:DISPLAY:ENABLE ON` (neither `*RST` nor `:SYSTEM:PRESET` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTEM:DEFAULTS MISC` or `:DISPLAY:ENABLE ON` (neither `*RST` nor `:SYSTEM:PRESET` enable the display)
- and you are using either the `:SYSTEM:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	<code>:DISPLAY:VIEW:ADVANCED:SELECT</code>
Rename User View	<code>:DISPLAY:VIEW:ADVANCED:RENAME</code>
Delete User View	<code>:DISPLAY:VIEW:ADVANCED:DELETE</code>
Create User View	<code>:DISPLAY:VIEW:ADVANCED:NAME</code>
Select Screen	<code>:INSTRUMENT:SCREEN:SELECT</code>
Delete Screen	<code>:INSTRUMENT:SCREEN:DELETE</code>

Name	Command
Delete All But This Screen	:INSTRUMENT:SCREEN:DELETE:ALL
Add Screen	:INSTRUMENT:SCREEN:CREATE
Rename Screen	:INSTRUMENT:SCREEN:RENAME
Sequencer On/Off	:SYSTEM:SEQUENCER

Remote Command	:DISPLAY:ENABLE OFF ON 0 1
Example	:DISP:ENAB OFF
Couplings	:DISP:ENAB OFF turns Backlight OFF and :DISP:ENAB ON turns Backlight ON, but changing Backlight settings does <i>not</i> change the state of :DISP:ENAB
Preset	ON Set by :SYST:DEF MISC, but not affected by *RST or :SYSTEM:PRESet
State Saved	Not saved in instrument state
Backwards Compatibility Notes	:SYST:PRES no longer turns on :DISPLAY:ENABLE as it did in legacy analyzers

3.2.6 Frequency

Contains controls that allow you to control the frequency and channel parameters of the instrument.

Some features in the **Frequency** menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by “**Meas Preset**” on page 327. For example, **Center Frequency** is the same for all measurements – it does not change as you change measurements.

3.2.6.1 Settings

Contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

Sets **Carrier Reference Frequency**. The center frequencies of carriers are defined as offset frequency from this value. This reference frequency is also the reference of carrier configuration preset.

Because LTE-A, MSR and 5G NR measurements often deal with multiple carriers with distinct bandwidths, the simple **Center Frequency** parameter used in most measurements does not apply here. Instead, **Carrier Reference Frequency** is the key parameter. This must be distinct from the **Center Frequency** parameter used in other measurements, because Center Frequency can be a global parameter. It makes no sense for **Carrier Reference Frequency** to use the global value.

In LTE-A and 5G NR Modes, if the following conditions are satisfied at the same time:

- **Number of Component Carriers** is 1
- **Center Freq Offset** is 0 Hz
- **Center Frequency** mode is Auto

then **Center Frequency** is equivalent to **Carrier Ref Frequency**. When **Center Frequency** changes in such conditions, its mode remains **Auto**, and **Carrier Reference Frequency** changes to the same value. The main purpose of this coupling is to maintain backwards compatibility with legacy LTE/LTE TDD Modes, in which **:SENSe:FREQuency:CENTer** is used to set up the frequency of the measurement.

See "[More Information](#)" on page 308

Remote Command	For LTE-A, 5G NR Modes <code>[:SENSe]:CCARrier:REFeRence <freq></code> <code>[:SENSe]:CCARrier:REFeRence?</code> For MSR Mode <code>[:SENSe]:CARRier:REFeRence <freq></code> <code>[:SENSe]:CARRier:REFeRence?</code>
Example	For LTE-A, 5G NR Modes <code>:CCAR:REF 2GHz</code> For MSR Mode <code>:CARR:REF 2GHz</code>
Dependencies	Only available in LTE-A FDD/TDD, 5G NR and MSR Modes
Preset	<code>1GHz</code>
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum center frequency. Same as Center Frequency

More Information

In most applications, **Center Frequency** is generally the location of the carrier center, and thus plays a very important role. However, in LTE-Advanced TDD/FDD Modes, the measurements are done based on carrier center frequencies and its

bandwidths, both of which are calculated or obtained according to the carriers' configuration.

The **Center Frequency** defined here is only for the Monitor Spectrum, IQ Waveform and CCDF measurements, because these three are general type measurements and focus on a certain frequency range, which may be the entire BS RF bandwidth, a frequency range of one of the component carriers or a range far away from the component carriers to see spurious. The **Center Frequency** in these three measurements has a different meaning, therefore it should be a separate setting from **Carrier Reference Frequency**.

Carrier center frequencies are defined using offsets from **Carrier Reference Frequency**, which determines absolute frequency locations, and which can be set as both absolute and relative frequency from the carrier reference frequency.

Since **Center Frequency** is only used in those three measurements, Monitor Spectrum, IQ Waveform and CCDF, this control only appears on the **Frequency** menu of these measurements.

Span

Changes the displayed frequency range symmetrically about the center frequency. While adjusting **Span**, **Center Frequency** is held constant, which means that both Start Frequency and Stop Frequency will change.

If **Span** is set to a value greater than the maximum allowable span of the instrument, an error message is generated indicating the data is out of range and was clipped to upper limit.

The default (and minimum) **Span** is calculated using the number of carriers and the carrier width where;

$$\text{Span} = (\text{Upper Carrier Freq} + (\text{max offset IBW} * (1 + \alpha)) / 2) - (\text{Lower Carrier Freq} - (\text{max offset IBW} * (1 + \alpha)) / 2)$$

If the RRC Filter is on, then span is increased by a factor of $1 + \text{Filter Alpha}$.

See "[Span Presets](#)" on page 311

Remote Command	<code>[:SENSe] :CHPower:FREQuency:SPAN <freq></code> <code>[:SENSe] :CHPower:FREQuency:SPAN?</code>
Example	<code>:CHP:FREQ:SPAN 10 MHz</code> <code>:CHP:FREQ:SPAN?</code>
Dependencies	If the electrical attenuator is enabled, any attempt to set Span such that the Stop Frequency would be >3.6 GHz results in an error In instruments with an RF Preselector, such as MXE, you cannot sweep across the band break at 3.6 GHz while the RF Preselector is on in Continuous sweep, as there is a mechanical switch which bypasses the RF Preselector above 3.6 GHz. See the Stop Frequency control description for details of this limitation

	<p>For MSR Mode, this control is not shown</p> <p>For WLAN 802.11ac (80 MHz + 80 MHz), the control is not enabled, and its value is coupled with the spacing between the center frequencies of the two carriers</p> <p>Span = Center Frequency 1 – Center Frequency 2 + Integ BW + 40 MHz Margin</p> <p>When the calculated span is over 1 GHz, it is still coupled to its maximum value, which is 1 GHz</p>
Couplings	<p>Span affects "Res BW" on page 294, Sweep Time, FFT & Sweep choice (including FFT Width, Phase Noise Optimization and ADC Dither auto couplings)</p> <p>Any value of Center Frequency or Span that is within the frequency range of the instrument is allowed <i>when</i> the value is being set through the front panel numeric keypad or the SCPI command. The other parameter is forced to a different value if needed, to keep the Start and the Stop Frequencies within the instrument's frequency range</p> <p>When using the knob or the step up/down keys or the UP DOWN keywords in SCPI, the value that is being changed, that is, Center Frequency or Span, is limited so that the other parameter is not forced to a new value</p> <p>When Res BW is set to Auto, the resolution bandwidth is auto-coupled to span. The ratio of span /RBW is approximately 106:1. When Res BW is set to Man, bandwidths are entered by the user, and these bandwidths are used regardless of other instrument settings</p> <p>Since Span is coupled to Integ BW in the factory default condition, if you change the Integ BW setting, the span setting changes by a proportional amount until a limit value is reached. However, the span can be individually set. The minimum value of the span is coupled with the integration bandwidth</p> <p>Span cannot be set less than the Integ BW value. When Span is changed, the ratio of Span/Integ BW is set, and retained when Integ BW is changed</p>
Preset	<p>Depends on instrument maximum frequency, mode, measurement, and selected input</p> <p>See "Span Presets" on page 311</p>
State Saved	Saved in instrument state
Min	<p>100 Hz</p> <p>In 5G NR, LTEAFDD, and LTEATDD Modes, this value is the minimum value required for the measurement, which depends on the Component Carrier configuration</p>
Max	<p>Depends on instrument maximum frequency, mode, measurement, and selected input. See "Span Presets" on page 311</p> <p>If the knob or step keys are being used, depends on the value of the other three interdependent parameters Center Frequency, Start Frequency, Stop Frequency</p>
Annunciation	Data out of range, value clipped to upper limit
Annotation	Span <value> appears on the first line of the annotation in the lower right corner of display
	LTE, 5G NR Modes only:
Remote Command	<pre>[:SENSe] :CHPower:FREQUENCY:SPAN:AUTO ON OFF 1 0 [:SENSe] :CHPower:FREQUENCY:SPAN:AUTO?</pre>
Example	<pre>:CHP:FREQ:SPAN:AUTO OFF :CHP:FREQ:SPAN:AUTO?</pre>
Notes	The span value is adjusted when the relevant carrier parameters such as bandwidth, integration

3 5G NR/5G-A Mode
3.2 Channel Power Measurement

	bandwidth, number of component carriers etc., are changed, whatever the span state (Auto or Man) When in Man state, if the input value is less than the required sum of total integration bandwidths and gaps of the multi-carriers, the required span value is set
Dependencies	Only available in LTE/LTE-Advanced FDD/TDD Modes and 5G NR Mode, CHP measurement
Preset	ON
State Saved	Saved in instrument state
Range	Auto Man

Span Presets

The following table provides the Max Span, for the various frequency options:

Freq Option	Max Span (can't set higher than this)
503 (all but CXA)	3.7 GHz
503, F03 (CXA, CXA-m)	3.08 GHz
507 (all but CXA)	7.1 GHz
507 (CXA, CXA-m)	7.575 GHz
508 (all but MXE)	8.5 GHz
508 (MXE)	8.5 GHz
513, F13	13.8 GHz
526 (all but CXA and MXE)	27.0 GHz
526 (MXE)	27.0 GHz
526, F26 (CXA, CXA-m)	26.55 GHz
544	44.5 GHz
550	52 GHz
F06 (VXT models M9410A/11A)	5.75 GHz
F06 & EP6 (VXT models M9410A/11A)	6.27 GHz
F06 & LFE & EP6	6.5999935 GHz

Freq Option	Max Span (can't set higher than this)
(VXT models M9411A)	
M9415A-F06	6.27 GHz
M9415A-F08	8.27 GHz
M9415A-F12	12.57 GHz

Input 2:

Model	Max Span (can't set higher than this)
CXA opt C75	1.58 GHz
MXE	1.000025 GHz

Note that if you are in External Mixing, the maximum Span will be equal to the Maximum Stop Frequency – Minimum Start Frequency for the currently selected mixer.

Span Presets by Mode

Mode	Radio Std	Preset Value
SA		3 MHz
WCDMA		7.5 MHz
LTE		7.5 MHz
LTETDD		7.5 MHz
5G NR		150 MHz
WLAN	802.11a/g(OFDM/DSSS-OFDM)	30 MHz
	802.11b	37.5 MHz
	802.11n/ac/ax/be 20MHz	30 MHz
	802.11n/ac/ax/be 40MHz	60 MHz
	802.11n/ac/ax/be 80 MHz	120 MHz
	802.11n/ac/ax/be 160 MHz	240 MHz
	802.11n/ac/ax/be 80 MHz + 80 MHz	360 MHz
	802.11be 320 MHz	480MHz
	802.11be 160MHz + 160MHz	440MHz

CF Step

Changes the step size for **Center Frequency** and start and stop frequency functions. Once a step size has been selected and the center frequency function is active, the step keys (and the **UP | DOWN** parameters for **Center Frequency** from remote commands) change the center frequency by the step-size value. The step size

3 5G NR/5G-A Mode
 3.2 Channel Power Measurement

function is useful for finding harmonics and sidebands beyond the current frequency span of the instrument.

Note that the start and stop frequencies also step by the **CF Step** value.

Remote Command	<code>[:SENSe]:FREQuency:CENTer:STEP[:INCRement] <freq></code> <code>[:SENSe]:FREQuency:CENTer:STEP[:INCRement]?</code>
Example	Increase the current center frequency value by 500 MHz: <code>:FREQ:CENT:STEP 500 MHz</code> <code>:FREQ:CENT UP</code>
Notes	Preset and Max values depend on Hardware Options
Dependencies	If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-arrow key, fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning Not available in the MSR, LTE-A FDD/TDD and 5G NR Modes
Couplings	When auto-coupled, the center frequency step size is set to 10% of the span
Preset	Auto
State Saved	Saved in instrument state
Min/Max	-/+ (the maximum frequency of the instrument) That is, 27 GHz max freq instrument has a CF step range of ±27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band
Status Bits/OPC dependencies	non-overlapped
	Auto Function

Remote Command	<code>[:SENSe]:FREQuency:CENTer:STEP:AUTO OFF ON 0 1</code> <code>[:SENSe]:FREQuency:CENTer:STEP:AUTO?</code>
Example	<code>:FREQ:CENT:STEP:AUTO ON</code> <code>:FREQ:CENT:STEP:AUTO?</code>

Full Span (Remote Command Only)

Changes the span to show the full frequency range of the instrument. It maximizes the span within a range not changing the center frequency.

Remote Command	<code>[:SENSe]:CHPower:FREQuency:SPAN:FULL</code>
Example	<code>:CHP:FREQ:SPAN:FULL</code>
Couplings	Selecting full span changes the measurement span value

3.2.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to Normal and places it at the center of the display. If the selected marker is Off, it is set to Normal and placed it at the center of the screen on the trace determined by the **Marker Trace** rules.

3.2.7.1 Select Marker

Specifies the *selected marker*. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

This control appears above the menu panel, indicating that it applies to all controls in the **Marker** menu panels. If you select a tab whose controls do *not* depend on the selected marker (for example, Counter), then this control is blanked.

For any menu that includes **Select Marker**, the first control is always **Marker Frequency**.

Notes	The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak
Preset	Marker 1
State Saved	The number of the selected marker is saved in instrument state
Annunciation	Appears in the marker results block label for Normal , Delta and Fixed markers

3.2.7.2 Settings

The controls on this tab include the Marker active function and a radio button selection of the marker control mode (**Normal**, **Delta**, or **Off**) for the selected marker, as well as additional functions that help you use markers.

Marker Frequency

Sets the marker X Axis value in the current marker X Axis Scale unit. It has no effect if the control mode is **Off**, but is the SCPI equivalent of entering an X value if the control mode is **Normal** or **Delta**.

Remote Command	<code>:CALCulate:CHPower:MARKer[1] 2 ... 12 : X <freq></code>
Example	<code>:CALC:CHP:MARK3:X 0</code>

:CALC:CHP:MARK3:X?

Notes	If no suffix is sent, uses the fundamental units for the current marker X Axis Scale. If a suffix is sent that does not match the current marker X Axis Scale unit, an error "Invalid suffix" is generated The query returns the marker's absolute X Axis value if the control mode is Normal , or the offset from the marker's reference marker if the control mode is Delta . The query is returned in the fundamental units for the current marker X Axis scale: Hz for Frequency and Inverse Time, seconds for Period and Time
Preset	After a preset, all markers are turned OFF , so Marker X-Axis Value query returns Not A Number (NAN)
State Saved	Saved in instrument state
Min/Max	-/+9.9E+37
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Marker X Axis Position (Remote Command Only)

Sets the marker X-Axis Scale position in trace points. This setting has no effect if the control mode is **Off**, but is the SCPI equivalent of entering a value if the control mode is **Normal** or **Delta**, except in trace points rather than X-Axis Scale units. The entered value is immediately translated into the current X-Axis Scale units for setting the value of the marker.

Remote Command	:CALCulate:CHPower:MARKer[1] 2 ... 12:X:POsition <real> :CALCulate:CHPower:MARKer[1] 2 ... 12:X:POsition?
Example	:CALC:CHP:MARK10:X:POS 0 :CALC:CHP:MARK10:X:POS?
Notes	The query returns the marker's absolute X-Axis value in trace points if the control mode is Normal , or the offset from the marker's reference marker in trace points if the control mode is Delta . The value is returned as a real number, not an integer, corresponding to the translation from X-Axis Scale units to trace points . When a marker is turned on, it is placed at the center of the screen on the trace. Therefore, the default value depends on instrument condition. If the marker is Off , the response is Not A Number
Preset	After a preset, all markers are turned Off , so the query returns Not A Number (NAN)
State Saved	Saved in instrument state
Min/Max	-/+9.9E+37

Marker Y Axis Value (Remote Query only)

Returns the marker Y Axis value in the current marker Y-Axis unit.

Remote Command	:CALCulate:CHPower:MARKer[1] 2 ... 12:Y?
Example	:CALC:CHP:MARK11:Y?
Notes	Returns the marker Y-Axis result if the control mode is Normal or Delta If the marker is Off , then the response is Not A Number

Preset	Result dependent on Markers setup and signal source
State Saved	No
Backwards Compatibility SCPI	<code>:CALCulate:CHPower:MARKer[1] 2 ... 12:FUNCTION:RESult?</code>

Marker Mode

Sets the marker control mode to **POSition (Normal)**, **DELTA**, or **OFF**. All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is **OFF**, pressing **Marker** sets it to **POSition** and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, **Marker X Axis Value** appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is **OFF**, there is no active function, and the active function is turned off.

Remote Command	<code>:CALCulate:CHPower:MARKer[1] 2 ... 12:MODE POSition DELTA OFF</code> <code>:CALCulate:CHPower:MARKer[1] 2 ... 12:MODE?</code>
Example	<code>:CALC:CHP:MARK3:MODE POS</code> <code>:CALC:CHP:MARK3:MODE?</code>
Preset	OFF
State Saved	Saved in instrument state
Range	POSition DELTA OFF
Annotation	Mkr # <X value> and <Marker value> upper right on graph When Marker Trace is Polar in WCDMA mode: Mkr # <Chip Value (RHO & QPSKEVM)/Symbol Value (CDP)>, <X value> and <Y value> upper right on graph

Backwards Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker that is **OFF** to **ON (1)** puts it in **POSition (Normal)** mode and places it at the center of the screen.

Example	<code>:CALC:CHP:MARK3:STAT ON</code> <code>:CALC:CHP:MARK3:STAT?</code>
Preset	OFF
State Saved	Saved in instrument state

Range	OFF ON
Backwards	:CALCulate:CHPower:MARKer[1] 2 ... 12:STATe OFF ON 0 1
Compatibility SCPI	:CALCulate:CHPower:MARKer[1] 2 ... 12:STATe?

Delta Marker (Reset Delta)

This control has the same effect as pressing **Delta** in "**Marker Mode**" on page 316. The selected marker becomes a **Delta** marker. If the selected marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

Lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command	:CALCulate:CHPower:MARKer:AOFF
Example	:CALC:CHP:MARK:AOFF

3.2.7.3 Peak Search

The controls on this tab let you move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with "**Marker Delta**" on page 318.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu *and* performs a peak search.

Pressing the **Peak Search** tab once you are already *in* the **Marker** menu does *not* perform a peak search.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. It is the same as "**Marker Frequency**" on page 314 in the **Settings** tab.

Peak Search

Moves the selected marker to the trace point that has the maximum Y-Axis value for that marker's trace.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu *and* performs a peak search.

Remote
Command

:CALCulate:CHPower:MARKer[1] | 2 | ... | 12:MAXimum

Example

:CALC:CHP:MARK2:MAX
:SYST:ERR?

can be used to query the errors to determine if a peak is found. Following an unsuccessful search, the message "No peak found" is returned

Notes

Sending this command selects the subopcoded marker

In W-CDMA Mode, this command does not work when the selected marker is located on the polar trace. In this case, the command is ignored

Marker Delta

Pressing this button has the same effect as pressing **Delta** in "**Marker Mode**" on [page 316](#) on the **Settings** tab. The selected marker becomes a **Delta** marker. If the selected marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the delta to zero.

The control is duplicated here to allow you to conveniently perform a peak search and change the marker's control mode to **Delta** without having to access two separate menus.

3.2.7.4 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. It is the same as "**Marker Frequency**" on [page 314](#) in the **Settings** tab.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the “reference marker” for that marker. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	<code>:CALCulate:CHPower:MARKer[1] 2 ... 12:REfERENCE <integer></code> <code>:CALCulate:CHPower:MARKer[1] 2 ... 12:REfERENCE?</code>
Example	<code>:CALC:CHP:MARK:REF 5</code> <code>:CALC:CHP:MARK:REF?</code>
Notes	Causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: “Settings conflict; marker cannot be relative to itself” When queried a single value is returned (the specified marker numbers relative marker)
Couplings	If the reference marker is Off , it is turned on in Normal mode at the delta marker location
Preset	The preset default “Relative To” marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then its default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using Restore Mode Defaults . Not reset by Marker Off , All Markers Off , or Preset
State Saved	Saved in instrument state. Not affected by Marker Off, and hence not affected by Preset or power cycle
Min	1
Max	12
Annunciation	Appears in the marker label of a Delta marker

Marker Trace

Selects the trace on which you want your marker placed. A marker is associated with one and only one trace. This trace is used to determine the placement, result, and X-Axis Scale of the marker. All markers have an associated trace; it is from that trace that they determine their attributes and behaviors, and it is to that trace that they go when they become **Normal** or **Delta** markers.

Specifying a **Marker Trace** manually or with this command associates the marker with the specified trace. If the marker is not **Off**, it moves the marker from the trace it was on to the new trace. If the marker is **Off**, it stays off but is now associated with the specified trace.

The query returns the number of the trace on which the marker is currently placed.

Remote Command	<code>:CALCulate:CHPower:MARKer[1] 2 ... 12:TRACe 1 2 3</code> <code>:CALCulate:CHPower:MARKer[1] 2 ... 12:TRACe?</code>
Example	<code>:CALC:CHP:MARK2:TRAC 2</code>

	<code>:CALC:CHP:MARK2:TRAC?</code>
Notes	A marker may be placed on a blanked and/or inactive trace, even though the trace is not visible and/or updating An application may register a trace name to be displayed on the control instead of a trace number
Couplings	The state of Marker Trace is not affected by "Auto Couple" on page 3017 Sending the remote command causes the addressed marker to become selected
Preset	1
State Saved	Saved in instrument state

Marker Settings Diagram

Lets you configure the **Marker** system using a visual utility. It is the same as "**Marker Settings Diagram**" on page 317 in the **Settings** tab.

3.2.8 Meas Setup

Contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the Mode.

3.2.8.1 Settings

Contains frequently used **Meas Setup** functions to which you will want the fastest access.

Avg/Hold Number

Specifies the number of measurement averages used to calculate the measurement result. The average is displayed at the end of each sweep. After the specified number of average counts, the averaging mode (terminal control) setting determines the averaging action.

Remote Command	<code>[:SENSe]:CHPower:AVERage:COUNT <integer></code> <code>[:SENSe]:CHPower:AVERage:COUNT?</code>
Example	<code>:CHP:AVER:COUN 15</code> <code>:CHP:AVER:COUN?</code>
Preset	SA, WLAN: 10 WCDMA, LTEAFDD, LTEATDD, 5G NR, MSR: 200
State Saved	Saved in instrument state
Min/Max	1 / 10000

Annotation The average count is displayed in the measurement bar on the front panel display. The annotation appears in the format **n/N** where **n** is the current average and **N** is the average count

Continue Averaging

Designed for acquiring the trace average through multiple sets of DUT conditions, in order to meet requirements such as those for an OTA measurement.

NOTE

You must be in **Single** sweep/measurement to use **Continue Averaging**. Switch to **Single** and press **Restart** to get your first set of averages, then **Continue Averaging** will be available.

Use **:FETCh:<meas>?** to retrieve the data as it waits for completion of **Continue Averaging**. ***OPC?** does *not* wait for completion and returns true immediately.

Pressing this control adds (to the already averaged trace or measurement) a number of averages equal to the "Avg/Hold Number" on page 320. Every time you press it, the terminal count increases by the current value of **Avg | Hold Number**. You can change your test setup (for example, the DUT position or antenna) after each average count reaches the terminal count.

You can accomplish the same thing by manually increasing the **Avg | Hold Number**, but by using **Continue Averaging** you are guaranteed to get the same number of averages at each step in the process, and **Avg | Hold Number** stays the same, so you do not lose its value

Remote Command	[:SENSe] :CHPower :AVERage :CONTinue
Example	:CHP :AVER :CONT
Dependencies	Enabled when you change the Sweep mode to Single and Average Count reaches Average Number. Otherwise, grayed-out

Terminal Count (Remote Query Only)

Query only.

Returns the terminal count that shows the target average number after "**Continue Averaging**" on page 321 is pressed. Every time you press **Continue Averaging**, the terminal count increases to 2N, 3N and so on. The value is the same as the **Avg | Hold Number** unless **Continue Averaging** is pressed, and it is reset to match the **Avg | Hold Number** when **Restart** is pressed.

Remote Command	[:SENSe] :CHPower :AVERage :COUNT :TERMinal?
Example	:CHP :AVER :COUN :TERM?

Averaging On/Off

Turns averaging on or off for this measurement.

NOTE

In this measurement, the **Average Type** is preset to the **Log-Pwr Avg (Video)** method. Other averaging methods are not available.

Remote Command	<code>[:SENSe]:CHPower:AVERage[:STATe] ON OFF 1 0</code> <code>[:SENSe]:CHPower:AVERage[:STATe]?</code>
Example	<code>:CHP:AVER ON</code> <code>:CHP:AVER?</code>
Preset	ON
State Saved	Yes
Range	ON OFF

Avg Mode

Allows you to select the type of termination control used for the averaging function. This determines the averaging action after the specified number of data acquisitions (average count) is reached. Options are:

- **EXPonential**: The measurement averaging continues using the specified number of averages to compute each exponentially-weighted averaged value. The average is displayed at the end of each sweep
- **REPeat**: The measurement resets the average counter each time the specified number of averages is reached

Remote Command	<code>[:SENSe]:CHPower:AVERage:TCONtrol EXPonential REPeat</code> <code>[:SENSe]:CHPower:AVERage:TCONtrol?</code>
Example	<code>:CHP:AVER:TCON EXP</code> <code>:CHP:AVER:TCON?</code>
Preset	EXP
State Saved	Yes
Range	EXPonential REPeat

Integ BW

Specifies the range of integration used in calculating the power in the channel. The integration bandwidth (IBW) is displayed on the trace as two markers connected by

3 5G NR/5G-A Mode
 3.2 Channel Power Measurement

an arrow.

Remote Command	<code>[:SENSe]:CHPower:BANDwidth:INTEgration <bandwidth></code> <code>[:SENSe]:CHPower:BANDwidth:INTEgration?</code>																															
Example	<code>:CHP:BAND:INT 10MHz</code> <code>:CHP:BAND:INT?</code>																															
Dependencies	For LTE-Advanced FDD/TDD, 5G NR and MSR Modes, this control is not shown																															
Couplings	The minimum value of the span is coupled with Integ BW When you change Integ BW, the span changes accordingly by keeping the same ratio of Span/Integ BW																															
Preset	<table border="1"> <thead> <tr> <th>Mode</th> <th>Radio Std</th> <th>Integ BW</th> </tr> </thead> <tbody> <tr> <td>SA</td> <td></td> <td>2 MHz</td> </tr> <tr> <td>WCDMA</td> <td></td> <td>5 MHz</td> </tr> <tr> <td>LTEAFDD, LTEATDD</td> <td></td> <td>5 MHz</td> </tr> <tr> <td rowspan="8">WLAN</td> <td>802.11a/g(OFDM/DSSS-OFDM)</td> <td>20 MHz</td> </tr> <tr> <td>802.11b</td> <td>25 MHz</td> </tr> <tr> <td>802.11n/ac/ax/be (20MHz)</td> <td>20 MHz</td> </tr> <tr> <td>802.11n/ac/ax/be (40MHz)</td> <td>40 MHz</td> </tr> <tr> <td>802.11n/ac/ax/be (80MHz)</td> <td>80 MHz</td> </tr> <tr> <td>802.11ax/be (80 MHz + 80 MHz)</td> <td>80 MHz</td> </tr> <tr> <td>802.11ac/ax/be (160 MHz)</td> <td>160 MHz</td> </tr> <tr> <td>802.11be (160 MHz + 160MHz)</td> <td>160 MHz</td> </tr> <tr> <td>802.11be (320MHz)</td> <td>320 MHz</td> </tr> </tbody> </table>	Mode	Radio Std	Integ BW	SA		2 MHz	WCDMA		5 MHz	LTEAFDD, LTEATDD		5 MHz	WLAN	802.11a/g(OFDM/DSSS-OFDM)	20 MHz	802.11b	25 MHz	802.11n/ac/ax/be (20MHz)	20 MHz	802.11n/ac/ax/be (40MHz)	40 MHz	802.11n/ac/ax/be (80MHz)	80 MHz	802.11ax/be (80 MHz + 80 MHz)	80 MHz	802.11ac/ax/be (160 MHz)	160 MHz	802.11be (160 MHz + 160MHz)	160 MHz	802.11be (320MHz)	320 MHz
Mode	Radio Std	Integ BW																														
SA		2 MHz																														
WCDMA		5 MHz																														
LTEAFDD, LTEATDD		5 MHz																														
WLAN	802.11a/g(OFDM/DSSS-OFDM)	20 MHz																														
	802.11b	25 MHz																														
	802.11n/ac/ax/be (20MHz)	20 MHz																														
	802.11n/ac/ax/be (40MHz)	40 MHz																														
	802.11n/ac/ax/be (80MHz)	80 MHz																														
	802.11ax/be (80 MHz + 80 MHz)	80 MHz																														
	802.11ac/ax/be (160 MHz)	160 MHz																														
	802.11be (160 MHz + 160MHz)	160 MHz																														
802.11be (320MHz)	320 MHz																															
State Saved	Saved in instrument state																															
Min/Max	100 Hz / Hardware Maximum Span																															
Backwards Compatibility SCPI	<code>[:SENSe]:CHPower:BWIDth:INTEgration</code>																															

PSD Unit

Sets the unit bandwidth for Power Spectral Density. The available units are dBm/Hz (**DBMHZ**) and dBm/MHz (**DBMMHZ**).

Remote Command	<code>:UNIT:CHPower:POWer:PSD DBMHZ DBMMHZ</code> <code>:UNIT:CHPower:POWer:PSD?</code>
Example	<code>:UNIT:CHP:POW:PSD DBMMHZ</code> <code>:UNIT:CHP:POW:PSD?</code>

Couplings	When the PSD unit is changed, the response to <code>:MEAS READ FETCH:CHP1?</code> also changes by the PSD unit basis (either dBm/Hz or dBm/MHz)
Preset	WLAN mode or SA mode with WLAN radio standard: <code>DBMMHZ</code> Otherwise: <code>DBMHZ</code>
State Saved	Saved in instrument state
Range	dBm/Hz dBm/MHz

IF Gain

Sets **IF Gain** to Auto, Low Gain or High Gain. These settings affect sensitivity and IF overloads.

Remote Command	<code>[:SENSe]:CHPower:IF:GAIN[:STATe] ON OFF 1 0</code> <code>[:SENSe]:CHPower:IF:GAIN[:STATe]?</code>
Example	<code>:CHP:IF:GAIN ON</code> <code>:CHP:IF:GAIN?</code>
Notes	ON = high gain OFF = low gain
Dependencies	The IF Gain controls (FFT IF Gain and Swept IF Gain) have no effect when the U7227A USB Preamp-lifier is connected. This is not annotated or reflected on any control; there are no controls grayed out nor any SCPI locked out. The instrument simply behaves as though both FFT IF Gain and Swept IF Gain are set to Low regardless of the setting on the controls Not available in VXT model M9421A
Preset	OFF
State Saved	Saved in instrument state
Range	Low Gain High Gain

Auto Function

Remote Command	<code>[:SENSe]:CHPower:IF:GAIN:AUTO[:STATe] ON OFF 1 0</code> <code>[:SENSe]:CHPower:IF:GAIN:AUTO[:STATe]?</code>
Example	<code>:CHP:IF:GAIN:AUTO ON</code> <code>:CHP:IF:GAIN:AUTO?</code>
Couplings	Auto sets IF Gain to High Gain if the input attenuator is set to 0 dB, or if the preamp is turned on and the frequency range is under 3.6 GHz For other conditions, Auto sets IF Gain to Low Gain
Preset	OFF

Spur Avoidance

Because VXT models M9410A/11A/15A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The **Spur Avoidance** function is provided to eliminate this spur, at the expense of some measurement speed.

When **Spur Avoidance** is **Enabled** (the default), the instrument uses a software algorithm to remove this spur from the displayed measurement data, but the algorithm only operates under certain conditions. Specifically, it only operates in the multiple capture case.

You can disable this function to speed up your measurement by setting **Spur Avoidance** to **Disabled (OFF)**.

Note that when **Spur Avoidance** is not in effect, either because you have disabled it or because you are not in multiple capture, the following warning message will appear in the status bar:

`Settings Alert;Spur Avoidance Off`

This is to alert you that measurement accuracy might be negatively impacted.

Remote Command	<code>[:SENSe]:CHPower:SAVoid[:STATe] ON OFF 0 1</code> <code>[:SENSe]:CHPower:SAVoid[:STATe]?</code>
Example	<code>:CHP:SAV ON</code> <code>:CHP:SAV?</code>
Dependencies	Only appears in VXT models M9410A/11A/15A
Preset	<code>OFF</code>
State Saved	Saved in instrument state
Range	<code>ON OFF</code>

Meas Setup Summary Table

Lets you view and access many of the parameters in the **Meas Setup** menus on one screen.

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is

an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see "[Measurement-Specific Details](#)" on page 326 below.

Remote Command	<code>:COUPlE ALL</code>
Example	<code>:COUP ALL</code>
Backwards Compatibility SCPI	<code>:COUPLE ALL NONE</code>
Backwards Compatibility Notes	<code>:COUP:NONE</code> puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is <i>not</i> recommended for making measurements or new designs

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple** *does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

3 5G NR/5G-A Mode

3.2 Channel Power Measurement

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all measurement parameters to their default values.

Remote Command	:CONFigure:CHPower
----------------	--------------------

Example	:CONF:CHP
---------	-----------

3.2.8.2 Radio

The Radio tab contains controls to select link direction.

Direction

Direction specifies whether the 5G NR signal is an uplink signal or a downlink signal. This control allows you to set the Direction of the signal being measured.

Remote Command	<code>[:SENSe]:RADio:STANdard:DIRectioN DLINK ULINK</code> <code>[:SENSe]:RADio:STANdard:DIRectioN?</code>
Example	<code>:RAD:STAN:DIR DLIN</code>
Dependencies	When N9085EM0E is not installed and N9085EM4E is installed, only Uplink is available
Couplings	Changing the direction affects the gate source as follows <ul style="list-style-type: none"> - If changed to uplink: RF burst - If changed to downlink: External 1 <p>In Transmit On Off Power, changing the direction affects the trigger source as follows</p> <ul style="list-style-type: none"> - If changed to uplink: Periodic - If changed to downlink: External 1 except for models with the H1G option. With the H1G option, the trigger source changes as follows. <ul style="list-style-type: none"> - External 1, when Info BW \leq 255 MHz - External 3, when Info BW \geq 256 MHz <p>Changing the direction affects many other modulation analysis setup parameters</p>
Preset	ULINK when N9085EM0E is not installed and N9085EM4E is installed Otherwise, DLINK
State Saved	Yes
Range	Uplink only when N9085EM0E is not installed and N9085EM4E is installed Otherwise, Downlink Uplink

MIMO

Indicates input Signal is MIMO (including MISO) or SISO.

NOTE

This setting is available for EVM.

Remote Command	<code>[:SENSe]:RADio:MIMO[:STATe] ON OFF 0 1</code> <code>[:SENSe]:RADio:MIMO[:STATe]?</code>
Example	<code>:RAD:MIMO ON</code> <code>:RAD:MIMO?</code>
Preset	OFF
State Saved	Yes
Range	ON OFF

When input signal is MIMO, there are two use models depends on input data channel number.

3 5G NR/5G-A Mode
 3.2 Channel Power Measurement

- Input data channel number = 1

This means the MIMO signal has been combined into one channel (MISO), in this condition only part of measurements results are valid:

MIMO Info table

Spectrum trace

Raw Main Time trace

- Input data channel number > 1

Input data channels may come from:

Recall IQ data for multiple channels

Reference Input Channel

Specifies reference channel in MIMO mode.

NOTE This setting is available for EVM when "MIMO" on page 3020 is set to On.

Remote Command	<code>[:SENSe] :RADio:MIMO:CHANnel:REFerence CHANnel1 ... CHANnel8</code> <code>[:SENSe] :RADio:MIMO:CHANnel:REFerence?</code>
Example	<code>:RAD:MIMO:CHAN:REF CHAN1</code> <code>:RAD:MIMO:CHAN:REF?</code>
Couplings	This key is grayed-out when MIMO is off The available selections depend on Total input channel number
Preset	<code>CHAN1</code>
State Saved	Yes

Multi Channel Synchronous Acquisition (UXM Only)

Enables you to perform multiple synchronous acquisition. When On, acquires signals simultaneously from multiple inputs specified in the Multi Channel Config dialog. The acquired data is assigned to each trace according to the Channel Assignment settings in the Trace Settings Table dialog.

Remote Command	<code>[:SENSe] :RADio:MCHannel:SACquisition[:STATE] ON OFF 1 0</code> <code>[:SENSe] :RADio:MCHannel:SACquisition[:STATE]?</code>
Example	<code>:RAD:MCH:SACQ ON</code> <code>:RAD:MCH:SACQ?</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel

	synchronous acquisition
Preset	OFF
State Saved	Yes

Multi Channel Config

Lets you perform a detailed configuration of each input channel. This will be used for three cases:

- MIMO (EVM only): Meas Setup > Radio (N9042B and UXM model E7515B only)
- ccEVM (EVM only): Meas Setup > Advanced
- Multiple Synchronous Acquisition (PowerSuite measurements supporting multi-channel synchronous acquisition): Meas Setup > Radio (UXM model E7515B only)

Multi Channel Configuration

Enables you to configure multiple channel receiver. Different hardware platforms have different parameters.

This menu is available for the following measurements:

- EVM in N9042B, VXT2/3, UXM model E7515B
- PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "[Multi Channel Synchronous Acquisition \(UXM Only\)](#)" on page 3021

Input Port (UXM)

Select input port for channel configuration.

Remote Command	<code>[:SENSe]:RADio:MCChannel:PORT[1] 2 RFI01 ... RFI08</code> <code>[:SENSe]:RADio:MCChannel:PORT[1] 2?</code>
Example	<code>:RAD:MCH:PORT2 RFI02</code> <code>:RAD:MCH:PORT2?</code>
Dependencies	This control appears only in the EVM and PowerSuite measurement supporting multiport synchronous

	<p>acquisition in the UXM model E7515B</p> <p>When "Lock (UXM)" on page 3023 is On, the selections are grayed out and cannot be changed.</p> <p>When "Lock (UXM)" on page 3023 is OFF, the label "Channel x" changes to "Unused"</p> <p>Selections are the same as those of RF Input Port and either RFIO1 to RFIO8 or RFIO1 to RFIO16 depending on the hardware configuration</p>
Preset	RFIO1 RFIO2
State Saved	Yes
Range	RFIO 1 RFIO 2 RFIO 3 RFIO 4 RFIO 5 RFIO 6 RFIO 7 RFIO 8 or RFIO 1 RFIO 2 RFIO 3 RFIO 4 RFIO 5 RFIO 6 RFIO 7 RFIO 8 RFIO 9 RFIO 10 RFIO 11 RFIO 12 RFIO 13 RFIO 14 RFIO 15 RFIO 16
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2</code>

Lock (UXM)

Enables you to lock/unlock the input port. When locked, the selected input port is assigned to a channel.

Remote Command	<code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed?</code>
Example	<code>:RAD:MCH:PORT2:LOCK ON</code> <code>:RAD:MCH:PORT2:LOCK?</code>
Dependencies	This control appears only in the EVM and PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2:LOCKed</code>

Input Channel IP address

Set instrument IP address for channel configuration, "local" is used for current instrument.

Remote Command	<code>[:SENSe]:RADio:MCHannel:IPAddress[1] 2 ... 4 <String></code> <code>[:SENSe]:RADio:MCHannel:IPAddress[1] 2 ... 4?</code>
Example	<code>:RAD:MCH:IPAD '192.168.1.2'</code>
Dependencies	Appears only in the EVM measurement
Preset	local

State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4</code>

Input Channel Instrument port

Set instrument port for channel configuration.

Remote Command	<code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:PORT <int></code> <code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:PORT?</code>
Example	<code>:RAD:MCH:IPAD:PORT 3574</code>
Dependencies	Available only for the EVM measurement. Only visible on VXT platforms
Preset	3574
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4:PORT</code>

Lock

Lock instrument and assign to a channel in sequence.

Remote Command	<code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:LOCKed?</code>
Example	<code>:RAD:MCH:IPAD1:LOCK 1</code> <code>:RAD:MCH:IPAD1:LOCK?</code>
Dependencies	Appears only in the EVM measurement
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4:LOCKed</code>

Channel Configuration Information (Remote Query only)

This SCPI query reads back channel configuration information.

Remote Command	<code>[:SENSe]:RADio:MCHannel:CHANnel:INFO?</code>
Example	<code>:RAD:MCH:CHAN:INFO?</code>
Dependencies	Available only for the EVM measurement
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:CHANnel:INFO</code>

Trace Settings Table

Lets you set a configuration of multiport synchronous acquisition.

Dependencies Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "[Multi Channel Synchronous Acquisition \(UXM Only\)](#)" on page 3021

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a **:READ** or **:FETCh** query:

- Trace 1
- Trace 2
- Trace 3

Remote Command `:CALCulate:<meas>:MTRace TRACe1 | TRACe2 | TRACe3`
`:CALCulate:<meas>:MTRace?`
 <meas> is the identifier for the current measurement; any one of `CHPower` | `ACPower` | `OBWidth` | `SEMask` | `SPURious` | `PVTime`

Example Channel Power
`:CALC:CHP:MTR TRAC1`
`:CALC:CHP:MTR?`

Dependencies In the ACP measurement, this control is grayed-out when **Meas Method** is set to **RBW** or **FAST**, and only Trace 1 is enabled

Preset	TRACe1
State Saved	No
Range	Trace 1 Trace 2 Trace 3

Channel Assignment

Selects the channel for each trace in the specified measurement. A port selected at "Input Port (UXM)" on page 3022 is assigned to a trace. This setting is valid when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3025 is ON.

Multi Channel Synchronous Acquisition is performed under the following conditions:

- All Input Port Channel Lock is set to ON
- Multi Channel Synchronous Acquisition is set to ON

The selected input port is shown in the Trace Setup Summary table, on the trace and at the bottom of the Trace Control menu panel.

Remote Command	:TRACe[1] 2 3:<meas>:CHANne1 CHANne11 CHANne12 :TRACe[1] 2 3:<meas>:CHANne1?
Example	For the ACP measurement Trace 2 :TRAC2:ACP:CHAN CHAN2
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3025 is On The unlocked channel is grayed-out
Preset	CHAN1 CHAN2 CHAN1
State Saved	Yes
Range	Channel 1 Channel 2

Input Port

Read-only information. Indicates which input data is displayed in each trace. This setting is valid when Multi Channel Synchronous Acquisition is ON.

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3021 is On This column is blank when Math Function is other than Off
--------------	--

Advanced Acquisition

This is the same as "Advanced Acquisition" on page 3072 in the Configure Comp Carriers dialog. See "Advanced Acquisition" on page 3072.

EIRP (Synchronous Acquisition) (UXM Only)

Enables you to preset the following parameters. Preset is made such that Trace 3 becomes the sum of Trace 1 and Trace 2 to which data from Channel 1 and Channel 2 are assigned. The measurement result is calculated based on Trace 3.

This parameter is useful when performing the EIRP measurement by acquiring signals from two ports simultaneously.

Multi Channel Synchronous Acquisition	On
--	-----------

Target trace parameters are those of the PowerSuite measurements supporting multi channel synchronous acquisition in the UXM model E7515B.

	Trace 1	Trace 2	Trace 3
Channel Assignment	Channel 1	Channel 2	Channel 1
Trace Type	Trace Average	Trace Average	Clear / Write
View/Blank	Active	Active	Active
Math Function	Off	Off	Power Sum
Operand 1	N/A	N/A	Trace 1
Operand 2	N/A	N/A	Trace 2
Math Trace	Trace 3		

Remote Command	[:SENSe]:RADio:MCHannel:PRESet:EIRP
Example	:RAD:MCH:PRES:EIRP
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Restore Defaults (UXM Only)

Enables you to preset the following parameters.

Multi Channel Synchronous Acquisition	Off		
Measure Trace	Trace1		
	Trace 1	Trace 2	Trace 3
View/Blank	Active	Blank	Blank
Math Function	Off	Off	Off

Remote Command	<code>[:SENSe]:RADio:MCHannel:PRESet:DEFault</code>
Example	<code>:RAD:MCH:PRES:DEF</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Interfering Signal Present

Sets whether interference signal for the intermodulation tests exists or not. If exists, limits are not evaluated over the interference signal frequency range specified by the span and the center frequency parameters in Adjacent Channel, Spectrum Emission Mask and Spurious Emissions measurements.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference[:STATe] OFF ON 0 1</code> <code>[:SENSe]:RADio:IMODulation:INTerference[:STATe]?</code>
Example	<code>:RAD:IMOD:INT 1</code> <code>:RAD:IMOD:INT?</code>
Preset	OFF
State Saved	Saved in instrument state
Range	On Off

Freq Offset From Edge

Sets the center frequency of the interference signal for intermodulation tests. The frequency is set as offset frequency from the BS RF bandwidth edge. Interference Offset Side determines on which side of the BS RF bandwidth the interference signal exists.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet <freq></code> <code>[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet?</code>
Example	<code>:RAD:IMOD:INT:FREQ:OFFS 5MHz</code> <code>:RAD:IMOD:INT:FREQ:OFFS?</code>
Preset	5MHz
State Saved	Saved in instrument state
Min	0 Hz
Max	400 MHz

Span

Sets the span of the interference signal for intermodulation tests.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:SPAN <freq></code> <code>[:SENSe]:RADio:IMODulation:INTerference:SPAN?</code>
Example	<code>:RAD:IMOD:INT:SPAN 5MHz</code> <code>:RAD:IMOD:INT:SPAN?</code>
Preset	5 MHz
State Saved	Saved in instrument state
Min	200 kHz
Max	400 MHz

Offset Side

Sets which side of the BS RF bandwidth the interference signal exists on.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:SIDE NEGative POSitive</code> <code>[:SENSe]:RADio:IMODulation:INTerference:SIDE?</code>
Example	<code>:RAD:IMOD:INT:SIDE POS</code> <code>:RAD:IMOD:INT:SIDE?</code>
Preset	POSitive
State Saved	Saved in instrument state

Non-Contiguous Interference Region

Sets the region the interfering signal exists at in the Non-Contiguous mode:

- Inner – The interfering signal exists at the inner region. This setting is only effective when Carrier Alloc is Non-Contiguous. When in Contiguous, the interference region is always outside regardless of the selection of this parameter
- Outer – The interfering signal exists at either of the outer regions

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:REGion INNer OUTer</code> <code>[:SENSe]:RADio:IMODulation:INTerference:REGion?</code>
Example	<code>:RAD:IMOD:INT:REG OUT</code> <code>:RAD:IMOD:INT:REG?</code>
Preset	<code>OUTer</code>
State Saved	Saved in instrument state

Interfering Signal Exclude Range

Enables you to select the offset range to be excluded from the measurement.

- Offset Integ BW (OIBW) - Exclude an entire ACP offset range where the interfering signal is allocated
- Interfering Signal Span (ISSP) - Exclude only the span where the interfering signal is occupied

NOTE This setting is available only for the ACP and Modulation Analysis measurements.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:RANGe:EXCLude[1] 2 OIBW ISSPan</code> <code>[:SENSe]:RADio:IMODulation:INTerference:RANGe:EXCLude[1] 2?</code>
Example	<code>RAD:IMOD:INT:RANG:EXCL OIBW</code> <code>RAD:IMOD:INT:RANG:EXCL?</code>
Notes	Subopcode 1 for Downlink, 2 for Uplink. Default is Downlink.
Preset	Downlink: ISSPan Uplink: OIBW
State Saved	Saved in instrument state
Range	Offset Integ BW Interfering Signal Span

3.2.8.3 Meas Standard

The tab contains settings which let you configure the analyzer to match the measurement standard in your 5G NR signal.

The section entitled “Configure Preset” lets you configure the preset values for the Component Carriers. Once you have set all the controls in the “Configure Preset” section to the desired value, press the “Apply Preset (to all CCs)” control and your

presets will be applied to each Component Carrier. Furthermore, any new Component Carriers will take on the same values you have applied.

NOTE

You must press *Apply Preset (to all CCs)* or the values on the controls will *not* affect the Component Carriers.

When you need to configure more parameters, select Advanced Preset Parameters to open a dialog and set advanced parameters for multiple measurements on one screen.

Bandwidth

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **"Bandwidth" on page 3057** of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “Configure Preset” section then press **Apply Preset (to all CCs)**.

NOTE

You must press *Apply Preset (to all CCs)* or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 3052** will also take on this value.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth] B3M B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth]?</code>
Example	<code>:RAD:STAN:PRES:CARR B5M</code> <code>:RAD:STAN:PRES:CARR?</code>
Dependencies	Selections other than 10 MHz, 20 MHz, 30 MHz, and 40 MHz are unavailable when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X If you change "Uplink Carrier Mode" on page 3041 to Sidelink - V2X when this parameter is set to a value other than 10 MHz, 20 MHz, 30 MHz, or 40 MHz, it is forcefully set to 10 MHz
Preset	When N9085EM0E is not installed and N9085EM4E is installed: B10M Otherwise: B100M
State Saved	Yes
Range	3MHz 5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet[:BANDwidth]</code>

Frequency Range

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **"Freq Range" on page 3058** of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “Configure Preset” section then press **Apply Preset (to all CCs)**.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 3052** will also take on this value.

Remote Command `[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe FR1 | FR2 | FR21 | FR22`
`[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe?`

Example `:RAD:STAN:PRES:FREQ:RANG FR1`
`:RAD:STAN:PRES:FREQ:RANG?`

Notes SCPI enum “FR2” is retained for backwards compatibility. When you change Bandwidth, this parameter changes as shown in **"Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility" on page 340** depending on the currently selected value.

Dependencies Available selections differ depending on Bandwidth as follows:

Bandwidth	FR
3 MHz, ..., 100 MHz	FR1
50 MHz, 100 MHz, 200 MHz, 400 MHz	FR2, FR2-1
100 MHz, 400 MHz, 800 MHz, 1600 MHz, 2000 MHz	FR2, FR2-2

When **"Uplink Carrier Mode" on page 3041** is Sidelink - V2X, FR2 is unavailable

Preset `FR1`

State Saved Yes

Range `FR1|FR2|FR2-1|FR2-2`

Backwards Compatibility SCPI `[:SENSe]:RADio:STANdard:PRESet:FRANge`

Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility

Current FR value	Bandwidth selection changes to:					
	3,...,45 MHz	50 MHz	100 MHz	200 MHz	400 MHz	800,...2000 MHz

	60,...90 MHz					
FR1	FR1	FR1	FR1	FR2	FR2	FR2
FR2	FR1	FR2	FR2	FR2	FR2	FR2
FR2-1	FR1	FR2-1	FR2-1	FR2-1	FR2-1	FR2
FR2-2	FR1	FR2	FR2-2	FR2	FR2-2	FR2-2

FR2 behaves as A.35.00 backwards compatibility mode.

Duplex Mode

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Duplex Mode of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers” on page 3052** will also take on this value.

FDD, TDD, User Defined are supported.

- FDD: RB allocation is filled with all slots and symbols
- TDD: When the Direction is Downlink and any of NR Test Models is selected for RB Alloc Preset, then, RB allocation is filled with the specified TDD slots and symbols only, based on the 3GPP Tx Conformance Test specification definition
- User Defined: Allows you to configure Transmission Periodicity, Number of Slots and Symbols where RB allocation is filled with in TDD slots and symbols

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DMODE FDD TDD UDEFined</code> <code>[:SENSe]:RADio:STANdard:PRESet:DMODE?</code>
Example	<code>:RAD:STAN:PRES:DMOD TDD</code> <code>:RAD:STAN:PRES:DMOD?</code>
Dependencies	Available selections depend on Frequency Range When FR1 is selected, all three selections are available. When FR2, FR2-1, or FR2-2 is selected, only TDD and User Defined are available
Preset	TDD
State Saved	Yes
Range	FDD TDD User Defined

TDD / User Def. Configuration

Lets you access TDD slot configuration parameters on one screen.

Duplex Mode

This is the same as "Duplex Mode" on page 3033 in the Meas Standard menu panel.

DL FR1 NR-TM Reference Standard Selection

This is the same as "DL FR1 NR-TM Reference Standard Selection " on page 3041 in Meas Standard > Advanced Preset Parameters.

Transmission Periodicity

Allows you to select transmission periodicity that determines the User Defined TDD slot configuration pattern repetition period.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmiSSion:PERiodicity P0_5MS P0_625MS P1MS P1_25MS P2MS P2_5MS P5MS P10MS</code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmiSSion:PERiodicity?</code>
Example	<code>:RAD:STAN:PRES:TRAN:PER P0_5MS</code> <code>:RAD:STAN:PRES:TRAN:PER?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	<code>P5MS</code>
State Saved	Yes
Range	0.5 ms 0.625 ms 1 ms 1.25 ms 2 ms 2.5 ms 5 ms 10 ms

Number of Downlink Slots

Specifies how many downlink slots are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SLOT:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SLOT:COUNT?</code>
Example	<code>:RAD:STAN:PRES:DLIN:SLOT:COUN 1</code> <code>:RAD:STAN:PRES:DLIN:SLOT:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed

Preset	7
State Saved	Yes
Min	1
Max	Max slot count in the transmission periodicity

Number of Downlink Symbols

Specifies how many downlink symbols are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SYMBOL:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SYMBOL:COUNT?</code>
Example	<code>:RAD:STAN:PRES:DLIN:SYMB:COUN 1</code> <code>:RAD:STAN:PRES:DLIN:SYMB:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	6
State Saved	Yes
Min	1
Max	14

Number of Uplink Slots

Specifies how many uplink slots are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SLOT:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SLOT:COUNT?</code>
Example	<code>:RAD:STAN:PRES:ULIN:SLOT:COUN 1</code> <code>:RAD:STAN:PRES:ULIN:SLOT:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	2
State Saved	Yes
Min	1
Max	Max slot count in the transmission periodicity.

Number of Uplink Symbols

Specifies how many uplink symbols are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SYMBOL:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SYMBOL:COUNT?</code>
Example	<code>:RAD:STAN:PRES:ULIN:SYMB:COUN 1</code> <code>:RAD:STAN:PRES:ULIN:SYMB:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	4
State Saved	Yes
Min	1
Max	14

Number of Special Slots (Remote Query Only)

Queries the number of special slots in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SPECial:SLOT:COUNT?</code>
Example	<code>:RAD:STAN:PRES:SPEC:SLOT:COUN?</code>
Preset	1
Min	1
Max	Max slot count in the transmission periodicity - 1

TDD Slot Allocation(Remote Query Only)

Queries TDD slot allocation in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SLOT:ALLocation?</code>
Example	<code>:RAD:STAN:PRES:SLOT:ALL?</code>
Preset	"DDDDDDDSUU"

Ignore Duplex Mode for Fulfilled RB Alloc

This is the same as ["Ignore Duplex Mode for Fulfilled RB Alloc" on page 3050](#).

SCS

This control is part of the "Configure Presets" section of **Meas Standard**. It lets you set the subcarrier spacing of each component carrier. Set the value you want for

this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers” on page 3052** will also take on this value.

In 5G, subcarrier spacing is governed by $2^n * 15$ kHz subcarrier spacings (where n is 0, 1, 2, or 3). 15, 30, and 60 kHz subcarrier spacings are used for the lower frequency bands, and 60 and 120 kHz subcarrier spacings are used for the higher frequency bands.

Remote Command `[:SENSe]:RADio:STANdard:PRESet:SCS SCS15K | SCS30K | SCS60K | SCS120K | SCS480K | SCS960K`

For option details, see **“Selections & Dependencies” on page 345**

`[:SENSe]:RADio:STANdard:PRESet:SCS?`

`[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe] OFF | ON | 0 | 1`

`[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe]?`

Example `:RAD:STAN:PRE:SCS SCS30K`

`:RAD:STAN:PRE:SCS?`

`:RAD:STAN:PRE:SCS:AUTO 0`

`:RAD:STAN:PRE:SCS:AUTO?`

Notes Not preset to the selection until **Apply Preset (to All CCs)** is executed

Dependencies Available selections depend on a combination of Bandwidth and Frequency Range, as detailed in **“Selections & Dependencies” on page 345**

Preset `SCS30K`

`ON`

State Saved Yes

Yes

Range `u = 0: 15 kHz | u = 1: 30 kHz | u = 2: 60 kHz | u = 3: 120 kHz | u = 5: 480 kHz | u = 6: 960 kHz`
Auto|Man

	2000 MHz	960K*	SCS960K

(*) When in Auto, the narrowest available SCS is selected.

RB Alloc Preset

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Resource Block Allocation Preset of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers” on page 3052** will also take on this value.

The RB Alloc Preset presets the Resource Block (RB) allocation mapping to a selected predefined pattern in the list:

“Fulfilled-xxx” is to fill out all maximum available RBs in each CC with one specified modulation type (Pi/2-BPSK | QPSK | 16 QAM | 64 QAM | 256 QAM | 1024 QAM), and “DL-NR-TM x.x” is to map RBs in each CC based on the NR Test Model definition according to the section 4.9.2 in 3GPP TS38.141-1 or -2.

Remote Command `[:SENSe]:RADio:STANdard:PRESet:RBAlloc FQPSK | FQAM16 | FQAM64 | FQAM256 | FQAM1024 | DLTm1DOT1 | DLTm1DOT2 | DLTm2 | DLTm2Q16 | DLTm2QPS | DLTm2A | DLTm2B | DLTm3DOT1 | DLTm3DOT1Q16 | DLTm3DOT1QPS | DLTm3DOT1A | DLTm3DOT1B | DLTm3DOT2 | DLTm3DOT3 | FPIBPSK | DLTm1DOT1P1 | DLTm1DOT1L2`

For selection details, see **“Available Selections” on page 347**

`[:SENSe]:RADio:STANdard:PRESet:RBAlloc?`

Example `:RAD:STAN:PRESet:RBAlloc DLTm1DOT1`

`:RAD:STAN:PRESet:RBAlloc?`

Advanced Preset Parameters

Lets you access advanced preset parameters on one screen.

Uplink Carrier Mode

Allows you to select the uplink carrier mode: either Normal Uplink or Sidelink - V2X.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CARRier NORMa1 V2X</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CARRier?</code>
Example	<code>:RAD:STAN:PRES:ULIN:CARR NORM</code> <code>:RAD:STAN:PRES:ULIN:CARR?</code>
Dependencies	Available when the required license is installed and Direction is Uplink
Preset	When N9085EMOE is not installed and N9085EM4E is installed: V2X Otherwise: NORMa1
State Saved	Saved
Range	Normal Uplink Sidelink-V2X

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:NRTM TS38 TS37CS1617</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:NRTM?</code>
Example	<code>RAD:STAN:PRES:DLIN:NRTM TS38</code> <code>RAD:STAN:PRES:DLIN:NRTM?</code>
Dependencies	Grayed out when Radio Direction is Uplink.
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed.

Preset	TS38
State Saved	Yes
Range	TS38.141-1 TS37.141 BC3 CS16/17

OFDM Type

This control is part of the “Preset for Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you specify the OFDM Type to configure preset values for the Component Carriers:

- CP-OFDM
- DFT-s-OFDM

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the Number of Component Carriers will also take on this value.

This parameter is valid only for the Modulation Analysis measurement.

Remote Command	<code>[:SENSe] :RADio :STANdard :PRESet :OTYPe CPOFdm DFTSoFdm</code> <code>[:SENSe] :RADio :STANdard :PRESet :OTYPe ?</code>
Example	<code>:RAD :STAN :PRES :OTYP CPOF</code> <code>:RAD :STAN :PRES :OTYP ?</code>
Dependencies	DFT-s-OFDM is grayed out when Radio Direction is Downlink DFT-s-OFDM is grayed-out when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	<code>CPOFdm</code>
State Saved	Yes
Range	CP-OFDM DFT-s-OFDM

Adjust Limit Mask for Freq Range

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the frequency range for preset.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0. Values to be preset will be preset to the values described in the Values for Meas Standard section when Apply Preset is executed.

When in Manual, values to be preset will be preset to the values described in Values or Meas Standard according to this value when Apply Preset is executed.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command `[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge NONE | FT01 | F1T03 | F3T04P2 | F4P2T06 | F6T07 | F24P25T029P5 | F37T040 | F43T048 | F52T071`

For option details, see ["Selections & Dependencies" on page 351](#)

`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge?`

`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge:AUTO OFF | ON | 0 | 1`

`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge:AUTO?`

Example `:RAD:STAN:PRES:ADJ:FRAN F1T03`
`:RAD:STAN:PRES:ADJ:FRAN?`
`:RAD:STAN:PRES:ADJ:FRAN:AUTO 1`
`:RAD:STAN:PRES:ADJ:FRAN:AUTO?`

Dependencies Available selections depend on Frequency Range. See ["Selections & Dependencies" on page 351](#)

Couplings When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0
 Not preset to the selection until **Apply Preset (to All CCs)** is executed

Preset Automatically selected
 The selection depends on which listed range the CC0 center freq is in
ON

BS Type

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Type for preset:

- 1-C (FR1 Conducted)
- 1-O (FR1 Radiated)
- 2-O (FR2 Radiated)

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE FR1C FR10 FR20</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE?</code>
Example	<code>:RAD:STAN:PRES:DLIN:BS:TYPE FR1C</code> <code>:RAD:STAN:PRES:DLIN:BS:TYPE?</code>
Dependencies	Grayed out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed

Preset	FR1C
State Saved	Yes
Range	1-C (FR1 Conducted) 1-0 (FR1 Radiated) 2-0 (FR2 Radiated)

BS Category

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Category for preset:

- Category A Wide Area BS
- Category B Wide Area BS
- Category A Medium Range BS
- Category B Medium Range BS
- Category A Medium Range BS (Low Power rated)
- Category B Medium Range BS (Low Power rated)
- Category A Local Area BS
- Category B Local Area BS

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:CATegory AWARea BWARea AMRange BMRRange AMRLow BMRLow ALARea BLARea</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:CATegory?</code>
Example	<code>:RAD:STAN:PRES:DLIN:BS:CAT BWAR</code> <code>:RAD:STAN:PRES:DLIN:BS:CAT?</code>
Dependencies	Grayed-out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed
Preset	BWARea

State Saved	Yes
Range	Category A Wide Area BS Category B Wide Area BS Category A Medium Range BS Category B Medium Range BS Category A Medium Range BS (Low Power rated) Category B Medium Range BS (Low Power rated) Category A Local Area BS Category B Local Area BS

Assumed Adjacent Channels

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you set the Assumed Adjacent Channels for carrier configuration preset. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Downlink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE] NR EUTRa NREutra</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:DLIN:ACH NR</code> <code>:RAD:STAN:PRES:DLIN:ACH?</code>
Dependencies	UTRA and NR+UTRA are grayed-out when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X
Preset	NR
State Saved	Yes
Range	NR (same BW) E-UTRA NR + E-UTRA

Uplink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE] NR UTRa NRUTra</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:ULIN:ACH NR</code> <code>:RAD:STAN:PRES:ULIN:ACH?</code>
Preset	NR
State Saved	Yes
Range	NR (same BW) UTRA NR + UTRA

UE Power Class

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you select the UE Power Class for preset from Power Class 1 to 4.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP and Mod Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PCLass CLASS1 ... CLASS4</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PCLass?</code>
Example	<code>:RAD:STAN:PRES:ULIN:PCL CLASS3</code> <code>:RAD:STAN:PRES:ULIN:PCL?</code>
Dependencies	Grayed out when Radio Direction is Downlink Power Class 4 is grayed out when Frequency Range is FR1 Power Class 1, 2, and 4 are grayed-out when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X
Preset	CLASS3
State Saved	Yes
Range	1 2 3 4

Uplink Channel Type

This control is part of the “Preset for Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you set the Uplink Channel Type to preset parameters for the Transmit On|Off Power measurement. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe NONE PUS PRA4 PRA160S15 PRA160S30 PRA12 PRA123S15 PRA123S30 SRS PRA0S60 PRA0S120</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe?</code>
Example	<code>:RAD:STAN:PRES:ULIN:CTYP PUS</code> <code>:RAD:STAN:PRES:ULIN:CTYP?</code>
Dependencies	Available selections differ depending on the combination of Freq Range and Duplex Mode as follows: When Freq Range is FR1 and Duplex Mode is FDD: - PUSCH, PRACH Config Index4, PRACH Config Index160 and SRS When Freq Range is FR1 and Duplex Mode is TDD: - PUSCH, PRACH Config Index12, PRACH Config Index123 and SRS When Freq Range is FR2: - PUSCH, PRACH Config Index0, SRS
Preset	PUS

State Saved	Yes
Range	PUSCH PRACH Config Index 4 PRACH Config Index 160 (15 kHz SCS) PRACH Config Index 160 (30 kHz SCS) PRACH Config Index 12 PRACH Config Index 123 (15 kHz SCS) PRACH Config Index 123 (30 kHz SCS) PRACH Config Index 0 (60 kHz SCS) PRACH Config Index 0 (120 kHz SCS) SRS

Apply Preset (to All CCs)

This is the same as the Apply Preset (to All CCs) control on the Meas Standard menu panel tab under Meas Standard.

See ["Apply Preset \(to All CCs\)" on page 3051](#).

More Advanced Preset Parameters

Enables you to configure more advanced Apply Preset features.

Include RB Alloc Preset for Mod Analysis

Enables you to select whether or not RB Alloc Preset is preset when “Apply Preset (to All CCs)” is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc?</code>
Example	<code>:RAD:STAN:PRES:INCL:EVM:RBAL 1</code> <code>:RAD:STAN:PRES:INCL:EVM:RBAL?</code>
Notes	When Exclude is selected, the indicator “Exclude EVM RB Alloc” appears on the Meas Setup menu panel
Preset	ON
State Saved	Yes

Include Gate Source

Enables you to select whether or not Gate Source is preset when “Apply Preset (to All CCs)” is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce?</code>
Example	<code>:RAD:STAN:PRES:INCL:EGAT:SOUR 1</code> <code>:RAD:STAN:PRES:INCL:EGAT:SOUR?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Period

Enables you to select whether or not Periodic Timer Period is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:PER 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:PER?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Source

Enables you to select whether or not Periodic Timer Sync Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce] OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce]?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:SYNC?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Holdoff

Enables you to select whether or not Periodic Timer Sync Holdoff is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD?</code>
Preset	ON
State Saved	Yes

Ignore Duplex Mode for Fulfilled RB Alloc

Enables you to select in Modulation Analysis measurement whether or not to ignore Duplex Mode for Fulfilled preset when “Apply Preset (to All CCs)” is executed. This parameter is valid only for the TDD duplex mode.

On: for fulfill preset FDD preset will be applied to modulation analysis measurement regardless of Duplex Mode setting

Off: for fulfill preset TDD preset based on the DL NR-TM will be applied to modulation analysis measurement

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDCon-fig]:RBALloc:FULFilled:IGNore:DMODe OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDCon-fig]:RBALloc:FULFilled:IGNore:DMODe?</code>
Example	<code>:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD 1</code> <code>:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD?</code>
Notes	Only apply to Modulation Analysis measurement
Dependencies	Unavailable when Duplex Mode is FDD, or Duplex Mode is User Defined, or Frequency Range is FR2, or RB Alloc Preset is DL NR TM
Preset	ON
State Saved	Yes

Adjust Meas Time Length for TM

Enables you to select in Modulation Analysis measurement whether or not to adjust Meas Time settings when Test Model preset is selected and “Apply Preset (to All CCs)” is executed.

None: do not adjust Meas Time settings for Test Model

1 Frame: adjust Meas Time settings for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
All	22 msec	10 Sub Frame	10 Sub Frame	Frame

3GPP: adjust Meas Time Setting for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
FR1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-2 (120K SCS)	32 msec	160 slots	160 slots	slot

3 5G NR/5G-A Mode
3.2 Channel Power Measurement

FR2-2 (480K SCS)	17 msec	160 slots	160 slots	slot
FR2-2 (960K SCS)	14.5 msec	160 slots	160 slots	slot

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth NONE FRAME GPP</code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth?</code>
Example	<code>:RAD:STAN:PRES:RBAL:TIME:LENG GPP</code> <code>:RAD:STAN:PRES:RBAL:TIME:LENG?</code>
Notes	Only apply to Modulation Analysis measurement
State Saved	Yes

Apply Preset (to All CCs)

When you press this control, parameters of each component carrier are configured to the values of parameters in the Meas Standard menu. These values will also be used for any subsequent Component Carriers created.

NOTE

You must press **“Apply Preset (to all CCs)”** or the values on the controls in the **“Configure Presets”** section of the menu panel will *not* affect the Component Carriers.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:IMMEDIATE</code>
Example	<code>:RAD:STAN:PRES:IMM</code>
Notes	Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until “Apply Preset” is executed again <ul style="list-style-type: none"> - Start-up - Mode Preset - Recall

Apply Preset (to CC)

When you press this control, parameters of the component carrier (specified by Apply Preset To) are configured to the values of parameters in the Meas Standard menu.

NOTE

This action is available only for EVM.

You must press “Apply Preset (to CC)” or the values on the controls in the “Configure Presets” section of the menu panel will not affect the Component Carriers.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:RADio:STANdard:PRESet:IMMediate</code>
Example	<code>:EVM:CCAR:RAD:STAN:PRES:IMM</code>
Notes	Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until “Apply Preset” is executed again <ul style="list-style-type: none"> - Start-up - Mode Preset - Recall

Apply Preset To

Specifies the component carrier for Apply Preset (to CC).

NOTE This action is available only for EVM.

Preset	All
State Saved	Saved in instrument state
Range	CC0 CC1 CC2 CC3 CC4 CC5 CC6 CC7 CC8 CC9 CC10 CC11 CC12 CC13 CC14 CC15 ALL

NOTE

3.2.8.4 Values for Meas Standard

For parameters to be preset when executing "Apply Preset", see "[Values for Meas Standard](#)" on page 2614 and its subsections under **Monitor Spectrum**.

3.2.8.5 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your 5G NR signal.

Number of Component Carriers

Specifies how many component carriers are included in the 5G NR measurements. The 5G NR supports the maximum of 16 component carriers.

Remote Command	<code>[:SENSe]:CCARrier:COUNT <integer></code> <code>[:SENSe]:CCARrier:COUNT?</code>
Example	<code>:CCAR:COUN 1</code> <code>:CCAR:COUN?</code>
Preset	1
State Saved	Yes
Min	1
Max	16

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous NCONtiguous</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation?</code>
Example	<code>:CCAR:CONF:ALL CONT</code> <code>:CCAR:CONF:ALL?</code>
Preset	<code>CONTiguous</code>
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 ... CC15</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?</code>
Example	<code>:CCAR:CONF:ALL:NCON:ABP CC0</code> <code>:CCAR:CONF:ALL:NCON:ABP?</code>
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0-CC1 if the number of Component Carriers is 2
Preset	<code>CC0</code>
State Saved	Saved in instrument state
Range	<code>CC0 ... CC15</code>

Configure Comp Carriers

This dialog lets you perform a detailed configuration of your component carriers, including number of carriers, bandwidth, offset, integration bandwidth, and so on.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

More Information

"Measure Carrier" on page 3057	"Sidelink" on page 1627	"Bandwidth" on page 3057	"Freq Range" on page 3058
"Freq Offset" on page 3058	"Cell ID Auto" on page 3059	"Cell ID Value" on page 3059	"Demod Spectrum" on page 3060
"CHP Power Integration Bandwidth" on page 3060	"ACP Power Integration Bandwidth" on page 3061	"SEM Power Integration Bandwidth" on page 3062	"N_Grid_Size (Display Only)" on page 3062
"SCS (Power Meas)" on page 3063			

Number of Component Carriers

This is the same as the control on the menu panel. See "[Number of Component Carriers](#)" on page 3052.

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	[:SENSe]:CCARrier:AFOffset OFF ACRA100K ACRA15K ACRA60K CARA100K CARA15K CARA60K [:SENSe]:CCARrier:AFOffset?	
Example	:CCAR:AFOF ACRA100K :CCAR:AFOF?	
Notes	When you change the value to OFF , nothing happens	
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate frequency offset unless OFF is selected When CC's Frequency Offset is manually changed, this parameter is set to OFF This feature isn't supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CCO Freq Offset is automatically adjusted to 0 Hz	
Preset	OFF	
State Saved	Yes	
Range	The cascading list is shown below	
	Channel Spacing for	Channel Raster
	Adjacent NR Carriers	100 kHz
	Carrier Aggregation	15 kHz
	Off	60 kHz
	Channel Spacing for	Channel Raster
	Adjacent NR Carriers	100 kHz
	Carrier Aggregation	15 kHz
	Off	60 kHz
	Channel Spacing for	Channel Raster
	Adjacent NR Carriers	
	Carrier Aggregation	
	Off	

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous NCONTiguous</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation?</code>
Example	<code>:CCAR:CONF:ALL CONT</code> <code>:CCAR:CONF:ALL?</code>
Preset	CONTiguous
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command `[:SENSe]:CCARrier:CONFig:ALLocation:NCONTiguous:ABPoint CC0 | ... | CC15`

	<code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?</code>
Example	<code>:CCAR:CONF:ALL:NCON:ABP CC0</code> <code>:CCAR:CONF:ALL:NCON:ABP?</code>
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	<code>CC0</code>
State Saved	Saved in instrument state
Range	<code>CC0 ... CC15</code>

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe] OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe]?</code>
Example	<code>:CCAR0 ON</code> <code>:CCAR0?</code>
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action "Apply Preset (to All CCs)" is executed
Preset	ON
State Saved	Saved in instrument state

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth B3M B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth?</code>
Example	<code>:CCAR4:RAD:STAN:BAND B50M</code>
Dependencies	When " Sidelink " on page 1627 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	B100M unless noted below

	<ul style="list-style-type: none"> - Option B25: B20M - Option B40: B35M - Option B85: B80M
State Saved	Yes
Range	3 MHz 5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge FR1 FR2</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge?</code>
Example	<code>:CCAR1:RAD:STAN:FRAN FR1</code>
Dependencies	Available selections differ depending on "Bandwidth" on page 3057 as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only
Couplings	This value will be preset to the Frequency Range value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	<code>FR1</code>
State Saved	Yes
Range	<code>FR1 FR2</code>

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	<code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq></code> <code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet?</code>
Example	<code>:CCAR4:FREQ:OFFS 10MHz</code> <code>:CCAR4:FREQ:OFFS?</code>
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range

of the sub-op code is determined by the number of component carriers
 Frequency Offset of CC0 to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly

Also, in some cases, make sure if the “Non-Contiguous Break at” parameter is set to the intended value since it’s often left unchanged after Frequency Offset of CCs are changed

Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Cell ID Auto

Enable and disable Cell ID auto detection based on SSB.

NOTE This setting is available for EVM measurement only.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE AUTO MANua1</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE?</code>
Example	<code>:EVM:CCAR:CID:MODE MAN</code> <code>:EVM:CCAR:CID:MODE?</code>
Preset	<code>MANua1</code>
State Saved	Saved in instrument state

Cell ID Value

Specify Cell ID for the component carrier.

NOTE This setting is available for EVM measurement only.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID?</code>
Example	<code>:EVM:CCAR4:CID 0</code> <code>:EVM:CCAR4:CID?</code>
Couplings	Invalid when Cell ID Auto is on
Preset	0

State Saved	Saved in instrument state
Min	0
Max	1007

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum NORMal INVert</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum?</code>
Example	<code>:CCAR0:SPEC INV</code> <code>:CCAR0:SPEC?</code>
Preset	<code>NORM</code>
State Saved	Yes
Range	Normal Invert

CHP Power Integration Bandwidth

This column specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

NOTE This setting is *not* available for EVM.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration?</code>
Example	<code>:CCAR0:CHP:BAND:INT 20MHz</code> <code>:CCAR0:CHP:BAND:INT?</code>
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:ACP:BAND:INT 20MHz</code> <code>:CCAR0:ACP:BAND:INT?</code>
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS

Couplings When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table
When Freq Range is FR1

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
3 MHz	2.700	2.715
5 MHz	4.500	4.515
10 MHz	9.360	9.375
15 MHz	14.220	14.235
20 MHz	19.080	19.095
25 MHz	23.940	23.955
30 MHz	28.800	28.815
35 MHz	33.840	33.855
40 MHz	38.880	38.895
45 MHz	43.560	43.575
50 MHz	48.600	48.615
60 MHz	58.320	58.350
70 MHz	68.040	68.070
80 MHz	78.120	78.150
90 MHz	88.200	88.230
100 MHz	98.280	98.310

When Freq Range is FR2

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
-----------	----------------------------------	--------------------------------

	50 MHz	47.520	47.580
	100 MHz	95.040	95.160
	200 MHz	190.080	190.20
	400 MHz	380.160	380.280
	800 MHz	714.24	715.20
	1600 MHz	1428.48	1429.44
	2000 MHz	1704.96	1705.92
Preset	98.280 MHz 98.310 MHz		
State Saved	Yes		
Min	100 kHz		
Max	2000 MHz		

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:SEM:BAND:INT 20MHz</code> <code>:CCAR0:SEM:BAND:INT?</code>
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

N_Grid_Size (Display Only)

Display Max RB Number for each available numerology. To adjust this setting please switch to Resource Grid tab.

NOTE

This setting is available for EVM measurement only.

3GPP TS38.104 or TS38.101-1 Table 5.3.2-1: Maximum transmission bandwidth configuration N_{RB} for FR1

3GPP TS38.104 Tables 5.3.2-2 and 5.3.2-3 or TS38.101-2 Table 5.3.2-1: Maximum transmission bandwidth configuration N_{RB} for FR2

SCS	50 MHz	100 MHz	200 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	66	132	264	N.A	N.A	N.A	N.A
120	32	66	132	264	N.A	N.A	N.A
480	N.A	N.A	N.A	66	124	248	N.A
960	N.A	N.A	N.A	33	62	124	148

NOTE: For the “N.A” value in above table, the value will be set to 0 and displayed as “ ---”.

SCS (Power Meas)

Queries the SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier set with **"SCS Enabled" on page 3066**.

It is used to calculate the aggregated channel bandwidth when Power Reference is set to Aggregated Chan BW.

Power Integration Bandwidth values are not affected even if SCS (Power Meas) is changed.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RGRid:PMSCs?</code>
Example	<code>:CCAR3:RGR:PMSC?</code>
Notes	Query-only Returns one of the following values: NONE, SCS15K, SCS30K, SCS60K, SCS120K, SCS240K, SCS480K, SCS960K

Resource Grid

Enables you to configure resource grid for each available numerology of each component carrier.

NOTE

This tab and the following controls are available only for Modulation Analysis measurement.

Component Carrier (GUI only)

Selects the Component Carrier to configure its resource grid for each available numerology.

Bandwidth

This is the same as the Bandwidth column in the Configure CCs table. See ["Bandwidth" on page 3057](#).

Freq Range

This is the same as the Freq Range column in the Configure CCs table. See ["Freq Range" on page 3058](#)

Configuration Mode

Selects the configuration mode for resource grid table:

- Auto – always reset N_grid_start and N_grid_size when the frequency range and bandwidth of component carrier are changed. SCS enable/disable state will not be changed, unless enabled SCS is invalid for new frequency range and bandwidth. If all enabled SCS are invalid for new frequency range and bandwidth, 30K SCS will be enabled for frequency range 1 and 120K SCS will be enabled for frequency range 2

3 5G NR/5G-A Mode
 3.2 Channel Power Measurement

- Man – keep the value in grid table when the frequency range and bandwidth of component carrier are changed, unless a value is invalid for new frequency range and bandwidth

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO ON OFF 1 0</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO?</code>
Example	<code>:EVM:CCAR:RGR:CONF:AUTO 0</code> <code>:EVM:CCAR:RGR:CONF:AUTO?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON 0 1

When the configuration mode is Auto, the default N_{grid_start} is set to 0 and N_{grid_size} is set according to tables below:

Table 5.3.2-1: Transmission bandwidth configuration N_{RB} for FR1

S	5	1	1	2	2	3	3	4	4	5	6	7	8	9	1
C	M	0	5	0	5	0	5	0	5	0	0	0	0	0	0

													7	1	5

Table 5.3.2-2: Transmission bandwidth configuration N_{RB} for FR2

SCS	50 MHz	100 MHz	200 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}						
60	66	132	264	N.A	N.A	N.A	N.A
120	32	66	132	264	N.A	N.A	N.A
480	N.A	N.A	N.A	66	124	248	N.A
960	N.A	N.A	N.A	33	62	124	148

SCS Enabled

The Enabled column lets you enable or disable selected SCS for current component carrier.

Remote Command	<pre>[:SENSe][:EVM]:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k [:STATe] OFF ON 0 1 [:SENSe][:EVM]:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k [:STATe]?</pre>
Example	<pre>:EVM:CCAR:RGR:SCS15 ON :EVM:CCAR:RGR:SCS15?</pre>
Notes	<p>Only valid numerology for selected frequency range and bandwidth will be visible. Some SCS are disabled if they are "N.A" in Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104)" in the Section 3.2.5.1.15, N_Grid_Size (Display Only)</p> <p>In EVM, if Configuration Mode is Auto and Freq Range is changed, the Grid Start and Grid Size will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p> <p>In measurements other than EVM, when Freq Range is changed, the parameter will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p>
Preset	<pre>SCS 15k : OFF SCS 30k : ON SCS 60k : OFF SCS 120k: OFF SCS240K: OFF SCS480K:OFF SCS960K:OFF</pre>
State Saved	Yes

N_grid_start

This column lets you set the Grid Start value for the selected numerology.

Remote Command	<pre>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:STARt <integer> [:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:STAR- t?</pre>
Example	<pre>:EVM:CCAR:RGRid:SCS15k:STAR 0 :EVM:CCAR:RGRid:SCS15k:STAR?</pre>
Preset	Depends on frequency range, bandwidth and numerology

3 5G NR/5G-A Mode
3.2 Channel Power Measurement

State Saved	Yes
Min	0
Max	Depends on frequency range, bandwidth and numerology

N_grid_size

This column lets you set the Grid Size for the selected numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE <integer></code> <code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:SIZE 270</code> <code>:EVM:CCAR:RGR:SCS15k:SIZE?</code>
Notes	Grid Size should not exceed the Nrb in Table 5.3.2-1 or Table 5.3.2-2 of 3GPP TS38.104 and TS38.101-1 & -2
Preset	Depends on frequency range and bandwidth
State Saved	Yes
Min	6
Max	Depends on frequency range, bandwidth and numerology
Backwards Compatibility SCPI	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RBNumber:SCS15k SCS30k SCS60k SCS120k SCS240k</code>

k0 (Display Only)

This column displays the k0 value for the selected Numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:k0?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:k0?</code>

More Information

See picture below for illustration how k0 is calculated.

Intra-Cell Guard Band

Enter a comma-separated string to set guard band. Consecutive numbers will be merged into one guard band. At most, 4 guard bands are allowed and the rest will be omitted. Colon-separated numbers represent the start and stop of a guard band.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:SCS15k SCS30k:GBANd <string></code>
Example	<code>:EVM:CCAR:RGR:SCS15k:GBAN "0:9"</code> <code>:EVM:CCAR:RGR:SCS15k:GBAN?</code>
Couplings	Only visible for Uplink and only available for 15kHz/30kHz numerology
State Saved	Yes

RB Set (Display Only)

Display the RB set according to Intra-Cell Guard Band setting.

Point A Frequency (Display Only)

This figure displays the Point A Freq for the resource grid.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:REFA?</code>
Example	<code>:EVM:CCAR:RGR:REFA?</code>

LTE Coexistence

This tab and the following controls are available only for Modulation Analysis measurement, and it will only appear for DL FR1 component carriers.

Add LTE (GUI only)

Pressing this control inserts a new LTE-CRS configuration into the list, the maximum number of LTE-CRS configurations is 4.

Delete LTE (GUI only)

Pressing this control deletes selected LTE-CRS configuration from the list.

Clear All (GUI only)

Pressing this control deletes all LTE-CRS configurations from the list.

Effective LTE Number (Remote Command only)

Specifies how many LTE-CRS configurations are effective. This SCPI only command is used to provide similar functions such as “Add LTE” and “Delete LTE”.

Note that all 4 LTE-CRS configurations can be modified through SCPI, but ineffective LTE-CRS configurations (index > Effective LTE Number) will not be included in the measurement no matter whether its state is “On” or “Off”.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:NUMBER:LTE <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:NUMBER:LTE?</code>
Example	<code>:EVM:CCAR:NUMB:LTE 2</code> <code>:EVM:CCAR:NUMB:LTE?</code>
Couplings	Max value is 4 If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	4

State

Enable or disable the LTE coexistence.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATe]?</code>
Example	<code>:EVM:CCAR:LTE1 OFF</code>

	<code>:EVM:CCAR:LTE1?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message This control is available only when 15K SCS is enabled in the resource grid
Preset	<code>OFF</code>
State Saved	Yes

Bandwidth

Set the LTE bandwidth.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW B1M4 B3M B5M B10M B15M B20M</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW?</code>
Example	<code>:EVM:CCAR:LTE1:BW B20M</code> <code>:EVM:CCAR:LTE1:BW?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	<code>B5M</code>
State Saved	Yes
Range	1.4 MHz 3 MHz 5 MHz 10 MHz 15 MHz 20 MHz

Carrier Offset to Point A

Sets the LTE carrier center subcarrier location determined by the offset from point A using 15K SCS.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset?</code>
Example	<code>:EVM:CCAR:LTE1:COFF 0</code> <code>:EVM:CCAR:LTE1:COFF?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	0
State Saved	Yes
Min	0
Max	16383

MBSFN Subframes

Sets the subframe index that can be configured as MBSFN subframes in LTE.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame <string></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame?</code>
Example	<code>:EVM:CCAR:LTE:MBSF:SFR "2:9"</code> <code>:EVM:CCAR:LTE:MBSF:SFR?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
State Saved	Yes

Number of CRS Antenna Ports

Set the number of antenna ports for LTE-CRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer N1 N2 N4</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB N1</code> <code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	N1
State Saved	Yes
Range	1 2 4

v-shift

Set the v-shift value for LTE-CRS; it is given by LTE Cell ID mod 6.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:VSH 0</code> <code>:EVM:CCAR:LTE1:CRS:VSH?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error

Advanced Acquisition

This menu is available only for the Modulation Analysis measurement. It enables you to configure selected RF settings for each component carrier and channel.

Number of Component Carriers

This is the same as the control on the menu panel. See ["Number of Component Carriers" on page 3052](#).

Input Channel (GUI Only)

Select the input channel to configure its settings.

State Saved	No
-------------	----

Use Advanced Acquisition Table

Specify if the settings in Advanced Acquisition Table will be applied.

Remote Command	<code>[:SENSe]:RF:ACQuistion:ATABle OFF ON 0 1</code> <code>[:SENSe]:RF:ACQuistion:ATABle?</code>
Example	<code>:RF:ACQ:ATAB 1</code> <code>:RF:ACQ:ATAB?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON

IF Path Auto

Specify if the IF path in Advanced Acquisition Table will be automatically or manually selected.

Remote	<code>[:SENSe]:RF:ACQuistion:ATABle:IFPath:AUTO ON OFF 1 0</code>
--------	--

Command	<code>[:SENSe]:RF:ACQuIstion:ATABle:IFPath:AUTO?</code>
Example	<code>:RF:ACQ:ATAB:IFP:AUTO 1</code> <code>:RF:ACQ:ATAB:IFP:AUTO?</code>
Preset	ON
State Saved	Yes
Range	OFF ON

Mechanical Attenuation

Set mechanical attenuation for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:ATT 20</code>
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. To get to a value below 6 dB it has to be directly entered from the keypad or via SCPI. This protects from adjusting the attenuation to a dangerously small value which can put the instrument at risk of damage to input circuitry. However, if the current mechanical attenuation is below 6 dB it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB

Elec Attenuation

Set electronic attenuation for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:EATT 20</code>
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual attenuator configuration: 24 dB Single attenuator configuration: the total of ATT and EATT cannot exceed 50 dB, so if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB

LNA

Turn on/off Low Noise Amplifier (LNA) for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:LNA ON</code>
Dependencies	Requires option LNA
Preset	OFF
State Saved	Saved in State

Internal Preamp

Turn on/off internal preamp for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:PREamp OFF LOW FULL</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:PREamp?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:PRE LOW</code> <code>:CCAR0:RF:CHAN1:GAIN:PRE?</code>
Dependencies	Preamp is not available on all hardware platforms. If the preamp is not present or is unlicensed, the control is not shown
Preset	OFF
State Saved	Saved in instrument state

uW Path Control

Select uW Path for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH STD LNPath MPBypass FULL</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH?</code>
Example	<code>:CCAR0:RF:CHAN1:MW:PATH LNP</code> <code>:CCAR0:RF:CHAN1:MW:PATH?</code>
Preset	MPB option present and licensed: MPB MPB option not present and licensed: STD
State Saved	Save in instrument state
Range	Standard Path Low Noise Path Enable μW Presel Bypass Full Bypass Enable

IF Gain

Set IF Gain for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:IF:GAIN:LEVel <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:IF:GAIN:LEVel?</code>
Example	<code>:CCAR0:RF:CHAN1:IF:GAIN:LEV -10</code> <code>:CCAR0:RF:CHAN1:IF:GAIN:LEV?</code>
Notes	Not available for B25 IF bandwidth option
Preset	0
State Saved	Save in instrument state
Min	Depends on CC Bandwidth
Max	Depends on CC Bandwidth

IF Path

Specify IF path manually for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath B10M B25M B40M B85M B125M B140M B160M B255M B510M B1G B1500M B2G B4G</code> <code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath?</code>
Example	<code>:CCAR0:RF:CHAN1:IFP B160M</code> <code>:CCAR0:RF:CHAN1:IFP?</code>
Notes	B10M = 10 MHz B25M = 25 MHz B40M = 40 MHz B85M = 85 MHz B125M = 125 MHz B140M = 140 MHz B160M = 160 MHz B255M = 255 MHz B510M = 510 MHz B1G = 1 GHz B1500M = 1.5 GHz B2G = 2 GHz B4G = 4 GHz In cases where the path is not available but is selected from SCPI, it generates an error - 241, "Hardware missing; Option not installed"

Dependencies	Gray out if IF Path Auto is On
Preset	Automatically selected IF path according to measurement required IFBW and available HW bandwidth

Measure CC

Selects the component carrier to be measured in the uplink time mask measurement.

NOTE

The parameter is available only for the Transmit On|Off Power measurement.

Remote Command	<code>[:SENSe]:PVTTime:ULINK:CCARrier CC0 ... CC15</code> <code>[:SENSe]:PVTTime:ULINK:CCARrier?</code>
Example	<code>:PVT:ULINK:CCAR CC0</code> <code>:PVT:ULINK:CCAR?</code>
Dependencies	Available only when Radio Direction is Uplink
Preset	<code>CC0</code>
State Saved	Yes
Range	CC0 CC1 CC2 CC3 CC4 CC5 CC6 CC7 CC8 CC9 CC10 CC11 CC12 CC13 CC14 CC15

3.2.8.6 Advanced

Contains controls for setting advanced functions of the instrument.

Does not appear in VXT.

Phase Noise Optimization

Lets you select the LO (local oscillator) phase noise behavior for various operating conditions. When in Auto, selects the LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions.

For full details, see "[Parameter Options, Installed Options & Ranges](#)" on page 385 below.

Remote Command	<code>[:SENSe]:CHPower:FREQUENCY:SYNThesis[:STATe] 1 ... 5</code> For the meaning of each numeric option value, see " Parameter Options, Installed Options & Ranges " on page 385 below <code>[:SENSe]:CHPower:FREQUENCY:SYNThesis[:STATe]?</code>
Example	<code>:CHP:FREQ:SYNT 1</code>

:CHP:FREQ:SYNT?	
Dependencies	Does not appear in all models. For models in which the control is not displayed, the SCPI command is accepted for compatibility, although no action is taken
Preset	3
State Saved	Saved in instrument state
Range	See "Ranges" on page 390 below
Auto Function	
Remote Command	[:SENSe]:CHPower:FREQuency:SYNTHeSis:AUTO[:STATe] OFF ON 0 1 [:SENSe]:CHPower:FREQuency:SYNTHeSis:AUTO[:STATe]?
Example	:CHP:FREQ:SYNT:AUTO 1 :CHP:FREQ:SYNT:AUTO?
Preset	OFF

Parameter Options, Installed Options & Ranges

The Phase Noise Optimization control lets you optimize the setup and behavior of the Local Oscillator (LO) depending on your specific measurement conditions. You may wish to trade off noise and speed, for example, to make a measurement faster without regard to noise or with optimum noise characteristics without regard to speed.

Parameter Values Summary

Option	#	Description
"Balanced" on page 386	1	<ul style="list-style-type: none"> - In instruments with EPO, balances close-in phase noise with spur avoidance - In instruments without EPO optimizes phase noise for small frequency offsets from the carrier
"Best Wide-offset" on page 387	2	Optimizes phase noise for wide frequency offsets from the carrier
"Fast Tuning" on page 387	3	Optimizes LO for tuning speed
"Best Close-in" on page 386	4 or 1*	<ul style="list-style-type: none"> - In instruments with EPO, emphasizes close-in phase noise performance without regard to spur avoidance - In instruments without EPO, this setting is accepted but no action is taken
"Best Spurs" on page 386	5	<ul style="list-style-type: none"> - In instruments with EPO, emphasizes spur avoidance over close-in phase noise performance - In instruments without EPO, this setting is accepted but no action

Option	#	Description
		taken
Auto	-	Automatically selects LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions

*Dependent on Option EPO installation. See "[Best Close-in](#)" on page 386 below.

The actual behavior varies somewhat depending on model number and option; for example, you always get Fast Tuning by choosing Option #3, but in some models, "[Fast Tuning](#)" on page 387 is identical in effect to "[Best Close-in](#)" on page 386.

Best Close-in

Without option EPO

`:FREQ:SYNT 1`

The LO phase noise is optimized for smaller offsets from the carrier, at the expense of phase noise farther out.

The actual frequency offset within which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset <20 kHz]

With option EPO

`:FREQ:SYNT 4`

In instruments with Option EPO, the LO is configured for the best possible close-in phase noise (offsets up to 600 kHz from the carrier), regardless of spurious products that occur with some center frequencies. Because this is generally less desirable for close-in measurements than the "[Balanced](#)" on page 386 setting, parameter 1 selects "[Balanced](#)" on page 386 in EPO instruments, in the interests of optimizing code compatibility across the family. Parameter 4 selects "[Best Close-in](#)" on page 386, which is usually not as good a choice as "[Balanced](#)" on page 386.

Balanced

`:FREQ:SYNT 1`

In instruments with EPO, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ± 1 octave around 400 kHz offset. The spurs will always be below -70 dBc.

Best Spurs

`:FREQ:SYNT 5`

In instruments with EPO, the LO is configured for better phase noise than the ["Best Wide-offset" on page 387](#) case close to the carrier, but the configuration has 11 dB worse phase noise than the ["Best Close-in" on page 386](#) case mostly within ± 1 octave around 300 kHz offset. Spurs are even lower than in the ["Balanced" on page 386](#) case at better than -90 dBc, whether or not the carrier is on-screen.

This setting is never selected when Phase Noise Optimization is in Auto, you must select it manually.

Best Wide-offset

`:FREQ:SYNT 2`

The LO phase noise is optimized for wider offsets from the carrier. Optimization is especially improved for offsets from 70 kHz to 300 kHz. Closer offsets are compromised and the throughput of measurements (especially remote measurements where the center frequency is changing rapidly), is reduced.

The actual frequency offset beyond which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset >30 kHz]

In instruments with Option EP0, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ± 1 octave around 400 kHz offset. The spurs will always be below -70 dBc.

Fast Tuning

`:FREQ:SYNT 3`

In this mode, the LO behavior compromises phase noise at many offsets from the carrier in order to allow rapid measurement throughput when changing the center frequency or span. The term ["Fast Tuning" on page 387](#) refers to the time it takes to move the local oscillator to the start frequency and begin a sweep; this setting does not impact the actual sweep time in any way.

In instruments with EP1, the LO behavior compromises phase noise at offsets below 4 MHz in order to improve measurement throughput. The throughput is especially affected when moving the LO more than 2.5 MHz and up to 10 MHz from the stop frequency to the next start frequency.

In instruments with Option EP0, this is the same configuration as ["Best Spurs" on page 386](#). It is available with the ["Fast Tuning" on page 387](#) label for convenience, and to make the user interface more consistent with other X-Series instrument family members.

(In models whose hardware does not provide for a "Fast Tuning" on page 387 option, the settings for "Best Close-in" on page 386 are used if "Fast Tuning" on page 387 is selected. This gives the fastest possible tuning for that hardware set.)

Auto

`:FREQ:SYNT:AUTO ON`

Selects the LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions. The selection rules are as follows.

Auto Optimization Rules

X-Series instruments have several grades of LO, offering different configurations when in the Auto Mode. The rules for Auto selection are as follows:

Models with Option	Conditions	Selection
EPO Models with option EPO have a two stage local oscillator, which switches to a single loop for fast tuning (available in UXA)	Center frequency is < 699.9 kHz Span > 114.1 MHz, <i>or</i> RBW > 800 kHz RBW > 290 kHz, <i>or</i> Span > 4.2 MHz Other conditions	"Balanced" on page 386 "Fast Tuning" on page 387 "Best Wide-offset" on page 387 "Balanced" on page 386
EP1 Models with option EP1 have a two-loop local oscillator, which switches to a single loop for fast tuning (available in PXA)	Span > 44.44 MHz, <i>or</i> RBW > 1.9 MHz, <i>or</i> Source Mode is set to "Tracking" Center frequency is < 195 kHz, <i>or</i> CF >= 1 MHz <i>and</i> Span <= 1.3 MHz <i>and</i> RBW <= 75 kHz All other conditions	"Fast Tuning" on page 387 "Best Close-in" on page 386 "Best Wide-offset" on page 387
EP2 Models with option EP2 use a different loop bandwidth for the fast-tuning choice, which is a compromise between tuning speed and phase noise, giving good tuning speed at all offsets. Although not as good as for	CF < 130 kHz, <i>or</i> CF > 12 MHz <i>and</i> Span < 495 kHz <i>and</i> RBW < 40 kHz	"Best Close-in" on page 386

3 5G NR/5G-A Mode
3.2 Channel Power Measurement

Models with Option	Conditions	Selection
"Best Close-in" on page 386; this is useful when you have to look across a wide range of spans (available, for example, in MXA for excellent phase noise)	Span > 22 MHz, <i>or</i> RBW > 400 kHz, <i>or</i> CF ≤ 12 MHz <i>and</i> Span < 495 kHz <i>and</i> RBW < 23 kHz All other conditions	"Fast Tuning" on page 387 "Best Wide-offset" on page 387
EP4 (available in CXA for improved phase noise)	Span > 101 MHz <i>or</i> RBW > 1.15 MHz <i>or</i> Source Mode is set to "Tracking" CF is < 109 kHz <i>or</i> CF ≥ 4.95 MHz <i>and</i> Span ≤ 666 kHz <i>and</i> RBW < 28 kHz All other conditions	"Fast Tuning" on page 387 "Best Close-in" on page 386 "Best Wide-offset" on page 387
All Other Models Note that in these models, the hardware does not actually provide for an extra-fast tuning option, so the settings for "Fast Tuning" on page 387 are actually the same as "Best Close-in" on page 386, but the rules are implemented this way so that the user who doesn't care about phase noise but does care about tuning speed doesn't have to remember which of the other two settings gives faster tuning	Span > 12.34 MHz, <i>or</i> RBW > 250 kHz, <i>or</i> Source Mode is set to "Tracking" Center frequency is < 25 kHz, <i>or</i> CF ≥ 1 MHz <i>and</i> Span ≤ 141.4 kHz <i>and</i> RBW ≤ 5 kHz All other conditions	"Fast Tuning" on page 387 "Best Close-in" on page 386 "Best Wide-offset" on page 387

In all the above cases:

- The RBW to be used in the calculations is the equivalent –3 dB bandwidth of the current RBW filter
- The rules apply whether in swept spans, zero span, or FFT spans

Ranges

Option	Option #	Phase Noise Option	Range
No EPx Option	1	Best Close-in	[offset < 20 kHz]
	2	Best Wide-offset	[offset > 30 kHz]
	3	Fast Tuning	[same as Best Close-In]
EP0	4	Best Close-in	[offset < 600 kHz]
	1	Balanced	[offset < 600 kHz]
	5	Best Spurs	[offset < 600 kHz]
	2	Best Wide-offset	[offset > 800 kHz]
	3	Fast Tuning	[same as Best Close-In]
EP1	1	Best Close-in	[offset < 140 kHz]
	2	Best Wide-offset	[offset > 160 kHz]
	3	Fast Tuning	[single loop]
EP2, EP3, EP5	1	Best Close-in	[offset < 70 kHz]
	2	Best Wide-offset	[offset > 100 kHz]
	3	Fast Tuning	[medium loop bw]
EP4	1	Best Close-in	[offset < 90 kHz]
	2	Best Wide-offset	[offset > 130 kHz]
	3	Fast Tuning	[same as Best Close-In]

Noise Floor Extension

Lets you turn on/configure the **Noise Floor Extension** (NFE) function. Some Modes (such as Spectrum Analyzer Mode), support two states of NFE, Full and Adaptive. The **ON** state (in Modes which do not support Adaptive NFE) matches the **FULL** state (in Modes that *do* support Adaptive NFE).

In **ON** or **FULL** NFE, the expected noise power of the instrument (derived from a factory calibration) is subtracted from the trace data. This will usually reduce the apparent noise level by about 10 dB in low band, and 8 dB in high band (>~3.6 GHz).

In Adaptive NFE, there is not the same dramatic visual impact on the noise floor as there is in Full NFE. Adaptive NFE controls the amount of correction that is applied based on other instrument settings like RBW, averaging and sweep time. Adaptive NFE controls the degree of potential improvement in the noise floor to give more improvement for those instrument settings that can make good use of the potential improvement, such as settings that provide more averaging. The result is that when not much averaging is being performed, the signal displays more like the NFE-off case; and when lots of averaging is being performed, the signal displays more like the full-NFE case.

Adaptive NFE (in Modes which support it) is recommended for general-purpose use. For fully ATE (automatic test equipment) applications, where the distraction of a person using the instrument is not a risk, Full NFE is recommended.

NFE works with any RBW, VBW, detector, any setting of Average Type, any amount of trace averaging, and any signal type. It is ineffective when the trace is not smoothed (smoothing processes include narrow VBWs, trace averaging, and long sweep times with the detector set to Average or Peak). It works best with extreme amounts of smoothing, and with the average detector, with the Average Type set to Power.

In those cases where the cancellation is ineffective, it nonetheless has no undesirable side-effects. There is no significant speed impact to having **Noise Floor Extension** on.

The best accuracy is achieved when substantial smoothing occurs in each point before trace averaging. Thus, when using the average detector, results are better with long sweep times and fewer trace averages. When using the sample detector, the VBW filter should be set narrow with less trace averaging, instead of a wide VBW filter with more trace averaging.

NOTE

Noise Floor Extension has no effect unless the RF Input is selected, so it does nothing when **External Mixing** is selected.

In Modes that support Adaptive NFE, the default state of NFE is **Adaptive (ON)**. In Modes that do not support Adaptive NFE, the default state of NFE is **OFF**. Prior to the introduction of Adaptive NFE (firmware version A.18.00), the default state of NFE was **OFF** for all Modes.

With the introduction of Adaptive NFE, the menu control is changed from **On|Off** to **Full|Adaptive|Off**. For SCPI Backwards Compatibility, the existing SCPI command to turn NFE on or off was retained, and a new command was added to set the state to turn Adaptive On or Off:

- `[:SENSe]:CORRection:NOISe:FLOor ON|OFF|1|0` is retained, default changed to On for modes that support Adaptive NFE
- `[:SENSe]:CORRection:NOISe:FLOor:ADAPtive ON|OFF|1|0` is added (for certain Modes), default = On
- `FULL = :CORRection:NOISe:FLOor ON` plus `:CORRection:NOISe:FLOor:ADAPtive ON`

See "[More Information](#)" on page 392

Remote Command	<code>[:SENSe]:CORRection:NOISe:FLOor ON OFF 1 0</code> <code>[:SENSe]:CORRection:NOISe:FLOor?</code>
Example	<code>:CORR:NOIS:FLO ON</code>
Dependencies	Only appears in instruments with the NFE or NF2 license installed. In all others, does not appear, but

	the SCPI command will be accepted without error but has no effect
Couplings	When NFE is enabled in any mode manually, a prompt will be displayed reminding you to perform the Characterize Noise Floor operation if it is needed. If NFE is enabled through SCPI and a Characterize Noise Floor operation is needed, an error will be entered in the system error queue
Preset	Unaffected by Mode Preset . Turned ON at startup and by Restore Mode Defaults in Modes that support Adaptive. Turned OFF at startup and by Restore Mode Defaults in Modes that do not support Adaptive
State Saved	No
Remote Command	<code>[:SENSe]:CORRection:NOISe:FLOor:ADAPtive ON OFF 1 0</code> <code>[:SENSe]:CORRection:NOISe:FLOor:ADAPtive?</code>
Example	Turn NFE ON (Full mode): <code>:CORR:NOIS:FLO ON</code> Set to Adaptive: <code>:CORR:NOIS:FLO:ADAP ON</code>
Dependencies	Only available in Modes that support Adaptive NFE Only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear, but the SCPI command is accepted without error (but has no effect)
Couplings	For backwards compatibility, sending <code>:CORR:NOIS:FLO ON</code> turns NFE Adaptive OFF . To turn Adaptive ON , you must issue the commands in the proper order, as shown in the example above
Preset	Not affected by Mode Preset , but set to ON at startup and by Restore Mode Defaults
State Saved	No

More Information

The instrument is characterized in the factory (or during a field calibration) with a model of the noise, referred to the input mixer, versus frequency in each band and path combination. Bands are 0 (low band) and 1 through 4 (high band) in a 26.5 GHz instrument, for example. Paths include normal paths, preamp paths, the electronic attenuator, etc.

In most band/path combinations, the noise can be well characterized based on just two parameters and the instrument frequency response before compensation for frequency-dependent losses.

After the noise density at the input mixer is estimated, the effects of the input attenuator, RBW, detector, etc. are computed to get the estimated input-port-referred noise level.

In the simplest case, the measured power (signal plus instrument noise) in each display point (bucket) is compensated by subtracting the estimated noise power, leaving just the signal power. This is the operation when the detector is Average, and the Average Type is set to Power.

In other cases, operation is often not quite as good but still highly effective. With peak detection, the noise floor is estimated based on the RBW and the duration of the bucket using the same equations used in the noise marker function. The voltage of the noise is subtracted from the voltage of the observed signal-plus-noise measurement to compute the estimated signal voltage. The peak detector is one example of processing that varies with detector to give good estimates of the signal level without the instrument noise.

For best operation, the average detector and the power scale are recommended, as already stated. Peak detection for pulsed-RF can still give excellent effectiveness. FFT analysis does not work well, and does not do NFE well, with pulsed-RF signals, so this combination is not recommended. Negative peak detection is not very useful, either. Sample detection works well, but is never better than the average detector because it doesn't smooth as well. The Normal detector is a combination of peak and negative peak behaviors, and works about as well as these.

For best operation, extreme smoothing is desirable, as already stated. Using narrow VBWs works well, but using very long bucket durations and the average detector works best. Reducing the number of trace points will make the buckets longer.

For best operation, the power scale (Average Type = Power) is optimum. When making CW measurements in the presence of noise without NFE, averaging on the decibel scale has the advantage of reducing the effect of noise. When using NFE, the NFE does an even better job than using the log scale ever could. Using NFE with the log scale is not synergistic, though; NFE with the power scale works a little better than NFE with log averaging type.

The results from NFE with internal preamp can often be lower than the theoretical noise in a signal source at room temperature, a noise density of -174 dBm/Hz. This is expected and useful behavior, because NFE is designed to report the amount of input signal that is in excess of the thermal noise, not the amount that includes the thermal noise. This can be a useful behavior because thermal noise often interferes with what you want to measure, instead of being part of what you want to measure. Note that NFE is not adequately accurate to always be able to read below kTB.

Adaptive NFE provides an alternative to fully-on and -off NFE. Fully-on NFE can, notably in cases with little or no averaging of the spectrum, result in a display that is distractingly unfamiliar in the variability in response to low level signals. Fully-off NFE fails to achieve the potential improvement in dynamic range and associated accuracy of measurement of low-level signals. Adaptive NFE controls the degree of potential improvement in the noise floor to give more improvement for those instrument settings that can make good use of the potential improvement—those settings with high degrees of variance reduction through some variant of averaging. When the potential improvement is small, the display acts like the NFE-off case, and when it is high, it acts like the fully-on case, and in-between, application is a compromise between attractiveness and effectiveness.

On instruments with the NF2 license installed, the calibrated Noise Floor used by Noise Floor Extensions should be refreshed periodically. Keysight recommends that the **Characterize Noise Floor** operation be performed after the first 500 hours of operation, *and* once every calendar year. The control to perform this is located in the **System, Alignments, Advanced** menu. If you have not done this yourself at the recommended interval, then when you turn on Noise Floor Extensions, the instrument will prompt you to do so with a dialog that says:

“This action will take several minutes to perform. Please disconnect all cables from the RF input and press Enter to proceed. Press ESC to cancel, or Postpone to postpone for a week”

If you **Cancel**, you will be prompted again the next time you turn NFE **ON**. If you **Postpone**, you will be prompted again after a week passes and you then turn NFE **ON**.

3.2.8.7 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, **"Global Center Freq" on page 3077**) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to **ON**, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched **ON**, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is **ON**, modifies the **Global Center Freq**.

When **Global Center Freq** is switched **OFF**, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is **ON**, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to **OFF** when "Restore Defaults" on page 3079 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	:INSTRUMENT:COUPLE:FREQUENCY:CENTER ALL NONE :INSTRUMENT:COUPLE:FREQUENCY:CENTER?
Example	:INST:COUP:FREQ:CENT ALL :INST:COUP:FREQ:CENT?
Preset	Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes
Range	ALL NONE
Preset	OFF
Backwards Compatibility SCPI	:GLOBAL:FREQUENCY:CENTER[:STATE] 1 0 ON OFF :GLOBAL:FREQUENCY:CENTER[:STATE]?

Global EMC Std

When this control is switched **ON**, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the **Global EMC Std**, so you can switch between any of these Modes and the EMC Std remains unchanged.

Adjusting the EMC Std of any Mode that supports Global settings, while **Global EMC Std** is **ON** modifies the **Global EMC Std**.

When **Global EMC Std** is switched **OFF**, the EMC Std of the current Mode remains unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is **ON**, **Global EMC Std** is preset to the preset EMC Std of the current Mode.

This function resets to **OFF** when "Restore Defaults" on page 3079 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	:INSTRUMENT:COUPLE:EMC:STANDARD ALL NONE :INSTRUMENT:COUPLE:EMC:STANDARD?
Example	:INST:COUP:EMC:STAN ALL :INST:COUP:EMC:STAN?
Dependencies	Only available if Option EMC is installed
Preset	Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes
Range	ALL NONE

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned **ON**, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System > Service > Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function resets to **OFF** when "**Restore Defaults**" on page 3079 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTRUMENT:COUPLE:FREQUENCY:BAND:EXTEND 0 1 ON OFF</code> <code>:INSTRUMENT:COUPLE:FREQUENCY:BAND:EXTEND?</code>
Example	<code>:INST:COUP:FREQ:BAND:EXT 1</code> <code>:INST:COUP:FREQ:BAND:EXT?</code>
Preset	Set to OFF by Global Settings > Restore Defaults and System > Restore Defaults > All Modes
Range	ON OFF

Restore Defaults

Resets all functions in the **Global** settings menu to **OFF**. Pressing **System, Restore Defaults, All Modes** has the same effect.

Remote Command	<code>:INSTRUMENT:COUPLE:DEFAULT</code>
Example	<code>:INST:COUP:DEF</code>
Backwards Compatibility SCPI	<code>:GLOBAL:DEFAULT</code>

3.2.9 Sweep

Accesses controls to configure and control the acquisition of data, and the X-axis parameters of the instrument.

Depending on the selected mode and measurement, these controls might include: **Sweep Time, Continuous/Single, Pause/Resume, X Scale** and **Number of Points**.

3.2.9.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep Time

Controls the time the instrument takes to sweep the current frequency span in swept measurements, displays the sweep time in swept measurements, and displays the equivalent Sweep Time in FFT measurements.

When **Sweep Time** is in Auto, the instrument computes a time that will give accurate measurements based on other settings, such as RBW and VBW.

You can select a shorter sweep time to improve the measurement throughput (with some potential unspecified accuracy reduction), but the **Meas Uncal** indicator will appear if the sweep time you set is less than the calculated Auto Sweep time.

You can also select a longer sweep time, which can be useful (for example) for obtaining accurate insertion loss measurements on very narrowband filters.

NOTE

Significantly faster sweep times are available with Option FS1.

NOTE

The **Meas Uncal** (measurement uncalibrated) warning is displayed in the Status Bar at the bottom of the screen when the manual Sweep time entered is faster than the time computed by the instrument's Sweep time equations, that is, the Auto Sweep Time. The instrument's computed Sweep time will provide accurate measurements; if you sweep faster than this your measurements may be inaccurate. A **Meas Uncal** condition may be corrected by returning the Sweep Time to Auto; by entering a longer Sweep Time; or by choosing a wider RBW and/or VBW.

NOTE

On non-sweeping hardware, this control is grayed-out. The value shown on this control is an estimate. It is the measurement's turnaround time, which is the sum of signal acquisition time, FFT time, and other overhead time, to complete the entire span of the measurement. If you need to specify the same "Sweep Time" as you would for sweeping hardware, send `[:SENSe] : < meas > : SWEp : TIME < time >`. The measurement emulates the "Sweep Time" effect, but this emulation is not straightforward, and therefore the behavior is not specified. Instead, we recommend using Minimum Acquisition Time, which provides better control.

Remote Command `[:SENSe] : < meas > : SWEp : TIME < time >`

`[:SENSe] : < meas > : SWEp : TIME ?`

Example Channel Power measurement:

`:CHP : SWE : TIME 25ms`

`:CHP : SWE : TIME ?`

Notes In the ACP measurement in WCDMA Mode, this parameter is preset by **Meas Method** selection.

	<p>Preset values are as follows:</p> <ul style="list-style-type: none"> - IBW: 29 ms - IBWR: 108 ms - FAST 7.5 ms 				
Dependencies	<p>On non-sweeping hardware, this control is grayed out, and the Auto/Man toggle disappears. The read-only control shows estimated sweep time</p> <p>In those instruments, "Minimum Acquisition Time" on page 2722 is available</p>				
Couplings	<p>Coupled to Span, RBW, VBW, and Sweep Time Rules when Sweep Time is set to Auto; Sweep Time changes when these parameters are changed</p> <p>When you manually set a value when in the Auto state, the state automatically changes to Man</p>				
Preset	<p>Automatically Calculated unless noted below</p> <p>WCDMA Mode</p> <ul style="list-style-type: none"> - Channel Power: 1.0 msOBW: 32.6 ms - ACP: 29 ms 				
State Saved	Saved in instrument state				
Min	<p>Other than non-sweeping hardware: Typically, 1 ms</p> <p>Non-sweeping hardware: N/A</p> <p>In the ACP measurement, when Meas Method is Fast Power, the minimum sweep time is span-dependent and automatically calculated</p>				
Max	<p>Other than non-sweeping hardware: 4000 s</p> <p>Non-sweeping hardware: N/A</p>				
Annotation	<p>The sweep time is displayed in the lower-right corner of the screen. The number of points is displayed parenthetically, as:</p> <p>Sweep 13.3 ms (1001 points)</p> <p>A “#” mark appears before “Sweep” in the annotation when it is switched from Auto to Manual coupling</p>				
Status Bits/OPC dependencies	<p>Meas Uncal is Bit 0 in the register:</p> <p>STATus:QUEStionable:INTEgrity:UNCalibrated</p> <p>Auto Function</p>				
Remote Command	<p>[:SENSe] : < meas > : SWEp : TIME : AUTO OFF ON 0 1</p> <p>[:SENSe] : < meas > : SWEp : TIME : AUTO ?</p>				
Example	<p>Channel Power measurement:</p> <p>:CHP:SWE:TIME:AUTO OFF</p> <p>:CHP:SWE:TIME:AUTO?</p>				
Preset	<table border="0"> <tr> <td>WCDMA Mode</td> <td>OFF</td> </tr> <tr> <td>All others</td> <td>ON</td> </tr> </table>	WCDMA Mode	OFF	All others	ON
WCDMA Mode	OFF				
All others	ON				

Minimum Acquisition Time

Available on non-sweeping hardware.

Specifies the minimum acquisition time for each “chunk” of the measurement result. The instrument automatically divides Span into multiple chunks if needed.

Therefore, the total signal acquisition time for the entire Span is:

$\sim(\sim\text{Minimum Acquisition Time}) * (\text{The number of chunks})$

When in Auto, this parameter’s value is determined by other parameters, such as **Span**, **RBW** and **VBW**.

You can manually increase this parameter value from this Auto value.

If increased, the instrument acquires signal for the specified time duration for each chunk. It performs additional FFTs, and averages or peak-holds the FFT results for a chunk, depending on **Detector** settings.

Note that the actual acquisition time for each chunk may exceed the **Minimum Acquisition Time** value, in order to satisfy FFT time required by other parameters, and to perform an integer number of FFTs.

Remote Command	<pre>[:SENSe] : <meas> : SWEep : ACQuisition : TIME <time> [:SENSe] : <meas> : SWEep : ACQuisition : TIME ?</pre> <p><meas> is the identifier for the current measurement; any one of CHPower- ACPower OBwidth MONitor</p>
Example	<p>Channel Power measurement</p> <pre>:CHP : SWE : ACQ : TIME 500 ms :CHP : SWE : ACQ : TIME ?</pre>
Dependencies	Available only on non-sweeping hardware
Couplings	Coupled to Span , RBW , and VBW when in the Auto state When you manually set a value when in the Auto state, the state automatically changes to Man
Preset	Automatically calculated
State Saved	Saved in instrument state
Min	100 ns
Max	4.00 ks
	Auto Function
Remote Command	<pre>[:SENSe] : <meas> : SWEep : ACQuisition : TIME : AUTO OFF ON 0 1 [:SENSe] : <meas> : SWEep : ACQuisition : TIME : AUTO ?</pre>

	<code><meas></code> is the identifier for the current measurement; any one of <code>CHPower-</code> <code>ACPower</code> <code>OBWidth</code> <code>MONitor</code>
Example	Channel Power measurement: <code>:CHP:SWE:ACQ:TIME:AUTO OFF</code>
Preset	<code>ON</code>

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "[More Information](#)" on page 400

Remote Command	<code>:INITiate:CONTinuous OFF ON 0 1</code> <code>:INITiate:CONTinuous?</code>		
Example	Put instrument into Single measurement operation: <code>:INIT:CONT 0</code> <code>:INIT:CONT OFF</code> Put instrument into Continuous measurement operation: <code>:INIT:CONT 1</code> <code>:INIT:CONT ON</code>		
Preset	<code>ON</code> Note that <code>:SYST:PRES</code> sets <code>:INIT:CONT</code> to <code>ON</code> , but <code>*RST</code> sets <code>:INIT:CONT</code> to <code>OFF</code>		
State Saved	Saved in instrument state		
Annunciation	The Single/Continuous icon in the Meas Bar changes depending on the setting: <ul style="list-style-type: none"> - A line with an arrow is Single - A loop with an arrow is Continuous 		
Backwards Compatibility Notes	X-Series A-models had Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and <code>INIT:CONT ON</code>) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep		
	More Information		
	<table border="0"> <tr> <td style="vertical-align: top;">Continuous Mode</td> <td>The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count</td> </tr> </table>	Continuous Mode	The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count
Continuous Mode	The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count		

3 5G NR/5G-A Mode

3.2 Channel Power Measurement

reaches the **Average/Hold Num**, the count stops incrementing, but the instrument keeps sweeping

See the **Trace** key description under **Trace Average** for the averaging formula used both before and after the **Average/Hold Num** is reached. The trigger condition must be met prior to each sweep

The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**

Single Mode

The instrument takes a single sweep when in **Single** mode, or if in average or Max/Min Hold, or if there is a **Waterfall** window displayed, it takes multiple sweeps until the average/hold count reaches the **Average/Hold Num**, then the count stops incrementing, and the instrument stops sweeping

See the **Trace** key description under **Trace Average** for the averaging formula used. The trigger condition must be met prior to the sweep

The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- **:INIT:CONT 1** has no effect
- **:INIT:CONT 0** places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See "**Restart**" on page 3081 for details of **:INIT:IMMEDIATE**.

If the instrument is already in **Single** sweep, **:INIT:CONT OFF** has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending **:INIT:IMM** does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending **:CALC:AVER:TCON UP**.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See "[More Information](#)" on page 402

Remote Command	<code>:INITiate[:IMMEDIATE]</code> <code>:INITiate:REStart</code>
Example	<code>:INIT:IMM</code> <code>:INIT:REST</code>
Notes	<code>:INIT:REST</code> and <code>:INIT:IMM</code> perform exactly the same function
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The <code>STATus:OPERation</code> register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The <code>STATus:QUESTionable</code> register bit 9 (<code>INTegrity</code> sum) is cleared The <code>SWEEPING</code> bit is set The <code>MEASURING</code> bit is set
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the <code>:INIT:REST</code> command restarted trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold In X-Series, the Restart hardkey and the <code>:INIT:REST</code> command restart not only Trace Average , but MaxHold and MinHold traces as well

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** > 1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue

Event	Trace Effect
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k . This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N , as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K , shows the count for the sweep (data acquisition) in progress. $K = k + 1$, with a limit of N . The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** un-pauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command	<code>:INITiate:PAUSE</code> <code>:INITiate:RESume</code>
Example	<code>:INIT:PAUS</code> <code>:INIT:RES</code>
Dependencies	Not displayed in Modes that do not support pausing
Annotation	Only on control

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when **:ABORT** is sent, the alignment finishes *before* the abort function is performed, so **:ABORT** does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an **:INIT:IMM** command is received.

Remote Command	:ABORT
Example	:ABOR
Notes	<p>If :INIT:CONT is ON, then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met</p> <p>If :INIT:CONT is OFF, then :INIT:IMM is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met</p>
Dependencies	<p>For continuous measurement, :ABORT is equivalent to the Restart key</p> <p>Not all measurements support this command</p>
Status Bits/OPC dependencies	<p>The STATUS:OPERation register bits 0 through 8 are cleared, <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous</p> <p>The STATUS:QUESTionable register bit 9 (INTegrity sum) is cleared</p> <p>Since all the bits that feed into OPC are cleared by :ABORT, the Abort command will cause the *OPC query to return true</p>

Sweep Time Annotation (Remote Query Only)

Returns the **Sweep Time Annotation** value. Available only on non-sweeping hardware.

This value is also displayed in the result trace window.

The value returned is the estimated turnaround time of each measurement cycle, in seconds. The turnaround time is the sum of the signal acquisition time, FFT time, and other overhead time, to complete the entire span of each measurement cycle.

Remote Command	[:SENSe] : <meas> : SWEEp : ETIMe?
	<meas> is the identifier for the current measurement; any one of CHPower- ACPower OBwidth MONitor
Example	Channel Power measurement

	<code>:CHP:SWE:ETIME?</code>
Dependencies	Available only on non-sweeping hardware
Preset	Automatically calculated

3.2.9.2 Sweep Config

Accesses controls that enable you to configure the Sweep and Control functions of the instrument, such as Sweep Rules.

Sweep Time Rules

Switches the instrument between **NORMa1** and **ACCuracy** sweep states.

Setting **Auto Sweep Time** to **ACCuracy** results in slower sweep times (usually about three times as long) but yields better amplitude accuracy for CW signals. The instrument amplitude accuracy specifications only apply when **Auto Sweep Time** is set to **ACCuracy**.

Additional amplitude errors that occur when **Auto Sweep Time** is set to **NORMa1** are usually well under 0.1 dB, though this is not guaranteed. Because of the faster sweep times and still low errors, **NORMa1** is the preferred setting of **Auto Sweep Time**. **Auto Sweep Time** is set to **NORMa1** on a **Preset**. This means that in the **Preset** state, instrument amplitude accuracy specifications do not apply.

Remote Command	<code>[:SENSe]:CHPower:SWEep:TIME:AUTO:RULEs NORMa1 ACCuracy</code> <code>[:SENSe]:CHPower:SWEep:TIME:AUTO:RULEs?</code>
Example	<code>:CHP:SWE:TIME:AUTO:RUL NORM</code> <code>:CHP:SWE:TIME:AUTO:RUL?</code>
Dependencies	Does not appear in Spectrum Analyzer Mode in VXT model M9421A
Preset	NORMa1
State Saved	Saved in instrument state
Range	NORMa1 ACCuracy

Points

Sets the number of points taken per sweep, and displayed in the traces. The current value of **Points** is displayed parenthetically, next to the sweep time in the lower-right corner of the display. Using more points provides greater resolution. Using fewer points compacts the data and decreases the time required to access a trace over the remote interface.

Increasing the number of points does not increase the sweep time. However, it can slightly impact the trace processing time and therefore the overall measurement

3 5G NR/5G-A Mode
 3.2 Channel Power Measurement

speed. Decreasing the number of points does not decrease the sweep time, but it may speed up the measurement, depending on the other sweep settings (for example, in FFT sweeps). Fewer points will always speed up the I/O.

Due to minimum sweep rate limitations of the hardware, the minimum sweep time available to the user will increase above its normal value of 1 ms as the number of sweep points increases above 15001.

Changing the number of sweep points has several effects on the instrument. Since markers are read at the point location, the marker reading may change. The sweep time resolution will change. Trace data for all the traces will be cleared and, if **"Sweep/Measure" on page 3079** is **Cont**, a new trace taken. If any trace is in average or hold, the averaging starts over.

Due to sweep time quantization issues, the knob and up/down keys cannot be used to adjust the number of points.

When in a split screen display each window may have its own value for points.

When sweep points is changed, an informational message is displayed, "Sweep points changed, all traces cleared."

Remote Command	<code>[:SENSe]:CHPower:SWEEp:POINts <integer></code> <code>[:SENSe]:CHPower:SWEEp:POINts?</code>
Example	<code>:CHP:SWE:POIN 501</code> <code>:CHP:SWE:POIN?</code>
Dependencies	Not available when Signal ID is ON in External Mixing Neither the knob nor the step keys can be used to change this value. If it is tried, a warning is given Not displayed in Modes that do not support Swept
Couplings	Whenever the number of sweep points change: <ul style="list-style-type: none"> - All trace data is erased - Any traces with Update Off also switch to Display Off (equivalent to switching from View to Blank in older instruments) - Sweep time is re-quantized - Any limit lines that are on will be updated - If averaging/hold is on, averaging/hold starts over <p>The resolution of setting the sweep time depends on the number of points selected</p>
Preset	1001
State Saved	Saved in instrument state
Min	11
Max	20001
Annotation	On second line of annotations, in lower right corner in parenthesis behind the sweep annotation

IF Dithering

Lets you turn IF Dithering on or off. This is a technique used in unpreselected instruments (such as Keysight's modular instruments) to enhance the rejection of images and internally-generated spurious signals.

Remote Command	<code>[:SENSe]:SWEep:IF:DITHer OFF ON 0 1</code> <code>[:SENSe]:SWEep:IF:DITHer?</code>
Dependencies	Only appears in Spectrum Analyzer Mode in VXT models
Preset	OFF
State Saved	Saved in instrument state

Image Protection

Lets you turn IF Protection on or off. This is a technique used in unpreselected instruments (such as Keysight's modular instruments) to detect and suppress images and spurs that may be present in non-preselected hardware.

IF Protection takes two sweeps and by correlating the data between them, provides a single, correct power-versus-frequency trace.

Remote Command	<code>[:SENSe]:SWEep:IMAGeprot OFF ON 0 1</code> <code>[:SENSe]:SWEep:IMAGeprot?</code>
Dependencies	Only appears in Spectrum Analyzer Mode in VXT models
Preset	ON
State Saved	Saved in instrument state

3.2.10 Trace

Lets you control the acquisition, display, storage, detection and manipulation of trace data for the available traces. The Trace Control tab of this menu contains radio-button selections for the trace type (**Clear/Write, Trace Average, Max Hold, Min Hold**) and **View/Blank** setting for the selected trace.

3.2.10.1 Select Trace

Specifies the *selected trace*, which is the trace that will be affected when you change trace settings.

Select Trace appears above the menu panel, indicating that it applies to *all* controls in the menu panel. **Select Trace** is blanked if you select a tab whose controls do *not* depend on the selected trace (for example, **Trace Function**).

Notes	The selected trace is remembered even when not in the Trace menu
Dependencies	For the Swept SA measurement: <ul style="list-style-type: none"> - In Image Suppress mode, when you select a trace it becomes the active trace, and the formerly active trace goes into View - When you turn on Image Suppress, Update turns off for all traces except the selected trace For the ACP measurement, when Meas Method is RBW , FAST or FPOwer , Select Trace is disabled
Preset	Trace 1
State Saved	Yes

3.2.10.2 Trace Control

The controls on this tab allow you to set the "Trace Type" on page 2927 and its update mode.

There are up to four **Trace Types** (although some measurements do not support all types):

- **Clear/Write**
- **Trace Average**
- **Max Hold**
- **Min Hold**

Each type handles data in a different way.

Each trace also has two values that determine whether it is being written or not, and whether it is being displayed or not. These values, **Update** and **Display**, are described fully in the "View/Blank" on page 2932 control description. Essentially, when **Update** is **ON**, a trace is updating, and when **Update** is **OFF** it is not. When **Display** is **ON**, it is visible and when **Display** is **OFF** it is not. These terms are used throughout the descriptions in this section.

Trace Type

There are four trace Types:

Option	Parameter	SCPI Example	Details
Clear/Write	WRITe	:TRAC2:TYPE WRIT	See: "Clear/Write" on page 413
Trace Average	AVERage	:TRAC2:TYPE AVER	See: "Trace Average" on page 413

Option	Parameter	SCPI Example	Details
Maximum Hold	MAXHold	:TRAC3:TYPE MAXH	See: "Max Hold" on page 414
Minimum Hold	MINHold	:TRAC5:TYPE MINH	See: "Min Hold" on page 414

NOTE

Some measurements do not support the **Trace Average** or **Min Hold** options.

Full descriptions of each type are provided below. You may select one of these types for each trace. Re-selecting the current **Trace Type** initiates the same action that selecting it the first time did, even though it is already selected. For example, selecting **Clear/Write** while **Clear/Write** is already selected will nonetheless clear the trace and begin rewriting it.

Besides the **Trace Type**, the "**View/Blank**" on page 2932 state must be set to **Active** (**Update: ON, Display: ON**) for a trace to be updating and visible. Selecting any **Trace Type** automatically makes the trace **Active**.

See also: "**Trace Mode Backwards Compatibility Commands**" on page 411

Remote Command	<p>For Swept SA Measurement (in SA Mode):</p> <pre>:TRACe[1] 2 ... 6:TYPE WRITe AVERAge MAXHold MINHold</pre> <pre>:TRACe[1] 2 ... 6:TYPE?</pre> <p>For all other measurements:</p> <pre>:TRACe[1] 2 3:<meas>:TYPE WRITe AVERAge MAXHold MINHold</pre> <pre>:TRACe[1] 2 3:<meas>:TYPE?</pre> <p>where <meas> is the identifier for the current measurement</p>
Example	<pre>:TRAC:TYPE WRIT</pre> <pre>:TRAC:TYPE?</pre>
Couplings	<p>Selecting a Trace Type (by pressing any of the Trace Type selections or sending <code>:TRAC:TYPE</code>) sets the Trace to Active (Update: ON, Display: OFF), even if the same trace type was already selected</p> <p>When Detector setting is "Auto" (<code>:SENSe[:<meas>:DETECTOR:AUTO?</code>), Detector (<code>:SENSe[:<meas>:DETECTOR[:FUNCTION]?</code>) switches aligning with the switch of this parameter: "NORMAL" with WRITE (Clear Write), "AVERAGE" with AVERAGE, "POSITIVE (peak)" with MAXHold, and "NEGATIVE (peak)" with MINHold</p>
Preset	<p>Swept SA, Monitor Spectrum, and I/Q Waveform measurements: WRITE</p> <p>Complex Spectrum measurement: WRITE AVERAGE WRITE</p> <p>All other measurements: AVERAGE</p> <p>Following Preset, all traces are cleared (all trace points set to <i>mintracevalue</i>)</p>
State Saved	The type of each trace is saved in instrument state
Annunciation	The type for each trace is indicated in the Trace annunciator panel on the Measurement Bar

Trace Mode Backwards Compatibility Commands

In earlier instruments, the “Trace Modes” were: Clear/Write, Max Hold, Min Hold, View and Blank. Averaging was global to all traces and was controlled under the **BW/Avg** menu.

In X-Series, trace averaging can be done on a per-trace basis. The Trace Modes (now called **Trace Types**) are **Clear/Write**, **Trace Average**, **Max Hold** and **Min Hold**. **View** and **Blank** are set separately under "**View/Blank**" on page 2932.

While this provides more flexibility, it also gives rise to potential backwards-compatibility problems. To mitigate these, the old Trace Mode command has been retained and a new **Trace Type** command has been added. The **:TRACe:MODE** command is retained for backwards compatibility, and the **:TRACe:TYPE**, **:TRACe:UPDate** and **:TRACe:DISPlay** commands introduced for ongoing use. The old Trace Modes are selected using **:TRACe:MODE**, whose parameters are mapped into calls to **:TRACe:TYPE**, **:TRACe:UPDate** and **:TRACe:DISPlay**, and the old global Averaging command **[:SENSe]:AVERage[:STATe]** is provided for backwards compatibility. See the individual command descriptions for details.

When **Average/Hold** in the **Meas Setup, Legacy Compatibility** menu is **ON**, the following is true for traces in **Max Hold** and **Min Hold**:

- They ignore the **Average/Hold** number; **Single** for **Max Hold** causes one sweep only, so switching to **Single** stops after the current sweep, and switching to **Cont** starts again without clearing the accumulated result
- **Max Hold** is not cleared on a **Restart**, **Single** or **:INIT:IMM**, but changing a measurement parameter, like frequency or bandwidth etc., still restarts the **Max Hold**

Preset	WRITE
State Saved	The trace mode is an alias only
Backwards Compatibility SCPI	:TRACe[1] 2 ... 6:MODE WRITE MAXHold MINHold VIEW BLANK :TRACe[1] 2 ... 6:MODE?
Backwards Compatibility Notes	<p>The legacy :TRACe:MODE command is retained for backwards compatibility. In conjunction with the legacy :AVERage command, it works as follows:</p> <ul style="list-style-type: none"> – :AVERage ON OFF sets/clears a variable that we will call average for the sake of this discussion. This variable is maintained by the instrument solely for backwards compatibility. See the [:SENSe]:AVERage[:STATe] command description below – :TRACe:MODE WRITE sets :TRACe:TYPE WRITE (Clear/Write) unless average is true, in which case it sets it to :TRACe:TYPE AVERage. It also sets :TRACe:UPDate ON, :TRACe:DISPlay ON, for the selected trace – :TRACe:MODE MAXHold sets :TRACe:TYPE MAXHold (Max Hold). It also sets :TRACe:UPDate ON, :TRACe:DISPlay ON, for the selected trace

- `:TRACe:MODE MINHold` sets `:TRACe:TYPE MINHold` (Min Hold). It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace
- `:TRACe:MODE VIEW` sets `:TRACe:UPDate OFF`, `:TRACe:DISPlay ON`, for the selected trace
- `:TRACe:MODE BLANK` sets `:TRACe:UPDate OFF`, `:TRACe:DISPlay OFF`, for the selected trace

The query returns the same value as `:TRACe:TYPE?`, meaning that if you set `:TRACe:MODE:VIEW` or `:TRACe:MODE:BLANK`, the query response will not be what you sent

`:TRACe[n]:MODE` was formerly used to set the type or “writing mode” of the trace. At that time, View and Blank were writing modes. The new `:TRACe:TYPE` command should be used in the future, but `:TRACe:MODE` is retained to provide backwards compatibility

In X-Series, unlike earlier instruments, Max Hold and Min Hold now obey the Average Number and counts up to a terminal value as Average always has

As the **Average/Hold Number** now affects **Min Hold** and **Max Hold**, the operations that restart Averaging (for example, the **Restart** key) now also restart **Min Hold** and **Max Hold**

As a result of these changes, legacy code that restarts averaging while retaining a running Max Hold will need to be rewritten, because the Max Hold will now restart when the Average does

Also, previous to X-Series:

- Pressing **Max Hold** while already in **Max Hold** (or doing so remotely) had no effect. Now it will clear the trace and restart the sweep and the Max Hold sequence
- Changing the vertical scale (Log/Lin or dB/div) of the display restarted **Max Hold** and **Min Hold**. This is no longer the case

Backwards Compatibility Command

Preset	<code>OFF</code>
State Saved	The state of Average is saved in Instrument State for ghosting purposes
Backwards Compatibility SCPI	<code>[:SENSe]:AVERage[:STATe] ON OFF 1 0</code> <code>[:SENSe]:AVERage[:STATe]?</code>
Backwards Compatibility Notes	<p>Previous to X-Series, Averaging (also sometimes known as trace averaging) was global to all traces, that is, it was either on or off for all active traces. The legacy command <code>[:SENSe]:AVERage[:STATe] ON OFF 1 0</code> was used to turn Averaging on or off</p> <p>In X-Series, Averaging is turned on or off on a per-trace basis, so it can be on for one trace and off for another</p> <p>For backwards compatibility, the old global Average State variable is retained solely as a legacy variable, turned on and off and queried by the legacy command <code>[:SENSe]:AVERage[:STATe] OFF ON 0 1</code>. When Averaging is turned on, any trace in Clear/Write will get put into Average. While Averaging is on, any trace put into Clear/Write by the old <code>:TRAC:MODE</code> command will instead get put into Average. When Averaging is turned off, any trace in Average will get put into Clear/Write</p>

Trace Type Details

Clear/Write

Each trace update replaces the old data in the trace with new data.

Pressing **Clear/Write** for the selected trace, or sending `:TRAC:TYPE WRIT` for the specified trace, sets the trace type to **Clear/Write** and clears the trace, even if you are already in **Clear/Write**. Then a new sweep is initiated. Trigger conditions must be met before the sweep actually starts, and if in **Single** the sweep won't start until **Restart** is pressed.

Pressing **Clear/Write** stops the current sweep and initiates a new one, so **Trace Average**, **Max Hold** and **Min Hold** data may be interrupted in mid-sweep when **Clear/Write** is pressed, and therefore may not accurately reflect the displayed count. Therefore, when **Clear/Write** is pressed for one trace, **Trace Average**, **Max Hold** and **Min Hold** must restart for all traces.

When in **Clear/Write**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), a new sweep is initiated but the trace is not cleared.

Trace Average

The instrument maintains and displays an average trace, which represents the cumulative average on a point-by-point basis of the new trace data and previous averaged trace data.

Pressing **Trace Average** (for the selected trace), or sending `:TRAC:TYPE AVER` (for the specified trace), sets the trace type to **Trace Average**, clears the trace, initiates a new sweep, and restarts the Average sequence.

Details of the count limiting behavior and the averaging calculations may be found under **Avg|Hold Number** and **Average Type** under **Meas Setup**.

When in **Trace Average**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the average restarts and a new sweep is initiated but the trace is not cleared.

Restarting the average means:

- The average/hold count k is set to 1, so that the next time the average trace is displayed it simply represents one trace of new data
- A new sweep is initiated

- Once the new sweep starts, the trace is overwritten with current trace data as the first trace of the new average

Remember that restarting averaging also restarts **Max Hold** and **Min Hold**, as there is only one count for Trace Average and Hold.

Max Hold

The instrument maintains and displays a max hold trace, which represents the maximum data value on a point-by-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under **Meas Setup**.

Pressing **Max Hold** for the selected trace, or sending `:TRAC:TYPE MAXH` for the specified trace, sets the Trace Type to **Max Hold**, clears the trace, initiates a new sweep, and restarts the hold sequence, even if you are already in **Max Hold**.

When in **Max Hold**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Max Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Max Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the max hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated.

Remember that restarting **Max Hold** also restarts averaging and **Min Hold**, as there is only one count for Trace Average and Hold.

Min Hold

The instrument maintains and displays a min hold trace, which represents the minimum data value on a point-by-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under the **Meas Setup** functions.

Pressing **Min Hold** for the selected trace, or sending `:TRAC:TYPE MINH` for the specified trace, sets the Trace Type to **Min Hold**, clears the trace, initiates a new sweep, and restarts the hold sequence, even if you are already in **Min Hold**.

When in **Min Hold**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Min Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Min Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the min hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated

Remember that restarting **Min Hold** also restarts **Max Hold** and averaging, because there is only one count for Trace Average and Hold.

Clear and Write | Restart Averaging | Restart Max/Min Hold

Starts the trace writing, as though the "Trace Type" on page 2927 had just been selected. The effect is exactly the same as reselecting the current **Trace Type** again – the control is provided because it may not be obvious that reselecting the same selection from a radio button menu will take any action.

This control displays different labels, depending on the selected Trace Type:

- **Clear/Write**: Clear and Write
- **Trace Average**: Restart Averaging
- **Max Hold**: Restart Max Hold
- **Min Hold**: Restart Min Hold

NOTE

Some measurements do not support the **Trace Average** or **Min Hold** options.

View/Blank

Lets you set the state of the two trace variables: **Update** and **Display**. The choices available in this dropdown menu are:

Active	Update and Display both ON
View	Update OFF ; Display ON
Blank	Update OFF ; Display OFF
Background	Update ON , Display OFF Allows a trace to be blanked <i>and</i> continue to update "in the background", which was not possible in the past

In the Swept SA measurement, a trace with **DisplayOFF** is indicated by a strikethrough of the type letter in the trace annotation panel in the Measurement Bar. A trace with **UpdateOFF** is indicated by dimming the type letter in the trace annotation panel in the Measurement Bar. In the example below, Traces 3, 4, 5 and 6 have **UpdateOFF**, and Traces 4 and 6 have **DisplayOFF**.

See: "[More Information](#)" on page 417

Notes	For the commands to control the two variables, Update and Display, see " Trace Update State On/Off " on page 416 and " Trace Display State On/Off " on page 417 below
Dependencies	When Signal ID is on, this key is grayed-out
Couplings	<p>Selecting a Trace Type for a trace (pressing the key or sending the equivalent command) puts the trace in Active (Update ON and Display ON), even if that trace type was already selected</p> <p>Selecting a detector for a trace (pressing the key or sending <code>[:SENS] :DET :TRAC</code>) puts the trace in Active (UpdateON and DisplayON), even if that detector was already selected</p> <p>Selecting a "Math Function" on page 2935 other than OFF for a trace (pressing the key or sending the equivalent command) puts the trace in Active (UpdateON and DisplayON), even if that Math Mode was already selected</p> <p>Loading a trace from a file puts that trace in View regardless of the state it was in when it was saved; as does being the target of a Copy or a participant in an Exchange</p>

Trace Update State On/Off

Remote Command	<p>For Swept SA Measurement (in SA Mode):</p> <pre>:TRACe[1] 2 ... 6:UPDate[:STATe] ON OFF 1 0 :TRACe[1] 2 ... 6:UPDate[:STATe]?</pre> <p>For all other measurements:</p> <pre>:TRACe[1] 2 3:<meas>:UPDate[:STATe] ON OFF 1 0 :TRACe[1] 2 3:<meas>:UPDate[:STATe]?</pre> <p>where <code><meas></code> is the identifier for the current measurement</p>
Example	<p>Make trace 2 inactive (stop updating):</p> <pre>:TRAC2:UPD 0</pre>
Couplings	Whenever you set Update to ON for any trace, the Display is set to ON for that trace
Preset	<p>For Swept SA Measurement (in SA Mode)</p> <pre>1 0 0 0 0 0</pre> <p>ON for Trace 1; OFF for 2–6</p> <p>For Complex Spectrum measurement:</p> <pre>1 1 0</pre> <p>ON for Trace 1 and Trace 2; OFF for 3</p> <p>For all other measurements:</p> <pre>1 0 0</pre> <p>ON for Trace 1; OFF for 2 & 3</p>
State Saved	Saved in instrument state

Trace Display State On/Off

Remote Command	<p>For Swept SA Measurement (in SA Mode):</p> <pre>:TRACe[1] 2 ... 6:DISPlay[:STATe] ON OFF 1 0</pre> <pre>:TRACe[1] 2 ... 6:DISPlay[:STATe]?</pre> <p>For all other measurements:</p> <pre>:TRACe[1] 2 3:<meas>:DISPlay[:STATe] ON OFF 1 0</pre> <pre>:TRACe[1] 2 3:<meas>:DISPlay[:STATe]?</pre> <p>where <meas> is the identifier for the current measurement</p>
Example	<p>Make trace 1 visible:</p> <pre>:TRAC2:DISP 1</pre> <p>Blank trace 3:</p> <pre>:TRAC3:DISP 3</pre>
Couplings	Whenever you set Update to ON for any trace, the Display is set to ON for that trace
Preset	<p>For Swept SA Measurement (in SA Mode):</p> <pre>1 0 0 0 0 0</pre> <p>ON for Trace 1; OFF for 2–6</p> <p>For Complex Spectrum measurement:</p> <pre>1 1 0</pre> <p>ON for Trace 1 and Trace 2; OFF for 3</p> <p>For all other measurements:</p> <pre>1 0 0</pre> <p>ON for Trace 1; OFF for 2 & 3</p>
State Saved	Saved in instrument state

More Information

When a trace becomes inactive, any update from the **:SENSe** system (detectors) immediately stops, without waiting for the end of the sweep. The trace data remains unchanged, but stops updating. If the trace is blanked, this still does not affect the data in the trace. Traces that are blanked (**Display=OFF**) do not display nor appear on printouts, but their data stays intact, they may be queried, and markers may be placed on them

In most cases, inactive traces are static and unchanging; however, there are cases when an inactive trace will update, specifically:

- if data is written to that trace from remote
- if trace data is loaded from mass storage

- if the trace is the target of a **Copy** or participant in an **Exchange**
- if the trace is cleared using **Clear Trace**

Inactive traces that are also being displayed (traces in **View**) are displayed at half intensity. Traces in **View** display across the entire X-Axis of the instrument. Their horizontal placement does not change, even if X-Axis settings subsequently are changed, although Y-Axis settings do affect the vertical placement of data.

When a trace becomes active (**Update=ON**), the trace is cleared, the average count is reset, and a new sweep is initiated.

Note that putting a trace into **Display=OFF** and/or **Update=OFF** does *not* restart the sweep and does *not* restart Averaging or Hold functions for any traces.

Trace Settings Table (UXM Only)

Lets you configure the Trace system using a visual utility.

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition
--------------	---

Multi Channel Configuration

Enables you to configure multiple channel receiver. Different hardware platforms have different parameters.

This menu is available for the following measurements:

- EVM in N9042B, VXT2/3, UXM model E7515B
- PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "[Multi Channel Synchronous Acquisition \(UXM Only\)](#)" on page 3021

Input Port (UXM)

Select input port for channel configuration.

Remote Command	<code>[:SENSe]:RADio:MCChannel:PORT[1] 2 RFI01 ... RFI08</code> <code>[:SENSe]:RADio:MCChannel:PORT[1] 2?</code>
----------------	---

Example	<code>:RAD:MCH:PORT2 RFI02</code> <code>:RAD:MCH:PORT2?</code>
Dependencies	This control appears only in the EVM and PowerSuite measurement supporting multiport synchronous acquisition in the UXM model E7515B When "Lock (UXM)" on page 3023 is On, the selections are grayed out and cannot be changed. When "Lock (UXM)" on page 3023 is OFF, the label "Channel x" changes to "Unused" Selections are the same as those of RF Input Port and either RFI01 to RFI08 or RFI01 to RFI016 depending on the hardware configuration
Preset	RFI01 RFI02
State Saved	Yes
Range	RFI01 RFI02 RFI03 RFI04 RFI05 RFI06 RFI07 RFI08 or RFI01 RFI02 RFI03 RFI04 RFI05 RFI06 RFI07 RFI08 RFI09 RFI10 RFI11 RFI12 RFI13 RFI14 RFI15 RFI16
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2</code>

Lock (UXM)

Enables you to lock/unlock the input port. When locked, the selected input port is assigned to a channel.

Remote Command	<code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed?</code>
Example	<code>:RAD:MCH:PORT2:LOCK ON</code> <code>:RAD:MCH:PORT2:LOCK?</code>
Dependencies	This control appears only in the EVM and PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2:LOCKed</code>

Trace Settings Table

Lets you set a configuration of multiport synchronous acquisition.

Dependencies Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "[Multi Channel Synchronous Acquisition \(UXM Only\)](#)" on page 3021

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a `:READ` or `:FETCh` query:

- Trace 1
- Trace 2
- Trace 3

Remote Command	<code>:CALCulate:<meas>:MTRace TRACe1 TRACe2 TRACe3</code> <code>:CALCulate:<meas>:MTRace?</code> <code><meas></code> is the identifier for the current measurement; any one of <code>CHPower</code> <code>ACPower</code> <code>OBWidth</code> <code>SEMask</code> <code>SPURious</code> <code>PVTime</code>
Example	Channel Power <code>:CALC:CHP:MTR TRAC1</code> <code>:CALC:CHP:MTR?</code>
Dependencies	In the ACP measurement, this control is grayed-out when Meas Method is set to <code>RBW</code> or <code>FAST</code> , and only Trace 1 is enabled
Preset	<code>TRACe1</code>
State Saved	No
Range	Trace 1 Trace 2 Trace 3

Channel Assignment

Selects the channel for each trace in the specified measurement. A port selected at ["Input Port \(UXM\)" on page 3022](#) is assigned to a trace. This setting is valid when ["Multi Channel Synchronous Acquisition \(UXM Only\)" on page 3025](#) is ON.

Multi Channel Synchronous Acquisition is performed under the following conditions:

- All Input Port Channel Lock is set to ON
- Multi Channel Synchronous Acquisition is set to ON

The selected input port is shown in the Trace Setup Summary table, on the trace and at the bottom of the Trace Control menu panel.

Remote Command	<code>:TRACe[1] 2 3:<meas>:CHANne1 CHANne11 CHANne12</code> <code>:TRACe[1] 2 3:<meas>:CHANne1?</code>
Example	For the ACP measurement Trace 2 <code>:TRAC2:ACP:CHAN CHAN2</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3025 is On The unlocked channel is grayed-out
Preset	CHAN1 CHAN2 CHAN1
State Saved	Yes
Range	Channel 1 Channel 2

Input Port

Read-only information. Indicates which input data is displayed in each trace. This setting is valid when Multi Channel Synchronous Acquisition is ON.

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3021 is On This column is blank when Math Function is other than Off
--------------	--

3.2.10.3 Math

Lets you turn on and configure Trace Math functions.

Math Function

Trace Math functions perform mathematical operations between traces and, in some cases, user-specified offsets. When in a Trace Math function, the indicated function is performed during the sweep with the math function used in place of a detector. The trace operands for the math function are set using the "Operand 1 / Operand 2" on page 2942 controls.

See "How trace math is processed" on page 426

Note that, in RTSA Mode, only **Spectrum** traces can participate in **Trace Math** functions.

Remote Command	<p>For option details, see "Trace Math Options" on page 424</p> <p>For Swept SA Measurement in SA Mode and Spectrum & PVT measurement in RTSA Mode:</p> <pre>:CALCulate:MATH <trace_num>, PDIFference PSUM LOFFset LDIFference OFF, <trace_num>, <trace_num>, <real>, <real> :CALCulate:MATH? <trace_num></pre> <p>where <trace_num> is any one of: TRACE1 TRACE2 TRACE3 TRACE4 TRACE5 TRACE6</p> <p>For all other measurements:</p> <pre>:CALCulate:<meas>:MATH <trace_num>, PDIFference PSUM LOFFset LDIFference OFF, <trace_num>, <trace_num>, <real>,<real> :CALCulate[:<meas>]:MATH? <trace_num></pre> <p>where:</p> <p><meas> is the identifier for the current measurement, and <trace_num> is any one of: TRACe1 TRACe2 TRACe3</p> <p>Note that the format of the TRACe<n> parameter differs from that for the Swept SA Measurement</p>
----------------	---

Example	<pre>:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0</pre> <p>Sets Trace 3 to Power Diff trace math function, and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2</p> <pre>:CALC:MATH TRACE3,PSUM,TRACE1,TRACE2,0,0</pre> <p>Sets Trace 3 to Power Sum trace math function and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2</p> <pre>:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0</pre> <p>Sets Trace 3 to Log Offset trace math function, sets the First Trace operand (for Trace 3) to Trace 1, leaves the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and sets the Log Offset (for Trace 3) to -6 dB</p> <pre>:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00</pre> <p>Sets Trace 3 to Log Diff trace math function, sets the First Trace operand (for Trace 3) to Trace 1, sets the Second Trace operand (for Trace 3) to Trace 2, and sets the Log Difference reference (for Trace 3)</p>
---------	---

3 5G NR/5G-A Mode
 3.2 Channel Power Measurement

	<p>to -6 dBm <code>:CALC:MATH TRACE1,OFF,TRACE2,TRACE3,0,0</code> Turns off trace math for trace 1</p>
Notes	<p>The Trace Math Function command has 6 main set of parameters:</p> <ul style="list-style-type: none"> - Set 1 defines the “result trace”: <code>TRACE1 ... TRACE6</code> - Set 2 defines the “function”: <code>PDifference PSUM LOFFset LDifference OFF</code> - Set 3 is a “trace operand” (1): <code>TRACE1 ... TRACE6</code> - Set 4 is a “trace operand” (2): <code>TRACE1 ... TRACE6</code> - Set 5 defines the “Log Offset” (in dB) - Set 6 defines the “Log Difference Reference” (in dBm) <p>Note that the trace math mode is an enumeration; that is, when a math function is set for a trace, it turns off any math function that is on for that trace, then sets the new math function</p> <p>The parameters sent in the command are reflected in the values in the control menu. There is no default for any parameter; all 6 parameters must be sent to satisfy the parser. Failure to specify a parameter will result in a missing parameter message</p> <p>The query returns the math mode, the operand traces, the offset and the reference for the specified trace, all separated by commas</p>
Dependencies	<p>Trace Math is not available if Normalize is on Trace Math is not available if Signal ID is on</p> <p>None of the trace operands can be the destination trace. If any of the three trace math commands is sent with a destination trace number matching one of the operands, a warning is generated, and the function does not turn on</p>
Couplings	<p>When a math function is changed for a trace, that trace is set to Display = ON; and Update = ON</p>
Preset	<p>For Swept SA Measurement (in SA Mode): <code>OFF,TRACE5,TRACE6,0,0 OFF,TRACE6,TRACE1,0,0 OFF,TRACE1,TRACE2,0,0 </code> <code>OFF,TRACE2,TRACE3,0,0 OFF,TRACE3,TRACE4,0,0 OFF,TRACE4,TRACE5,0,0</code></p> <p>For all other measurements: <code>OFF,TRACE2,TRACE3,0,0 OFF,TRACE3,TRACE1,0,0 OFF,TRACE1,TRACE2,0,0</code></p>
State Saved	<p>The trace math function for each trace is saved in instrument state</p>
Annunciation	<p>An “P” is shown on the trace annunciation panel in the Measurement Bar when a math function is on; and the function is annotated on the trace if Trace Annotation is on</p>
Status Bits/OPC dependencies	<p>*OPC can be used to detect the completion of a sweep, which will also correspond to the completion of the math operation, since all math takes place during the sweep</p>

Trace Math Options

IMPORTANT

To generate a trace math result, *you must take a sweep*. The trace math engine, described below, operates in concert with the sweep engine in the instrument. Until a sweep has been taken, even if the constituent traces are not in Update mode, no result is generated.

Note that certain events can affect the trace in ways that affects all points at once. This can happen in any number of ways, including:

- A trace clear taking place
- A trace being loaded from the file system
- Trace data being sent in from the remote interface
- A copy or exchange of trace data

You should try to avoid these occurrences during a sweep, as they will tend to invalidate the math result being accumulated.

The Trace Math functions are:

Power Diff (Op1 - Op2)

Calculates a power difference between the **First Trace** operand and the **Second Trace** operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace:

$$\text{DestinationTrace} = 10 \log_{10}(1/10)(\text{FirstTrace}) - 10(1/10)(\text{SecondTrace})$$

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in **FirstTrace** is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

Otherwise, if the result of the subtraction is less than or equal to 0, the resultant point is **mintracevalue**.

Power Sum (Op1 + Op2)

Calculates a power sum between the **First Trace** operand and the **Second Trace** operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

$DestinationTrace = 10 \log(10(1/10)(FirstTrace) + 10(1/10)(SecondTrace))$

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in either trace operand is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

Log Offset (Op1 + Offset)

Calculates a log offset from the **First Trace** operand and puts the result in the destination trace. This is like the B-DL function in some older instruments. The offset is entered on the **Offset** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own offset.

During the sweep, the following formula is executed for each point in the trace operand, and the corresponding point is generated for the destination trace.

$DestinationTrace = FirstTrace + Offset$

The values of the trace points are assumed to be in dBm (as they are internally stored) and the offset is in dB.

If a point in the trace operand is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

If a point in the trace operand is equal to **mintracevalue**, the resultant point is also **mintracevalue**.

Example: If offset is 25 dB, then our destination trace will be higher than the operand trace by 25 dB.

Note that the **Second Trace** operand is not used for this function.

Log Diff (Op1 - Op2 + Ref)

Offsets the difference between the **First Trace** operand and the **Second Trace** operand by a reference and puts the result in the destination trace. This is like the A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

Offsets the difference between the **First Trace** operand and the **Second Trace** operand by a reference and puts the result in the destination trace. This is like the A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

$DestinationTrace = (FirstTrace - SecondTrace) + Reference$

The values of the operand trace points are assumed to be in decibel units (as they are internally stored) and the reference is in dBm so the result is in dBm.

Example: If the first operand trace 1 is at 5 dBm, the second operand trace 2 is at -5 dBm, and the reference is -25 dBm, then the destination trace will be -15 dBm.

Example: If the first operand trace 1 is at 60 dBuV, the second operand trace 2 is at 50 dBuV, and the reference is 35 dBuV, then the destination trace will be 45 dBuV.

If a point in **FirstTrace** is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

If a point in **FirstTrace** is equal to **mintracevalue**, the resultant point is also **mintracevalue**.

If neither of the above is true for a given point, then:

- If that point in **SecondTrace** is equal to **maxtracevalue**, the resultant point is **mintracevalue**.
- If that point in **SecondTrace** is equal to **mintracevalue**, the resultant point is **maxtracevalue**.

How trace math is processed

Whenever a trace math function is turned on, or the parameters and/or operands of an existing trace math function are changed, the destination trace is cleared. After the trace is cleared, all x-axis values in the trace, and the domain of the trace, are set to match the X-Axis settings of the first trace operand. When this is complete, a new sweep is initiated.

The process of acquiring data, processing it using the math and Average/Hold functions, and presenting it as trace data, consists of several functional blocks, as shown below:

For each active trace, the current trace point is processed for **Trace 1**, then **Trace 2**, then **Trace 3**, etc. Trace data is taken from either the detector for that trace, or

from the mathematical result of up to two other traces and an offset, depending on whether trace math is on or not. The resultant data is then fed to the Average/Hold processing block, where (if the trace type is **Average**, **Max Hold**, or **Min Hold**) it is processed with previous trace data. The new trace data resulting from this process is then available for display, storage or remote output.

When the processing is complete for **Trace 1**, **Trace 2** is processed, and so on until all six traces have been processed. This allows a downstream trace to use as one of its math components a fully processed upstream trace. In other words, if math is **ON** for **Trace 4**, and its operand traces are **Trace 2** and **Trace 3**, then all detector, math, average and hold processing for Traces 2 and 3 is completed before the math is performed for **Trace 4**. When the current trace point is completed for all traces, the instrument moves on to the next trace point.

This allows very flexible and powerful math functions to be configured. For example, **Trace 1** can be an average trace, which can be fed with an offset to **Trace 2**, which can also be in **Max Hold**, allowing you to obtain the **Max Hold** of an Average trace.

Note that none of this processing is performed on inactive traces.

Note also that for any active trace with math **ON**, the Operand traces should have *lower* numbers than the trace (for example, using **Trace 4** as an operand for **Trace 1** will cause the data coming from **Trace 4** to be delayed by one sweep).

Operand 1 / Operand 2

These two controls select the first and second trace operands to be used for the trace math functions for the destination trace. The operands are common to all math functions for a given trace. The most recently sent **:CALCulate:MATH** command for a given trace sets the operands for that trace. Those settings are displayed on the trace operand controls for that trace.

Example	<p>The following examples are for the Swept SA measurement</p> <p>Set Trace 3 to Power Diff trace math function. Set the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2:</p> <pre>:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0</pre> <p>Set Trace 3 to Log Offset trace math function. Set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB:</p> <pre>:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0</pre>
Notes	See " Math Function " on page 2935 for how to specify Operands 1 and 2 using :CALCulate:MATH
Dependencies	The destination trace cannot be an operand. The destination trace number is grayed-out on the dropdown
Preset	Operand 1: Trace number minus 2 (wraps at 1). For example, for Trace 1, Operand 1 presets to Trace

	5; for Trace 6, it presets to Trace 4 Operand 2: Trace number minus 1 (wraps at 1). For example, for Trace 1, Operand 2 presets to Trace 6; for Trace 6, it presets to Trace 5
State Saved	Operands 1 and 2 for each trace are stored in instrument state

Offset

Used by the Log Offset math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Offset trace math function, set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB: <code>:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0</code>
State Saved	The Log Offset value for each trace is saved in Instrument State
Min/Max	-/+100 dB

Reference

Used by the Log Diff math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Diff trace math function, set the First Trace operand (for Trace 3) to Trace 1, set the Second Trace operand (for Trace 3) to Trace 2, and set the Log Difference reference (for Trace 3) to -6 dBm: <code>:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00</code>
State Saved	The Log Difference reference value for each trace is saved in instrument state
Min/Max	Same as reference level

3.2.10.4 Detector

Lets you choose and configure detectors for the selected trace.

Detector

Selects a detector to be used by the instrument for the current measurement. The following choices are available:

Option	Parameter	Detector Behavior
Auto	n/a	The detector selected depends on marker functions, trace functions, average type, and the trace averaging function

Option	Parameter	Detector Behavior
		This option is set using "Detector Select Auto/Man" on page 431
Normal	NORMa1	The detector determines the peak of the CW-like signals, and it yields alternating maximums and minimums of noise-like signals. This is also referred to as Rosenfell detection
Average	AVERAge	The detector determines the average of the signal within the sweep points, using RMS averaging
Peak (Positive)	POSitive	The detector determines the maximum of the signal within the sweep points
Sample	SAMPle	The detector indicates the instantaneous level of the signal at the center of the sweep points represented by each display point
Negative Peak	NEGative	The detector determines the minimum of the signal within the sweep points
RMS	RMS	Equivalent to Average . See Notes below

Because they may not find a spectral component's true peak, neither **Average** nor **Sample** detectors measure amplitudes of CW signals as accurately as **Peak** or **Normal**, but they do measure noise without the biases of peak detection.

Remote Command `[:SENSe]:CHPower:DETEctor[:FUNction] NORMa1 | AVERAge | POSitive | SAMPle | NEGative | RMS`
`[:SENSe]:CHPower:DETEctor[:FUNction]?`

Example `:CHP:DET NORM`
`:CHP:DET?`
 Set the detector to **Average**, which uses RMS averaging, so this is equivalent to selecting an **RMS** detector:
`:CHP:DET RMS`

Notes The query returns a name that corresponds to the detector type, as shown below
 The **RMS** selection sets the detector type to **AVERAge** with **RMS** averaging. Therefore, if **RMS** has been selected, the query returns **AVER**

String Returned	Definition
NORM	Normal
AVER	Average (RMS)
POS	Peak
SAMP	Sample
NEG	Negative Peak

Couplings When the **Detector** setting is **Auto**, switches to align with "Trace Type" on page 2927:
 - **NORMa1** with Clear Write
 - **AVERAge** with **AVERAge**

	<ul style="list-style-type: none"> - POSitive (peak) with MAXHold - NEGative (peak) with MINHold
Preset	AVERage
State Saved	Saved in instrument state
Range	NORMal AVERage POSitive SAMPlE NEGative RMS

Detector Select Auto/Man

Sets the Detector mode to **Auto** or **Manual**. In **Auto**, the proper detector is chosen based on rules that take into account the measurement settings and other instrument settings.

When you select any detector explicitly, this setting switches automatically to **Man** (manual).

Remote Command	[:SENSe] :CHPower:DETEctor:AUTO ON OFF 1 0
Example	:CHP:DET:AUTO ON :CHP:DET:AUTO?
Couplings	When the Detector setting is Auto , switches to align with "Trace Type" on page 2927 : <ul style="list-style-type: none"> - NORMal with Clear Write - AVERage with AVERage - POSitive (peak) with MAXHold - NEGative (peak) with MINHold
Preset	ON
State Saved	Yes

3.2.10.5 Trace Function

Contains controls to:

- Copy and Exchange traces
- Preset or Clear all traces

From Trace

Selects the trace to be copied to or exchanged with the ["To Trace" on page 2311](#) when a ["Copy" on page 2311](#) or ["Exchange" on page 2311](#) is performed

Preset 1

To Trace

Selects the trace to be copied from or exchanged with the "From Trace" on page 2310 when a "Copy" on page 2311 or "Exchange" on page 2311 is performed

Preset 2

Copy

Executes a Trace Copy based on the "From Trace" on page 2310 and "To Trace" on page 2311 parameters. The copy operation is from the **From Trace** to the **To Trace**. The action is performed once.

The X-Axis settings and domain of a trace are also copied.

Remote Command For Swept SA Measurement in SA Mode:
`:TRACe:COPIY TRACE1 | ... | TRACE6, TRACE1 | ... | TRACE6`
 For Spectrum & PvT measurement in RTSA Mode:
`:TRACe:COPIY TRACE1 | ... | TRACE12, TRACE1 | ... | TRACE12`
 For all other measurements:
`:TRACe:<meas>:COPIY TRACe1 | TRACe2 | TRACe3, TRACe1 | TRACe2 | TRACe3`
 where <meas> is the identifier for the current measurement
 Note that the format of the `TRACe<n>` parameter differs from that for the Swept SA Measurement

Example Copy Trace 1 to Trace 3 and put Trace 3 in Update=Off, Display=On
`:TRAC:COPIY TRACE1,TRACE3`

Notes The command is of the form:
`:TRACe:COPIY <source_trace>,<dest_trace>`

Dependencies When Signal ID is on, this key is grayed-out

Couplings The destination trace is put in **View** (Update = Off, Display = On) after the copy

Preset For Swept SA Measurement in SA Mode:
`TRACE1, TRACE2`
 For all other measurements:
`TRACe1, TRACe2`

Exchange

Executes a Trace Exchange based on the "From Trace" on page 2310 and "To Trace" on page 2311 parameters. The **From Trace** and **To Trace** values are exchanged with each other. The action is performed once.

The X-Axis settings and domain of a trace are also copied when it is exchanged with another trace.

Note that, in RTSA Mode, only traces of the same type can participate in **Copy** and **Exchange** functions.

Remote Command	<p>For Swept SA Measurement in SA Mode: :TRACe:EXCHange TRACE1 ... TRACE6, TRACE1 ... TRACE6</p> <p>For Spectrum & PvT measurement in RTSA Mode: :TRACe:EXCHange TRACE1 ... TRACE12, TRACE1 ... TRACE12</p> <p>For all other measurements: :TRACe:<meas>:EXCHange TRACe1 TRACe2 TRACe3, TRACe1 TRACe2 TRACe3</p> <p>where <meas> is the identifier for the current measurement</p> <p>Note that the format of the :TRACe<n> parameter differs from that for the Swept SA Measurement</p>
Example	<p>Exchange Trace 1 and Trace 2 and put both traces in Update=OFF, Display=ON: :TRAC:EXCH TRACE1,TRACE2</p>
Notes	<p>The command is of the form: :TRACe:EXCHange <trace_1>,<trace_2></p>
Couplings	Both traces are put in View (Update=Off, Display=On) after the exchange

Preset All Traces

Turns on Trace 1 and blanks all other traces. This is useful when you have many traces on, and you want to return to having only Trace 1 on the display. Does not affect the trace type, detector or any other aspect of the trace system.

Remote Command	:TRACe[:<meas>]:PRESet:ALL
Example	:TRAC:PRE:ALL
Dependencies	When Signal ID is on, this key is grayed-out

Clear All Traces

Clears all traces. Does not affect the state of any function or variable in the instrument. Loads **mintracevalue** into all of the points for all traces, except traces in **Min Hold**, in which case it loads **maxtracevalue**, even if **Update = OFF**.

Remote Command	<p>:TRACe[:<meas>]:CLEar:ALL</p> <p>RTSA Mode only: :TRACe:PRESet:ALL</p>
Example	:TRAC:CLE:ALL
Dependencies	When Signal ID is on, this key is grayed-out

Multiple Traces for EIRP

Enables you to preset the following parameters.

Multi Channel Synchronous Acquisition		Off	
From Trace		Trace 1	
To Trace		Trace 2	
	Trace 1	Trace 2	Trace 3
Trace Type	Trace Average	Trace Average	Clear / Write
View/Blank	Active	View	Active
Math Function	Off	Off	Power Sum =Trace 1 + 2
Operand 1	N/A	N/A	Trace 1
Operand 2	N/A	N/A	Trace 2

Remote Command **:TRACe:<meas>:PRESet:EIRP**

Example For OBW Meas:
 :TRAC:OBW:PRES:EIRP

3.2.10.6 Advanced

Contains controls for setting advanced trace functions of the instrument.

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a **:READ** or **:FETCh** query:

- Trace 1
- Trace 2
- Trace 3

Remote Command **:CALCulate:<meas>:MTRace TRACe1 | TRACe2 | TRACe3**
 :CALCulate:<meas>:MTRace?

<meas> is the identifier for the current measurement; any one of **CHPower | ACPower | OBWidth | SEMask | SPURious | PVTime**

Example Channel Power
 :CALC:CHP:MTR TRAC1
 :CALC:CHP:MTR?

3 5G NR/5G-A Mode
3.2 Channel Power Measurement

Dependencies	In the ACP measurement, this control is grayed-out when Meas Method is set to RBW or FAST , and only Trace 1 is enabled
Preset	TRACe1
State Saved	No
Range	Trace 1 Trace 2 Trace 3

3.3 Occupied BW Measurement

This measurement computes and displays the bandwidth occupied by a given percentage of the total mean power of a signal.

Measurement Commands

The general functionality of "CONFigure" on page 3824, "INITiate" on page 3825, "FETCh" on page 3825, "MEASure" on page 3827, and "READ" on page 3826 are described in the section **SCPI Operation and Results Query** in the topic **Programming the Instrument**.

Note that, in general, `:CONF : <Measurement>` resets the specified measurement settings to their defaults. X-Series permits the addition of the `NDEFault` node to the command, which prevents a measurement preset after a measurement switch.

The tables below list setup commands for this measurement and queries to retrieve results.

Command	Function
<code>:INITiate:OBwidth</code>	Initiates a trigger cycle for the OBW measurement, but does not return any data. You must then use <code>:FETC:OBW[n]?</code> to retrieve data
<code>:CONFigure?</code>	Does not change any measurement settings
<code>:CONFigure:OBwidth</code>	Returns the long form name of current measurement, in this case, OBwidth
<code>:CONFigure:OBwidth</code>	Selects OBW measurement with Meas Setup settings in preset state – same as Meas Preset
<code>:CONFigure:OBwidth:NDEFault</code>	Selects OBW measurement <i>without</i> affecting settings

The following queries are used to retrieve data. The type of data returned depends on the value of `n`, as detailed in "Remote Command Results" on page 437.

Command	Function
<code>:FETCh:OBwidth[n]?</code>	Retrieves the data defined by <code>n</code>
<code>:MEASure:OBwidth[n]?</code>	Switches to OBW measurement, restores default values, starts the measurement, then retrieves the data defined by <code>n</code>
<code>:READ:OBwidth[n]?</code>	Starts the measurement, then retrieves the data defined by <code>n</code>

Backwards Compatibility Queries

Command	Return Value
<code>:FETCh:OBwidth:OBwidth?</code>	Returns the Occupied Bandwidth (Hz)
<code>:MEASure:OBwidth:OBwidth?</code>	
<code>:READ:OBwidth:OBwidth?</code>	

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

Command	Return Value
:FETCh:OBWidth:FERRor?	Returns the Transmit Frequency Error (Hz)
:MEASure:OBWidth:FERRor?	
:READ:OBWidth:FERRor?	
:FETCh:OBWidth:XDB?	Returns the xdB Bandwidth (Hz)
:MEASure:OBWidth:XDB?	
:READ:OBWidth:XDB?	

Remote Command Results

The following table describes the results returned by the **FETCh**, **MEASure**, and **READ** queries listed above, according to the index value **n**.

n	Results Returned																								
1, or not specified	Returns scalar results, in the following order: <table border="1" data-bbox="381 877 1404 1281"> <thead> <tr> <th>#</th> <th>Item</th> <th>Unit</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Occupied Bandwidth</td> <td>Hz</td> </tr> <tr> <td>2</td> <td>Total Power or OBW Power Power reference type can be changed with "Power Ref" on page 514 in Meas Setup</td> <td>dBm</td> </tr> <tr> <td>3</td> <td>Span</td> <td>Hz</td> </tr> <tr> <td>4</td> <td>Spectrum Trace Points</td> <td>points</td> </tr> <tr> <td>5</td> <td>Res BW</td> <td>Hz</td> </tr> <tr> <td>6</td> <td>Transmit Frequency Error</td> <td>Hz</td> </tr> <tr> <td>7</td> <td>7. x dB Bandwidth</td> <td>Hz</td> </tr> </tbody> </table>	#	Item	Unit	1	Occupied Bandwidth	Hz	2	Total Power or OBW Power Power reference type can be changed with "Power Ref" on page 514 in Meas Setup	dBm	3	Span	Hz	4	Spectrum Trace Points	points	5	Res BW	Hz	6	Transmit Frequency Error	Hz	7	7. x dB Bandwidth	Hz
#	Item	Unit																							
1	Occupied Bandwidth	Hz																							
2	Total Power or OBW Power Power reference type can be changed with "Power Ref" on page 514 in Meas Setup	dBm																							
3	Span	Hz																							
4	Spectrum Trace Points	points																							
5	Res BW	Hz																							
6	Transmit Frequency Error	Hz																							
7	7. x dB Bandwidth	Hz																							
2	Returns the frequency-domain spectrum trace (data array) for the entire frequency range being measured for Trace 1																								
3	Only available in LTEAFDD, LTEATDD, 5GNR Modes 1. Number of active carriers Returns number of active carriers within Span in Auto detected mode, otherwise the command is out of scope																								
4	Returns OBW Boundaries table results in the following order: <table border="1" data-bbox="381 1575 1404 1793"> <thead> <tr> <th>#</th> <th>Item</th> <th>Unit, if any</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Occupied bandwidth</td> <td>Hz</td> </tr> <tr> <td>2</td> <td>Total Power or OBW Power Power reference type can be changed with "Power Ref" on page 514 in Meas Setup</td> <td>dBm</td> </tr> </tbody> </table>	#	Item	Unit, if any	1	Occupied bandwidth	Hz	2	Total Power or OBW Power Power reference type can be changed with "Power Ref" on page 514 in Meas Setup	dBm															
#	Item	Unit, if any																							
1	Occupied bandwidth	Hz																							
2	Total Power or OBW Power Power reference type can be changed with "Power Ref" on page 514 in Meas Setup	dBm																							

n Results Returned			
#	Item	Unit, if any	
3	x dB Reference Power	dBm	
4	x dB Reference Power Frequency - offset frequency	Hz	
5	x dB Reference Power Frequency - absolute frequency	Hz	
6	NaN (9.91E+37)	-	
7	NaN (9.91E+37)	-	
8	NaN (9.91E+37)	-	
9	Lower OBW boundary - offset frequency	Hz	
10	Lower OBW boundary - absolute frequency	Hz	
11	Lower OBW boundary - absolute power	dBm	
12	Lower OBW boundary - relative power	dBc	
13	Upper OBW boundary - offset frequency	Hz	
14	Upper OBW boundary - absolute frequency	Hz	
15	Upper OBW boundary - absolute power	dBm	
16	Upper OBW boundary - relative power	dBc	
17	Lower x dB BW boundary - offset frequency	Hz	
18	Lower x dB BW boundary - absolute frequency	Hz	
19	Lower x dB BW boundary - absolute power	dBm	
20	NaN (9.91E+37)	-	
21	Upper x dB BW boundary - offset frequency	Hz	
22	Upper x dB BW boundary - absolute frequency	Hz	
23	Upper x dB BW boundary - absolute power	dBm	
24	NaN (9.91E+37)	-	
Results 6, 7, 8, 20 and 24 always return NaN (9.91E+37)			
5	Returns the frequency-domain spectrum trace (data array) for the entire frequency range being measured for Trace 2		
6	Returns the frequency-domain spectrum trace (data array) for the entire frequency range being measured for Trace 3		

3.3.1 Views

This measurement has three predefined views:

Name	SCPI Name	SCPI #
"OBW Results" on page 439	OBWResults	1
"OBW Boundaries" on page 440	BOUNDaries	2

Name	SCPI Name	SCPI #
"Gate" on page 440	See "Gate View On/Off" on page 3745	

These are multiple-window views. When in a multiple-window view, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the **View** changes, the default menu is **Frequency**, unless otherwise specified in the **View** description.

The following SCPI commands can be used to select any view other than **Gate**.

View Selection by Name

Remote Command	<code>:DISPlay:OBWidth:VIEW[:SElect] OBWResults BOUNdaries</code> <code>:DISPlay:OBWidth:VIEW[:SElect]?</code>
Example	<code>:DISP:OBW:VIEW OBWR</code> <code>:DISP:OBW:VIEW?</code>
Preset	<code>OBWResults</code>
State Saved	Saved in instrument state
Range	<code>OBWResults BOUNdaries</code>

View Selection by Number

Remote Command	<code>:DISPlay:OBWidth:VIEW:NSElect <integer></code> <code>:DISPlay:OBWidth:VIEW:NSElect?</code>
Example	<code>:DISP:OBW:VIEW:NSEL 2</code> <code>:DISP:OBW:VIEW:NSEL?</code>
Preset	1
State Saved	Saved in instrument state
Min/Max	1/2

3.3.1.1 OBW Results

Windows: "Graph" on page 440, "Metrics - OBW Results" on page 441

The spectrum trace is displayed in the upper window. Measurement results such as Occupied Bandwidth or Power are displayed in the lower window.

Example	<code>:DISP:OBW:VIEW OBWR</code>
---------	----------------------------------

3.3.1.2 OBW Boundaries

Windows: "Graph" on page 440, "Metrics - OBW Boundaries" on page 443

The spectrum trace is displayed in the upper window. The lower window of OBW Results view is replaced by the OBW boundaries table in this view. Occupied bandwidth and X dB bandwidth for both lower and upper boundaries are displayed.

Example `:DISP:OBW:VIEW BOUN`

3.3.1.3 Gate

See "Gate View On/Off" on page 3745

3.3.2 Windows

There are four available window types. The **Gate** window is available only when "Gate View On/Off" on page 3745 is **ON** in the **Gate Settings** menu under **Trigger**.

View	#
"Graph" on page 440	1
"OBW Results" on page 439	2
"OBW Boundaries" on page 440	3
"Gate" on page 444	4

3.3.2.1 Graph

Window #1

Appears in two Views, as follows:

View	Size	Position
"OBW Results" on page 439	Three fifth, full width	Top
"OBW Boundaries" on page 440	Half, full width	Top

Spectrum View

For SA, WCDMA, WLAN mode:

3 5G NR/5G-A Mode
 3.3 Occupied BW Measurement

For LTE-Advanced FDD/TDD mode only

3.3.2.2 Metrics - OBW Results

Window #2

Displays the textual results of the Occupied BW measurement.

View	Size	Position
"OBW Results" on page 439	Two fifth, full width	Bottom
Gate	One third, full width	Bottom

Metrics			
Occupied Bandwidth	2.9730 MHz	Total Power	20.2 dBm
Transmit Freq Error	0 Hz	% of OBW Power	99.00 %
x dB Bandwidth	3.000 MHz	x dB	-26.00 dB

For the LTE-Advanced FDD/TDD and 5G NR modes, the metric result is shown as below:

Metrics			
Occupied Bandwidth	2.9730 MHz	Total Power	20.2 dBm
Transmit Freq Error	0 Hz	% of OBW Power	99.00 %
x dB Bandwidth	3.000 MHz	x dB	-26.00 dB

Measure Trace Trace 1

Occupied Bandwidth

The occupied bandwidth result is $f_2 - f_1$, where f_1 and f_2 are the lower and upper carrier boundary point. f_1 and f_2 are calculated with Occupied Bandwidth algorithms.

Total Power or OBW Power

The total power is the power integrated in the specified span setting. The OBW power is calculated from multiplying the total power by OBW percent power. The user can select the total power or the OBW power with the Power Ref control in Meas Setup.

Transmit Freq Error

The transmit freq error (transmit frequency error) result is calculated as the difference between $(f_2+f_1)/2$ and the tuned center frequency of the signal, where f_1 and f_2 are the lower and upper carrier boundary point.

x dB Bandwidth

The x dB result is a bandwidth measured between two points on the signal which are a certain number of dBs down from the highest signal point within the OBW Span. For example, If the 'x dB' parameter is set to -26 dB, and the 'Occupied BW Span' is set to 10 MHz, then the maximum signal power level is first determined from the 10 MHz wide trace sweep. Next, the two furthest frequencies below (xdb_{f_1}) and above (xdb_{f_2}) the frequency of the maximum level occurrence are found where the signal level is 26 dB below the peak level. This calculation also uses linear interpolation to find the lower and upper carrier boundary point within the width of a sweep point (the span divided by the number of sweep points).

The x dB bandwidth is calculated to be $xdb_{f_2} - xdb_{f_1}$.

% of OBW Power

The x dB reference power result shows the power of the highest signal point within the OBW Span.

x dB At Freq

The x dB reference power frequency result shows the frequency of the highest signal point within the OBW Span. The frequency display type, either Offset or Absolute, can be selected with the Boundary Frequency control under Display.

OBW Boundary Results

Name	Unit	Corresponding Results
Lower OBW boundary - offset frequency	Hz	Offset frequency of the lower OBW boundary from center frequency
Lower OBW boundary - absolute power	dB	Absolute power on the point of lower OBW boundary
Lower OBW boundary - relative power	dBc	Relative power on the point of lower OBW boundary
Upper OBW boundary - offset frequency	Hz	Offset frequency of the upper OBW boundary from center frequency
Upper OBW boundary - absolute power	dB	Absolute power on the point of upper OBW boundary
Upper OBW boundary - relative power	dBc	Relative power on the point of upper OBW boundary
Lower x dB BW boundary - offset frequency	Hz	Offset frequency of the lower x dB BW boundary from center frequency
Lower x dB BW boundary - absolute power	dB	Absolute power on the point of lower x dB BW boundary
Upper x dB BW boundary - offset frequency	Hz	Offset frequency of the lower x dB BW boundary from center frequency
Upper x dB BW boundary - absolute power	dB	Absolute power on the point of lower x dB BW boundary

3.3.2.4 Gate

Window #4

Turning on **Gate** View shows the **Gate** Window, which lets you see your Gating signal at the same time as the measured data. See the description in "[Gate View On/Off](#)" on page 3745 under **Trigger, Gate Settings**.

Views in which this window appears:

View	Size	Position
Gate	One third, full width	Top

3.3.3 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.3.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The reference line is at the top, center, or bottom of the graticule, depending on the value of the Ref Position function.

Remote Command	<code>:DISPlay:OBWidth:WINDow[1]:TRACe:Y[:SCALe]:RLEVel <real></code>
Example	<code>:DISP:OBW:WIND:TRAC:Y:RLEV 125</code> <code>:DISP:OBW:WIND:TRAC:Y:RLEV?</code>
Couplings	When " Auto Scaling " on page 447 is ON (default), this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling changes to OFF " Attenuation " on page 2951 is not coupled to Ref Value
Preset	10.00 dBm
State Saved	Saved in instrument state
Min/Max	-250.00 dBm / 250.00 dBm
Annotation	Ref <value> top left of graph
Backwards Compatibility SCPI	<code>:DISPlay:OBWidth:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVel</code>

Scale/Div

For measurements that support a logarithmic Y-Axis, **Scale/Div** sets the height of one division of the graticule in the current Y-Axis unit.

Scale/Div also determines the displayed amplitude range in the log plot graph. Since there are usually 10 vertical graticule division on the display, the total amplitude range of the graph is typically 10x this amount. For example, if Scale/Div is 10 dB, then the total range of the graph is 100 dB.

Remote Command	<code>:DISPlay:OBWidth:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <rel_amp1></code> <code>:DISPlay:OBWidth:WINDow[1]:TRACe:Y[:SCALe]:PDIVision?</code>
Example	<code>:DISP:OBW:WIND:TRAC:Y:PDIV 5</code> <code>:DISP:OBW:WIND:TRAC:Y:PDIV?</code>
Couplings	Coupled to Scale Range as follows Scale/Div = Scale Range/10 (number of divisions) When the Auto Scaling is On, this value is automatically determined by the measurement result When you change a value, Auto Scaling automatically changes to Off
Preset	10.00 dB / Div
State Saved	Saved in instrument state
Min	0.10 dB
Max	20 dB
Annotation	<value> dB/ left upper of graph
Backwards Compatibility SCPI	<code>:DISPlay:OBWidth:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision</code>

Scale Range

Sets the Y-Axis scale range.

Remote Command	Replace <meas> with the identifier for the current measurement <code>:DISPlay:<meas>:WINDow[1]:TRACe:Y[:SCALe]:RANGe <rel_amp1></code> <code>:DISPlay:<meas>:WINDow[1]:TRACe:Y[:SCALe]:RANGe?</code>
Example	<code>:DISP:CHP:WIND:TRAC:Y:RANG 100</code> <code>:DISP:CHP:WIND:TRAC:Y:RANG?</code>
Couplings	Coupled to Scale/Div as follows Scale Range = Scale/Div * 10 (number of divisions) When you change this value, Auto Scaling automatically changes to OFF
Preset	100 dB
State Saved	Saved in instrument state
Min	1
Max	200

Ref Position

Positions the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

Remote Command	<code>:DISPlay:OBWidth:WINDow[1]:TRACe:Y[:SCALe]:RPOSition TOP CENTer BOTTom</code> <code>:DISPlay:OBWidth:WINDow[1]:TRACe:Y[:SCALe]:RPOSition?</code>
Example	<code>:DISP:OBW:WIND:TRAC:Y:RPOS CENT</code> <code>:DISP:OBW:WIND:TRAC:Y:RPOS?</code>
Preset	TOP
State Saved	Saved in instrument state
Range	TOP CENTer BOTTom
Annotation	The greater than (>) and less than (<) symbols are displayed on both sides of the graph to indicate the Reference Position
Backwards Compatibility SCPI	<code>:DISPlay:OBWidth:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition</code>

Auto Scaling

Toggles **Auto Scaling** On or Off.

Remote Command	<code>:DISPlay:OBWidth:WINDow[1]:TRACe:Y[:SCALe]:COUPlE 0 1 OFF ON</code> <code>:DISPlay:OBWidth:WINDow[1]:TRACe:Y[:SCALe]:COUPlE?</code>
Example	<code>:DISP:OBW:WIND:TRAC:Y:COUP OFF</code> <code>:DISP:OBW:WIND:TRAC:Y:COUP?</code>
Couplings	When Auto Scaling is ON , and the Restart front-panel key is pressed, this function automatically sets the scale per division to 10 dB and determines the reference values based on the measurement results When you change a value of " Scale/Div " on page 445, " Ref Value " on page 445, or " Scale Range " on page 1244, Auto Scaling automatically changes to OFF
Preset	1
State Saved	Saved in instrument state
Range	OFF ON
Backwards Compatibility SCPI	<code>:DISPlay:OBWidth:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:COUPlE</code>

3.3.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See ["Dual-Attenuator Configurations"](#) on page 448
- See ["Single-Attenuator Configuration"](#) on page 449

Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

Dependencies In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

Configuration 2: Mechanical attenuator, no optional electronic attenuator

Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

Dual Attenuator

Single Attenuator

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	<code>[:SENSe]:POWer[:RF]:FRATten <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:FRATten?</code> Note that this is the same command as that for "Atten >50 GHz" on page 2961 in N9042B
Example	<code>:POW:FRAT 14</code> <code>:POW:FRAT?</code>
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Available on N9041B UXA Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See Reference Level and "Mech Atten" on page 2954 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	When the Input is RF , and the Input Port is RF Input 2 , and the Full Range Attenuator is installed: On the Meas Bar, the field "Atten" displays as follows: <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten + Full Range Atten - If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Full Range Atten - If the sweep straddles 50 GHz, the value shown after "Atten:" is preceded by the symbol ">=" and is equal to Full Range Atten In the Amplitude , "Y Scale" on page 2948 menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows: "Total Atten below 50 GHz" followed by the value of Full Range Atten + Mech Atten + Elec Atten "Total Atten above 50 GHz" followed by the value of Full Range Atten For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown: <ul style="list-style-type: none"> - Attenuator summary: - Total Atten below 50 GHz: 30 dB

-
- Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, ["Internal Preamp" on page 2979](#), and any External Gain that is entered, as described in the table below.

See ["Attenuator Configurations and Auto/Man" on page 453](#)

Remote Command	<code>[:SENSe]:POWer[:RF]:ATTenuation <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:ATTenuation?</code>
Example	<code>:POW:ATT 20</code> Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of "main" attenuation) In either case, if the attenuator was in Auto, it is set to Manual
Dependencies	Available on benchtop models. Some measurements do not support Auto setting of Mech Atten . In these measurements, the Auto/Man selection is not available, and the Auto/Man toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the Auto/Man toggle function is not available. The state of Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 2957 See "Attenuator Configurations and Auto/Man" on page 453 for more information on the Auto/Man functionality
Couplings	If the RF Input Port is the RF Input: <ul style="list-style-type: none"> - If the USB Preamp is connected to USB, use 0 dB for Mech Atten - Otherwise compute the auto-selected value of Mech Atten based on Reference Level, Int Preamp, External Gain, Ref Level Offset, Max Mixer Level, μW Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) - In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 2953 from the result to determine the Mech Atten. Limit the value so that it is never lower than 0 dB and so that total attenuation, including Full Range Atten, is never less than 6 dB (total attenuation, including Full Range Atten below 6 dB, can never be chosen by Auto) In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when Mech Atten is in Auto , but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input

	For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is ≤ 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB						
Preset	Auto value if Auto/Manual function is supported The Auto value is various 10 dB if Auto/Manual function is not supported						
State Saved	Saved in instrument state						
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased						
Max	<table border="1"> <tr> <td>CXA Option 503 or 507</td> <td>50 dB</td> </tr> <tr> <td>EXA</td> <td>60 dB</td> </tr> <tr> <td>All other models</td> <td>70 dB</td> </tr> </table> <p>Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB</p>	CXA Option 503 or 507	50 dB	EXA	60 dB	All other models	70 dB
CXA Option 503 or 507	50 dB						
EXA	60 dB						
All other models	70 dB						
Annotation	<p>The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as:</p> <p><i>Atten: <total> dB (e<elec>)</i></p> <p>The letter e is in amber in Single-Attenuator configurations</p> <p>For example:</p> <p>Dual-Attenuator configuration: <i>Atten: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB</p> <p>Single-Attenuator configuration: <i>A: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)</p> <p>When in Manual, a # sign appears in front of Atten in the annotation</p> <p>Auto Function</p>						
Remote Command	<code>[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:ATTenuation:AUTO?</code>						
Example	Turn Auto Mech AttenON : <code>:POW:ATT:AUTO ON</code>						

Dependencies	Available on benchtop models. Available in: Spectrum Analyzer Mode – Swept SA measurement Real-Time Spectrum Analyzer Mode – Spectrum & PVT measurement Remote Language Compatibility Mode – Swept SA measurement (Remote command depends on Compatibility Model setting) SCPI Language Compatibility Mode – Swept SA measurement (Remote command depends on Compatibility Model setting) Avionics Mode – all measurements Measuring Receiver Mode – all measurements except for Audio measurements
Preset	ON

Attenuator Configurations and Auto/Man

As described under "[Attenuation](#)" on page 2951, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using **Mech Atten** (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "[Elec Atten](#)" on page 2957 for more about “soft” attenuation.

NOTE

In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see ["More Information" on page 456](#)

Remote Command	<code>[:SENSe]:POWer[:RF]:EATTenuation <rel_ampl></code> <code>[:SENSe]:POWer[:RF]:EATTenuation?</code>
Example	<code>:POW:EATT 10</code> <code>:POW:EATT?</code>
Notes	Electronic Attenuation's specification is defined only when Mech Atten is 6 dB
Dependencies	<p>Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the Attenuation control or <code>:POW:ATT</code>, and affects the total attenuation displayed on the Attenuation control and the Meas Bar</p> <p>The electronic attenuator, and the "soft" attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If "Internal Preamp" on page 2979 is ON (that is, set to Low Band or Full), the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned</p> <p>If both the above are true, pressing the control generates error message -221, in other words, the</p>

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

frequency range lockout takes precedence

If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable

If "**LNA**" on page 2981 is **ON**, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be **OFF** and grayed-out. This coupling works in the following modes/measurements:

- Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes
- Transmit On|Off Power measurement in 5GNR Mode
- Power vs. Time and Transmit Power measurement in GSM/EDGE Mode
- Burst Power measurement in Spectrum Analyzer Mode

The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement

Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in " Mechanical Attenuator Transition Rules " on page 456
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the Mech Atten control description

Auto Function

Remote Command	<code>[:SENSe] :POWer [:RF] :EATTenuation :STATE OFF ON 0 1</code> <code>[:SENSe] :POWer [:RF] :EATTenuation :STATE?</code>
Example	<code>:POW:EATT:STAT ON</code> <code>:POW:EATT:STAT?</code>
Preset	OFF (Disabled) for Swept SA measurement ON (Enabled) for all other measurements that support the electronic attenuator

NOTE The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and 1 GHz

< IFBW <= 1.5 GHz have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See ["Using the Electronic Attenuator: Pros and Cons" on page 457](#) for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the "soft" attenuation feature replaces the Dual-Attenuator configuration's electronic attenuator. All the same couplings and limitations apply. See ["Attenuator Configurations and Auto/Man" on page 2956](#)

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled

- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Atten >50 GHz

Only appears in N9042B with Option 575 installed.

Modifies the attenuation applied to the internal frequency extender's frequency path above 50 GHz to 75 GHz. This setting is applicable without an external frequency extender connected.

Remote Command	<code>[:SENSe]:POWer[:RF]:FRATten <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:FRATten?</code> Note that this is the same command as that for "Full Range Atten" on page 2953 in N9041B
Example	<code>:POW:FRAT 14</code> <code>:POW:FRAT?</code>
Dependencies	Only appears in N9042B with Option 575, if input RF is selected, and RF Input Port is selected
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB
Max	26 dB
Annotation	<p>When Input is RF, Input Port is RF Input, and the Option 575 Internal Frequency Extender is present: On the Meas Bar, the field "Atten" displays as follows:</p> <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten - If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Atten > 50 GHz - If the sweep straddles 50 GHz, the value shown after "Atten:" is the Mech Atten + Elec Atten value, followed by " " then the Atten >50 GHz. Example "Atten: 20 dB 24 dB" <p>In the Amplitude, "Y Scale" on page 2948 menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows:</p> <p>"Attenuation below 50 GHz" followed by the value of Mech Atten + Elec Atten "Attenuation above 50 GHz" followed by the value of Atten > 50 GHz</p> <p>For example, if "Mech Atten" on page 2954 = 6 dB, Elec Atten = 4 dB, Atten > 50 GHz = 20 dB, the summary below is shown:</p> <ul style="list-style-type: none"> - Attenuator summary: - Attenuation below 50 GHz: 10 dB - Attenuation above 50 GHz: 20 dB

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under ["Pre-Adjust for Min Clipping" on page 2963](#).

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code>
Example	<code>:POW:RANG:OPT IMM</code>
Notes	Executing Adjust Atten for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes

Restart Meas on Adjust Atten

Toggles the force restart switch for the ["Adjust Atten for Min Clipping" on page 2962](#) function.

When **ON**, pressing **Adjust Atten for Min Clipping**, or sending `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` restarts the measurement and then executes the function.

When **OFF**, pressing the control or sending the command neither restarts the measurement nor executes the function until you restart or continue averaging. In this case, pressing the control generates the following advisory message:

"Adjust Atten is deferred until "Restart" or "Continue Averaging" is executed"

This message is *not* generated if the command is sent.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:REStart OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:REStart?</code>
Example	<code>:POW:RANG:OPT:REST OFF</code> <code>:POW:RANG:OPT:REST?</code>
Dependencies	Available only in measurements that support continuous averaging
Preset	ON
State Saved	Saved

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` is executed.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLY COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?</code>
Example	<code>:POW:RANG:OPT:TYPE EONL</code> <code>:POW:RANG:OPT:TYPE?</code>
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	<code>COMBined</code>
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under "[Adjust Atten for Min Clipping](#)" on page 2962 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "[Adjustment Algorithm](#)" on page 461

Selection	SCPI	Note
Off	<code>OFF</code>	This is the default setting
On	<code>ON</code>	Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the <code>ON</code> parameter is supported and mapped to <code>COMBined</code>
Elec Atten Only	<code>ELECTrical</code>	Selects only the electric attenuator to participate in autoranging. This offers less wear on the mechanical attenuator and is usually faster
Elec+Mech Atten	<code>COMBined</code>	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code>
Example	<code>:POW:RANG:OPT:ATT OFF</code> <code>:POW:RANG:OPT:ATT?</code>
Notes	The parameter option ELECTrical sets this function to ON in Single-Attenuator models The parameter option COMBined is mapped to ELECTrical in Single-Attenuator models. If you send COMBined , it sets the function to ON and returns ELEC to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 2957 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 460 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	OFF when Elec Atten is Disabled at preset, otherwise ELEC
State Saved	Saved in instrument state
Range	Dual-Attenuator models: Off Elec Atten Only Mech + Elec Atten Single-Attenuator models: Off On

Backwards Compatibility Command

Notes	ON aliases to "Elec Atten Only" (<code>:POW:RANG:OPT:ATT ELEC</code>) OFF aliases to "Off" (<code>:POW:RANG:OPT:ATT OFF</code>) <code>:POW:RANG:AUTO?</code> returns true if <code>:POW:RANG:OPT:ATT</code> is not OFF
Backwards Compatibility SCPI	<code>[:SENSe]:POWer[:RF]:RANGe:AUTO ON OFF 1 0</code> <code>[:SENSe]:POWer[:RF]:RANGe:AUTO?</code>

Adjustment Algorithm

The algorithms for the adjustment are documented below:

Single-Attenuator Models

Dual-Attenuator models

"Adjust Atten for Min Clipping" on page 2962 or "Pre-Adjust for Min Clipping" on page 460 selection is Mech + Elec Atten:

3 5G NR/5G-A Mode
 3.3 Occupied BW Measurement

vsd04

"Pre-Adjust for Min Clipping" on page 460 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.

Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command `[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

3 5G NR/5G-A Mode
 3.3 Occupied BW Measurement

	<code>[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?</code>
Example	<code>:POW:ATT:STEP 2</code> <code>:POW:ATT:STEP?</code>
Notes	Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.3.3.3 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved	No
-------------	----

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe <real></code> <code>[:SENSe]:POWer[:RF]:RANGe?</code>
Example	<code>:POW:RANG 10 dBm</code> <code>:POW:RANG?</code>
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min/Max	-/+100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code>
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements

Restart Meas on Adjust Range

The same as ["Restart Meas on Adjust Atten" on page 2962](#) under ["Attenuation" on page 2951](#).

Min Acq Time for Adjust Range

The acquisition time of auto range is set up internally, based on application/Mode. For a low-duty-cycle TDD signal, the acquisition of auto range would only capture the noise part, and the calculated range value will be unreasonable. So, in the low-duty-cycle TDD signal case, set **Min Acq Time for Adjust Range** to limit the min acquisition time of auto range. **Min Acq Time for Adjust Range** should be set to a value to make sure the auto range acquisition always covers the signal part.

The default value, 0 s, specifies that there is no user-set **Min Acq Time for Adjust Range**, and the internal calculated time will be used for acquisition. If the user-set **Min Acq Time for Adjust Range** is less than the internally calculated time, it will still result in using the internally calculated time.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TIME:MINimum <time></code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TIME:MINimum?</code>
Example	Set the Min Adjust time to 95 ms: <code>:POW:RANG:OPT:TIME:MIN 95 ms</code> <code>:POW:RANG:OPT:TIME:MIN?</code>
Preset	0 s
State Saved	Saved in instrument state

Offset for Adjust Range

Used when additional optimization is needed to the result of **Adjust Range for Min Clipping**.

When you set **Offset for Adjust Range**, then perform **Adjust Range for Min Clipping**, the new range is as follows:

Range = result of **Adjust Range for Min Clipping** + entered **Offset for Adjust Range**

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:OFFSet?</code>
Example	<code>:POW:RANG:OPT:OFFS 10 dB</code> <code>:POW:RANG:OPT:OFFS?</code>
Notes	Set Offset for Adjust Range before performing Adjust Range for Min Clipping , otherwise the result will not be applied “Input Overload” error might be reported with inappropriate negative value of Offset for Adjust Range
Preset	0 dB
State Saved	Saved in instrument state
Min/Max	-/+20 dB

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under **Adjust Range For Min Clipping** each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code>
Notes	Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELECTrical , COMBined , and ON) are honored and all are mapped to ELECTrical , so if any of these three parameters is sent, a subsequent query will return ELEC
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements
Preset	OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 2972 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:PARatio <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:PARatio?</code>	
Example	<code>:POW:RANG:PAR 12 dB</code>	
Notes	In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated	
Dependencies	Does not appear in Spectrum Analyzer Mode	
Preset	VXT Models M9410A/11A	0 dB
	All Others	10 dB
State Saved	Saved in instrument state	

Min	0 dB	
Max	VXT Models M9410A/11A	50 dB
	All Others	20 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 2975. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?</code>	
Example	<code>:POW:RANG:MIX:OFFS -5 dB</code>	
Preset	0 dB	
State Saved	Saved in instrument state	
Min	VXT Models M9410A/11A	-34 dB
	All Others	-35 dB
Max	30 dB	

3.3.3.4 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "[Software Preselection](#)" on page 2992 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy. When **Presel Center** is pressed, the instrument performs centering on the

measurements center frequency.

For the Swept SA measurement of the Spectrum Analyzer mode, Presel Center adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "**Preselector Adjust**" on page 2978 changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "**Proper Preselector Operation**" on page 471.

Remote Command	<code>[:SENSe] :POWer [:RF] :PCENter</code>
Example	<code>:POW:PCEN</code>
Notes	The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command
Dependencies	Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off <ul style="list-style-type: none"> - If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken - Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz - Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in " Preselector Adjust " on page 2978
Status Bits/OPC dependencies	When centering the preselector, *OPC does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to <code>:READ</code> or <code>:MEASure</code> queries The Measuring bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "[Presel Center](#)" on page 2977 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	<code>[:SENSe] :POWer [:RF] :PADJust <freq></code> <code>[:SENSe] :POWer [:RF] :PADJust?</code>
Example	<code>:POW:PADJ 100KHz</code> <code>:POW:PADJ?</code>
Notes	The value on the control is displayed to 0.1 MHz resolution
Dependencies	<ul style="list-style-type: none"> - Does not appear in CXA-m - Does not appear in VXT Models M9410A/11A/15A/16A - Does not appear in M9410E/11E/15E/16E - Grayed-out if microwave preselector is off

	<ul style="list-style-type: none"> - Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz - Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz - Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Preset	0 MHz
State Saved	The Preselector Adjust value set by " Presel Center " on page 2977, or by manually adjusting Preselector Adjust Not saved in instrument state, and does not survive a Preset or power cycle
Min/Max	-/+500 MHz
Backwards Compatibility SCPI	<code>[:SENSe] :POWer [:RF] :MW :PADJust</code> <code>[:SENSe] :POWer [:RF] :MMW :PADJust</code> Backwards Compatibility Command
Notes	The command has no effect, and the query always returns <code>MWAVE</code>
Backwards Compatibility SCPI	<code>[:SENSe] :POWer [:RF] :PADJust :PRESelector MWAVE MMWave EXTERNAL</code> <code>[:SENSe] :POWer [:RF] :PADJust :PRESelector?</code>

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	<code>:POW:GAIN OFF</code>	
Low Band	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND LOW</code>	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

Selection	Example	Note
Full Range	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND FULL</code>	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE

The maximum **Center Frequency for Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:BAND LOW FULL</code> <code>[:SENSe]:POWer[:RF]:GAIN:BAND?</code>
Example	<code>:POW:GAIN:BAND LOW</code> <code>:POW:GAIN:BAND?</code>
Dependencies	Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If <code>:POW:GAIN:BAND FULL</code> is sent when a low band preamp is available, the preamp band parameter is set to LOW instead of FULL , and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled
Preset	LOW
State Saved	Saved in instrument state
Annotation	When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz" When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp)
Auto Function	

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN[:STATe]?</code>
Example	<code>:POW:GAIN OFF</code> <code>:POW:GAIN?</code>
Preset	OFF

LNA

Lets you turn the Low Noise Amplifier (LNA) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to ["Internal Preamp" on page 2979](#). LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, LNA can be turned on *together* with ["Internal Preamp" on page 2979](#), although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see ["More Information" on page 474](#)

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?</code>
Example	<code>:POW:GAIN:LNA ON</code>
Dependencies	Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled
Preset	OFF
State Saved	Saved in State

More Information

When LNA is installed, the preamp annotation changes to show the state of both LNA and **Internal Preamp**. Below is an example:

```
Atten: 8 dB
Pre: Int on, LNA on
µW Path: LNP, On
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to **ON**). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```
Atten: 8 dB
Pre: Int off, LNA on
μW Path: LNP, On
Source: Off
```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	SCPI	Note
Standard Path	<code>STD</code>	Normal setting for most measurements. μ W Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	<code>LNPath</code>	See " Low Noise Path Enable " on page 479
μ W Preselector Bypass	<code>MPBypass</code>	See " μW Preselector Bypass " on page 481
Full Bypass Enable	<code>FULL</code>	See " Full Bypass Enable " on page 482

Remote Command	<code>[:SENSe] :POWer [:RF] :MW :PATH STD LNPath MPBypass FULL</code> <code>[:SENSe] :POWer [:RF] :MW :PATH?</code>
Example	<code>:POW:MW:PATH LNP</code> Selects Low Noise Path Enable
Notes	<p>When "Presel Center" on page 2977 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of μW Path Control</p> <p>The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is Low Noise Path Enable or Full Bypass Enable. In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled</p> <p>Alignment switching ignores the settings in this menu, and restores them when finished</p>
Dependencies	<p>Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing</p> <ul style="list-style-type: none"> - The Low Noise Path Enable selection does not appear unless Option LNP is present and licensed - The μW Preselector Bypass selection does not appear unless Option MPB is present and licensed - The Full Bypass Enable selection does not appear unless options LNP and MPB are both present as well as option FBP <p>In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated</p> <p>Low Noise Path Enable and Full Bypass Enable are grayed-out if the current measurement does not support them</p> <p>Low Noise Path Enable and Full Bypass Enable are not supported in Avionics and MMR Modes (non-modulation measurements). Low Noise Path Enable

SCPI: [LNPath](#)

Provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high

band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

μ W Preselector Bypass

SCPI: [MPBypass](#)

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

SCPI: **FULL**

The microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user

interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 2948 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar: "Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

Notes	Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (:POW:MW:PATH STD) The OFF parameter sets path MPB (:POW:MW:PATH MPB)
Preset	ON
Backwards Compatibility SCPI	[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON OFF 0 1 [:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender

Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

Type	ID	
	159	Settings Alert - DETECTED; Presel/Meas BW conflict

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 2982.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 2982 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 2948 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar: "Full Bypass Enabled, maximum safe input power reduced"

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M941xA and M941xE

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPreSel:STATe 0 1 ON OFF</code> <code>[:SENSe]:POWer[:RF]:SWPreSel:STAT?</code>
Example	<code>:POW:SWPR:STAT 1</code> <code>:POW:SWPR:STAT?</code>
Dependencies	Only appears in N9041B, N9042B+V2050A, VXT models M941xA and M941xE. Does not appear in all measurements
Couplings	Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state
Preset	N9041B OFF N9042B+V3050A ON M941xA and M941xE ON
State Saved	Saved in instrument state

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are

3 5G NR/5G-A Mode
 3.3 Occupied BW Measurement

images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel NORMa1 ADVanced</code> <code>[:SENSe]:POWer[:RF]:SWPResel?</code>
Example	<code>:POW:SWPR NORM</code> <code>:POW:SWPR?</code>
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 2992 is OFF. The grayout message is “Unavailable unless SW Presel enabled”
Preset	N9041B ADVanced N9042B+V3050A NORMa1
State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)
- **NARRow**– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel:BW NORMa1 NARRow</code> <code>[:SENSe]:POWer[:RF]:SWPResel:BW?</code>
----------------	---

Example	<code>:POW:SWPR:BW NARR</code>

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A, M9410E/11E and S9110E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	<code>[:SENSe] : <measurement> : PFILter [:STATe] ON OFF 1 0</code> <code>[:SENSe] : <measurement> : PFILter [:STATe] ?</code>							
Example	<p>Enable High Freq Prefilter for the Complex Spectrum Measurement in BASIC Mode: <code>:SPEC:PFIL ON</code></p> <p>Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes: <code>:WAV:PFIL ON</code></p> <p>Enable High Freq Prefilter for the Swept SA Measurement in SA Mode: <code>:SAN:PFIL ON</code></p>

3.3.4 BW

Opens the Bandwidth (**BW**) menu, which contains controls for ["Res BW" on page 490](#) and ["Video BW" on page 491](#).

The **Resolution BW** functions control filter bandwidth and filter type. There are two filter types, Gaussian and Flattop. The Gaussian filters have a response curve that is parabolic on a log scale. The Flattop filter shape is a close approximation of a rectangular filter.

3.3.4.1 Settings

Contains the basic bandwidth functions. In this measurement, it is the only tab under **BW**.

Res BW

Activates the resolution bandwidth active function, which allows you to manually set the resolution bandwidth (RBW) of the instrument.

Normally, **Res BW** (Auto) selects automatic coupling of the **Res BW** to "**Span**" on [page 503](#) using the ratio set by **Span:3 dB RBW** (some measurements do not have a **Span:3 dB RBW** control, in which case the measurement chooses the optimal ratio). To decouple the resolution bandwidth, press the **Auto/Man** toggle on the **Res BW** control, or simply enter a different value for **Res BW**.

When the **Res BW** is manually selected, it may be returned to the coupled state by pressing the **Auto/Man** toggle on the **Res BW** control. This may also be done by pressing "**Auto Couple**" on [page 3017](#) or by performing a **Preset**.

When **Res BW** is set to **Auto**, the bandwidth selected depends on "**RBW Filter Type**" on [page 492](#).

Only certain discrete resolution bandwidths are available. The available bandwidths are dependent on **Filter Type** or **EMC Standard**. If an unavailable bandwidth is entered with the numeric keypad, the closest available bandwidth is selected.

Remote Command	<pre>[:SENSe]:OBWidth:BANDwidth[:RESolution] <bandwidth> [:SENSe]:OBWidth:BANDwidth[:RESolution]? [:SENSe]:OBWidth:BANDwidth[:RESolution]:AUTO ON OFF 1 0 [:SENSe]:OBWidth:BANDwidth[:RESolution]:AUTO?</pre>
Example	<pre>:OBW:BAND 5 MHz :OBW:BAND? :OBW:BAND:AUTO ON :OBW:BAND:AUTO?</pre>
Notes	<p>For numeric entries, all RBW Types choose the nearest (arithmetically, on a linear scale, rounding up) available RBW to the value entered</p> <p>The setting and querying of values depend on the current bandwidth type</p>
Couplings	<p>Sweep time is coupled to RBW. As RBW changes, the sweep time (if set to Auto) is changed to maintain amplitude calibration</p> <p>"Video BW" on page 491 is coupled to RBW. As the resolution bandwidth changes, the video bandwidth (if set to Auto) changes to maintain the ratio of VBW/RBW (10:1)</p> <p>When Res BW is set to Auto, the resolution bandwidth is auto-coupled to the span. The ratio of Span/RBW is approximately 106:1 when auto coupled. When Res BW is set to Man, and the bandwidths are entered manually, these bandwidths are used regardless of other instrument settings</p>
Preset	<p>Auto, unless noted in "RBW Presets" on page 491 below</p> <p>See table below</p>

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

State Saved	Saved in instrument state
Min	1 Hz
Max	8 MHz is the max equivalent -3 dB RBW, which means that the named RBW (the one shown on the control etc.) can exceed 8 MHz if using a filter other than -3 dB Gaussian
Annotation	A “#” mark appears before “RBW” in the annotation when it is switched from Auto to Manual coupling
Backwards Compatibility Notes	For backwards compatibility, this command supports both BANDwidth and BWIDth forms For ESA, the maximum Res BW was 5 MHz; for X-Series it is 8 MHz

RBW Presets

Unless noted in the table below, the Preset value of RBW is **Auto**.

Mode	Preset Value
WCDMA	30 kHz
BT	10 kHz
WLAN	100 kHz
MSR	30 kHz
LTE, LTETDD, LTEAFDD, LTEATDD, 5G NR	30 kHz

Video BW

Lets you change the instrument post-detection filter (VBW or “video bandwidth”) from 1 Hz to 8 MHz, in approximately 10% steps. In addition, a wide-open video filter bandwidth may be chosen by selecting 50 MHz. The VBW is annotated at the bottom of the display, in the center.

Video BW (Auto) selects automatic coupling of **Video BW** to **"Res BW"** on page 490. To decouple the resolution bandwidth, press the **Auto/Man** toggle on the **Video BW** control, or simply enter a different value for **Video BW**.

When **Video BW** is manually selected, it may be returned to the coupled state by pressing the **Auto/Man** toggle on **Video BW**. This may also be done by pressing **"Auto Couple"** on page 3017 or by performing a **Preset**.

Remote Command	<pre>[:SENSe]:OBwidth:BAWdwidth:VIDeo <bandwidth> [:SENSe]:OBwidth:BAWdwidth:VIDeo? [:SENSe]:OBwidth:BAWdwidth:VIDeo:AUTO ON OFF 1 0 [:SENSe]:OBwidth:BAWdwidth:VIDeo:AUTO?</pre>
Example	<pre>:OBW:BAWd:VID 2.4 MHz :OBW:BAWd:VID? :OBW:BAWd:VID:AUTO ON</pre>

:OBW: BAND: VID: AUTO?	
Notes	For numeric entries, the instrument chooses the nearest (arithmetically, on a linear scale, rounding up) available VBW to the value entered. The 50 MHz VBW is defined to mean “wide open” The values shown in this table reflect the conditions after a Mode Preset
Dependencies	Sometimes the displayed Video BW is not actually used to process the trace data: When the Average detector is selected, and Sweep Type is set to Swept , the video bandwidth filter cannot be used, because it uses the same hardware as the Average detector When the Quasi-Peak , EMI Average , or RMS Average detector is selected, Video BW is implemented by the digital IF as part of the detector In this case, Video BW still acts to change the Sweep Time, if Sweep Time is in Auto , and still affects the data on other traces for which this is not the case
Couplings	Normally coupled to Res BW . If Video BW is set to Auto , then video bandwidth is changed as Res BW changes, to maintain the preset ratio (normally 10:1)
Preset	Auto , unless noted in " Video BW Presets " on page 492 below ON
State Saved	Saved in instrument state
Min	1 Hz
Max	50 MHz
Annunciation	A “#” mark appears before “VBW” in the annotation when it is not coupled
Annotation	In the bottom center of the screen, “VBW <value> <units>” indicates the current video bandwidth value. Note that for some detectors this is not the value used for VBW (see above)
Backwards Compatibility Notes	For backwards compatibility, this command supports both BANDwidth and BWIDth forms

Video BW Presets

Unless noted in the table below, the Preset value is **Auto**.

Mode ID	Preset Value
WCDMA	300 kHz
BT	30 kHz

RBW Filter Type

Selects the type for the resolution bandwidth filters. Historically, the **Res BW** filters in HP/Agilent/Keysight spectrum analyzers were Gaussian filters, specified using the –3 dB bandwidth of the filter. That is, a 10 MHz **Res BW** filter was a Gaussian shape with its –3 dB points 10 MHz apart. In X-Series, you can choose between a Gaussian and Flat Top filter shape, for varying measurement conditions.

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

	Filter Type	SCPI
	Gaussian	GAUSSian
	Flattop	FLATtop
Remote Command	[:SENSE]:OBWidth:BANDwidth:SHAPE GAUSSian FLATtop [:SENSE]:OBWidth:BANDwidth:SHAPE?	
Example	:OBW:BAND:SHAP GAUS :OBW:BAND:SHAP?	
Preset	"Auto Couple" on page 3017 selects the preset value	
State Saved	Saved in instrument state	
Annotation	The annotation under RBW in the bottom left of the screen shows the type of filter or bandwidth that is being used. The following examples illustrate this:	
	-3 dB (Normal) filter BW	Res BW 300 Hz
	-6 dB filter BW	Res BW (-6 dB) 422 Hz
	Noise filter BW	Res BW (Noise) 317 Hz
	Impulse filter BW	Res BW (Impulse) 444 Hz
	CISPR filter BW	Res BW (CISPR) 200 Hz
	MIL filter BW	Res BW (MIL) 1 kHz
	Flattop filter type	Res BW (Flattop) 300 Hz
Backwards Compatibility SCPI	[:SENSE]:OBWidth:BWIDth:SHAPE	

3.3.5 Display

Opens the **Display** menu, which lets you configure display items for the current Mode, Measurement View or Window.

3.3.5.1 Meas Display

Contains controls for setting the display for the current Measurement, View or Window.

x dB BW Boundaries On/Off

Turns the x dB BW Boundaries On or Off.

Remote Command	:DISPlay:OBWidth:WINDow[1]:XDB 0 1 OFF ON :DISPlay:OBWidth:WINDow[1]:XDB?
----------------	--

Example	<code>:DISP:OBW:WIND:XDB 1</code> <code>:DISP:OBW:WIND:XDB?</code>
Preset	0
State Saved	Saved in instrument state
Range	OFF ON
Backwards Compatibility SCPI	<code>:DISPlay:OBWidth:VIEW:WINDow[1]:XDB</code>

Boundary Frequency

Selects frequency display type:

- **OFFSet**: offsets from Center Freq to OBW boundary frequency are displayed
- **ABSolute**: absolute frequencies are displayed

Remote Command	<code>:DISPlay:OBWidth:WINDow2:BOUNDaries:FREQuency OFFSet ABSolute</code> <code>:DISPlay:OBWidth:WINDow2:BOUNDaries:FREQuency?</code>
Example	<code>:DISP:OBW:WIND2:BOUN:FREQ ABS</code> <code>:DISP:OBW:WIND2:BOUN:FREQ?</code>
Preset	OFFSet
State Saved	Saved in instrument state
Range	OFFSet ABSolute
Backwards Compatibility SCPI	<code>:DISPlay:OBWidth:VIEW2:WINDow2:BOUNDaries:FREQuency</code>

3.3.5.2 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	<code>:DISPlay:GRATicule[:STATe] OFF ON 0 1</code> <code>:DISPlay:GRATicule[:STATe]?</code>
----------------	--

Example	<code>:DISP:GRAT OFF</code>
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	<code>ON</code>
State Saved	Saved in instrument state
Backwards Compatibility SCPI	<code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1</code> <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?</code> This command is accepted for backwards compatibility with older instruments, but the <code>WINDow</code> , <code>TRACe</code> and <code>GRID</code> parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When `OFF`, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	<code>:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:SCReen[:STATe]?</code>
Example	<code>:DISP:ANN:SCR OFF</code>
Dependencies	Grayed-out and forced to <code>OFF</code> when System Display Settings, Annotation is <code>OFF</code>
Preset	<code>ON</code> This remains <code>OFF</code> through a Preset when System Display Settings, Annotation is set to <code>OFF</code>
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

Remote Command	<code>:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0</code> <code>:DISPlay:ANNotation:TRACe[:STATe]?</code>
Example	<code>:DISP:ANN:TRAC OFF</code>
Preset	<code>OFF</code>
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	<code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code>
Example	<code>:DISP:ACT OFF</code>
Dependencies	Grayed out and forced to <code>OFF</code> when System Display Settings, Annotation is <code>OFF</code>
Preset	<code>ON</code> This remains <code>OFF</code> through a Preset when System Display Settings, Annotation is set to <code>OFF</code>
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When `OFF`, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	<code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code>
Example	<code>:DISP:ANN:MBAR OFF</code>
Dependencies	Grayed out and forced to <code>OFF</code> when System Display Settings, Annotation is <code>OFF</code>
Preset	<code>ON</code> This remains <code>OFF</code> through a Preset when System Display Settings, Annotation is set to <code>OFF</code>
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

3 5G NR/5G-A Mode
 3.3 Occupied BW Measurement

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTEM:DEFAULTS MISC` or `:DISPLAY:ENABLE ON` (neither `*RST` nor `:SYSTEM:PRESET` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTEM:DEFAULTS MISC` or `:DISPLAY:ENABLE ON` (neither `*RST` nor `:SYSTEM:PRESET` enable the display)
- and you are using either the `:SYSTEM:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	<code>:DISPLAY:VIEW:ADVANCED:SELECT</code>
Rename User View	<code>:DISPLAY:VIEW:ADVANCED:RENAME</code>
Delete User View	<code>:DISPLAY:VIEW:ADVANCED:DELETE</code>
Create User View	<code>:DISPLAY:VIEW:ADVANCED:NAME</code>
Select Screen	<code>:INSTRUMENT:SCREEN:SELECT</code>
Delete Screen	<code>:INSTRUMENT:SCREEN:DELETE</code>
Delete All But This Screen	<code>:INSTRUMENT:SCREEN:DELETE:ALL</code>
Add Screen	<code>:INSTRUMENT:SCREEN:CREATE</code>
Rename Screen	<code>:INSTRUMENT:SCREEN:RENAME</code>
Sequencer On/Off	<code>:SYSTEM:SEQUENCER</code>

Remote Command	<code>:DISPLAY:ENABLE OFF ON 0 1</code> <code>:DISPLAY:ENABLE?</code>
Example	<code>:DISP:ENAB OFF</code>
Couplings	<code>:DISP:ENAB OFF</code> turns Backlight OFF and <code>:DISP:ENAB ON</code> turns Backlight ON , but changing Backlight settings does <i>not</i> change the state of <code>:DISP:ENAB</code>

Preset	ON Set by <code>:SYST:DEF MISC</code> , but not affected by <code>*RST</code> or <code>:SYSTEM:PRESet</code>
State Saved	Not saved in instrument state
Backwards Compatibility Notes	<code>:SYST:PRES</code> no longer turns on <code>:DISPlay:ENABle</code> as it did in legacy analyzers

3.3.5.3 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See "[Views](#)" on page 438

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:SElect <alphanumeric></code> <code>:DISPlay:VIEW:ADVanced:SElect?</code>
Example	Select Baseband as the current View <code>:DISP:VIEW:ADV:SEL "Baseband"</code>
Notes	<p>You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command</p> <p>For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:</p> <pre><code>:DISP:VIEW:ADV:SEL "Trace Zoom"</code></pre> <p>because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu</p> <p>You <i>cannot</i> use the legacy View parameter (which in this case would be <code>TZOOM</code>) with</p> <pre><code>:DISP:VIEW:ADV:SEL</code></pre> <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:</p> <pre><code>:DISP:VIEW:ADV:SEL "Trace Zoom"</code> <code>:DISP:VIEW:ADV:SEL "TRACE ZOOM"</code></pre> <p>If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View</p>

	SCPI cannot be used while Display is disabled” is generated
Backwards Compatibility SCPI	The legacy node <code>:DISPlay:VIEW[:SElect]</code> is retained for backwards compatibility, but it only supports predefined views

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a “User View”.

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	<code>:DISPlay:VIEW:ADVanced:NAME <alphanumeric></code>
Example	<code>:DISP:VIEW:ADV:NAME “Baseband”</code> Creates a new View named Baseband from the current View, and selects it as the current View
Notes	<code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If <code><alphanumeric></code> name already exists as a View, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; User View SCPI cannot be used while Display is disabled” is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View’s name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	<code>:DISPlay:VIEW:ADVanced:REName <alphanumeric></code>
Example	<code>:DISP:VIEW:ADV:REN "Baseband"</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> specifying the new name is already present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated</p> <p>If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot rename a Predefined View" is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p>

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DElete</code>
Example	<code>:DISP:VIEW:ADV:DEL</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> is not present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> does not exist" is generated</p> <p>If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot delete a Predefined View" is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p>

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DElete:ALL</code>
----------------	--

Example	<code>:DISP:VIEW:ADV:DEL:ALL</code>
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, `:DISPlay:VIEW[:SElect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:CATalog?</code>
Example	<code>:DISP:VIEW:ADV:CAT?</code>
Notes	Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for <i>all</i> the Views, including User Views, available for the current Measurement Example: <code>"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"</code> No distinction is made between Predefined and User Views If you switch measurements with the display disabled (via <code>:DISP:ENAB OFF</code>), then query the list of available Views, the result is undefined

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:USER:CATalog?</code>
Example	<code>:DISP:VIEW:ADV:USER:CAT?</code>
Notes	Returns a quoted string of the available User Views for the current measurement, separated by commas. Example: <code>"Baseband,myView1,yourView1"</code> If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 3004), then query the list of available Views, the result is undefined

3.3.6 Frequency

Opens the **Frequency** menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

Some features in the **Frequency** menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements – it does not change as you change measurements.

3.3.6.1 Settings

Contains controls that pertain to the X-Axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

Sets **Carrier Reference Frequency**. The center frequencies of carriers are defined as offset frequency from this value. This reference frequency is also the reference of carrier configuration preset.

Because LTE-A, MSR and 5G NR measurements often deal with multiple carriers with distinct bandwidths, the simple Center Frequency parameter used in most measurements does not apply here. Instead, the Carrier Reference Frequency is the key parameter. This must be distinct from the Center Frequency parameter used in other measurements, as Center Frequency can be a global parameter, and it would not make sense for Carrier Reference Frequency to take on this global value.

In LTE-A and 5G NR Modes, if the following conditions are satisfied at the same time:

- the Number of Component Carriers is 1
- the Center Freq Offset is 0 Hz
- the mode of the Center Freq is Auto

then Center Freq is equivalent to Carrier Ref Freq. When Center Freq changes in such conditions, the mode of Center Freq remains as Auto and Carrier Ref Freq will be changed to same value. The major purpose of this coupling is to keep BWCC with legacy LTE/LTE TDD, in which **:SENSe:FREQuency:CENTer** is used to set up the frequency of the measurement.

See ["More Information" on page 503](#).

3 5G NR/5G-A Mode

3.3 Occupied BW Measurement

Remote Command	For LTE-A, 5G NR <code>[:SENSe]:CCARrier:REFeRence <freq></code> <code>[:SENSe]:CCARrier:REFeRence?</code> For MSR <code>[:SENSe]:CARRier:REFeRence <freq></code> <code>[:SENSe]:CARRier:REFeRence?</code>
Example	For LTE-A, 5G NR <code>:CCAR:REF 2GHz</code> <code>:CCAR:REF?</code> For MSR <code>:CARR:REF 2GHz</code> <code>:CARR:REF?</code>
Dependencies	Only available in LTEAFDD/LTEATDD, 5GNR and MSR Modes
Preset	1GHz
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum center frequency. Same as Center Frequency

More Information

In most applications, **Center Frequency** is generally where the carrier center is located at and thus plays a very important role. However, in LTE-Advanced TDD/FDD mode, the measurements are done based on carrier center frequencies and its bandwidths, both of which are calculated or obtained according to the carriers' configuration.

Carrier center frequencies are defined using offsets from **Carrier Reference Frequency**, which determine absolute frequency locations, which can be set as both absolute and relative frequency from the carrier reference frequency.

Span

Set the frequency of the occupied bandwidth span for the current measurement.

Remote Command	<code>[:SENSe]:OBWidth:FREQuency:SPAN <freq></code> <code>[:SENSe]:OBWidth:FREQuency:SPAN?</code> <code>[:SENSe]:OBWidth:FREQuency:SPAN:AUTO ON OFF 0 1</code> <code>[:SENSe]:OBWidth:FREQuency:SPAN:AUTO?</code>
Example	<code>:OBW:FREQ:SPAN 2.4 MHz</code> <code>:OBW:FREQ:SPAN?</code>

	<code>:OBW:FREQ:SPAN:AUTO 0</code>																																
	<code>:OBW:FREQ:SPAN:AUTO?</code>																																
Notes	Span Auto Detector (<code>[:SENSe]:OBWidth:FREQuency:SPAN:AUTO</code>) is only available in the MSR, LTEAFDD/LTEATDD and 5GNR modes																																
Dependencies	The Auto Detect functionality is only available in the MSR, LTEAFDD/LTEATDD and 5GNR modes																																
Preset	<table border="1"> <thead> <tr> <th>Mode</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>SA</td> <td>3 MHz</td> </tr> <tr> <td>WCDMA</td> <td>10 MHz</td> </tr> <tr> <td>LTEAFDD, LTEATDD</td> <td>10 MHz</td> </tr> <tr> <td>BT</td> <td>2 MHz</td> </tr> <tr> <td>5GNR</td> <td>Automatically calculated</td> </tr> <tr> <td>RTS</td> <td>27 kHz</td> </tr> <tr> <td>MSR</td> <td>10 MHz</td> </tr> <tr> <td>WLAN</td> <td> <table border="1"> <thead> <tr> <th>Radio Std</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>802.11b</td> <td>30MHz</td> </tr> <tr> <td>802.11a/g/n/ac/ax/be (20MHz)</td> <td>25 MHz</td> </tr> <tr> <td>802.11n/ac/ax/be (40MHz)</td> <td>50 MHz</td> </tr> <tr> <td>802.11n/ac/ax/be (80MHz)</td> <td>100 MHz</td> </tr> <tr> <td>802.11ac/ax/be (160MHz)</td> <td>200 MHz</td> </tr> <tr> <td>802.11be (320MHz)</td> <td>400 MHz</td> </tr> </tbody> </table> </td> </tr> </tbody> </table>	Mode	Value	SA	3 MHz	WCDMA	10 MHz	LTEAFDD, LTEATDD	10 MHz	BT	2 MHz	5GNR	Automatically calculated	RTS	27 kHz	MSR	10 MHz	WLAN	<table border="1"> <thead> <tr> <th>Radio Std</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>802.11b</td> <td>30MHz</td> </tr> <tr> <td>802.11a/g/n/ac/ax/be (20MHz)</td> <td>25 MHz</td> </tr> <tr> <td>802.11n/ac/ax/be (40MHz)</td> <td>50 MHz</td> </tr> <tr> <td>802.11n/ac/ax/be (80MHz)</td> <td>100 MHz</td> </tr> <tr> <td>802.11ac/ax/be (160MHz)</td> <td>200 MHz</td> </tr> <tr> <td>802.11be (320MHz)</td> <td>400 MHz</td> </tr> </tbody> </table>	Radio Std	Value	802.11b	30MHz	802.11a/g/n/ac/ax/be (20MHz)	25 MHz	802.11n/ac/ax/be (40MHz)	50 MHz	802.11n/ac/ax/be (80MHz)	100 MHz	802.11ac/ax/be (160MHz)	200 MHz	802.11be (320MHz)	400 MHz

State Saved	Yes																																
Min	100 Hz																																
Max	Hardware Maximum Span																																
Backwards Compatibility SCPI	<code>[:SENSe]:EBWidth:FREQuency:SPAN</code>																																

Full Span (Remote Command Only)

Changes the Occupied Bandwidth Span to show the full frequency range of the instrument. It maximizes the span within a range but does not change **Center Frequency**. When using external mixing, it changes the displayed frequency span to the frequency range specified for the selected external mixing band.

Remote Command	<code>[:SENSe]:OBWidth:FREQuency:SPAN:FULL</code>
----------------	---

Example	:OBW:FREQ:SPAN:FULL
Couplings	Selecting full span changes the measurement span value

3.3.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to **Normal** mode (see "[Marker Mode](#)" on page 507), and places it at the center of the display. If the selected marker is **Off**, it is set to **Normal** and placed at the center of the screen, on the trace determined by the Marker Trace rules.

3.3.7.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a **Peak Search**, etc.

This control appears above the menu panel, indicating that it applies to all controls in the **Marker** menu panels. **Select Marker** is blanked if you select a tab whose controls do *not* depend on the selected marker (for example, **Counter**).

For any menu that includes **Select Marker**, the first control is always **Marker Frequency | Time**.

Notes	The selected marker is remembered even when not in the Marker menu and is used if a search is done, or a Band Function is turned on, or for Signal Track or Continuous Peak
Preset	Marker 1
State Saved	The number of the selected marker is saved in instrument state
Annunciation	Appears in the marker results block label for Normal and Delta markers

3.3.7.2 Settings

The controls on this tab include the Marker active function and a radio button selection for the marker control mode (**Normal/POSiTion**, **Delta** or **Off**; see "[Marker Mode](#)" on page 507) for the selected marker, as well as additional functions that help you use markers.

Marker Frequency

Sets the marker X-Axis value in the current marker X-Axis Scale unit. It has no effect if the control mode (see "[Marker Mode](#)" on page 507) is **Off**, but is the SCPI equivalent of entering an X value if the control mode is **Normal** or **Delta**.

Remote Command	<code>:CALCulate:OBWidth:MARKer[1] 2 ... 12:X <freq></code> <code>:CALCulate:OBWidth:MARKer[1] 2 ... 12:X?</code>
Example	<code>:CALC:OBW:MARK3:X 0</code> <code>:CALC:OBW:MARK3:X?</code>
Notes	If no suffix is sent, uses the fundamental units for the current marker X Axis Scale. If a suffix is sent that does not match the current marker X Axis Scale unit, an error "Invalid suffix" is generated The query returns the marker's absolute X Axis value if the control mode is Normal , or the offset from the marker's reference marker if the control mode is Delta . The query is returned in the fundamental units for the current marker X Axis scale: Hz for Frequency and Inverse Time , seconds for Period and Time
Preset	After a preset, all markers are turned OFF , so Marker X Axis Value query returns Not a Number (NAN)
State Saved	Saved in instrument state
Min	-9.9E+37
Max	9.9E+37
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Marker X Axis Position (Remote Command Only)

Sets the marker X-Axis Scale position in trace points. This setting has no effect if the control mode is **Off**, but is the SCPI equivalent of entering a value if the control mode is **Normal** or **Delta** – except in trace points rather than X-Axis Scale units. The entered value is immediately translated into the current X-Axis Scale units for setting the value of the marker.

Remote Command	<code>:CALCulate:OBWidth:MARKer[1] 2 ... 12:X:POSition <real></code> <code>:CALCulate:OBWidth:MARKer[1] 2 ... 12:X:POSition?</code>
Example	<code>:CALC:OBW:MARK10:X:POS 0</code> <code>:CALC:OBW:MARK10:X:POS?</code>
Notes	The query returns the marker's absolute X-Axis value in trace points if the control mode is Normal , or the offset from the marker's reference marker in trace points if the control mode is Delta . The value is returned as a real number, not an integer, corresponding to the translation from X-Axis Scale units to trace points . When a marker is turned on, it is placed center of the screen on the trace. Therefore, the default value depends on instrument condition If the marker is Off , the query response is Not A Number
Preset	After a preset, all markers are turned Off , so the query returns Not A Number (NAN)
State Saved	Saved in instrument state
Min	-9.9E+37
Max	9.9E+37

Marker Y Axis Value (Remote Query only)

Returns the marker Y-Axis value in the current marker Y-Axis unit.

Remote Command	:CALCulate:OBWidth:MARKer[1] 2 ... 12:Y?
Example	:CALC:OBW:MARK11:Y?
Notes	Returns the marker Y-Axis result, if the control mode is Normal or Delta If the marker is Off , the response is Not A Number
Preset	Result dependent on Markers setup and signal source
State Saved	No
Backwards Compatibility SCPI	:CALCulate:OBWidth:MARKer[1] 2 ... 12:FUNCTION:RESult?

Marker Mode

Sets the marker control mode to **Normal** (**POSition**), **Delta**, or **Off**. All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is **OFF**, pressing **Marker** sets it to **Normal** and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, **Marker X Axis Value** appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is **Off**, there is no active function, and the active function is turned off.

Remote Command	:CALCulate:OBWidth:MARKer[1] 2 ... 12:MODE POSition DELTa OFF :CALCulate:OBWidth:MARKer[1] 2 ... 12:MODE?
Example	:CALC:OBW:MARK:MODE POS :CALC:OBW:MARK:MODE?
Preset	OFF
State Saved	Saved in instrument state
Range	POSition DELTA OFF
Annotation	Mkr # <X value> and <Marker value> upper right on graph When Marker Trace is Polar in WCDMA mode: Mkr # <Chip Value (RHO & QPSKEVM)/Symbol Value (CDP)>, <X value> and <Y value> upper right on graph

Backwards Compatibility SCPI Command

Sets or queries the state of a marker. Setting a marker that is **OFF** to **ON** (1), puts it in **Normal** mode, and places it at the center of the screen.

Example	<code>:CALC:OBW:MARK3:STAT ON</code> <code>:CALC:OBW:MARK3:STAT?</code>
Preset	OFF
State Saved	Saved in instrument state
Range	OFF ON
Backwards Compatibility SCPI	<code>:CALCulate:OBWidth:MARKer[1] 2 ... 12:STATe OFF ON 0 1</code> <code>:CALCulate:OBWidth:MARKer[1] 2 ... 12:STATe?</code>

Delta Marker (Reset Delta)

Pressing this button has the same effect as pressing **Delta** in **Marker Mode**. The selected marker becomes a **Delta** marker. If the selected marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the delta to zero.

Marker Settings Diagram

Lets you configure the **Marker** system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command	<code>:CALCulate:OBWidth:MARKer:AOFF</code>
Example	<code>:CALC:OBW:MARK:AOFF</code>

3.3.7.3 Peak Search

The controls on this tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with "**Marker Delta**" on page 509.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu *and* performs a peak search.
Pressing the **Peak Search** tab once you are already *in* the **Marker** menu does *not* perform a peak search.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. It is the same as **"Marker Frequency" on page 505** on the **Settings** tab.

Peak Search

Moves the selected marker to the trace point which has the maximum y-axis value for that marker's trace.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu *and* performs a peak search.

Remote Command	<code>:CALCulate:OBwidth:MARKer[1] 2 ... 12:MAXimum</code>
----------------	--

Example	<code>:CALC:OBW:MARK2:MAX</code> <code>:SYST:ERR?</code>
---------	---

can be used to query the errors to determine if a peak is found. The message "No peak found" (-200) will be returned after an unsuccessful search

Notes	Sending this command selects the subopcoded marker
-------	--

In WCDMA Mode, this command does not work when the selected marker is located on the polar trace. In this case, the command is ignored

Marker Delta

Pressing this button has the same effect as pressing **Delta** in **"Marker Mode" on page 507** on the **Settings** tab. The selected marker becomes a **Delta** marker. If the selected marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the delta to zero.

The control is duplicated here to allow you to conveniently perform a peak search and change the marker's control mode to **Delta** without having to access two separate menus.

3.3.7.4 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. It is the same as "**Marker Frequency**" on page 505 on the **Settings** tab.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the "reference marker" for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	<code>:CALCulate:OBWidth:MARKer[1] 2 ... 12:REference <integer></code> <code>:CALCulate:OBWidth:MARKer[1] 2 ... 12:REference?</code>
Example	<code>:CALC:OBW:MARK:REF 2</code> <code>:CALC:OBW:MARK:REF?</code>
Notes	Causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded, the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself" The query returns a single value (the specified marker number's relative marker)
Couplings	The act of specifying the selected marker's reference marker makes the selected marker a Delta marker If the reference marker is Off , it is turned on in Normal mode at the Delta marker location
Preset	The preset default "Relative To" marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it's default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using Restore Mode Defaults . This is not reset by Marker Off , All Markers Off , or Preset
State Saved	Saved in instrument state. Not affected by Marker Off and hence not affected by Preset or power cycle
Min	1
Max	12
Annunciation	Appears in the marker label of a Delta marker

Marker Trace

Selects the trace on which you want your marker placed. A marker is associated with one and only one trace. This trace is used to determine the placement, result, and X-Axis Scale of the marker. All markers have an associated trace; it is from that trace that they determine their attributes and behaviors, and it is to that trace that they go when they become **Normal** or **Delta** markers (see "[Marker Mode](#)" on page 507).

Specifying a **Marker Trace** manually or with this command associates the marker with the specified trace. If the marker is not **Off**, it moves from the trace it was on to the new trace. If the marker is **Off**, it stays off, but is now associated with the specified trace.

The query returns the number of the trace on which the marker is currently placed.

Remote Command	<code>:CALCulate:OBwidth:MARKer[1] 2 ... 12:TRACe 1 2 3</code> <code>:CALCulate:OBwidth:MARKer[1] 2 ... 12:TRACe?</code>
Example	<code>:CALC:OBW:MARK2:TRAC 2</code> <code>:CALC:OBW:MARK2:TRAC?</code>
Notes	A marker may be placed on a blanked and/or inactive trace, even though the trace is not visible and/or updating An application may register a trace name to be displayed on the control instead of a trace number
Couplings	The state of Marker Trace is not affected by " Auto Couple " on page 3017 Sending the remote command causes the addressed marker to become selected
Preset	1
State Saved	Saved in instrument state

Marker Settings Diagram

Lets you configure the **Marker** system using a visual utility. It is the same as "[Marker Settings Diagram](#)" on page 508 on the **Settings** tab.

3.3.8 Meas Setup

Contains functions for setting up the measurement parameters and contains functions for setting up parameters global to all measurements in the mode.

3.3.8.1 Settings

Contains frequently used **Meas Setup** functions to which you will want the fastest access.

Avg/Hold Num

Specifies the number of measurement averages used when calculating the measurement result. The average is displayed at the end of each sweep.

Initiates an averaging routine that averages the sweep points in several successive sweeps, resulting in trace smoothing.

After the specified number of average counts, "[Average Mode](#)" on page 514 (termination control) determines the average action.

Remote Command	<code>[:SENSe] :OBWidth :AVERage :COUNT <integer></code>
Example	<code>:OBW :AVER :COUN 1500</code> <code>:OBW :AVER :COUN ?</code>
Preset	10
State Saved	Yes
Min/Max	1/10000
Annotation	The average count is displayed in the measurement bar on the front panel display. The annotation appears in the format n/N where n is the current average and N is the average count
Backwards Compatibility SCPI	<code>[:SENSe] :EBWidth :AVERage :COUNT</code>

Continue Averaging

Designed for acquiring the trace average through multiple sets of DUT conditions, to meet requirements such as those for an OTA measurement.

NOTE

You must be in **Single** sweep/measurement to use **Continue Averaging**. Go to **Single** and press **Restart** to obtain the first set of averages, then **Continue Averaging** will be available.

Use `:FETCh :<meas> ?` to retrieve the data as it waits for completion of **Continue Averaging**. `*OPC ?` does not wait for completion and returns true immediately.

Pressing this control adds (to the already averaged trace or measurement) several averages equal to "[Avg/Hold Num](#)" on page 512. Every time you press it, the

terminal count increases by the current value of the **Avg|Hold Num**. You can change your test setup (for example, the DUT position or antenna) after each average count reaches the terminal count.

You could also accomplish the same thing by manually increasing **Avg|Hold Num**, but by using **Continue Averaging** you can guarantee the same number of averages for each step in the process, while keeping **Avg|Hold Num** the same so you do not lose its value.

Remote Command	<code>[:SENSe]:OBWidth:AVERage:CONTinue</code>
Example	<code>:OBW:AVER:CONT</code>
Dependencies	Enabled when you change the Sweep mode to Single and the Average Count reaches the Average Number. Otherwise, it is grayed-out

Terminal Count (Remote Query Only)

Returns the terminal count that shows the target average number after "**Continue Averaging**" on page 512 is pressed. Every time you press **Continue Averaging**, the terminal count increases to 2N, 3N, and so on. The value is the same as the "**Avg/Hold Num**" on page 512 unless **Continue Averaging** is pressed. When **Restart** is pressed, it is reset to match **Avg|Hold Num**.

Remote Command	<code>[:SENSe]:OBWidth:AVERage:COUNt:TERMinal?</code>
Example	<code>:OBW:AVER:COUN:TERM?</code>

Averaging On/Off

Turns averaging on or off.

NOTE

In this measurement, **Average Type** is always preset to the **Log-Pwr Avg (Video)** method. Other averaging methods are not available.

Remote Command	<code>[:SENSe]:OBWidth:AVERage[:STATe] ON OFF 1 0</code> <code>[:SENSe]:OBWidth:AVERage[:STATe]?</code>
Example	<code>:OBW:AVER ON</code> <code>:OBW:AVER?</code>
Couplings	Averaging state is coupled to " Max Hold (Remote Command Only) " on page 519. If Max Hold is changed from OFF to ON , Averaging state is automatically set to ON
Preset	ON
State Saved	Yes
Range	ON OFF
Backwards	<code>[:SENSe]:EBWidth:AVERage[:STATe]</code>

Compatibility
SCPI

Average Mode

Lets you set the averaging mode.

EXP	Measurement averaging continues using the specified number of averages to compute each averaged value. The average is displayed at the end of each sweep
REP	The measurement resets the average counter each time the specified number of averages is reached

Remote Command	<code>[:SENSe]:OBWidth:AVERage:TCONtrol EXP REP</code> <code>[:SENSe]:OBWidth:AVERage:TCONtrol?</code>
Example	<code>:OBW:AVER:TCON REP</code> <code>:OBW:AVER:TCON?</code>
Preset	EXP
State Saved	Yes
Range	EXP REP

% of OBW Power

Assigns the percentage of the total power that is measured within the Occupied Bandwidth for the current measurement. The resulting Occupied Bandwidth limits are displayed by markers placed on the frequencies of the specified percentage.

Remote Command	<code>[:SENSe]:OBWidth:PERCent <real></code> <code>[:SENSe]:OBWidth:PERCent?</code>
Example	<code>:OBW:PERC 75</code> <code>:OBW:PERC?</code>
Preset	99.00
State Saved	Yes
Min/Max	10/99.99

Power Ref

Lets you select Power Ref type:

Total Power	TP	Total power in the current span is displayed
OBW Power	OBWP	Occupied power is displayed

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

When **Power Ref** type is changed, the annotation in the lower window and Remote Command SCPI Results also change.

Remote Command	<code>[:SENSe]:OBWidth:PREFERENCE OBWPower</code> <code>[:SENSe]:OBWidth:PREFERENCE?</code>
Example	<code>:OBW:PREF TPOW</code> <code>:OBW:PREF?</code>
Preset	<code>TPOWer</code>
State Saved	Saved in instrument state
Range	<code>TPOWer OBWPower</code>

x dB

Sets the x dB value used for the "x dB bandwidth" result that measures the bandwidth between two points on the signal that is x dB down from the highest signal point within the OBW Span.

Remote Command	<code>[:SENSe]:OBWidth:XDB <rel_ampl></code> <code>[:SENSe]:OBWidth:XDB?</code>
Example	<code>:OBW:XDB -20</code> <code>:OBW:XDB?</code>
Preset	BT Mode: -20.0 dB All other Modes: -26.0 dB
State Saved	Yes
Min/Max	-100.0 dB/-0.1 dB
Backwards Compatibility SCPI	<code>[:SENSe]:EBWidth:XDB</code>

Power Integration Method

Selects the power integration method:

Normal	<code>NORMal</code>	By integrating the linear power bucket values from the lower edge of the trace, and interpolating to find the point where the integrated power equals $(1 - [\text{Occ BW \% Pwr}]) / 2$ (0.5% if, for example, the 99% occupied bandwidth is to be found) of the total power, frequency f1 is obtained. This procedure is repeated from the upper trace edge to find frequency f2. This calculation uses linear interpolation to find the lower and upper carrier boundary point within the width of a sweep point (the span divided by the number of sweep points), f1 and f2
From	<code>ICENter</code>	Measures the power spectrum distribution within two times or more

Center frequency range over the requirement for Occupied Bandwidth specification centering on the current carrier frequency

Remote Command	<code>[:SENSe]:OBWidth:INTEgration[:METHod] NORMal ICENter</code> <code>[:SENSe]:OBWidth:INTEgration[:METHod]?</code>
Example	<code>:OBW:INT NORM</code> <code>:OBW:INT?</code>
Preset	For 5GNR Mode, Uplink: <code>ICENter</code> All other Modes <code>NORMal</code>
State Saved	Yes
Range	<code>Normal From Center</code>

Spur Avoidance

Because VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The **Spur Avoidance** function is provided to eliminate this spur, at the expense of some measurement speed.

When **Spur Avoidance** is enabled (the default), the instrument uses a software algorithm to remove this spur from the displayed measurement data, but the algorithm only operates under certain conditions. Specifically, it only operates in the multiple capture case.

You can disable this function to speed up your measurement by setting **Spur Avoidance** to “Disabled.”

Note that when **Spur Avoidance** is not in effect, either because you have disabled it or because you are not in multiple capture, the following warning message will appear in the status bar:

`Settings Alert;Spur Avoidance Off`

This is to alert you that measurement accuracy might be impacted by the fact that **Spur Avoidance** is not in effect.

The spur avoidance function is not available for:

- M9410A/11A with EP6 option at frequency above 6 GHz
- M9415A/16A at frequency below 380 MHz and above 12.3 GHz
- M9410E/11E/15E/16E at frequency below 380 MHz and above 25.9 GHz

Remote Command	<code>[:SENSe]:OBWidth:SAVoid[:STATe] OFF ON 0 1</code> <code>[:SENSe]:OBWidth:SAVoid[:STATe]?</code>
Example	<code>:OBW:SAV ON</code> <code>:OBW:SAV?</code>
Dependencies	Only appears in VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E
Preset	<code>OFF</code>
State Saved	Saved in instrument state
Range	<code>OFF ON</code>

Meas Setup Summary Table

Lets you view and access many of the parameters in the **Meas Setup** menus on one screen.

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see "[Measurement-Specific Details](#)" on page 518 below.

Remote Command	<code>:COUPle ALL</code>
Example	<code>:COUP ALL</code>
Backwards Compatibility SCPI	<code>:COUPLE ALL NONE</code>
Backwards Compatibility Notes	<code>:COUP:NONE</code> puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is <i>not</i> recommended for making measurements or new designs

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero

Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple** *does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all measurement parameters to their default values.

Remote Command	:CONFigure:OBWidth
----------------	--------------------

Example	:CONF:OBW
---------	-----------

Max Hold (Remote Command Only)

When **ON**, **Max Hold** displays and holds the maximum responses of the current measurement. Turn **Max Hold** **OFF** to disable the maximum hold feature.

Remote Command	[:SENSe]:OBWidth:MAXHold ON OFF 1 0 [:SENSe]:OBWidth:MAXHold?
----------------	--

Example	:OBW:MAXH ON :OBW:MAXH?
---------	----------------------------

Couplings	Max Hold is coupled to " Averaging On/Off " on page 513. Max Hold is activated only if Average state is ON . If Max Hold is changed to ON when Average state is OFF , Average state is automatically set to ON
-----------	---

Preset	OFF
--------	-----

State Saved	Yes
-------------	-----

Range	OFF ON
-------	----------

Backwards Compatibility SCPI	[:SENSe]:EBWidth:MAXHold
---------------------------------	---------------------------

3.3.8.2 Limits

Lets you set measurement limits and be alerted when they have been exceeded.

Limit Test

Toggles the limit test.

Remote Command	<code>:CALCulate:OBwidth:LIMit[:TEST] ON OFF 1 0</code> <code>:CALCulate:OBwidth:LIMit[:TEST]?</code>
Example	<code>:CALC:OBW:LIM 0</code> <code>:CALC:OBW:LIM?</code>
Dependencies	Only appears in LTEAFDD/LTEATDD and 5GNR Modes
Preset	ON
State Saved	Saved in instrument state
Range	ON OFF

Bandwidth

Sets the limit bandwidth for OBW measurement.

Remote Command	<code>:CALCulate:OBwidth:LIMit:FBLimit <freq></code> <code>:CALCulate:OBwidth:LIMit:FBLimit?</code>
Example	<code>:CALC:OBW:LIM:FBL 10</code> <code>:CALC:OBW:LIM:FBL?</code>
Dependencies	Only appears in LTEAFDD/LTEATDD and 5GNR Modes
Preset	Automatically calculated
State Saved	Saved in instrument state
Min/Max	1 kHz/Depends on instrument maximum frequency

Remote Command	<code>:CALCulate:OBwidth:LIMit:FBLimit:AUTO ON OFF 1 0</code> <code>:CALCulate:OBwidth:LIMit:FBLimit:AUTO?</code>
Example	<code>:CALC:OBW:LIM:FBL:AUTO OFF</code> <code>:CALC:OBW:LIM:FBL:AUTO?</code>
Dependencies	Only available in LTE-A and 5G NR Modes
Couplings	When the state of limit bandwidth is ON , the bandwidth value is automatically determined by multi-carrier configuration (system bandwidth and freq offset of each component carrier). Otherwise, the bandwidth value depends on user input When the bandwidth value is set manually, the state of limit bandwidth automatically changes to OFF
Preset	ON
State Saved	Yes
Range	Auto Man

3.3.8.3 Radio

The Radio tab contains controls to select link direction.

Direction

Direction specifies whether the 5G NR signal is an uplink signal or a downlink signal. This control allows you to set the Direction of the signal being measured.

Remote Command	<code>[:SENSe]:RADio:STANdard:DIRectioN DLINK ULINK</code> <code>[:SENSe]:RADio:STANdard:DIRectioN?</code>
Example	<code>:RAD:STAN:DIR DLIN</code>
Dependencies	When N9085EM0E is not installed and N9085EM4E is installed, only Uplink is available
Couplings	Changing the direction affects the gate source as follows <ul style="list-style-type: none"> - If changed to uplink: RF burst - If changed to downlink: External 1 <p>In Transmit On Off Power, changing the direction affects the trigger source as follows</p> <ul style="list-style-type: none"> - If changed to uplink: Periodic - If changed to downlink: External 1 except for models with the H1G option. With the H1G option, the trigger source changes as follows. <ul style="list-style-type: none"> - External 1, when Info BW \leq 255 MHz - External 3, when Info BW \geq 256 MHz <p>Changing the direction affects many other modulation analysis setup parameters</p>
Preset	ULINK when N9085EM0E is not installed and N9085EM4E is installed Otherwise, DLINK
State Saved	Yes
Range	Uplink only when N9085EM0E is not installed and N9085EM4E is installed Otherwise, Downlink Uplink

MIMO

Indicates input Signal is MIMO (including MISO) or SISO.

NOTE This setting is available for EVM.

Remote Command	<code>[:SENSe]:RADio:MIMO[:STATe] ON OFF 0 1</code> <code>[:SENSe]:RADio:MIMO[:STATe]?</code>
Example	<code>:RAD:MIMO ON</code> <code>:RAD:MIMO?</code>

Preset	OFF
State Saved	Yes
Range	ON OFF

When input signal is MIMO, there are two use models depends on input data channel number.

- Input data channel number = 1

This means the MIMO signal has been combined into one channel (MISO), in this condition only part of measurements results are valid:

MIMO Info table

Spectrum trace

Raw Main Time trace

- Input data channel number > 1

Input data channels may come from:

Recall IQ data for multiple channels

Reference Input Channel

Specifies reference channel in MIMO mode.

NOTE

This setting is available for EVM when "MIMO" on page 3020 is set to On.

Remote Command	<code>[:SENSe]:RADio:MIMO:CHANnel:REFerence CHANne11 ... CHANne18</code> <code>[:SENSe]:RADio:MIMO:CHANnel:REFerence?</code>
Example	<code>:RAD:MIMO:CHAN:REF CHAN1</code> <code>:RAD:MIMO:CHAN:REF?</code>
Couplings	This key is grayed-out when MIMO is off The available selections depend on Total input channel number
Preset	CHAN1
State Saved	Yes

Multi Channel Synchronous Acquisition (UXM Only)

Enables you to perform multiple synchronous acquisition. When On, acquires signals simultaneously from multiple inputs specified in the Multi Channel Config dialog. The acquired data is assigned to each trace according to the Channel Assignment settings in the Trace Settings Table dialog.

Remote Command	<code>[:SENSe]:RADio:MCHannel:SACQuisition[:STATe] ON OFF 1 0</code> <code>[:SENSe]:RADio:MCHannel:SACQuisition[:STATe]?</code>
Example	<code>:RAD:MCH:SACQ ON</code> <code>:RAD:MCH:SACQ?</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition
Preset	<code>OFF</code>
State Saved	Yes

Multi Channel Config

Lets you perform a detailed configuration of each input channel. This will be used for three cases:

- MIMO (EVM only): Meas Setup > Radio (N9042B and UXM model E7515B only)
- ccEVM (EVM only): Meas Setup > Advanced
- Multiple Synchronous Acquisition (PowerSuite measurements supporting multi-channel synchronous acquisition): Meas Setup > Radio (UXM model E7515B only)

Multi Channel Configuration

Enables you to configure multiple channel receiver. Different hardware platforms have different parameters.

This menu is available for the following measurements:

- EVM in N9042B, VXT2/3, UXM model E7515B
- PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "[Multi Channel Synchronous Acquisition \(UXM Only\)](#)" on page 3021

Input Port (UXM)

Select input port for channel configuration.

Remote Command	<code>[:SENSe]:RADio:MCHannel:PORT[1] 2 RFI01 ... RFI08</code> <code>[:SENSe]:RADio:MCHannel:PORT[1] 2?</code>
Example	<code>:RAD:MCH:PORT2 RFI02</code> <code>:RAD:MCH:PORT2?</code>
Dependencies	This control appears only in the EVM and PowerSuite measurement supporting multiport synchronous acquisition in the UXM model E7515B When "Lock (UXM)" on page 3023 is On, the selections are grayed out and cannot be changed. When "Lock (UXM)" on page 3023 is OFF, the label "Channel x" changes to "Unused" Selections are the same as those of RF Input Port and either RFI01 to RFI08 or RFI01 to RFI016 depending on the hardware configuration
Preset	RFIO1 RFIO2
State Saved	Yes
Range	RFIO 1 RFIO 2 RFIO 3 RFIO 4 RFIO 5 RFIO 6 RFIO 7 RFIO 8 or RFIO 1 RFIO 2 RFIO 3 RFIO 4 RFIO 5 RFIO 6 RFIO 7 RFIO 8 RFIO 9 RFIO 10 RFIO 11 RFIO 12 RFIO 13 RFIO 14 RFIO 15 RFIO 16
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2</code>

Lock (UXM)

Enables you to lock/unlock the input port. When locked, the selected input port is assigned to a channel.

Remote Command	<code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed?</code>
Example	<code>:RAD:MCH:PORT2:LOCK ON</code> <code>:RAD:MCH:PORT2:LOCK?</code>
Dependencies	This control appears only in the EVM and PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2:LOCKed</code>

Input Channel IP address

Set instrument IP address for channel configuration, "local" is used for current instrument.

Remote Command	<code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4 <String></code>
----------------	---

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

	<code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4?</code>
Example	<code>:RAD:MCH:IPAD '192.168.1.2'</code>
Dependencies	Appears only in the EVM measurement
Preset	local
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4</code>

Input Channel Instrument port

Set instrument port for channel configuration.

Remote Command	<code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:PORT <int></code> <code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:PORT?</code>
Example	<code>:RAD:MCH:IPAD:PORT 3574</code>
Dependencies	Available only for the EVM measurement. Only visible on VXT platforms
Preset	3574
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4:PORT</code>

Lock

Lock instrument and assign to a channel in sequence.

Remote Command	<code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:LOCKed?</code>
Example	<code>:RAD:MCH:IPAD1:LOCK 1</code> <code>:RAD:MCH:IPAD1:LOCK?</code>
Dependencies	Appears only in the EVM measurement
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4:LOCKed</code>

Channel Configuration Information (Remote Query only)

This SCPI query reads back channel configuration information.

Remote Command	<code>[:SENSe]:RADio:MCHannel:CHANnel:INFO?</code>
----------------	---

Example	<code>:RAD:MCH:CHAN:INFO?</code>
Dependencies	Available only for the EVM measurement
Backwards Compatibility SCPI	<code>[:SENSe] :RADio :MIMO :CHANnel :INFO</code>

Trace Settings Table

Lets you set a configuration of multiport synchronous acquisition.

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition
--------------	---

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "[Multi Channel Synchronous Acquisition \(UXM Only\)](#)" on page 3021

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a `:READ` or `:FETCh` query:

- Trace 1
- Trace 2
- Trace 3

Remote Command	<code>:CALCulate:<meas>:MTRace TRACe1 TRACe2 TRACe3</code> <code>:CALCulate:<meas>:MTRace?</code> <code><meas></code> is the identifier for the current measurement; any one of <code>CHPower</code> <code>ACPower</code> <code>OBWidth</code> <code>SEMask</code> <code>SPURious</code> <code>PVTime</code>
----------------	--

Example	Channel Power
---------	---------------

	<code>:CALC:CHP:MTR TRAC1</code>
	<code>:CALC:CHP:MTR?</code>
Dependencies	In the ACP measurement, this control is grayed-out when Meas Method is set to RBW or FAST , and only Trace 1 is enabled
Preset	<code>TRACe1</code>
State Saved	No
Range	Trace 1 Trace 2 Trace 3

Channel Assignment

Selects the channel for each trace in the specified measurement. A port selected at "Input Port (UXM)" on page 3022 is assigned to a trace. This setting is valid when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3025 is ON.

Multi Channel Synchronous Acquisition is performed under the following conditions:

- All Input Port Channel Lock is set to ON
- Multi Channel Synchronous Acquisition is set to ON

The selected input port is shown in the Trace Setup Summary table, on the trace and at the bottom of the Trace Control menu panel.

Remote Command	<code>:TRACe[1] 2 3:<meas>:CHANnel CHANne11 CHANne12</code> <code>:TRACe[1] 2 3:<meas>:CHANne1?</code>
Example	For the ACP measurement Trace 2 <code>:TRAC2:ACP:CHAN CHAN2</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3025 is On The unlocked channel is grayed-out
Preset	CHAN1 CHAN2 CHAN1
State Saved	Yes
Range	Channel 1 Channel 2

Input Port

Read-only information. Indicates which input data is displayed in each trace. This setting is valid when Multi Channel Synchronous Acquisition is ON.

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition
--------------	---

Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3021 is On
This column is blank when Math Function is other than Off

Advanced Acquisition

This is the same as "Advanced Acquisition" on page 3072 in the Configure Comp Carriers dialog. See "Advanced Acquisition" on page 3072.

EIRP (Synchronous Acquisition) (UXM Only)

Enables you to preset the following parameters. Preset is made such that Trace 3 becomes the sum of Trace 1 and Trace 2 to which data from Channel 1 and Channel 2 are assigned. The measurement result is calculated based on Trace 3.

This parameter is useful when performing the EIRP measurement by acquiring signals from two ports simultaneously.

Multi Channel Synchronous Acquisition	On
--	-----------

Target trace parameters are those of the PowerSuite measurements supporting multi channel synchronous acquisition in the UXM model E7515B.

	Trace 1	Trace 2	Trace 3
Channel Assignment	Channel 1	Channel 2	Channel 1
Trace Type	Trace Average	Trace Average	Clear / Write
View/Blank	Active	Active	Active
Math Function	Off	Off	Power Sum
Operand 1	N/A	N/A	Trace 1
Operand 2	N/A	N/A	Trace 2
Math Trace	Trace 3		

Remote Command	<code>[:SENSe] :RADio:MCHannel:PRESet:EIRP</code>
Example	<code>:RAD:MCH:PRES:EIRP</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Restore Defaults (UXM Only)

Enables you to preset the following parameters.

Multi Channel Synchronous Acquisition	Off
Measure Trace	Trace1

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

	Trace 1	Trace 2	Trace 3
View/Blank	Active	Blank	Blank
Math Function	Off	Off	Off

Remote Command	<code>[:SENSe]:RADio:MCHannel:PRESet:DEFault</code>
Example	<code>:RAD:MCH:PRES:DEF</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Interfering Signal Present

Sets whether interference signal for the intermodulation tests exists or not. If exists, limits are not evaluated over the interference signal frequency range specified by the span and the center frequency parameters in Adjacent Channel, Spectrum Emission Mask and Spurious Emissions measurements.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference[:STATe] OFF ON 0 1</code> <code>[:SENSe]:RADio:IMODulation:INTerference[:STATe]?</code>
Example	<code>:RAD:IMOD:INT 1</code> <code>:RAD:IMOD:INT?</code>
Preset	OFF
State Saved	Saved in instrument state
Range	On Off

Freq Offset From Edge

Sets the center frequency of the interference signal for intermodulation tests. The frequency is set as offset frequency from the BS RF bandwidth edge. Interference Offset Side determines on which side of the BS RF bandwidth the interference signal exists.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:FREQUency:OFFSet <freq></code> <code>[:SENSe]:RADio:IMODulation:INTerference:FREQUency:OFFSet?</code>
Example	<code>:RAD:IMOD:INT:FREQ:OFFS 5MHz</code> <code>:RAD:IMOD:INT:FREQ:OFFS?</code>

Preset	5MHz
State Saved	Saved in instrument state
Min	0 Hz
Max	400 MHz

Span

Sets the span of the interference signal for intermodulation tests.

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:SPAN <freq></code> <code>[:SENSe]:RADio:IMODulation:INTerference:SPAN?</code>
Example	<code>:RAD:IMOD:INT:SPAN 5MHz</code> <code>:RAD:IMOD:INT:SPAN?</code>
Preset	5 MHz
State Saved	Saved in instrument state
Min	200 kHz
Max	400 MHz

Offset Side

Sets which side of the BS RF bandwidth the interference signal exists on.

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:SIDE NEGative POSitive</code> <code>[:SENSe]:RADio:IMODulation:INTerference:SIDE?</code>
Example	<code>:RAD:IMOD:INT:SIDE POS</code> <code>:RAD:IMOD:INT:SIDE?</code>
Preset	<code>POSitive</code>
State Saved	Saved in instrument state

Non-Contiguous Interference Region

Sets the region the interfering signal exists at in the Non-Contiguous mode:

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

- Inner – The interfering signal exists at the inner region. This setting is only effective when Carrier Alloc is Non-Contiguous. When in Contiguous, the interference region is always outside regardless of the selection of this parameter
- Outer – The interfering signal exists at either of the outer regions

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:REGion INNer OUTer</code> <code>[:SENSe]:RADio:IMODulation:INTerference:REGion?</code>
Example	<code>:RAD:IMOD:INT:REG OUT</code> <code>:RAD:IMOD:INT:REG?</code>
Preset	<code>OUTer</code>
State Saved	Saved in instrument state

Interfering Signal Exclude Range

Enables you to select the offset range to be excluded from the measurement.

- Offset Integ BW (OIBW) – Exclude an entire ACP offset range where the interfering signal is allocated
- Interfering Signal Span (ISSP) – Exclude only the span where the interfering signal is occupied

NOTE

This setting is available only for the ACP and Modulation Analysis measurements.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:RANGe:EXCLude[1] 2 OIBW ISSPan</code> <code>[:SENSe]:RADio:IMODulation:INTerference:RANGe:EXCLude[1] 2?</code>
Example	<code>RAD:IMOD:INT:RANG:EXCL OIBW</code> <code>RAD:IMOD:INT:RANG:EXCL?</code>
Notes	Subopcode 1 for Downlink, 2 for Uplink. Default is Downlink.
Preset	Downlink: ISSPan Uplink: OIBW
State Saved	Saved in instrument state
Range	Offset Integ BW Interfering Signal Span

3.3.8.4 Meas Standard

The tab contains settings which let you configure the analyzer to match the measurement standard in your 5G NR signal.

The section entitled “Configure Preset” lets you configure the preset values for the Component Carriers. Once you have set all the controls in the “Configure Preset” section to the desired value, press the “Apply Preset (to all CCs)” control and your presets will be applied to each Component Carrier. Furthermore, any new Component Carriers will take on the same values you have applied.

NOTE

You must press **Apply Preset (to all CCs)** or the values on the controls will *not* affect the Component Carriers.

When you need to configure more parameters, select Advanced Preset Parameters to open a dialog and set advanced parameters for multiple measurements on one screen.

Bandwidth

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **"Bandwidth" on page 3057** of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “Configure Preset” section then press **Apply Preset (to all CCs)**.

NOTE

You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 3052** will also take on this value.

Remote Command `[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth] B3M | B5M | B10M | B15M | B20M | B25M | B30M | B35M | B40M | B45M | B50M | B60M | B70M | B80M | B90M | B100M | B200M | B400M | B800M | B1600M | B2000M`

`[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth]?`

Example `:RAD:STAN:PRES:CARR B5M`

`:RAD:STAN:PRES:CARR?`

Dependencies Selections other than 10 MHz, 20 MHz, 30 MHz, and 40 MHz are unavailable when **"Uplink Carrier Mode" on page 3041** is Sidelink - V2X
If you change **"Uplink Carrier Mode" on page 3041** to Sidelink - V2X when this parameter is set to a value other than 10 MHz, 20 MHz, 30 MHz, or 40 MHz, it is forcefully set to 10 MHz

Preset	When N9085EMOE is not installed and N9085EM4E is installed: B10M Otherwise: B100M
State Saved	Yes
Range	3MHz 5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet[:BANDwidth]</code>

Frequency Range

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **"Freq Range" on page 3058** of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “Configure Preset” section then press **Apply Preset (to all CCs)**.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 3052** will also take on this value.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe FR1 FR2 FR21 FR22</code> <code>[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe?</code>								
Example	<code>:RAD:STAN:PRES:FREQ:RANG FR1</code> <code>:RAD:STAN:PRES:FREQ:RANG?</code>								
Notes	SCPI enum “FR2” is retained for backwards compatibility. When you change Bandwidth, this parameter changes as shown in "Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility" on page 534 depending on the currently selected value.								
Dependencies	Available selections differ depending on Bandwidth as follows: <table border="1" data-bbox="402 1486 1406 1654"> <thead> <tr> <th>Bandwidth</th> <th>FR</th> </tr> </thead> <tbody> <tr> <td>3 MHz, ..., 100 MHz</td> <td>FR1</td> </tr> <tr> <td>50 MHz, 100 MHz, 200 MHz, 400 MHz</td> <td>FR2, FR2-1</td> </tr> <tr> <td>100 MHz, 400 MHz, 800 MHz, 1600 MHz, 2000 MHz</td> <td>FR2, FR2-2</td> </tr> </tbody> </table> <p>When "Uplink Carrier Mode" on page 3041 is Sidelink - V2X, FR2 is unavailable</p>	Bandwidth	FR	3 MHz, ..., 100 MHz	FR1	50 MHz, 100 MHz, 200 MHz, 400 MHz	FR2, FR2-1	100 MHz, 400 MHz, 800 MHz, 1600 MHz, 2000 MHz	FR2, FR2-2
Bandwidth	FR								
3 MHz, ..., 100 MHz	FR1								
50 MHz, 100 MHz, 200 MHz, 400 MHz	FR2, FR2-1								
100 MHz, 400 MHz, 800 MHz, 1600 MHz, 2000 MHz	FR2, FR2-2								
Preset	FR1								
State Saved	Yes								

Range	FR1 FR2 FR2-1 FR2-2
Backwards Compatibility SCPI	<code>[:SENSe] :RADio:STANdard:PRESet:FRANge</code>

Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility

Current FR value	Bandwidth selection changes to:					
	3,...,45 MHz	50 MHz	100 MHz	200 MHz	400 MHz	800,...2000 MHz
FR1	FR1	FR1	FR1	FR2	FR2	FR2
FR2	FR1	FR2	FR2	FR2	FR2	FR2
FR2-1	FR1	FR2-1	FR2-1	FR2-1	FR2-1	FR2
FR2-2	FR1	FR2	FR2-2	FR2	FR2-2	FR2-2

FR2 behaves as A.35.00 backwards compatibility mode.

Duplex Mode

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Duplex Mode of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers”** on page 3052 will also take on this value.

FDD, TDD, User Defined are supported.

- FDD: RB allocation is filled with all slots and symbols
- TDD: When the Direction is Downlink and any of NR Test Models is selected for RB Alloc Preset, then, RB allocation is filled with the specified TDD slots and symbols only, based on the 3GPP Tx Conformance Test specification definition
- User Defined: Allows you to configure Transmission Periodicity, Number of Slots and Symbols where RB allocation is filled with in TDD slots and symbols

Remote Command	<code>[:SENSe] :RADio:STANdard:PRESet:DMODE FDD TDD UDEFined</code> <code>[:SENSe] :RADio:STANdard:PRESet:DMODE?</code>
----------------	--

Example	<code>:RAD:STAN:PRES:DMOD TDD</code> <code>:RAD:STAN:PRES:DMOD?</code>
Dependencies	Available selections depend on Frequency Range When FR1 is selected, all three selections are available. When FR2, FR2-1, or FR2-2 is selected, only TDD and User Defined are available
Preset	<code>TDD</code>
State Saved	Yes
Range	FDD TDD User Defined

TDD / User Def. Configuration

Lets you access TDD slot configuration parameters on one screen.

Duplex Mode

This is the same as "[Duplex Mode](#)" on page 3033 in the Meas Standard menu panel.

DL FR1 NR-TM Reference Standard Selection

This is the same as "[DL FR1 NR-TM Reference Standard Selection](#)" on page 3041 in Meas Standard > Advanced Preset Parameters.

Transmission Periodicity

Allows you to select transmission periodicity that determines the User Defined TDD slot configuration pattern repetition period.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmiSSion:PERiodicity P0_5MS P0_625MS P1MS P1_25MS P2MS P2_5MS P5MS P10MS</code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmiSSion:PERiodicity?</code>
Example	<code>:RAD:STAN:PRES:TRAN:PER P0_5MS</code> <code>:RAD:STAN:PRES:TRAN:PER?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	<code>P5MS</code>
State Saved	Yes
Range	0.5 ms 0.625 ms 1 ms 1.25 ms 2 ms 2.5 ms 5 ms 10 ms

Number of Downlink Slots

Specifies how many downlink slots are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SLOT:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SLOT:COUNT?</code>
Example	<code>:RAD:STAN:PRES:DLIN:SLOT:COUN 1</code> <code>:RAD:STAN:PRES:DLIN:SLOT:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	7
State Saved	Yes
Min	1
Max	Max slot count in the transmission periodicity

Number of Downlink Symbols

Specifies how many downlink symbols are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SYMBOL:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SYMBOL:COUNT?</code>
Example	<code>:RAD:STAN:PRES:DLIN:SYMB:COUN 1</code> <code>:RAD:STAN:PRES:DLIN:SYMB:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	6
State Saved	Yes
Min	1
Max	14

Number of Uplink Slots

Specifies how many uplink slots are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SLOT:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SLOT:COUNT?</code>
Example	<code>:RAD:STAN:PRES:ULIN:SLOT:COUN 1</code> <code>:RAD:STAN:PRES:ULIN:SLOT:COUN?</code>

3 5G NR/5G-A Mode
 3.3 Occupied BW Measurement

Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	2
State Saved	Yes
Min	1
Max	Max slot count in the transmission periodicity.

Number of Uplink Symbols

Specifies how many uplink symbols are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SYMBol:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SYMBol:COUNT?</code>
Example	<code>:RAD:STAN:PRES:ULIN:SYMB:COUN 1</code> <code>:RAD:STAN:PRES:ULIN:SYMB:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	4
State Saved	Yes
Min	1
Max	14

Number of Special Slots (Remote Query Only)

Queries the number of special slots in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SPECial:SLOT:COUNT?</code>
Example	<code>:RAD:STAN:PRES:SPEC:SLOT:COUN?</code>
Preset	1
Min	1
Max	Max slot count in the transmission periodicity - 1

TDD Slot Allocation(Remote Query Only)

Queries TDD slot allocation in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SLOT:ALLocation?</code>
----------------	---

Example	<code>:RAD:STAN:PRES:SLOT:ALL?</code>
Preset	“DDDDDDDSUU”

Ignore Duplex Mode for Fulfilled RB Alloc

This is the same as ["Ignore Duplex Mode for Fulfilled RB Alloc" on page 3050](#).

SCS

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the subcarrier spacing of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the ["Number of Component Carriers" on page 3052](#) will also take on this value.

In 5G, subcarrier spacing is governed by $2^n * 15$ kHz subcarrier spacings (where n is 0, 1, 2, or 3). 15, 30, and 60 kHz subcarrier spacings are used for the lower frequency bands, and 60 and 120 kHz subcarrier spacings are used for the higher frequency bands.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:SCS SCS15K SCS30K SCS60K SCS120K SCS480K SCS960K</code> For option details, see "Selections & Dependencies" on page 539 <code>[:SENSe]:RADio:STANdard:PRESet:SCS?</code> <code>[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe] OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe]?</code>
Example	<code>:RAD:STAN:PRES:SCS SCS30K</code> <code>:RAD:STAN:PRES:SCS?</code> <code>:RAD:STAN:PRES:SCS:AUTO 0</code> <code>:RAD:STAN:PRES:SCS:AUTO?</code>
Notes	Not preset to the selection until Apply Preset (to All CCs) is executed
Dependencies	Available selections depend on a combination of Bandwidth and Frequency Range, as detailed in "Selections & Dependencies" on page 539
Preset	<code>SCS30K</code> <code>ON</code>
State Saved	Yes

	Yes

(*) When in Auto, the narrowest available SCS is selected.

RB Alloc Preset

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Resource Block Allocation Preset of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers” on page 3052** will also take on this value.

The RB Alloc Preset presets the Resource Block (RB) allocation mapping to a selected predefined pattern in the list:

“Fulfilled-xxx” is to fill out all maximum available RBs in each CC with one specified modulation type (Pi/2-BPSK | QPSK | 16 QAM | 64 QAM | 256 QAM | 1024 QAM), and

“DL-NR-TM x.x” is to map RBs in each CC based on the NR Test Model definition according to the section 4.9.2 in 3GPP TS38.141-1 or -2.

Advanced Preset Parameters

Lets you access advanced preset parameters on one screen.

Uplink Carrier Mode

Allows you to select the uplink carrier mode: either Normal Uplink or Sidelink - V2X.

Remote Command	<code>[:SENSe] :RADio :STANdard :PRESet :ULINK :CARRier NORMa1 V2X</code> <code>[:SENSe] :RADio :STANdard :PRESet :ULINK :CARRier ?</code>
Example	<code>:RAD :STAN :PRES :ULIN :CARR NORM</code> <code>:RAD :STAN :PRES :ULIN :CARR ?</code>
Dependencies	Available when the required license is installed and Direction is Uplink
Preset	When N9085EM0E is not installed and N9085EM4E is installed: V2X Otherwise: NORMa1
State Saved	Saved
Range	Normal Uplink Sidelink-V2X

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:NRTM TS38 TS37CS1617</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:NRTM?</code>
Example	<code>RAD:STAN:PRES:DLIN:NRTM TS38</code> <code>RAD:STAN:PRES:DLIN:NRTM?</code>
Dependencies	Grayed out when Radio Direction is Uplink.
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed.
Preset	TS38
State Saved	Yes
Range	TS38.141-1 TS37.141 BC3 CS16/17

OFDM Type

This control is part of the “Preset for Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you specify the OFDM Type to configure preset values for the Component Carriers:

- CP-OFDM
- DFT-s-OFDM

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the Number of Component Carriers will also take on this value.

This parameter is valid only for the Modulation Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:OTYPE CPOFdm DFTSofdm</code> <code>[:SENSe]:RADio:STANdard:PRESet:OTYPE?</code>
Example	<code>:RAD:STAN:PRES:OTYP CPOF</code> <code>:RAD:STAN:PRES:OTYP?</code>

Dependencies	DFT-s-OFDM is grayed out when Radio Direction is Downlink DFT-s-OFDM is grayed-out when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	CPOFdm
State Saved	Yes
Range	CP-OFDM DFT-s-OFDM

Adjust Limit Mask for Freq Range

This control is part of the "Preset for ACP, SEM, Spur, Tx On|Off Power" section of the Advanced Preset Parameters dialog. It lets you specify the frequency range for preset.

Set the value you want for this control and the other controls in the "Configure Preset" section, and then press "Apply Preset (to all CCs)".

NOTE

You must press [Apply Preset \(to all CCs\)](#) or the value on this controls will *not* affect the Component Carriers.

When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0. Values to be preset will be preset to the values described in the Values for Meas Standard section when Apply Preset is executed.

When in Manual, values to be preset will be preset to the values described in Values or Meas Standard according to this value when Apply Preset is executed.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge NONE FT01 F1T03 F3T04P2 F4P2T06 F6T07 F24P25T029P5 F37T040 F43T048 F52T071</code>

BS Type

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Type for preset:

- 1-C (FR1 Conducted)
- 1-O (FR1 Radiated)
- 2-O (FR2 Radiated)

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE FR1C FR10 FR20</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE?</code>

Example	<code>:RAD:STAN:PRES:ULIN:ACH NR</code> <code>:RAD:STAN:PRES:ULIN:ACH?</code>

Preset	NR
State Saved	Yes
Range	NR (same BW) UTRA NR + UTRA

UE Power Class

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you select the UE Power Class for preset from Power Class 1 to 4.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP and Mod Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PCLass CLASS1 ... CLASS4</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PCLass?</code>
Example	<code>:RAD:STAN:PRES:ULIN:PCL CLASS3</code> <code>:RAD:STAN:PRES:ULIN:PCL?</code>
Dependencies	Grayed out when Radio Direction is Downlink Power Class 4 is grayed out when Frequency Range is FR1 Power Class 1, 2, and 4 are grayed-out when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X
Preset	CLASS3
State Saved	Yes
Range	1 2 3 4

Uplink Channel Type

This control is part of the “Preset for Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you set the Uplink Channel Type to preset parameters for the Transmit On|Off Power measurement. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe NONE PUS PRA4 PRA160S15 PRA160S30 PRA12 PRA123S15 PRA123S30 SRS PRA0S60 PRA0S120</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe?</code>

Apply Preset (to All CCs)

This is the same as the Apply Preset (to All CCs) control on the Meas Standard menu panel tab under Meas Standard.

See ["Apply Preset \(to All CCs\)" on page 3051](#).

More Advanced Preset Parameters

Enables you to configure more advanced Apply Preset features.

Include RB Alloc Preset for Mod Analysis

Enables you to select whether or not RB Alloc Preset is preset when “Apply Preset (to All CCs)” is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc?</code>
Example	<code>:RAD:STAN:PRES:INCL:EVM:RBAL 1</code> <code>:RAD:STAN:PRES:INCL:EVM:RBAL?</code>
Notes	When Exclude is selected, the indicator “Exclude EVM RB Alloc” appears on the Meas Setup menu panel
Preset	<code>ON</code>
State Saved	Yes

Include Gate Source

Enables you to select whether or not Gate Source is preset when “Apply Preset (to All CCs)” is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce?</code>
Example	<code>:RAD:STAN:PRES:INCL:EGAT:SOUR 1</code> <code>:RAD:STAN:PRES:INCL:EGAT:SOUR?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Period

Enables you to select whether or not Periodic Timer Period is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:PER 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:PER?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Source

Enables you to select whether or not Periodic Timer Sync Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce] OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce]?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:SYNC?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Holdoff

Enables you to select whether or not Periodic Timer Sync Holdoff is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD?</code>
Preset	ON
State Saved	Yes

Ignore Duplex Mode for Fulfilled RB Alloc

Enables you to select in Modulation Analysis measurement whether or not to ignore Duplex Mode for Fulfilled preset when “Apply Preset (to All CCs)” is executed. This parameter is valid only for the TDD duplex mode.

On: for fulfill preset FDD preset will be applied to modulation analysis measurement regardless of Duplex Mode setting

Off: for fulfill preset TDD preset based on the DL NR-TM will be applied to modulation analysis measurement

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDCon-fig]:RBALloc:FULFilled:IGNore:DMODE OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDCon-fig]:RBALloc:FULFilled:IGNore:DMODE?</code>
Example	<code>:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD 1</code> <code>:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD?</code>
Notes	Only apply to Modulation Analysis measurement
Dependencies	Unavailable when Duplex Mode is FDD, or Duplex Mode is User Defined, or Frequency Range is FR2, or RB Alloc Preset is DL NR TM
Preset	ON
State Saved	Yes

Adjust Meas Time Length for TM

Enables you to select in Modulation Analysis measurement whether or not to adjust Meas Time settings when Test Model preset is selected and “Apply Preset (to All CCs)” is executed.

None: do not adjust Meas Time settings for Test Model

1 Frame: adjust Meas Time settings for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
All	22 msec	10 Sub Frame	10 Sub Frame	Frame

3GPP: adjust Meas Time Setting for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
FR1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-2 (120K SCS)	32 msec	160 slots	160 slots	slot
FR2-2 (480K SCS)	17 msec	160 slots	160 slots	slot
FR2-2 (960K SCS)	14.5 msec	160 slots	160 slots	slot

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth NONE FRAME GPP</code>
Example	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth?</code> <code>:RAD:STAN:PRES:RBAL:TIME:LENG GPP</code> <code>:RAD:STAN:PRES:RBAL:TIME:LENG?</code>
Notes	Only apply to Modulation Analysis measurement
State Saved	Yes

Apply Preset (to All CCs)

When you press this control, parameters of each component carrier are configured to the values of parameters in the Meas Standard menu. These values will also be used for any subsequent Component Carriers created.

NOTE

You must press “Apply Preset (to all CCs)” or the values on the controls in the “Configure Presets” section of the menu panel will *not* affect the Component Carriers.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:IMMEDIATE</code>
Example	<code>:RAD:STAN:PRES:IMM</code>
Notes	Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until “Apply Preset” is executed again <ul style="list-style-type: none"> - Start-up - Mode Preset

- Recall

Apply Preset (to CC)

When you press this control, parameters of the component carrier (specified by Apply Preset To) are configured to the values of parameters in the Meas Standard menu.

NOTE This action is available only for EVM.

You must press “Apply Preset (to CC)” or the values on the controls in the “Configure Presets” section of the menu panel will not affect the Component Carriers.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:RADio:STANdard:PRESet:IMMediate</code>
Example	<code>:EVM:CCAR:RAD:STAN:PRES:IMM</code>
Notes	Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until “Apply Preset” is executed again <ul style="list-style-type: none"> - Start-up - Mode Preset - Recall

Apply Preset To

Specifies the component carrier for Apply Preset (to CC).

NOTE This action is available only for EVM.

Preset	All
State Saved	Saved in instrument state
Range	CC0 CC1 CC2 CC3 CC4 CC5 CC6 CC7 CC8 CC9 CC10 CC11 CC12 CC13 CC14 CC15 ALL

NOTE

3.3.8.5 Values for Meas Standard

For parameters to be preset when executing "Apply Preset", see "[Values for Meas Standard](#)" on page 2614 and its subsections under **Monitor Spectrum**.

3.3.8.6 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your 5G NR signal.

Number of Component Carriers

Specifies how many component carriers are included in the 5G NR measurements. The 5G NR supports the maximum of 16 component carriers.

Remote Command	<code>[:SENSe]:CCARrier:COUNT <integer></code> <code>[:SENSe]:CCARrier:COUNT?</code>
Example	<code>:CCAR:COUN 1</code> <code>:CCAR:COUN?</code>
Preset	1
State Saved	Yes
Min	1
Max	16

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous NCONTiguous</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation?</code>
Example	<code>:CCAR:CONF:ALL CONT</code> <code>:CCAR:CONF:ALL?</code>
Preset	<code>CONTiguous</code>
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command `[:SENSe]:CCARrier:CONFig:ALlocation:NCONtiguous:ABPoint CC0 | ... | CC15`
`[:SENSe]:CCARrier:CONFig:ALlocation:NCONtiguous:ABPoint?`

Example `:CCAR:CONF:ALL:NCON:ABP CC0`
`:CCAR:CONF:ALL:NCON:ABP?`

Dependencies Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2

Preset `CC0`

State Saved Saved in instrument state

Range `CC0 | ... | CC15`

Configure Comp Carriers

This dialog lets you perform a detailed configuration of your component carriers, including number of carriers, bandwidth, offset, integration bandwidth, and so on.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

More Information

"Measure Carrier" on page 3057	"Sidelink" on page 1627	"Bandwidth" on page 3057	"Freq Range" on page 3058
"Freq Offset" on page 3058	"Cell ID Auto" on page 3059	"Cell ID Value" on page 3059	"Demod Spectrum" on page 3060
"CHP Power Integration Bandwidth" on page 3060	"ACP Power Integration Bandwidth" on page 3061	"SEM Power Integration Bandwidth" on page 3062	"N_Grid_Size (Display Only)" on page 3062
"SCS (Power Meas)" on page 3063			

Number of Component Carriers

This is the same as the control on the menu panel. See ["Number of Component Carriers" on page 3052](#).

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	<code>[:SENSe]:CCARrier:AFOffset OFF ACRA100K ACRA15K ACRA60K CARA100K CARA15K CARA60K</code> <code>[:SENSe]:CCARrier:AFOffset?</code>		
Example	<code>:CCAR:AFOF ACRA100K</code> <code>:CCAR:AFOF?</code>		
Notes	When you change the value to OFF , nothing happens		
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate frequency offset unless OFF is selected When CC's Frequency Offset is manually changed, this parameter is set to OFF This feature isn't supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CCO Freq Offset is automatically adjusted to 0 Hz		
Preset	OFF		
State Saved	Yes		
Range	The cascading list is shown below		
	<table border="1"> <tr> <td>Channel Spacing for Adjacent NR Carriers</td> <td>Channel Raster 100 kHz</td> </tr> </table>	Channel Spacing for Adjacent NR Carriers	Channel Raster 100 kHz
Channel Spacing for Adjacent NR Carriers	Channel Raster 100 kHz		

Carrier Aggregation	15 kHz
Off	60 kHz
Channel Spacing for Adjacent NR Carriers	Channel Raster 100 kHz
Carrier Aggregation	15 kHz
Off	60 kHz
Channel Spacing for Adjacent NR Carriers	Channel Raster
Carrier Aggregation	
Off	

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[:SENSe] :CCARrier :CONFig :ALLocation CONTiguous NCONTiguous</code> <code>[:SENSe] :CCARrier :CONFig :ALLocation ?</code>
Example	<code>:CCAR :CONF :ALL CONT</code> <code>:CCAR :CONF :ALL ?</code>
Preset	<code>CONTiguous</code>
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that

sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 ... CC15</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?</code>
Example	<code>:CCAR:CONF:ALL:NCON:ABP CC0</code> <code>:CCAR:CONF:ALL:NCON:ABP?</code>
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	<code>CC0</code>
State Saved	Saved in instrument state
Range	<code>CC0 ... CC15</code>

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe] OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe]?</code>
Example	<code>:CCAR0 ON</code> <code>:CCAR0?</code>
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action "Apply Preset (to All CCs)" is executed
Preset	ON
State Saved	Saved in instrument state

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth B3M B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth?</code>
Example	<code>:CCAR4:RAD:STAN:BAND B50M</code>
Dependencies	When "Sidelink" on page 1627 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	B100M unless noted below <ul style="list-style-type: none"> - Option B25: B20M - Option B40: B35M - Option B85: B80M
State Saved	Yes
Range	3 MHz 5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge FR1 FR2</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge?</code>
Example	<code>:CCAR1:RAD:STAN:FRAN FR1</code>
Dependencies	Available selections differ depending on "Bandwidth" on page 3057 as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only

Couplings	This value will be preset to the Frequency Range value in the Meas Standard menu when the action “Apply Preset (to All CCs)” is executed
Preset	FR1
State Saved	Yes
Range	FR1 FR2

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	<code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq></code> <code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet?</code>
Example	<code>:CCAR4:FREQ:OFFS 10MHz</code> <code>:CCAR4:FREQ:OFFS?</code>
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers Frequency Offset of CC0 to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly Also, in some cases, make sure if the “Non-Contiguous Break at” parameter is set to the intended value since it’s often left unchanged after Frequency Offset of CCs are changed
Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Cell ID Auto

Enable and disable Cell ID auto detection based on SSB.

NOTE

This setting is available for EVM measurement only.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE AUTO MANua1</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE?</code>
Example	<code>:EVM:CCAR:CID:MODE MAN</code> <code>:EVM:CCAR:CID:MODE?</code>

Preset	MANual
State Saved	Saved in instrument state

Cell ID Value

Specify Cell ID for the component carrier.

NOTE

This setting is available for EVM measurement only.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID?</code>
Example	<code>:EVM:CCAR4:CID 0</code> <code>:EVM:CCAR4:CID?</code>
Couplings	Invalid when Cell ID Auto is on
Preset	0
State Saved	Saved in instrument state
Min	0
Max	1007

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum NORMal INVert</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum?</code>
Example	<code>:CCAR0:SPEC INV</code> <code>:CCAR0:SPEC?</code>
Preset	NORM
State Saved	Yes
Range	Normal Invert

CHP Power Integration Bandwidth

This column specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

NOTE This setting is *not* available for EVM.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration?</code>
Example	<code>:CCAR0:CHP:BAND:INT 20MHz</code> <code>:CCAR0:CHP:BAND:INT?</code>
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration?</code>	
Example	<code>:CCAR0:ACP:BAND:INT 20MHz</code> <code>:CCAR0:ACP:BAND:INT?</code>	
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS	
Couplings	When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table When Freq Range is FR1	
	Bandwidth	Uplink ACP Meas Noise BW (MHz)
		Downlink ACP Meas Noise BW (MHz)
	3 MHz	2.715
	5 MHz	4.515
	10 MHz	9.375
	15 MHz	14.235
	20 MHz	19.095
	25 MHz	23.955
	30 MHz	28.815
	35 MHz	33.855

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

40 MHz	38.880	38.895
45 MHz	43.560	43.575
50 MHz	48.600	48.615
60 MHz	58.320	58.350
70 MHz	68.040	68.070
80 MHz	78.120	78.150
90 MHz	88.200	88.230
100 MHz	98.280	98.310

When Freq Range is FR2

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
50 MHz	47.520	47.580
100 MHz	95.040	95.160
200 MHz	190.080	190.20
400 MHz	380.160	380.280
800 MHz	714.24	715.20
1600 MHz	1428.48	1429.44
2000 MHz	1704.96	1705.92

Preset 98.280 MHz|98.310 MHz

State Saved Yes

Min 100 kHz

Max 2000 MHz

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command `[:SENSe]:CCARrier[0]|1|...|15:SEMAsk:Bandwidth[1]|2:INTEgration <freq>`
`[:SENSe]:CCARrier[0]|1|...|15:SEMAsk:Bandwidth[1]|2:INTEgration?`

Example `:CCAR0:SEM:Band:INT 20MHz`
`:CCAR0:SEM:Band:INT?`

Notes Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS

Couplings When Bandwidth of the parameter set is changed, this parameter also changes to that value

Preset 100 MHz

State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

N_Grid_Size (Display Only)

Display Max RB Number for each available numerology. To adjust this setting please switch to Resource Grid tab.

NOTE

This setting is available for EVM measurement only.

3GPP TS38.104 or TS38.101-1 Table 5.3.2-1: Maximum transmission bandwidth configuration N_{RB} for FR1

3GPP TS38.104 Tables 5.3.2-2 and 5.3.2-3 or TS38.101-2 Table 5.3.2-1: Maximum transmission bandwidth configuration N_{RB} for FR2

SCS	50 MHz	100 MHz	200 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	66	132	264	N.A	N.A	N.A	N.A
120	32	66	132	264	N.A	N.A	N.A
480	N.A	N.A	N.A	66	124	248	N.A
960	N.A	N.A	N.A	33	62	124	148

NOTE: For the “N.A” value in above table, the value will be set to 0 and displayed as “---”.

SCS (Power Meas)

Queries the SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier set with ["SCS Enabled" on page 3066](#).

It is used to calculate the aggregated channel bandwidth when Power Reference is set to Aggregated Chan BW.

Power Integration Bandwidth values are not affected even if SCS (Power Meas) is changed.

Remote Command	<code>[:SENSe] :CCARrier [0] 1 ... 15 :RGRid :PMSCs ?</code>
Example	<code>:CCAR3 :RGR :PMSC ?</code>
Notes	Query-only Returns one of the following values: NONE, SCS15K, SCS30K, SCS60K, SCS120K, SCS240K, SCS480K, SCS960K

Resource Grid

Enables you to configure resource grid for each available numerology of each component carrier.

NOTE

This tab and the following controls are available only for Modulation Analysis measurement.

Component Carrier (GUI only)

Selects the Component Carrier to configure its resource grid for each available numerology.

Bandwidth

This is the same as the Bandwidth column in the Configure CCs table. See ["Bandwidth" on page 3057](#).

Freq Range

This is the same as the Freq Range column in the Configure CCs table. See ["Freq Range" on page 3058](#)

Configuration Mode

Selects the configuration mode for resource grid table:

- Auto – always reset N_grid_start and N_grid_size when the frequency range and bandwidth of component carrier are changed. SCS enable/disable state will not be changed, unless enabled SCS is invalid for new frequency range and bandwidth. If all enabled SCS are invalid for new frequency range and bandwidth, 30K SCS will be enabled for frequency range 1 and 120K SCS will be enabled for frequency range 2
- Man – keep the value in grid table when the frequency range and bandwidth of component carrier are changed, unless a value is invalid for new frequency range and bandwidth

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO ON OFF 1 0</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO?</code>
Example	<code>:EVM:CCAR:RGR:CONF:AUTO 0</code> <code>:EVM:CCAR:RGR:CONF:AUTO?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON 0 1

When the configuration mode is Auto, the default N_grid_start is set to 0 and N_grid_size is set according to tables below:

Table 5.3.2-1: Transmission bandwidth configuration N_{RB} for FR1

960	N.A	N.A	N.A	33	62	124	148

SCS Enabled

The Enabled column lets you enable or disable selected SCS for current component carrier.

Remote Command	<pre>[:SENSE][:EVM] :CCARrier [0] 1 ... 15 :RGRid :SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k [:STATE] OFF ON 0 1 [:SENSE][:EVM] :CCARrier [0] 1 ... 15 :RGRid :SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k [:STATE] ?</pre>
Example	<pre>:EVM:CCAR:RGR:SCS15 ON :EVM:CCAR:RGR:SCS15?</pre>
Notes	<p>Only valid numerology for selected frequency range and bandwidth will be visible. Some SCS are disabled if they are "N.A" in Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104)" in the Section 3.2.5.1.15, N_{Grid_Size} (Display Only)</p> <p>In EVM, if Configuration Mode is Auto and Freq Range is changed, the Grid Start and Grid Size will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p> <p>In measurements other than EVM, when Freq Range is changed, the parameter will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p>
Preset	<pre>SCS 15k : OFF SCS 30k : ON SCS 60k : OFF SCS 120k : OFF SCS240K : OFF SCS480K : OFF SCS960K : OFF</pre>
State Saved	Yes

N_{grid_start}

This column lets you set the Grid Start value for the selected numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:STARt <integer></code> <code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:STAR-t?</code>
Example	<code>:EVM:CCAR:RGRid:SCS15k:STAR 0</code> <code>:EVM:CCAR:RGRid:SCS15k:STAR?</code>
Preset	Depends on frequency range, bandwidth and numerology
State Saved	Yes
Min	0
Max	Depends on frequency range, bandwidth and numerology

N_grid_size

This column lets you set the Grid Size for the selected numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE E <integer></code> <code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE-E?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:SIZE 270</code> <code>:EVM:CCAR:RGR:SCS15k:SIZE?</code>
Notes	Grid Size should not exceed the Nrb in Table 5.3.2-1 or Table 5.3.2-2 of 3GPP TS38.104 and TS38.101-1 & -2
Preset	Depends on frequency range and bandwidth
State Saved	Yes
Min	6
Max	Depends on frequency range, bandwidth and numerology
Backwards Compatibility SCPI	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RBNumber:SCS15k SCS30k SCS60k SCS120k SCS240k</code>

k0 (Display Only)

This column displays the k0 value for the selected Numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:k0?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:k0?</code>

3 5G NR/5G-A Mode

3.3 Occupied BW Measurement

More Information

See picture below for illustration how k_0 is calculated.

Intra-Cell Guard Band

Enter a comma-separated string to set guard band. Consecutive numbers will be merged into one guard band. At most, 4 guard bands are allowed and the rest will be omitted. Colon-separated numbers represent the start and stop of a guard band.

Remote Command	<code>[:SENSe] :EVM:CCARrier[0] 1 ... 15:RGRid:SCS15k SCS30k:GBANd <string></code>
Example	<code>:EVM:CCAR:RGR:SCS15k:GBAN "0:9"</code> <code>:EVM:CCAR:RGR:SCS15k:GBAN?</code>
Couplings	Only visible for Uplink and only available for 15kHz/30kHz numerology
State Saved	Yes

RB Set (Display Only)

Display the RB set according to Intra-Cell Guard Band setting.

Point A Frequency (Display Only)

This figure displays the Point A Freq for the resource grid.

Remote Command	<code>[:SENSe] :EVM:CCARrier[0] 1 ... 15:RGRid:REFA?</code>
Example	<code>:EVM:CCAR:RGR:REFA?</code>

LTE Coexistence

This tab and the following controls are available only for Modulation Analysis measurement, and it will only appear for DL FR1 component carriers.

Add LTE (GUI only)

Pressing this control inserts a new LTE-CRS configuration into the list, the maximum number of LTE-CRS configurations is 4.

Delete LTE (GUI only)

Pressing this control deletes selected LTE-CRS configuration from the list.

Clear All (GUI only)

Pressing this control deletes all LTE-CRS configurations from the list.

Effective LTE Number (Remote Command only)

Specifies how many LTE-CRS configurations are effective. This SCPI only command is used to provide similar functions such as “Add LTE” and “Delete LTE”.

Note that all 4 LTE-CRS configurations can be modified through SCPI, but ineffective LTE-CRS configurations (index > Effective LTE Number) will not be included in the measurement no matter whether its state is “On” or “Off”.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:NUMBer:LTE <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:NUMBer:LTE?</code>
Example	<code>:EVM:CCAR:NUMB:LTE 2</code> <code>:EVM:CCAR:NUMB:LTE?</code>
Couplings	Max value is 4 If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	4

State

Enable or disable the LTE coexistence.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATe]?</code>
Example	<code>:EVM:CCAR:LTE1 OFF</code>

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

	<code>:EVM:CCAR:LTE1?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message This control is available only when 15K SCS is enabled in the resource grid
Preset	<code>OFF</code>
State Saved	Yes

Bandwidth

Set the LTE bandwidth.

Remote Command	<code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW B1M4 B3M B5M B10M B15M B20M</code> <code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW?</code>
Example	<code>:EVM:CCAR:LTE1:BW B20M</code> <code>:EVM:CCAR:LTE1:BW?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	<code>B5M</code>
State Saved	Yes
Range	1.4 MHz 3 MHz 5 MHz 10 MHz 15 MHz 20 MHz

Carrier Offset to Point A

Sets the LTE carrier center subcarrier location determined by the offset from point A using 15K SCS.

Remote Command	<code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset <integer></code> <code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset?</code>
Example	<code>:EVM:CCAR:LTE1:COFF 0</code> <code>:EVM:CCAR:LTE1:COFF?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	0
State Saved	Yes
Min	0
Max	16383

MBSFN Subframes

Sets the subframe index that can be configured as MBSFN subframes in LTE.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame <string></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame?</code>
Example	<code>:EVM:CCAR:LTE:MBSF:SFR "2:9"</code> <code>:EVM:CCAR:LTE:MBSF:SFR?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
State Saved	Yes

Number of CRS Antenna Ports

Set the number of antenna ports for LTE-CRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer N1 N2 N4</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB N1</code> <code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	N1
State Saved	Yes
Range	1 2 4

v-shift

Set the v-shift value for LTE-CRS; it is given by LTE Cell ID mod 6.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:VSH 0</code> <code>:EVM:CCAR:LTE1:CRS:VSH?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message

Preset	0

Min	0
Max	5

Advanced Acquisition

This menu is available only for the Modulation Analysis measurement. It enables you to configure selected RF settings for each component carrier and channel.

Number of Component Carriers

This is the same as the control on the menu panel. See ["Number of Component Carriers" on page 3052](#).

Input Channel (GUI Only)

Select the input channel to configure its settings.

State Saved	No
-------------	----

Use Advanced Acquisition Table

Specify if the settings in Advanced Acquisition Table will be applied.

Remote Command	<code>[:SENSe]:RF:ACQuistion:ATABle OFF ON 0 1</code> <code>[:SENSe]:RF:ACQuistion:ATABle?</code>
Example	<code>:RF:ACQ:ATAB 1</code> <code>:RF:ACQ:ATAB?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON

IF Path Auto

Specify if the IF path in Advanced Acquisition Table will be automatically or manually selected.

Remote Command	<code>[:SENSe]:RF:ACQuistion:ATABle:IFPath:AUTO ON OFF 1 0</code> <code>[:SENSe]:RF:ACQuistion:ATABle:IFPath:AUTO?</code>
----------------	--

Example	<code>:RF:ACQ:ATAB:IFP:AUTO 1</code> <code>:RF:ACQ:ATAB:IFP:AUTO?</code>
Preset	ON
State Saved	Yes
Range	OFF ON

Mechanical Attenuation

Set mechanical attenuation for each component carriers.

Remote Command	<code>[[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation <rel_ampl></code> <code>[[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:ATT 20</code>
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. To get to a value below 6 dB it has to be directly entered from the keypad or via SCPI. This protects from adjusting the attenuation to a dangerously small value which can put the instrument at risk of damage to input circuitry. However, if the current mechanical attenuation is below 6 dB it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB

Elec Attenuation

Set electronic attenuation for each component carriers.

Remote Command	<code>[[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation <rel_ampl></code> <code>[[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:EATT 20</code>
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual attenuator configuration: 24 dB Single attenuator configuration: the total of ATT and EATT cannot exceed 50 dB, so if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB

LNA

Turn on/off Low Noise Amplifier (LNA) for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:LNA ON</code>
Dependencies	Requires option LNA
Preset	<code>OFF</code>
State Saved	Saved in State

Internal Preamp

Turn on/off internal preamp for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:PREamp OFF LOW FULL</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:PREamp?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:PRE LOW</code> <code>:CCAR0:RF:CHAN1:GAIN:PRE?</code>
Dependencies	Preamp is not available on all hardware platforms. If the preamp is not present or is unlicensed, the control is not shown
Preset	<code>OFF</code>
State Saved	Saved in instrument state

uW Path Control

Select uW Path for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH STD LNPath MPBypass FULL</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH?</code>
Example	<code>:CCAR0:RF:CHAN1:MW:PATH LNP</code> <code>:CCAR0:RF:CHAN1:MW:PATH?</code>
Preset	MPB option present and licensed: <code>MPB</code> MPB option not present and licensed: <code>STD</code>
State Saved	Save in instrument state
Range	Standard Path Low Noise Path Enable μW Presel Bypass Full Bypass Enable

IF Gain

Set IF Gain for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:IF:GAIN:LEVel <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:IF:GAIN:LEVel?</code>
Example	<code>:CCAR0:RF:CHAN1:IF:GAIN:LEV -10</code> <code>:CCAR0:RF:CHAN1:IF:GAIN:LEV?</code>
Notes	Not available for B25 IF bandwidth option
Preset	0
State Saved	Save in instrument state
Min	Depends on CC Bandwidth
Max	Depends on CC Bandwidth

IF Path

Specify IF path manually for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath B10M B25M B40M B85M B125M B140M B160M B255M B510M B1G B1500M B2G B4G</code> <code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath?</code>
Example	<code>:CCAR0:RF:CHAN1:IFP B160M</code> <code>:CCAR0:RF:CHAN1:IFP?</code>
Notes	B10M = 10 MHz B25M = 25 MHz B40M = 40 MHz B85M = 85 MHz B125M = 125 MHz B140M = 140 MHz B160M = 160 MHz B255M = 255 MHz B510M = 510 MHz B1G = 1 GHz B1500M = 1.5 GHz B2G = 2 GHz B4G = 4 GHz In cases where the path is not available but is selected from SCPI, it generates an error - 241, "Hardware missing; Option not installed"

3.3 Occupied BW Measurement

Dependencies	Gray out if IF Path Auto is On
Preset	Automatically selected IF path according to measurement required IFBW and available HW bandwidth
State Saved	Saved in instrument state

Measure CC

Selects the component carrier to be measured in the uplink time mask measurement.

NOTE

The parameter is available only for the Transmit On|Off Power measurement.

Remote Command	<code>[:SENSe]:PVTime:ULINK:CCARrier CC0 ... CC15</code> <code>[:SENSe]:PVTime:ULINK:CCARrier?</code>
Example	<code>:PVT:ULINK:CCAR CC0</code> <code>:PVT:ULINK:CCAR?</code>
Dependencies	Available only when Radio Direction is Uplink
Preset	<code>CC0</code>
State Saved	Yes
Range	CC0 CC1 CC2 CC3 CC4 CC5 CC6 CC7 CC8 CC9 CC10 CC11 CC12 CC13 CC14 CC15

3.3.8.7 Advanced

Contains controls for setting advanced functions of the instrument. This tab does not appear in EXM, nor in VXT models M9420A/10A/11A.

Noise Floor Extension

Lets you configure **Noise Floor Extension** (NFE). All Modes that support NFE let you set it on or off. Additionally, some Modes support two “on” states for NFE, **Full** and **Adaptive**, as described below.

Adaptive Option Support

At present (Release: X-Apps 2024), support for **Adaptive** NFE is as follows:

Mode	Measurements	Supports Adaptive NFE?
BT	ACP, IBEM, IBSP	No

Mode	Measurements	Supports Adaptive NFE?
CQM	MON	Yes
EDGE GSM	EORF, ETSP, MON	No
EMI	APD, DAN, FSC, MON, RTSC, SCH	Yes
LTEAFDD	PVT	No
LTEATDD	PVT	No
MSR	ACP, CHP, MON, OBW, SEM, SPUR	Yes
NR5G	PVT	No
PNOISE	LPL, MON, SFR	No
SA	SAN	Yes
SRCOMMS	ACP, CHP, MON, OBW, SEM, SPUR	Yes
VMA	ACP, CHP, OBW, SEM, SPUR	Yes
WCDMA	ACP, CHP, MON, OBW, SEM, SPUR	Yes
WLAN	CHP, MON, OBW, SEM, SPUR	Yes

The menus and command options are as follows:

NFE State	Modes with Adaptive NFE	Modes without Adaptive NFE	SCPI
Off	Off	Off	See "NFE On/Off Command" on page 580
On	Full	On	
Adaptive	Adaptive	n/a	See "Adaptive NFE Command" on page 580

As shown in the table above, the **On** state (in Modes that do not support **Adaptive NFE**) matches the **Full** state in Modes that *do* support **Adaptive NFE**.

To maintain SCPI backwards compatibility, the existing command to turn NFE on or off is retained, and a new command is added to set the state to turn **Adaptive ON** or **OFF**:

- `[[:SENSe]:CORRection:NOISe:FLOor ON|OFF|1|0]` is retained, with the default changed to **ON** for Modes that support **Adaptive NFE**
- `[[:SENSe]:CORRection:NOISe:FLOor:ADAPtive ON|OFF|1|0]` is added (for certain Modes), default = **ON**

When NFE is **On** or **Full**, the expected noise power of the instrument (derived from a factory calibration) is subtracted from the trace data. This will usually reduce the apparent noise level by about 10 dB in low band, and 8 dB in high band (>~3.6 GHz).

NFE works with any RBW, VBW, detector, any setting of **Average Type**, any amount of trace averaging, and any signal type. It is ineffective when the trace is not smoothed (smoothing processes include narrow VBWs, trace averaging, and long sweep times with the detector set to **Average** or **Peak**). It works best with extreme

amounts of smoothing, and with the average detector, with the **Average Type** set to **Power**.

In those cases where the cancellation is ineffective, it nonetheless has no undesirable side-effects. There is no significant speed impact to having **Noise Floor Extension** on.

The best accuracy is achieved when substantial smoothing occurs in each point before trace averaging. Thus, when using the **Average** detector, results are better with long sweep times and fewer trace averages. When using the **Sample** detector, the VBW filter should be set narrow with less trace averaging, instead of a wide VBW filter with more trace averaging.

NOTE

Noise Floor Extension has no effect unless the RF Input is selected, so when **External Mixing** is selected, it does nothing.

For more details, see ["Optimal Detector & Averaging Selections" on page 581](#) and ["Recalibration of Noise Floor" on page 582](#).

Pros & Cons of Adaptive NFE

Adaptive NFE provides an alternative to fully-on or fully-off NFE. Fully-on NFE can, notably in cases with little or no averaging of the spectrum, result in a display that is distractingly unfamiliar in the variability in response to low level signals. Fully-off NFE fails to achieve the potential improvement in dynamic range and associated accuracy of measurement of low-level signals. **Adaptive** NFE controls the degree of potential improvement in the noise floor to give more improvement for those instrument settings that can make good use of the potential improvement—those settings with high degrees of variance reduction through some variant of averaging. When the potential improvement is small, the display acts like the fully-off case, and when it is high, it acts like the fully-on case, and in-between, application is a compromise between attractiveness and effectiveness.

In **Adaptive** NFE, there is not the same dramatic visual impact on the noise floor as there is in **Full** NFE. **Adaptive** NFE controls the amount of correction that is applied based on other instrument settings like RBW, averaging and sweep time. **Adaptive** NFE controls the degree of potential improvement in the noise floor to give more improvement for those instrument settings that can make good use of the potential improvement, such as settings that provide more averaging. The result is that when not much averaging is being performed, the signal displays more like the fully-off case; and when lots of averaging is being performed, the signal displays more like the **Full** NFE case.

Adaptive NFE is recommended for general-purpose use. For fully-ATE (automatic test equipment) applications, where possible distraction of the instrument user is not a risk, **Full** NFE is recommended.

NFE On/Off Command

Remote Command	<code>[:SENSe]:CORRection:NOISe:FLOor ON OFF 1 0</code> <code>[:SENSe]:CORRection:NOISe:FLOor?</code>
Example	<code>:CORR:NOIS:FLO ON</code>
Dependencies	Only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear. In those cases, the SCPI command is accepted without error, but has no effect
Couplings	When NFE is enabled in any Mode manually, a prompt is displayed reminding you to perform the Characterize Noise Floor operation if it is needed When NFE is enabled through SCPI, and a Characterize Noise Floor operation is needed, an error is entered in the system error queue
Preset	Unaffected by Mode Preset . Turned ON at startup and by Restore Mode Defaults in Modes that support Adaptive . Turned OFF at startup and by Restore Mode Defaults in Modes that do <i>not</i> support Adaptive In Modes that support Adaptive NFE, the default (preset) state of NFE is Adaptive . In Modes that do not support Adaptive NFE, the default state of NFE is Off
State Saved	No

Adaptive NFE Command

Only effective in instruments with the NFE or NF2 license installed, and in Modes that support **Adaptive** NFE. For coverage, see "[Adaptive Option Support](#)" on page 577 above.

For all other cases, the SCPI command below is accepted without error, but has no effect.

Remote Command	<code>[:SENSe]:CORRection:NOISe:FLOor:ADaptive ON OFF 1 0</code> <code>[:SENSe]:CORRection:NOISe:FLOor:ADaptive?</code>
Example	First turn NFE on, this is Full mode <code>:CORR:NOIS:FLO ON</code> Then set it to Adaptive <code>:CORR:NOIS:FLO:ADAP ON</code>
Couplings	To maintain backwards compatibility, sending <code>:CORR:NOIS:FLO ON</code> turns NFE AdaptiveOFF . To turn Adaptive on, you must issue the commands in the proper order, as shown in the example above
Preset	Not affected by Mode Preset , but set to ON at startup and by Restore Mode Defaults
State Saved	No

Optimal Detector & Averaging Selections

Note that some measurements do not allow you to switch the **Detector** type (which is set by default to **Average**), so the discussion of detector types here is irrelevant for those measurements. Similarly, some measurements do not allow you to set **Average Type** (set by default to **LOG**), so that discussion here is irrelevant in those cases.

The instrument is characterized in the factory (or during a field calibration) with a model of the noise, referred to the input mixer, versus frequency in each band and path combination. Bands are 0 (low band) and 1 through 4 (high band) in a 26.5 GHz instrument, for example. Paths include normal paths, preamp paths, the electronic attenuator, etc.

In most band/path combinations, the noise can be well characterized based on just two parameters and the instrument frequency response before compensation for frequency-dependent losses.

After the noise density at the input mixer is estimated, the effects of the input attenuator, RBW, detector, etc. are computed to obtain the estimated input-port-referred noise level.

In the simplest case, the measured power (signal plus analyzer noise) in each display point (bucket) is compensated by subtracting the estimated noise power, leaving just the signal power. This is the operation when **Detector** is **Average** and **Average Type** is set to **Power (RMS)**.

For best operation, **AverageDetector** (default) and **Average Type** = **Power** are recommended, as already stated. In other cases, operation is often not quite as good but still highly effective. Other **Detector** options, when available, behave as follows:

Positive Peak	<p>The noise floor is estimated based on the RBW and the duration of the bucket using the same equations used in the noise marker function. The voltage of the noise is subtracted from the voltage of the observed signal-plus-noise measurement to compute the estimated signal voltage</p> <p>Positive Peak is one example of processing that varies with detector to give good estimates of the signal level without the analyzer noise</p> <p>For pulsed-RF, Positive Peak can still give excellent effectiveness</p> <p>FFT analysis does not work well, and does not perform NFE well, with pulsed-RF signals, so this combination is <i>not</i> recommended</p>
Negative Peak	<p>Not very useful</p>
Sample	<p>Works well, but never better than Average, because it does not smooth as well</p>
Normal	<p>A combination of peak and negative peak behaviors, and works about as well as these</p>

For best operation, extreme smoothing is desirable, as already stated. Using narrow VBWs works well, but using very long bucket durations and the average detector works best. Reducing the number of trace points makes the buckets longer.

For best operation, **Average Type = Power (RMS)** is optimal (when this option is available). When making CW measurements in the presence of noise without NFE, averaging on the decibel scale has the advantage of reducing the effect of noise. Using NFE with **Average Type = Log-Power (LOG)** is not synergistic, though; NFE with **Average Type = Power (RMS)** works a little better than NFE with **LOG**.

The results from NFE with internal preamp can often be lower than the theoretical noise in a signal source at room temperature, a noise density of -174 dBm/Hz. This is expected and useful behavior, because NFE is designed to report the amount of input signal that exceeds the thermal noise, not the amount that includes the thermal noise. This can be a useful behavior because thermal noise often interferes with what you want to measure, instead of being part of what you want to measure. Note that NFE is not adequately accurate to always be able to read below kTB.

Recalibration of Noise Floor

In instruments with the NF2 license installed, the calibrated noise floor used by **Noise Floor Extension** should be refreshed periodically. Keysight recommends that the **Characterize Noise Floor** operation be performed after the first 500 hours of operation, *and* once every calendar year. To do this, use "**Characterize Noise Floor**" on page 3196, under **System, Alignments, Advanced**. If you have not done this yourself at the recommended interval, then when you turn on **Noise Floor Extension**, the instrument will prompt you to do so with a dialog stating:

This action will take several minutes to perform. Please disconnect all cables from the RF input and press Enter to proceed. Press ESC to cancel, or Postpone to postpone for a week

If you cancel, you will be prompted again the next time you turn NFE on. If you postpone, you will be prompted again after a week passes and you then turn NFE on.

IF Gain

Sets the **IF Gain** function to one of:

Setting	SCPI	Comments
Auto	AUTO = ON	Auto
Low	OFF	Low Gain
	AUTO = OFF	
High	ON	High Gain

Setting	SCPI	Comments
	AUTO = OFF	
	This setting affects sensitivity and IF overloads. It only applies to the RF input; not to the baseband I/Q input.	
Remote Command	<pre>[:SENSe]:OBWidth:IF:GAIN[:STATe] ON OFF 1 0 [:SENSe]:OBWidth:IF:GAIN[:STATe]? [:SENSe]:OBWidth:IF:GAIN:AUTO[:STATe] ON OFF 1 0 [:SENSe]:OBWidth:IF:GAIN:AUTO[:STATe]?</pre>	
Example	<pre>:OBW:IF:GAIN ON :OBW:IF:GAIN? :OBW:IF:GAIN:AUTO OFF :OBW:IF:GAIN:AUTO?</pre>	
Dependencies	<p>Has no effect when the U7227A USB Preamplifier is connected. This is not annotated or reflected on any control; there are no controls grayed-out nor any SCPI locked out. The instrument simply behaves as though both IF Gain is set to Low regardless of the setting on the control</p> <p>Not available in VXT models M9420A/10A/11A, EXM, or UXM</p>	
Couplings	<p>Auto sets IF Gain to High (ON) under any of the following conditions:</p> <ul style="list-style-type: none"> - The input attenuator is set to 0 dB, or - The preamp is turned on and the frequency range is under 3.6 GHz <p>For other conditions, Auto sets IF Gain to Low (OFF)</p>	
Preset	<pre>OFF OFF</pre>	
State Saved	Saved in instrument state	
Range	Low Gain High Gain	

3.3.8.8 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, "[Global Center Freq](#)" on page 3077) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to **ON**, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched **ON**, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is **ON**, modifies the **Global Center Freq**.

When **Global Center Freq** is switched **OFF**, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is **ON**, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to **OFF** when "**Restore Defaults**" on page 3079 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTrument:COUPle:FREQuency:CENTer ALL NONE</code> <code>:INSTrument:COUPle:FREQuency:CENTer?</code>
Example	<code>:INST:COUP:FREQ:CENT ALL</code> <code>:INST:COUP:FREQ:CENT?</code>
Preset	Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes
Range	ALL NONE
Preset	OFF
Backwards Compatibility SCPI	<code>:GLOBal:FREQuency:CENTer[:STATe] 1 0 ON OFF</code> <code>:GLOBal:FREQuency:CENTer[:STATe]?</code>

Global EMC Std

When this control is switched **ON**, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the **Global EMC Std**, so you can switch between any of these Modes and the EMC Std remains unchanged.

Adjusting the EMC Std of any Mode that supports Global settings, while **Global EMC Std** is **ON** modifies the **Global EMC Std**.

When **Global EMC Std** is switched **OFF**, the EMC Std of the current Mode remains unchanged, but now the EMC Std of each Mode is once again independent. When

Mode Preset is pressed while **Global EMC Std** is **ON**, **Global EMC Std** is preset to the preset EMC Std of the current Mode.

This function resets to **OFF** when "**Restore Defaults**" on page 3079 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTRument:COUPle:EMC:STANdard ALL NONE</code> <code>:INSTRument:COUPle:EMC:STANdard?</code>
Example	<code>:INST:COUP:EMC:STAN ALL</code> <code>:INST:COUP:EMC:STAN?</code>
Dependencies	Only available if Option EMC is installed
Preset	Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes
Range	ALL NONE

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned **ON**, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System > Service > Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function resets to **OFF** when "**Restore Defaults**" on page 3079 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTRument:COUPle:FREQuency:BAND:EXTend 0 1 ON OFF</code> <code>:INSTRument:COUPle:FREQuency:BAND:EXTend?</code>
Example	<code>:INST:COUP:FREQ:BAND:EXT 1</code> <code>:INST:COUP:FREQ:BAND:EXT?</code>
Preset	Set to OFF by Global Settings > Restore Defaults and System > Restore Defaults > All Modes
Range	ON OFF

Restore Defaults

Resets all functions in the **Global** settings menu to **OFF**. Pressing **System, Restore Defaults, All Modes** has the same effect.

Remote Command	<code>:INSTRument:COUPle:DEFault</code>
----------------	---

Example	:INST:COUP:DEF
Backwards Compatibility SCPI	:GLOBal:DEFault

3.3.9 Sweep

Accesses controls to configure and control the acquisition of data, and the X-axis parameters of the instrument.

Depending on the selected mode and measurement, these controls might include: **Sweep Time**, **Continuous/Single**, **Pause/Resume**, **X Scale** and **Number of Points**.

3.3.9.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep Time

Controls the time the instrument takes to sweep the current frequency span in swept measurements, displays the sweep time in swept measurements, and displays the equivalent Sweep Time in FFT measurements.

When **Sweep Time** is in Auto, the instrument computes a time that will give accurate measurements based on other settings, such as RBW and VBW.

You can select a shorter sweep time to improve the measurement throughput (with some potential unspecified accuracy reduction), but the **Meas Uncal** indicator will appear if the sweep time you set is less than the calculated Auto Sweep time.

You can also select a longer sweep time, which can be useful (for example) for obtaining accurate insertion loss measurements on very narrowband filters.

NOTE Significantly faster sweep times are available with Option FS1.

NOTE The **Meas Uncal** (measurement uncalibrated) warning is displayed in the Status Bar at the bottom of the screen when the manual Sweep time entered is faster than the time computed by the instrument's Sweep time equations, that is, the Auto Sweep Time. The instrument's computed Sweep time will provide accurate measurements; if you sweep faster than this your measurements may be inaccurate. A **Meas Uncal** condition may be corrected by returning the Sweep Time to Auto; by entering a longer Sweep Time; or by choosing a wider RBW and/or VBW.

NOTE

On non-sweeping hardware, this control is grayed-out. The value shown on this control is an estimate. It is the measurement's turnaround time, which is the sum of signal acquisition time, FFT time, and other overhead time, to complete the entire span of the measurement. If you need to specify the same "Sweep Time" as you would for sweeping hardware, send `[:SENSe] : <meas> : SWEp : TIME <time>`. The measurement emulates the "Sweep Time" effect, but this emulation is not straightforward, and therefore the behavior is not specified. Instead, we recommend using Minimum Acquisition Time, which provides better control.

Remote Command	<code>[:SENSe] : <meas> : SWEp : TIME <time></code> <code>[:SENSe] : <meas> : SWEp : TIME ?</code>
Example	Channel Power measurement: <code>:CHP : SWE : TIME 25ms</code> <code>:CHP : SWE : TIME ?</code>
Notes	In the ACP measurement in WCDMA Mode, this parameter is preset by Meas Method selection. Preset values are as follows: <ul style="list-style-type: none"> - IBW: 29 ms - IBWR: 108 ms - FAST 7.5 ms
Dependencies	On non-sweeping hardware, this control is grayed out, and the Auto/Man toggle disappears. The read-only control shows estimated sweep time In those instruments, " Minimum Acquisition Time " on page 2722 is available
Couplings	Coupled to Span , RBW , VBW , and Sweep Time Rules when Sweep Time is set to Auto; Sweep Time changes when these parameters are changed When you manually set a value when in the Auto state, the state automatically changes to Man
Preset	Automatically Calculated unless noted below WCDMA Mode <ul style="list-style-type: none"> - Channel Power: 1.0 msOBW: 32.6 ms - ACP: 29 ms
State Saved	Saved in instrument state
Min	Other than non-sweeping hardware: Typically, 1 ms Non-sweeping hardware: N/A In the ACP measurement, when Meas Method is Fast Power , the minimum sweep time is span-dependent and automatically calculated
Max	Other than non-sweeping hardware: 4000 s Non-sweeping hardware: N/A
Annotation	The sweep time is displayed in the lower-right corner of the screen. The number of points is displayed parenthetically, as:

	Sweep 13.3 ms (1001 points) A “#” mark appears before “Sweep” in the annotation when it is switched from Auto to Manual coupling
Status Bits/OPC dependencies	Meas Uncal is Bit 0 in the register: <code>STATus:QUEStionable:INTEgrity:UNCalibrated</code> Auto Function
Remote Command	<code>[:SENSe] : < meas > : SWEEp : TIME : AUTO OFF ON 0 1</code> <code>[:SENSe] : < meas > : SWEEp : TIME : AUTO ?</code>
Example	Channel Power measurement: <code>: CHP : SWE : TIME : AUTO OFF</code> <code>: CHP : SWE : TIME : AUTO ?</code>
Preset	WCDMA Mode <code>OFF</code> All others <code>ON</code>

Minimum Acquisition Time

Available on non-sweeping hardware.

Specifies the minimum acquisition time for each “chunk” of the measurement result. The instrument automatically divides Span into multiple chunks if needed. Therefore, the total signal acquisition time for the entire Span is:

$\sim(\sim\text{Minimum Acquisition Time}) * (\text{The number of chunks})$

When in Auto, this parameter’s value is determined by other parameters, such as **Span**, **RBW** and **VBW**.

You can manually increase this parameter value from this Auto value.

If increased, the instrument acquires signal for the specified time duration for each chunk. It performs additional FFTs, and averages or peak-holds the FFT results for a chunk, depending on **Detector** settings.

Note that the actual acquisition time for each chunk may exceed the **Minimum Acquisition Time** value, in order to satisfy FFT time required by other parameters, and to perform an integer number of FFTs.

Remote Command	<code>[:SENSe] : < meas > : SWEEp : ACQuisition : TIME < time ></code> <code>[:SENSe] : < meas > : SWEEp : ACQuisition : TIME ?</code> <code>< meas ></code> is the identifier for the current measurement; any one of <code>CHPower-</code> <code> ACPower OBWidth MONitor</code>
Example	Channel Power measurement

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

	<code>:CHP:SWE:ACQ:TIME 500 ms</code> <code>:CHP:SWE:ACQ:TIME?</code>
Dependencies	Available only on non-sweeping hardware
Couplings	Coupled to Span , RBW , and VBW when in the Auto state When you manually set a value when in the Auto state, the state automatically changes to Man
Preset	Automatically calculated
State Saved	Saved in instrument state
Min	100 ns
Max	4.00 ks
Auto Function	
Remote Command	<code>[:SENSe] : < meas > : SWEep : ACQuisition : TIME : AUTO OFF ON 0 1</code> <code>[:SENSe] : < meas > : SWEep : ACQuisition : TIME : AUTO ?</code> <code>< meas ></code> is the identifier for the current measurement; any one of <code>CHPower-</code> <code>ACPower</code> <code>OBWidth</code> <code>MONitor</code>
Example	Channel Power measurement: <code>:CHP:SWE:ACQ:TIME:AUTO OFF</code>
Preset	<code>ON</code>

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "[More Information](#)" on page 590

Remote Command	<code>:INITiate:CONTinuous OFF ON 0 1</code> <code>:INITiate:CONTinuous?</code>
Example	Put instrument into Single measurement operation: <code>:INIT:CONT 0</code> <code>:INIT:CONT OFF</code> Put instrument into Continuous measurement operation: <code>:INIT:CONT 1</code> <code>:INIT:CONT ON</code>
Preset	<code>ON</code> Note that <code>:SYST:PRES</code> sets <code>:INIT:CONT</code> to <code>ON</code> , but <code>*RST</code> sets <code>:INIT:CONT</code> to <code>OFF</code>

State Saved	Saved in instrument state
Annunciation	The Single/Continuous icon in the Meas Bar changes depending on the setting: <ul style="list-style-type: none"> - A line with an arrow is Single - A loop with an arrow is Continuous
Backwards Compatibility Notes	X-Series A-models had Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and INIT:CONT ON) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep

More Information

Continuous Mode	<p>The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num, the count stops incrementing, but the instrument keeps sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>
Single Mode	<p>The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num, then the count stops incrementing, and the instrument stops sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- **:INIT:CONT 1** has no effect
- **:INIT:CONT 0** places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See "**Restart**" on page 3081 for details of **:INIT:IMMEDIATE**.

If the instrument is already in **Single** sweep, **:INIT:CONT OFF** has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending **:INIT:IMM** does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending **:CALC:AVER:TCON UP**.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending **:INIT:IMM**
- Sending **:INIT:REST**

See "[More Information](#)" on page 592

Remote Command	:INITiate[:IMMEDIATE] :INITiate:REStart
Example	:INIT:IMM :INIT:REST
Notes	:INIT:REST and :INIT:IMM perform exactly the same function
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The STATUS:OPERation register bits 0 through 8 are cleared, <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The STATUS:QUESTionable register bit 9 (INTEgrity sum) is cleared The SWEEPING bit is set

	The MEASURING bit is set
Backwards Compatibility Notes	<p>For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the :INIT:REST command restarted trace averages (displayed average count reset to 1) for a trace in Clear Write, but did not restart Max Hold and Min Hold</p> <p>In X-Series, the Restart hardkey and the :INIT:REST command restart not only Trace Average, but MaxHold and MinHold traces as well</p>

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** > 1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command **:CALC:AVER:TCON UP**.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k . This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N , as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K , shows the count for the sweep (data acquisition) in progress. $K = k + 1$, with a limit of N . The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** un-pauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command	<code>:INITiate:PAUSE</code> <code>:INITiate:RESume</code>
Example	<code>:INIT:PAUS</code> <code>:INIT:RES</code>
Dependencies	Not displayed in Modes that do not support pausing
Annotation	Only on control

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when `:ABORT` is sent, the alignment finishes *before* the abort function is performed, so `:ABORT` does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an `:INIT:IMM` command is received.

Remote Command	<code>:ABORT</code>
Example	<code>:ABOR</code>
Notes	If <code>:INIT:CONT</code> is ON , then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met If <code>:INIT:CONT</code> is OFF , then <code>:INIT:IMM</code> is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met
Dependencies	For continuous measurement, <code>:ABORT</code> is equivalent to the Restart key Not all measurements support this command
Status Bits/OPC dependencies	The <code>STATus:OPERation</code> register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The <code>STATus:QUESTionable</code> register bit 9 (INTEGRity sum) is cleared Since all the bits that feed into OPC are cleared by <code>:ABORT</code> , the Abort command will cause the *OPC query to return true

Sweep Time Annotation (Remote Query Only)

Returns the **Sweep Time Annotation** value. Available only on non-sweeping hardware.

This value is also displayed in the result trace window.

The value returned is the estimated turnaround time of each measurement cycle, in seconds. The turnaround time is the sum of the signal acquisition time, FFT time, and other overhead time, to complete the entire span of each measurement cycle.

Remote Command	<code>[:SENSe] : <meas> : SWEep : ETIMe?</code> <code><meas></code> is the identifier for the current measurement; any one of <code>CHPower-</code> <code>ACPower</code> <code>OBWidth</code> <code>MONitor</code>
Example	Channel Power measurement <code>:CHP : SWE : ETIMe?</code>
Dependencies	Available only on non-sweeping hardware
Preset	Automatically calculated

3.3.9.2 Sweep Config

Accesses controls that let you configure the sweep and control functions of the instrument, such as "[Sweep Time Rules](#)" on page 595.

Sweep Time Rules

Switches the instrument between normal and accuracy sweep states:

Accy	<code>ACCuracy</code>
Norm	<code>NORMa1</code>

Setting **Auto Sweep Time** to **Accy** results in slower sweep times, usually about three times as long, but yields better amplitude accuracy for CW signals. The instrument amplitude accuracy specifications only apply when **Auto Sweep Time** is set to **Accy**.

Additional amplitude errors which occur when **Auto Sweep Time** is set to **Norm** are usually well under 0.1 dB, though this is not guaranteed. Because of the faster sweep times and still low errors, **Norm** is the preferred setting of **Auto Sweep Time**. **Auto Sweep Time** is set to **Norm** on a **Preset**. This means that in the Preset state, instrument amplitude accuracy specifications do not apply.

Remote Command	<code>[:SENSe] : OBWidth : SWEep : TIME : AUTO : RULEs NORMa1 ACCuracy</code> <code>[:SENSe] : OBWidth : SWEep : TIME : AUTO : RULEs?</code>
----------------	---

Example	<code>:OBW:SWE:TIME:AUTO:RUL NORM</code> <code>:OBW:SWE:TIME:AUTO:RUL?</code>
Dependencies	Does not appear in Spectrum Analyzer Mode in VXT model M9420A
Preset	<code>NORMa1</code>
State Saved	Saved in instrument state
Range	<code>NORMa1 ACCuracy</code>

Points

Sets the number of points taken per sweep, and displayed in the traces. The current value of points is displayed parenthetically, next to the sweep time in the lower-right corner of the display. Using more points provides greater resolution. Using fewer points compacts the data and decreases the time required to access a trace over the remote interface.

Increasing the number of points does not increase the sweep time. However, it can slightly impact the trace processing time and therefore the overall measurement speed. Decreasing the number of points does not decrease the sweep time, but it may speed up the measurement, depending on the other sweep settings (for example, in FFT sweeps). Fewer points will always speed up the I/O.

Due to minimum sweep rate limitations of the hardware, the minimum sweep time available to the user will increase above its normal value of 1 ms as the number of sweep points increases above 15001.

Changing the number of sweep points has several effects on the instrument. Since markers are read at the point location, the marker reading may change. The sweep time resolution will change. Trace data for all the traces will be cleared and, if **Sweep** is in **Cont**, a new trace taken. If any trace is in average or hold, the averaging starts over.

Due to sweep time quantization issues, the knob and up/down keys *cannot* be used to adjust the number of points.

When in a split-screen display, each window may have its own value for points.

When sweep **Points** is changed, an informational message "Sweep points changed, all traces cleared" is displayed, and in 5G NR Mode, **Auto Sweep Points** is set to **OFF** (0).

Remote Command	<code>[:SENSe]:OBWidth:SWEp:POINts <integer></code> <code>[:SENSe]:OBWidth:SWEp:POINts?</code>
Example	<code>:OBW:SWE:POIN 501</code> <code>:OBW:SWE:POIN?</code>
Dependencies	Not available when Signal ID is set to On in External Mixing

3 5G NR/5G-A Mode
 3.3 Occupied BW Measurement

	Neither the knob nor the step keys can be used to change this value. If it is tried, a warning is given Not displayed in Modes that do not support Swept								
Couplings	Whenever the number of sweep points change: <ul style="list-style-type: none"> - All trace data is erased - Any traces with Update Off will also go to Display Off - Sweep time is re-quantized - Any limit lines that are on will be updated - If averaging/hold is on, averaging/hold starts over - Auto Sweep Points is set to OFF (5G NR Mode only) <p>The resolution of setting the sweep time depends on the number of points selected</p>								
Preset	<table border="1"> <thead> <tr> <th>Mode</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>MSR, LTEAFDD, LTEATDD</td> <td>2001</td> </tr> <tr> <td>5GNR</td> <td>Automatically calculated</td> </tr> <tr> <td>All Others</td> <td>1001</td> </tr> </tbody> </table>	Mode	Value	MSR, LTEAFDD, LTEATDD	2001	5GNR	Automatically calculated	All Others	1001
Mode	Value								
MSR, LTEAFDD, LTEATDD	2001								
5GNR	Automatically calculated								
All Others	1001								
State Saved	Saved in instrument state								
Min	101								
Max	20001								
Annotation	On second line of annotations, in lower right corner in parenthesis behind the sweep annotation								

Auto Sweep Points

When **ON**, the instrument determines the points using the following calculation formula.

$$\# \text{ points} = \text{ceil}(\text{Span} / (\text{Rbw} * 1\text{e}3)) * 1000 + 1$$

Where $\text{ceil}(x)$ returns the smallest possible integer value that is greater than or equal to x .

Remote Command	<code>[:SENSe]:OBWidth:SWEEP:POINTS:AUTO[:STATe] OFF ON 0 1</code> <code>[:SENSe]:OBWidth:SWEEP:POINTS:AUTO[:STATe]?</code>
Example	<code>:OBW:SWE:POIN:AUTO 0</code> <code>:OBW:SWE:POIN:AUTO?</code>
Dependencies	Available only in 5GNR Mode
Preset	ON
State Saved	Yes
Range	OFF ON

IF Dithering

Lets you turn IF Dithering on or off. This is a technique used in unpreselected instruments (such as Keysight's modular instruments) to enhance the rejection of images and internally-generated spurious signals.

Remote Command	<code>[:SENSe]:SWEep:IF:DITHer OFF ON 0 1</code> <code>[:SENSe]:SWEep:IF:DITHer?</code>
Dependencies	Only appears in Spectrum Analyzer Mode in VXT models
Preset	OFF
State Saved	Saved in instrument state

Image Protection

Lets you turn IF Protection on or off. This is a technique used in unpreselected instruments (such as Keysight's modular instruments) to detect and suppress images and spurs that may be present in non-preselected hardware.

IF Protection takes two sweeps and by correlating the data between them, provides a single, correct power-versus-frequency trace.

Remote Command	<code>[:SENSe]:SWEep:IMAGeprot OFF ON 0 1</code> <code>[:SENSe]:SWEep:IMAGeprot?</code>
Dependencies	Only appears in Spectrum Analyzer Mode in VXT models
Preset	ON
State Saved	Saved in instrument state

3.3.10 Trace

Lets you control the acquisition, display, storage, detection and manipulation of trace data for the available traces.

The "**Trace Control**" on page 2926 tab of this menu contains radio-button selections for the trace type (**Clear/Write**, **Trace Average**, **Max Hold**, **Min Hold**) and **View/Blank** setting for the selected trace.

A trace is a series of data points, each having an x and a y value. The x value is frequency (or time, in zero span) and the y value is amplitude. Each data point is referred to as a *trace point*. In any given trace, trace point 0 is the first point, and trace point (*sweep_points* – 1) is the last. For example, in a 1001-point trace, the first point is 0 and the last is 1000. Another term sometimes used to describe traces is *bucket*. A bucket is the frequency span of a trace point, equal to the point spacing.

For swept analysis, the y value in each bucket is measured while the instrument is sweeping across the bucket. The selected detector determines how it is measured.

When in **Single** Mode, Measurements and their Views save the trace data from the last acquisition. This is true on multiple screens. The marker and trace data will be present whenever the measurement is brought back into focus. The measurement switches for these measurements do not clear the traces, so the data will be present until the next acquisition is completed.

Invalid Data Indicator

The Invalid Data Indicator is displayed whenever the data on the display does not match the settings of the instrument. The most common example of this is when instrument settings have changed in the time since the data in the traces on the display was taken. This means that the screen annotation cannot be guaranteed to match the trace data. For example, if you change **Center Frequency**, the Invalid Data Indicator will display until the trace has been retaken.

If any Trace is in View mode (displaying but not updating) and instrument settings are changed, the Invalid Data Indicator will display as long as that trace remains in View. Traces that are blanked do not turn on the Invalid Data Indicator.

Not all instrument settings require display of the invalid data indicator when they change; only changes that require a new acquisition will cause it to display. For example, changing the Y-Axis scale of the instrument does not cause the invalid data indicator to display, unless the attenuation changes.

The Invalid Data Indicator is also turned on:

- When the counter is turned on, until the completion of the first count
- When a trace is imported from mass storage and the trace's parameters do not match the current instrument settings
- When a trace is sent to the instrument from a remote interface (since there is no way to know if its settings match)

NOTE

The Invalid Data Indicator has an associated status bit that can be checked at any time to determine whether the indicator is on.

Trace right-click menu

If you right-click on a trace (or touch and hold a trace and wait for the circle to close) you will see the Trace Right-Click Menu:

If you now tap or click on one of the items in this menu, the instrument will perform the corresponding function. **Peak Search** finds the highest peak on the selected Trace. **Clear/Write**, **Trace Average**, **Max Hold** and **Min Hold** set the "Trace Type" on [page 2927](#). **Active**, **View**, **Blank**, and **Background** set the "View/Blank" on [page 2932](#) type.

Waterfall Window

If you right-click on the trace (or touch and hold the trace and wait for the circle to close) in the **Waterfall** window (for example, in the Spectrogram View) you will see the Waterfall Trace Right-Click Menu:

In this menu, **Peak Search** works as above. **Peak Search all Traces** finds the highest peak in the Waterfall window. **Add Marker Here** takes the lowest numbered Marker that is currently Off and turns it On as a **Normal** marker in the Waterfall window at the point where you right-clicked (or touched-and-held). **Move Marker n Here** moves the currently selected Marker to the point in the Waterfall window where you right-clicked (or touched-and-held).

Trace Update Indicator

Trace updates can take one of two forms:

1. The trace is updated in a single operation that affects all of the points in the trace at once. This happens, for example, in the case of very fast (< 200 ms) sweeps, single-chunk FFT's, and the initial math operation after a math function is set for a trace
2. The trace is updated in a series of discrete steps, with measurement data being gathered between each step. This will be the case for slow sweeps, multi-chunk FFTs, gated sweeps, etc.

In the first case, no update indicator is required. In the second case, however, a visual indicator exists on the trace where the new data is being written. The indicator is a green caret (^), which moves across the bottom of the graticule showing the current trace point.

Trace Annunciator Panel

This panel appears on the right-hand side of the Meas Bar. Here is an explanation of the fields in this panel, as shown below:

Top Line

On the top line, each trace number is shown, in the trace color. A box is drawn around the currently selected trace.

Middle Line

Below each trace number, is a letter signifying the trace type for that trace number, where

W	Clear/Write
A	Trace Average
M	Max Hold
m	Min Hold

If the letter is white, it means the trace is being updated (**Update = ON**); if the letter is dimmed, it means the trace is not being updated (**Update = OFF**). A strikethrough indicates that the trace is blanked (**Display = OFF**). Note that it is possible for a trace to be updating *and* blanked, which is useful if the trace is a trace math component.

Bottom Line

The third line shows the detector type for each trace, or, if trace math is on for that trace, it shows “f” (for “math function”). It is not always possible to have a unique detector for each trace, but the instrument hardware provides the maximum flexibility of detector selection in order to maintain the highest accuracy. The letters used for this readout are

N	Normal
A	Average
P	peak
p	negative peak
S	Sample
Q	Quasi Peak
E	EMI Average
R	RMS Average
f	math function

If the letter is green, the detector is in Auto. If white, the detector has been manually selected.

In the example above, the panel is indicating the following:

- Trace 1: Visible, being updated, in Clear/Write, with Normal detector auto selected
- Trace 2: Visible, being updated, in Clear/Write, being written to with a math function
- Trace 3: Visible, not updating, data was taken in Max Hold, with the peak detector auto selected
- Trace 4: Blanked, not updating, data was taken with Averaging turned on, Sample detector manually selected
- Trace 5: Visible, not updating, data was taken in Min Hold with Negative Peak detector auto selected
- Trace 6: Blanked, not updating, in Clear/Write, with Normal detector manually selected

Trace Annotation

When **Trace Annotation** (see **Display**) is **ON**, each non-blanked trace is labeled on the trace with the detector used to take it, unless a Trace Math function is on for that trace, in which case it is labeled with the **"Math Function"** on page 2935.

The detector labels are:

NORM	Normal
PEAK	Peak
SAMP	Sample
NPEAK	Negative Peak
RMS	Average detector with Power Average (RMS)
LG AVG	Average detector with Log-Pwr Average
VAVG	Average detector with Voltage Average
QPEAK	Quasi Peak
EMI AVG	EMI Average
RMS AVG	RMS Average

The trace math labels are:

PDIF	Power Difference
PSUM	Power Sum

LOFF	Log Offset
LDIF	Log Difference

3.3.10.1 Select Trace

Specifies the *selected trace*, which is the trace that will be affected when you change trace settings.

Select Trace appears above the menu panel, indicating that it applies to *all* controls in the menu panel. **Select Trace** is blanked if you select a tab whose controls do *not* depend on the selected trace (for example, **Trace Function**).

Notes	The selected trace is remembered even when not in the Trace menu
Dependencies	For the Swept SA measurement: <ul style="list-style-type: none"> - In Image Suppress mode, when you select a trace it becomes the active trace, and the formerly active trace goes into View - When you turn on Image Suppress, Update turns off for all traces except the selected trace For the ACP measurement, when Meas Method is RBW , FAST or FPower , Select Trace is disabled
Preset	Trace 1
State Saved	Yes

3.3.10.2 Trace Control

The controls on this tab allow you to set the "**Trace Type**" on page 2927 and its update mode.

There are up to four **Trace Types** (although some measurements do not support all types):

- **Clear/Write**
- **Trace Average**
- **Max Hold**
- **Min Hold**

Each type handles data in a different way.

Each trace also has two values that determine whether it is being written or not, and whether it is being displayed or not. These values, **Update** and **Display**, are described fully in the "**View/Blank**" on page 2932 control description. Essentially, when **Update** is **ON**, a trace is updating, and when **Update** is **OFF** it is not. When

Display is **ON**, it is visible and when **Display** is **OFF** it is not. These terms are used throughout the descriptions in this section.

Trace Type

There are four trace Types:

Option	Parameter	SCPI Example	Details
Clear/Write	<code>WRITE</code>	<code>:TRAC2:TYPE WRIT</code>	See: "Clear/Write" on page 608
Trace Average	<code>AVERage</code>	<code>:TRAC2:TYPE AVER</code>	See: "Trace Average" on page 608
Maximum Hold	<code>MAXHold</code>	<code>:TRAC3:TYPE MAXH</code>	See: "Max Hold" on page 609
Minimum Hold	<code>MINHold</code>	<code>:TRAC5:TYPE MINH</code>	See: "Min Hold" on page 609

NOTE

Some measurements do not support the **Trace Average** or **Min Hold** options.

Full descriptions of each type are provided below. You may select one of these types for each trace. Re-selecting the current **Trace Type** initiates the same action that selecting it the first time did, even though it is already selected. For example, selecting **Clear/Write** while **Clear/Write** is already selected will nonetheless clear the trace and begin rewriting it.

Besides the **Trace Type**, the ["View/Blank" on page 2932](#) state must be set to **Active** (**Update: ON, Display: ON**) for a trace to be updating and visible. Selecting any **Trace Type** automatically makes the trace **Active**.

See also: ["Trace Mode Backwards Compatibility Commands" on page 606](#)

Remote Command	<p>For Swept SA Measurement (in SA Mode):</p> <pre>:TRACe[1] 2 ... 6:TYPE WRITe AVERage MAXHold MINHold</pre> <pre>:TRACe[1] 2 ... 6:TYPE?</pre> <p>For all other measurements:</p> <pre>:TRACe[1] 2 3:<meas>:TYPE WRITe AVERage MAXHold MINHold</pre> <pre>:TRACe[1] 2 3:<meas>:TYPE?</pre> <p>where <code><meas></code> is the identifier for the current measurement</p>
Example	<pre>:TRAC:TYPE WRIT</pre> <pre>:TRAC:TYPE?</pre>
Couplings	<p>Selecting a Trace Type (by pressing any of the Trace Type selections or sending <code>:TRAC:TYPE</code>) sets the Trace to Active (Update: ON, Display: OFF), even if the same trace type was already selected</p> <p>When Detector setting is "Auto" (<code>[:SENSe] : <meas> : DETector : AUTO ?</code>), Detector (<code>[:SENSe] : <meas> : DETector [:FUNCTION] ?</code>) switches aligning with the switch of this parameter: "NORMal" with <code>WRITe</code> (Clear Write), "AVERage" with <code>AVERage</code>, "POSitive (peak)" with <code>MAXHold</code>, and "NEGative (peak)" with <code>MINHold</code></p>
Preset	Swept SA, Monitor Spectrum, and I/Q Waveform measurements: <code>WRITE</code>

	Complex Spectrum measurement: <code>WRITE AVERage WRITE</code> All other measurements: <code>AVERage</code> Following Preset , all traces are cleared (all trace points set to <i>mintracevalue</i>)
State Saved	The type of each trace is saved in instrument state
Annunciation	The type for each trace is indicated in the Trace annunciator panel on the Measurement Bar

Trace Mode Backwards Compatibility Commands

In earlier instruments, the “Trace Modes” were: Clear/Write, Max Hold, Min Hold, View and Blank. Averaging was global to all traces and was controlled under the **BW/Avg** menu.

In X-Series, trace averaging can be done on a per-trace basis. The Trace Modes (now called **Trace Types**) are **Clear/Write**, **Trace Average**, **Max Hold** and **Min Hold**. **View** and **Blank** are set separately under "**View/Blank**" on page 2932.

While this provides more flexibility, it also gives rise to potential backwards-compatibility problems. To mitigate these, the old Trace Mode command has been retained and a new **Trace Type** command has been added. The `:TRACe:MODE` command is retained for backwards compatibility, and the `:TRACe:TYPE`, `:TRACe:UPDate` and `:TRACe:DISPly` commands introduced for ongoing use. The old Trace Modes are selected using `:TRAC:MODE`, whose parameters are mapped into calls to `:TRACe:TYPE`, `:TRACe:UPDate` and `:TRACe:DISPly`, and the old global Averaging command `[:SENSe]:AVERage [:STATe]` is provided for backwards compatibility. See the individual command descriptions for details.

When **Average/Hold** in the **Meas Setup, Legacy Compatibility** menu is **ON**, the following is true for traces in **Max Hold** and **Min Hold**:

- They ignore the **Average/Hold** number; **Single** for **Max Hold** causes one sweep only, so switching to **Single** stops after the current sweep, and switching to **Cont** starts again without clearing the accumulated result
- **Max Hold** is not cleared on a **Restart**, **Single** or `:INIT:IMM`, but changing a measurement parameter, like frequency or bandwidth etc., still restarts the **Max Hold**

Preset	<code>WRITE</code>
State Saved	The trace mode is an alias only
Backwards Compatibility SCPI	<code>:TRACe[1] 2 ... 6:MODE WRITE MAXHold MINHold VIEW BLANK</code> <code>:TRACe[1] 2 ... 6:MODE?</code>
Backwards Compatibility Notes	The legacy <code>:TRACe:MODE</code> command is retained for backwards compatibility. In conjunction with the legacy <code>:AVERage</code> command, it works as follows: <ul style="list-style-type: none"> – <code>:AVERage ON OFF</code> sets/clears a variable that we will call average for the sake of this discussion. This variable is maintained by the instrument solely for backwards compatibility. See

the `[:SENSe]:AVERage[:STATE]` command description below

- `:TRACe:MODE WRITe` sets `:TRACe:TYPE WRITe` (Clear/Write) unless average is true, in which case it sets it to `:TRACe:TYPE AVERage`. It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace
- `:TRACe:MODE MAXHold` sets `:TRACe:TYPE MAXHold` (Max Hold). It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace
- `:TRACe:MODE MINHold` sets `:TRACe:TYPE MINHold` (Min Hold). It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace
- `:TRACe:MODE VIEW` sets `:TRACe:UPDate OFF`, `:TRACe:DISPlay ON`, for the selected trace
- `:TRACe:MODE BLANK` sets `:TRACe:UPDate OFF`, `:TRACe:DISPlay OFF`, for the selected trace

The query returns the same value as `:TRACe:TYPE?`, meaning that if you set `:TRACe:MODE:VIEW` or `:TRACe:MODE:BLANK`, the query response will not be what you sent

`:TRACe[n]:MODE` was formerly used to set the type or “writing mode” of the trace. At that time, View and Blank were writing modes. The new `:TRACe:TYPE` command should be used in the future, but `:TRACe:MODE` is retained to provide backwards compatibility

In X-Series, unlike earlier instruments, Max Hold and Min Hold now obey the Average Number and counts up to a terminal value as Average always has

As the **Average/Hold Number** now affects **Min Hold** and **Max Hold**, the operations that restart Averaging (for example, the **Restart** key) now also restart **Min Hold** and **Max Hold**

As a result of these changes, legacy code that restarts averaging while retaining a running Max Hold will need to be rewritten, because the Max Hold will now restart when the Average does

Also, previous to X-Series:

- Pressing **Max Hold** while already in **Max Hold** (or doing so remotely) had no effect. Now it will clear the trace and restart the sweep and the Max Hold sequence
- Changing the vertical scale (Log/Lin or dB/div) of the display restarted **Max Hold** and **Min Hold**. This is no longer the case

Backwards Compatibility Command

Preset	OFF
State Saved	The state of Average is saved in Instrument State for ghosting purposes
Backwards Compatibility SCPI	<code>[:SENSe]:AVERage[:STATE] ON OFF 1 0</code> <code>[:SENSe]:AVERage[:STATE]?</code>
Backwards Compatibility Notes	Previous to X-Series, Averaging (also sometimes known as trace averaging) was global to all traces, that is, it was either on or off for all active traces. The legacy command <code>[:SENSe]:AVERage [:STATE] ON OFF 1 0</code> was used to turn Averaging on or off In X-Series, Averaging is turned on or off on a per-trace basis, so it can be on for one trace and off for

another

For backwards compatibility, the old global Average State variable is retained solely as a legacy variable, turned on and off and queried by the legacy command `[:SENSe]:AVERage[:STATE] OFF|ON|0|1`. When **Averaging** is turned on, any trace in **Clear/Write** will get put into Average.

While **Averaging** is on, any trace put into **Clear/Write** by the old `:TRAC:MODE` command will instead get put into Average. When **Averaging** is turned off, any trace in Average will get put into **Clear/Write**

Trace Type Details

Clear/Write

Each trace update replaces the old data in the trace with new data.

Pressing **Clear/Write** for the selected trace, or sending `:TRAC:TYPE WRIT` for the specified trace, sets the trace type to **Clear/Write** and clears the trace, even if you are already in **Clear/Write**. Then a new sweep is initiated. Trigger conditions must be met before the sweep actually starts, and if in **Single** the sweep won't start until **Restart** is pressed.

Pressing **Clear/Write** stops the current sweep and initiates a new one, so **Trace Average**, **Max Hold** and **Min Hold** data may be interrupted in mid-sweep when **Clear/Write** is pressed, and therefore may not accurately reflect the displayed count. Therefore, when **Clear/Write** is pressed for one trace, **Trace Average**, **Max Hold** and **Min Hold** must restart for all traces.

When in **Clear/Write**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), a new sweep is initiated but the trace is not cleared.

Trace Average

The instrument maintains and displays an average trace, which represents the cumulative average on a point-by-point basis of the new trace data and previous averaged trace data.

Pressing **Trace Average** (for the selected trace), or sending `:TRAC:TYPE AVER` (for the specified trace), sets the trace type to **Trace Average**, clears the trace, initiates a new sweep, and restarts the Average sequence.

Details of the count limiting behavior and the averaging calculations may be found under **Avg|Hold Number** and **Average Type** under **Meas Setup**.

When in **Trace Average**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the average restarts and a new sweep is initiated but the trace is not cleared.

Restarting the average means:

- The average/hold count k is set to 1, so that the next time the average trace is displayed it simply represents one trace of new data
- A new sweep is initiated
- Once the new sweep starts, the trace is overwritten with current trace data as the first trace of the new average

Remember that restarting averaging also restarts **Max Hold** and **Min Hold**, as there is only one count for Trace Average and Hold.

Max Hold

The instrument maintains and displays a max hold trace, which represents the maximum data value on a point-by-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under **Meas Setup**.

Pressing **Max Hold** for the selected trace, or sending `:TRAC:TYPE MAXH` for the specified trace, sets the Trace Type to **Max Hold**, clears the trace, initiates a new sweep, and restarts the hold sequence, even if you are already in **Max Hold**.

When in **Max Hold**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Max Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Max Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the max hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated.

Remember that restarting **Max Hold** also restarts averaging and **Min Hold**, as there is only one count for Trace Average and Hold.

Min Hold

The instrument maintains and displays a min hold trace, which represents the minimum data value on a point-by-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under the **Meas Setup** functions.

Pressing **Min Hold** for the selected trace, or sending `:TRAC:TYPE MINH` for the specified trace, sets the Trace Type to **Min Hold**, clears the trace, initiates a new sweep, and restarts the hold sequence, even if you are already in **Min Hold**.

When in **Min Hold**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the

Min Hold sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Min Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the min hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated

Remember that restarting **Min Hold** also restarts **Max Hold** and averaging, because there is only one count for Trace Average and Hold.

Clear and Write | Restart Averaging | Restart Max/Min Hold

Starts the trace writing, as though the "Trace Type" on page 2927 had just been selected. The effect is exactly the same as reselecting the current **Trace Type** again – the control is provided because it may not be obvious that reselecting the same selection from a radio button menu will take any action.

This control displays different labels, depending on the selected Trace Type:

- **Clear/Write**: Clear and Write
- **Trace Average**: Restart Averaging
- **Max Hold**: Restart Max Hold
- **Min Hold**: Restart Min Hold

NOTE

Some measurements do not support the **Trace Average** or **Min Hold** options.

View/Blank

Lets you set the state of the two trace variables: **Update** and **Display**. The choices available in this dropdown menu are:

Active	Update and Display both ON
View	Update OFF ; Display ON
Blank	Update OFF ; Display OFF
Background	Update ON , Display OFF Allows a trace to be blanked <i>and</i> continue to update "in the background", which was not possible in the past

3 5G NR/5G-A Mode
3.3 Occupied BW Measurement

In the Swept SA measurement, a trace with **DisplayOFF** is indicated by a strikethrough of the type letter in the trace annotation panel in the Measurement Bar. A trace with **UpdateOFF** is indicated by dimming the type letter in the trace annotation panel in the Measurement Bar. In the example below, Traces 3, 4, 5 and 6 have **UpdateOFF**, and Traces 4 and 6 have **DisplayOFF**.

See: ["More Information" on page 612](#)

Notes	For the commands to control the two variables, Update and Display, see "Trace Update State On/Off" on page 611 and "Trace Display State On/Off" on page 612 below
Dependencies	When Signal ID is on, this key is grayed-out
Couplings	<p>Selecting a Trace Type for a trace (pressing the key or sending the equivalent command) puts the trace in Active (Update ON and Display ON), even if that trace type was already selected</p> <p>Selecting a detector for a trace (pressing the key or sending <code>[:SENS] :DET :TRAC</code>) puts the trace in Active (UpdateON and DisplayON), even if that detector was already selected</p> <p>Selecting a "Math Function" on page 2935 other than OFF for a trace (pressing the key or sending the equivalent command) puts the trace in Active (UpdateON and DisplayON), even if that Math Mode was already selected</p> <p>Loading a trace from a file puts that trace in View regardless of the state it was in when it was saved; as does being the target of a Copy or a participant in an Exchange</p>

Trace Update State On/Off

Remote Command	<p>For Swept SA Measurement (in SA Mode):</p> <pre>:TRACe[1] 2 ... 6:UPDate[:STATe] ON OFF 1 0</pre> <pre>:TRACe[1] 2 ... 6:UPDate[:STATe]?</pre> <p>For all other measurements:</p> <pre>:TRACe[1] 2 3:<meas>:UPDate[:STATe] ON OFF 1 0</pre> <pre>:TRACe[1] 2 3:<meas>:UPDate[:STATe]?</pre> <p>where <code><meas></code> is the identifier for the current measurement</p>
Example	<p>Make trace 2 inactive (stop updating):</p> <pre>:TRAC2:UPD 0</pre>
Couplings	Whenever you set Update to ON for any trace, the Display is set to ON for that trace
Preset	<p>For Swept SA Measurement (in SA Mode)</p> <pre>1 0 0 0 0 0</pre> <p>ON for Trace 1; OFF for 2–6</p> <p>For Complex Spectrum measurement:</p> <pre>1 1 0</pre>

	<p>ON for Trace 1 and Trace 2; OFF for 3</p> <p>For all other measurements:</p> <p>1 0 0</p> <p>ON for Trace 1; OFF for 2 &3</p>
State Saved	Saved in instrument state

Trace Display State On/Off

Remote Command	<p>For Swept SA Measurement (in SA Mode):</p> <p>:TRACe[1] 2 ... 6:DISPly[:STATe] ON OFF 1 0</p> <p>:TRACe[1] 2 ... 6:DISPly[:STATe]?</p> <p>For all other measurements:</p> <p>:TRACe[1] 2 3:<meas>:DISPly[:STATe] ON OFF 1 0</p> <p>:TRACe[1] 2 3:<meas>:DISPly[:STATe]?</p> <p>where <meas> is the identifier for the current measurement</p>
----------------	--

Example	<p>Make trace 1 visible:</p> <p>:TRAC2:DISP 1</p> <p>Blank trace 3:</p> <p>:TRAC3:DISP 3</p>
---------	--

Couplings	Whenever you set Update to ON for any trace, the Display is set to ON for that trace
-----------	--

Preset	<p>For Swept SA Measurement (in SA Mode):</p> <p>1 0 0 0 0 0</p> <p>ON for Trace 1; OFF for 2–6</p> <p>For Complex Spectrum measurement:</p> <p>1 1 0</p> <p>ON for Trace 1 and Trace 2; OFF for 3</p> <p>For all other measurements:</p> <p>1 0 0</p> <p>ON for Trace 1; OFF for 2 &3</p>
--------	---

State Saved	Saved in instrument state
-------------	---------------------------

More Information

When a trace becomes inactive, any update from the **:SENSe** system (detectors) immediately stops, without waiting for the end of the sweep. The trace data remains unchanged, but stops updating. If the trace is blanked, this still does not affect the data in the trace. Traces that are blanked (**Display=OFF**) do not display nor appear on printouts, but their data stays intact, they may be queried, and markers may be placed on them

In most cases, inactive traces are static and unchanging; however, there are cases when an inactive trace will update, specifically:

- if data is written to that trace from remote
- if trace data is loaded from mass storage
- if the trace is the target of a **Copy** or participant in an **Exchange**
- if the trace is cleared using **Clear Trace**

Inactive traces that are also being displayed (traces in **View**) are displayed at half intensity. Traces in **View** display across the entire X-Axis of the instrument. Their horizontal placement does not change, even if X-Axis settings subsequently are changed, although Y-Axis settings do affect the vertical placement of data.

When a trace becomes active (**Update=ON**), the trace is cleared, the average count is reset, and a new sweep is initiated.

Note that putting a trace into **Display=OFF** and/or **Update=OFF** does *not* restart the sweep and does *not* restart Averaging or Hold functions for any traces.

3.3.10.3 Math

Lets you turn on and configure Trace Math functions.

Math Function

Trace Math functions perform mathematical operations between traces and, in some cases, user-specified offsets. When in a Trace Math function, the indicated function is performed during the sweep with the math function used in place of a detector. The trace operands for the math function are set using the "**Operand 1 / Operand 2**" on page 2942 controls.

See "**How trace math is processed**" on page 618

Note that, in RTSA Mode, only **Spectrum** traces can participate in **Trace Math** functions.

Remote Command For option details, see "**Trace Math Options**" on page 615
For Swept SA Measurement in SA Mode and Spectrum & PvT measurement in RTSA Mode:
:CALCulate:MATH <trace_num>, PDifference | PSUM | LOFFset | LDifference
| OFF, <trace_num>, <trace_num>, <real>, <real>
:CALCulate:MATH? <trace_num>
where <trace_num> is any one of:
TRACE1|TRACE2|TRACE3|TRACE4|TRACE5|TRACE6

For all other measurements:

```
:CALCulate:<meas>:MATH <trace_num>, PDIFference | PSUM | LOFFset |  
LDIFference | OFF, <trace_num>, <trace_num>, <real>,<real>
```

```
:CALCulate[:<meas>]:MATH? <trace_num>
```

where:

<meas> is the identifier for the current measurement, and

<trace_num> is any one of:

TRACe1|TRACe2|TRACe3

Note that the format of the **TRACe<n>** parameter differs from that for the Swept SA Measurement

Example

```
:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0
```

Sets Trace 3 to Power Diff trace math function, and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2

```
:CALC:MATH TRACE3,PSUM,TRACE1,TRACE2,0,0
```

Sets Trace 3 to Power Sum trace math function and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2

```
:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0
```

Sets Trace 3 to Log Offset trace math function, sets the First Trace operand (for Trace 3) to Trace 1, leaves the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and sets the Log Offset (for Trace 3) to -6 dB

```
:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00
```

Sets Trace 3 to Log Diff trace math function, sets the First Trace operand (for Trace 3) to Trace 1, sets the Second Trace operand (for Trace 3) to Trace 2, and sets the Log Difference reference (for Trace 3) to -6 dBm

```
:CALC:MATH TRACE1,OFF,TRACE2,TRACE3,0,0
```

Turns off trace math for trace 1

Notes

The Trace Math Function command has 6 main set of parameters:

- Set 1 defines the “result trace”:

```
TRACE1 |... | TRACE6
```

- Set 2 defines the “function”:

```
PDIFference | PSUM | LOFFset | LDIFference | OFF
```

- Set 3 is a “trace operand” (1):

```
TRACE1 |... | TRACE6
```

- Set 4 is a “trace operand” (2):

```
TRACE1 |... | TRACE6
```

- Set 5 defines the “Log Offset” (in dB)

- Set 6 defines the “Log Difference Reference” (in dBm)

Note that the trace math mode is an enumeration; that is, when a math function is set for a trace, it turns off any math function that is on for that trace, then sets the new math function

The parameters sent in the command are reflected in the values in the control menu. There is no default for any parameter; all 6 parameters must be sent to satisfy the parser. Failure to specify a

	parameter will result in a missing parameter message The query returns the math mode, the operand traces, the offset and the reference for the specified trace, all separated by commas
Dependencies	Trace Math is not available if Normalize is on Trace Math is not available if Signal ID is on None of the trace operands can be the destination trace. If any of the three trace math commands is sent with a destination trace number matching one of the operands, a warning is generated, and the function does not turn on
Couplings	When a math function is changed for a trace, that trace is set to Display = ON ; and Update = ON
Preset	For Swept SA Measurement (in SA Mode): <code>OFF, TRACE5, TRACE6, 0, 0 OFF, TRACE6, TRACE1, 0, 0 OFF, TRACE1, TRACE2, 0, 0 </code> <code>OFF, TRACE2, TRACE3, 0, 0 OFF, TRACE3, TRACE4, 0, 0 OFF, TRACE4, TRACE5, 0, 0</code> For all other measurements: <code>OFF, TRACE2, TRACE3, 0, 0 OFF, TRACE3, TRACE1, 0, 0 OFF, TRACE1, TRACE2, 0, 0</code>
State Saved	The trace math function for each trace is saved in instrument state
Annunciation	An “P” is shown on the trace annunciation panel in the Measurement Bar when a math function is on; and the function is annotated on the trace if Trace Annotation is on
Status Bits/OPC dependencies	*OPC can be used to detect the completion of a sweep, which will also correspond to the completion of the math operation, since all math takes place during the sweep

Trace Math Options

IMPORTANT

To generate a trace math result, *you must take a sweep*. The trace math engine, described below, operates in concert with the sweep engine in the instrument. Until a sweep has been taken, even if the constituent traces are not in Update mode, no result is generated.

Note that certain events can affect the trace in ways that affects all points at once. This can happen in any number of ways, including:

- A trace clear taking place
- A trace being loaded from the file system
- Trace data being sent in from the remote interface
- A copy or exchange of trace data

You should try to avoid these occurrences during a sweep, as they will tend to invalidate the math result being accumulated.

The Trace Math functions are:

Power Diff (Op1 - Op2)

Calculates a power difference between the **First Trace** operand and the **Second Trace** operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace:

$$\text{DestinationTrace} = 10 \log_{10}(1/10)(\text{FirstTrace}) - 10(1/10)(\text{SecondTrace})$$

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in **FirstTrace** is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

Otherwise, if the result of the subtraction is less than or equal to 0, the resultant point is **mintracevalue**.

Power Sum (Op1 + Op2)

Calculates a power sum between the **First Trace** operand and the **Second Trace** operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

$$\text{DestinationTrace} = 10 \log_{10}(1/10)(\text{FirstTrace}) + 10(1/10)(\text{SecondTrace})$$

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in either trace operand is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

Log Offset (Op1 + Offset)

Calculates a log offset from the **First Trace** operand and puts the result in the destination trace. This is like the B-DL function in some older instruments. The offset is entered on the **Offset** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own offset.

During the sweep, the following formula is executed for each point in the trace operand, and the corresponding point is generated for the destination trace.

$$\text{DestinationTrace} = \text{FirstTrace} + \text{Offset}$$

The values of the trace points are assumed to be in dBm (as they are internally stored) and the offset is in dB.

If a point in the trace operand is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

If a point in the trace operand is equal to **mintracevalue**, the resultant point is also **mintracevalue**.

Example: If offset is 25 dB, then our destination trace will be higher than the operand trace by 25 dB.

Note that the **Second Trace** operand is not used for this function.

Log Diff (Op1 - Op2 + Ref)

Offsets the difference between the **First Trace** operand and the **Second Trace** operand by a reference and puts the result in the destination trace. This is like the A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

Offsets the difference between the **First Trace** operand and the **Second Trace** operand by a reference and puts the result in the destination trace. This is like the A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

$$\text{DestinationTrace} = (\text{FirstTrace} - \text{SecondTrace}) + \text{Reference}$$

The values of the operand trace points are assumed to be in decibel units (as they are internally stored) and the reference is in dBm so the result is in dBm.

Example: If the first operand trace 1 is at 5 dBm, the second operand trace 2 is at -5 dBm, and the reference is -25 dBm, then the destination trace will be -15 dBm.

Example: If the first operand trace 1 is at 60 dBuV, the second operand trace 2 is at 50 dBuV, and the reference is 35 dBuV, then the destination trace will be 45 dBuV.

If a point in **FirstTrace** is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

If a point in **FirstTrace** is equal to **mintracevalue**, the resultant point is also **mintracevalue**.

If neither of the above is true for a given point, then:

- If that point in **SecondTrace** is equal to **maxtracevalue**, the resultant point is **mintracevalue**.
- If that point in **SecondTrace** is equal to **mintracevalue**, the resultant point is **maxtracevalue**.

How trace math is processed

Whenever a trace math function is turned on, or the parameters and/or operands of an existing trace math function are changed, the destination trace is cleared. After the trace is cleared, all x-axis values in the trace, and the domain of the trace, are set to match the X-Axis settings of the first trace operand. When this is complete, a new sweep is initiated.

The process of acquiring data, processing it using the math and Average/Hold functions, and presenting it as trace data, consists of several functional blocks, as shown below:

For each active trace, the current trace point is processed for **Trace 1**, then **Trace 2**, then **Trace 3**, etc. Trace data is taken from either the detector for that trace, or

from the mathematical result of up to two other traces and an offset, depending on whether trace math is on or not. The resultant data is then fed to the Average/Hold processing block, where (if the trace type is **Average**, **Max Hold**, or **Min Hold**) it is processed with previous trace data. The new trace data resulting from this process is then available for display, storage or remote output.

When the processing is complete for **Trace 1**, **Trace 2** is processed, and so on until all six traces have been processed. This allows a downstream trace to use as one of its math components a fully processed upstream trace. In other words, if math is **ON** for **Trace 4**, and its operand traces are **Trace 2** and **Trace 3**, then all detector, math, average and hold processing for Traces 2 and 3 is completed before the math is performed for **Trace 4**. When the current trace point is completed for all traces, the instrument moves on to the next trace point.

This allows very flexible and powerful math functions to be configured. For example, **Trace 1** can be an average trace, which can be fed with an offset to **Trace 2**, which can also be in **Max Hold**, allowing you to obtain the **Max Hold** of an Average trace.

Note that none of this processing is performed on inactive traces.

Note also that for any active trace with math **ON**, the Operand traces should have *lower* numbers than the trace (for example, using **Trace 4** as an operand for **Trace 1** will cause the data coming from **Trace 4** to be delayed by one sweep).

Operand 1 / Operand 2

These two controls select the first and second trace operands to be used for the trace math functions for the destination trace. The operands are common to all math functions for a given trace. The most recently sent **:CALCulate:MATH** command for a given trace sets the operands for that trace. Those settings are displayed on the trace operand controls for that trace.

Example	<p>The following examples are for the Swept SA measurement</p> <p>Set Trace 3 to Power Diff trace math function. Set the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2:</p> <pre>:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0</pre> <p>Set Trace 3 to Log Offset trace math function. Set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB:</p> <pre>:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0</pre>
Notes	See " Math Function " on page 2935 for how to specify Operands 1 and 2 using :CALCulate:MATH
Dependencies	The destination trace cannot be an operand. The destination trace number is grayed-out on the dropdown
Preset	Operand 1: Trace number minus 2 (wraps at 1). For example, for Trace 1, Operand 1 presets to Trace

	5; for Trace 6, it presets to Trace 4 Operand 2: Trace number minus 1 (wraps at 1). For example, for Trace 1, Operand 2 presets to Trace 6; for Trace 6, it presets to Trace 5
State Saved	Operands 1 and 2 for each trace are stored in instrument state

Offset

Used by the Log Offset math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Offset trace math function, set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB: <code>:CALC:MATH TRACE3, LOFF, TRACE1, TRACE2, -6.00, 0</code>
State Saved	The Log Offset value for each trace is saved in Instrument State
Min/Max	-/+100 dB

Reference

Used by the Log Diff math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Diff trace math function, set the First Trace operand (for Trace 3) to Trace 1, set the Second Trace operand (for Trace 3) to Trace 2, and set the Log Difference reference (for Trace 3) to -6 dBm: <code>:CALC:MATH TRACE3, LDIF, TRACE1, TRACE2, 0, -6.00</code>
State Saved	The Log Difference reference value for each trace is saved in instrument state
Min/Max	Same as reference level

3.3.10.4 Detector

Lets you select and configure detectors for the specified trace.

Detector

Selects a detector to be used by the instrument for the current measurement. The following selections are available:

Option	Behavior
AUTO	The detector selected depends on marker functions, trace functions, average type, and the trace averaging function

Option	Behavior
	For details, see "Detector Select Auto/Man" on page 623
NORMal	The detector determines the peak of the CW-like signals, and it yields alternating maximums and minimums of noise-like signals. This is also referred to as Rosenfell detection
AVERage	The detector determines the average of the signal within the sweep points, using RMS averaging
POSitive	The detector determines the maximum of the signal within the sweep points
Peak	
SAMPle	The detector indicates the instantaneous level of the signal at the center of the sweep points represented by each display point
NEGative	The detector determines the minimum of the signal within the sweep points
Peak	
RMS	Equivalent to AVERage

Because they may not find a spectral component's true peak, neither **AVERage** nor **SAMPle** detectors measure amplitudes of CW signals as accurately as **POSitivePeak** or **NORMal**, but they do measure noise without the biases of peak detection.

Remote Command	<code>[:SENSe]:OBWidth:DETEctor[:FUNction] NORMal AVERage POSitive SAMPle NEGative RMS</code> <code>[:SENSe]:OBWidth:DETEctor[:FUNction]?</code>												
Example	<code>:OBW:DET NORM</code> <code>:OBW:DET?</code> Set the detector to Average . Average uses RMS averaging, so this is equivalent to selecting an RMS detector: <code>:OBW:DET RMS</code>												
Notes	The query returns a name that corresponds to the detector type, as follows The RMS selection sets the detector type to AVERage , with RMS averaging. Therefore, if RMS had been selected, the query returns AVER												
	<table border="1"> <thead> <tr> <th>String Returned</th> <th>Definition</th> </tr> </thead> <tbody> <tr> <td>NORM</td> <td>Normal</td> </tr> <tr> <td>AVER</td> <td>Average (RMS)</td> </tr> <tr> <td>POS</td> <td>Peak</td> </tr> <tr> <td>SAMP</td> <td>Sample</td> </tr> <tr> <td>NEG</td> <td>Negative Peak</td> </tr> </tbody> </table>	String Returned	Definition	NORM	Normal	AVER	Average (RMS)	POS	Peak	SAMP	Sample	NEG	Negative Peak
String Returned	Definition												
NORM	Normal												
AVER	Average (RMS)												
POS	Peak												
SAMP	Sample												
NEG	Negative Peak												
Couplings	When "Detector Select Auto/Man" on page 623 is ON , the values returned by the query depend on the setting of "Trace Type" on page 2927 as follows:												

	Trace Type	Query Returns:
	WRITE	NORMAL
	AVERAGE	AVERAGE
	MAXHOLD	POSITIVE
	MINHOLD	NEGATIVE
Preset	AVERAGE	
State Saved	Saved in instrument state	
Range	NORMAL AVERAGE POSITIVE SAMPLE NEGATIVE RMS	

Detector Select Auto/Man

Sets the Detector mode to **Auto (ON)** or **Man (OFF)**. In **Auto**, the proper detector is chosen based on rules that take into account the measurement settings and other instrument settings.

When you select any "Detector" on page 621 manually, this setting reverts automatically to **Man** (manual).

Remote Command	[:SENSe]:OBWidth:DETECTOR:AUTO ON OFF 1 0 [:SENSe]:OBWidth:DETECTOR:AUTO?	
Example	:OBW:DET:AUTO ON :OBW:DET:AUTO?	
Couplings	When ON , the query "Detector" on page 621 returns values that depend on the setting of "Trace Type" on page 2927 as follows:	
	Trace Type	Query Returns:
	WRITE	NORMAL
	AVERAGE	AVERAGE
	MAXHOLD	POSITIVE
	MINHOLD	NEGATIVE
Preset	ON	
State Saved	Yes	

3.3.10.5 Trace Function

Contains controls to:

- Copy and Exchange traces
- Preset or Clear all traces

From Trace

Selects the trace to be copied to or exchanged with the **"To Trace" on page 2311** when a **"Copy" on page 2311** or **"Exchange" on page 2311** is performed

Preset 1

To Trace

Selects the trace to be copied from or exchanged with the **"From Trace" on page 2310** when a **"Copy" on page 2311** or **"Exchange" on page 2311** is performed

Preset 2

Copy

Executes a Trace Copy based on the **"From Trace" on page 2310** and **"To Trace" on page 2311** parameters. The copy operation is from the **From Trace** to the **To Trace**. The action is performed once.

The X-Axis settings and domain of a trace are also copied.

Remote Command For Swept SA Measurement in SA Mode:
`:TRACe:COPIY TRACE1 | ... | TRACE6, TRACE1 | ... | TRACE6`
 For Spectrum & PvT measurement in RTSA Mode:
`:TRACe:COPIY TRACE1 | ... | TRACE12, TRACE1 | ... | TRACE12`
 For all other measurements:
`:TRACe:<meas>:COPIY TRACe1 | TRACe2 | TRACe3, TRACe1 | TRACe2 | TRACe3`
 where **<meas>** is the identifier for the current measurement
 Note that the format of the **TRACe<n>** parameter differs from that for the Swept SA Measurement

Example Copy Trace 1 to Trace 3 and put Trace 3 in Update=Off, Display=On
`:TRAC:COPIY TRACE1,TRACE3`

Notes The command is of the form:
`:TRACe:COPIY <source_trace>,<dest_trace>`

Dependencies When Signal ID is on, this key is grayed-out

Couplings The destination trace is put in **View** (Update = Off, Display = On) after the copy

Preset For Swept SA Measurement in SA Mode:
`TRACE1, TRACE2`
 For all other measurements:
`TRACe1, TRACe2`

Exchange

Executes a Trace Exchange based on the "From Trace" on page 2310 and "To Trace" on page 2311 parameters. The **From Trace** and **To Trace** values are exchanged with each other. The action is performed once.

The X-Axis settings and domain of a trace are also copied when it is exchanged with another trace.

Note that, in RTSA Mode, only traces of the same type can participate in **Copy** and **Exchange** functions.

Remote Command	<p>For Swept SA Measurement in SA Mode: <code>:TRACe:EXCHange TRACE1 ... TRACE6, TRACE1 ... TRACE6</code></p> <p>For Spectrum & PvT measurement in RTSA Mode: <code>:TRACe:EXCHange TRACE1 ... TRACE12, TRACE1 ... TRACE12</code></p> <p>For all other measurements: <code>:TRACe:<meas>:EXCHange TRACe1 TRACe2 TRACe3, TRACe1 TRACe2 TRACe3</code></p> <p>where <meas> is the identifier for the current measurement</p> <p>Note that the format of the <code>:TRACe<n></code> parameter differs from that for the Swept SA Measurement</p>
Example	<p>Exchange Trace 1 and Trace 2 and put both traces in Update=OFF, Display=ON: <code>:TRAC:EXCH TRACE1,TRACE2</code></p>
Notes	<p>The command is of the form: <code>:TRACe:EXCHange <trace_1>,<trace_2></code></p>
Couplings	Both traces are put in View (Update=Off, Display=On) after the exchange

Preset All Traces

Turns on Trace 1 and blanks all other traces. This is useful when you have many traces on, and you want to return to having only Trace 1 on the display. Does not affect the trace type, detector or any other aspect of the trace system.

Remote Command	<code>:TRACe[:<meas>]:PRESet:ALL</code>
Example	<code>:TRAC:PRES:ALL</code>
Dependencies	When Signal ID is on, this key is grayed-out

Clear All Traces

Clears all traces. Does not affect the state of any function or variable in the instrument. Loads `mintracevalue` into all of the points for all traces, except traces in **Min Hold**, in which case it loads `maxtracevalue`, even if **Update = OFF**.

Remote Command	<code>:TRACe[:<meas>]:CLEAr:ALL</code> RTSA Mode only: <code>:TRACe:PRESet:ALL</code>
Example	<code>:TRAC:CLE:ALL</code>
Dependencies	When Signal ID is on, this key is grayed-out

Multiple Traces for EIRP

Enables you to preset the following parameters.

Multi Channel Synchronous Acquisition		Off	
From Trace			Trace 1
To Trace			Trace 2
	Trace 1	Trace 2	Trace 3
Trace Type	Trace Average	Trace Average	Clear / Write
View/Blank	Active	View	Active
Math Function	Off	Off	Power Sum =Trace 1 + 2
Operand 1	N/A	N/A	Trace 1
Operand 2	N/A	N/A	Trace 2

Remote Command	<code>:TRACe:<meas>:PRESet:EIRP</code>
Example	For OBW Meas: <code>:TRAC:OBW:PRES:EIRP</code>

3.3.10.6 Advanced

Contains controls for setting advanced trace functions of the instrument.

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a `:READ` or `:FETCh` query:

- Trace 1
- Trace 2
- Trace 3

Remote Command	<code>:CALCuLate:<meas>:MTRace TRACe1 TRACe2 TRACe3</code>
----------------	--

3 5G NR/5G-A Mode
 3.3 Occupied BW Measurement

	<code>:CALCulate:<meas>:MTRace?</code> <meas> is the identifier for the current measurement; any one of <code>CHPower</code> <code>ACPower</code> <code>OBWidth</code> <code>SEMask</code> <code>SPURious</code> <code>PVTime</code>
Example	Channel Power <code>:CALC:CHP:MTR TRAC1</code> <code>:CALC:CHP:MTR?</code>
Dependencies	In the ACP measurement, this control is grayed-out when Meas Method is set to <code>RBW</code> or <code>FAST</code> , and only Trace 1 is enabled
Preset	<code>TRACe1</code>
State Saved	No
Range	Trace 1 Trace 2 Trace 3

3.4 ACP Measurement

ACP is a measurement of the amount of interference, or power, in an adjacent frequency channel. The results are displayed as a bar graph or as spectrum data, with measurement data at specified offsets.

Measurement Commands

The general functionality of ["CONFigure" on page 3824](#), ["INITiate" on page 3825](#), ["FETCh" on page 3825](#), ["MEASure" on page 3827](#), and ["READ" on page 3826](#) are described in the section **SCPI Operation and Results Query** in the topic **Programming the Instrument**.

The following measurement commands and queries are used to configure the measurement:

<code>:INITiate:ACPower</code>	Initiates a trigger cycle for the ACPower measurement, but does not return any data. You must then use <code>:FETC:ACP[n]?</code> to retrieve data Does not change any measurement settings
<code>:CONFigure?</code>	Returns the long form name of current measurement, in this case, ACPower
<code>:CONFigure:ACPower</code>	Selects ACP measurement with Meas Setup settings in preset state – same as "Meas Preset" on page 781
<code>:CONFigure:ACPower:NDEFault</code>	Selects ACP measurement <i>without</i> affecting settings

The following queries are used to retrieve the results:

<code>:FETCh:ACPower?</code>	Retrieves the data specified by <code>n</code>
<code>:MEASure:ACPower[n]?</code>	Switches to ACP measurement, restores default values, starts the measurement, then retrieves the data specified by <code>n</code>
<code>:READ:ACPower[n]?</code>	Starts the measurement, then retrieves the data specified by <code>n</code>

Remote Command Results

The following table describes the results returned by the `:FETCh`, `:MEASure`, and `:READ` queries listed above, according to the index value `n`.

n	Results Returned
1, or not specified	Dependent on Mode , "Meas Method" on page 719 , "Power Ref" on page 1996 , and "Measurement Type" on page 1996 See "Measurement Results for n = 1, or no Index Specified" on page 631
2	Dependent on "Measurement Type" on page 1996 . See "Measurement Results for n = 2" on page 634
3	Dependent on Mode and "Measurement Type" on page 1996 . See "Measurement Results for n = 3" on page 634

n	Results Returned
	636
4	Returns <Num Pts> comma-separated scalar values representing the Y values in Trace 1
5	Returns <Num Pts> comma-separated scalar values representing the Y values in Trace 2
6	Returns <Num Pts> comma-separated scalar values representing the Y values in Trace 3
7	Dependent on Mode and " Measurement Type " on page 1996. See " Measurement Results for n = 7 " on page 636
8	Only available in LTEAFDD, LTEATDD, 5GNR, MSR Modes Dependent on " Measurement Type " on page 1996, " PSD Unit " on page 2004, and " Power Ref " on page 1996. See " Measurement Results for n = 8 " on page 637
9	Only available in LTEAFDD, LTEATDD, 5GNR, MSR Modes Returns scalar pass/fail values (0 = passed, or 1 = failed) for the trace specified by " Measure Trace " on page 3025 , determined by comparing the relative to the reference carrier and by testing the absolute power limit of the offset frequencies

#	Item
1	Inner Lower offset A - relative limit result
2	Inner Lower offset A - absolute limit result
3	Inner Upper offset A - relative limit result
4	Inner Upper offset A - absolute limit result
5	Inner Lower offset B - relative limit result
6	Inner Lower offset B - absolute limit result
7	Inner Upper offset B - relative limit result
8	Inner Upper offset B - absolute limit result
...	...

When "[Max Num of Offsets](#)" on page [777](#) is 6, returns 24 results (Offset A-F: 24 = 4*6) and when set to 12, returns 48 results (Offset A-L: 48 = 4 * 12)

10	Only available in LTEAFDD, LTEATDD, 5GNR, MSR Modes Returns scalar values of offset results for the trace specified by " Measure Trace " on page 3025 Numbers returned in this trace are 10 x the actual measured offsets. Note that upper and lower sides of an offset are returned separately. For example, when only outer offset A is measured with offset side both, 10 x 2 = 20 values are returned In the table below, f is the Number of Offsets. See " Max Num of Offsets " on page 777
----	---

#	Measurement Type	Item	Unit, if any
1		Inner = 1 or Outer = 2	
2		Offset A~L. (A = 1, B = 2, ... L = 12)	
3		Offset Side. Lower = 1 or Upper = 2	

n Results Returned				
#	Measurement Type	Item	Unit, if any	
4	TPRef	Relative power or	dBc	
	PSDRef	Relative PSD	dB	
5	TPRef	Absolute power	dBm	
	PSDRef	Absolute PSD	dBm/Hz, dBm/MHz*	
6	TPRef	Reference power	dBm	
	PSDRef	Reference PSD	dBm/Hz, dBm/MHz*	
7		Reference Index 1		
8		Reference Index 2		
9		0 (Reserved)		
10		0 (Reserved)		
...				
10(f - 1) + 1		Inner = 1 or Outer = 2		
10(f - 1) + 2		Offset A~L. (A = 1, B = 2, ... L = 12)		
10(f - 1) + 3		Offset Side. Lower = 1 or Upper = 2		
10(f - 1) + 4	TPRef	Relative power	dBc	
	PSDRef	Relative PSD	dB	
10(f - 1) + 5	TPRef	Absolute power	dBm	
	PSDRef	Absolute PSD	dBm/Hz, dBm/MHz*	
10(f - 1) + 6	TPRef	Reference power	dBm	
	PSDRef	Reference PSD	dBm/Hz, dBm/MHz*	
10(f - 1) + 7		Reference Index 1		
10(f - 1) + 8		Reference Index 2		
10(f - 1) + 9		0 (Reserved)		
10(f - 1) + 10		0 (Reserved)		

"Measurement Type" on page 1996 determines which type of power result is returned: Total Pwr Ref (TPRef) or PSD Ref (PSDRef)

*For PSD results, the unit is determined by "PSD Unit" on page 2004: DBMHZ or DBMMHZ

If any result is not available, 9.91E+37 (NaN) is returned

11 Returns Marker Table data as a series of comma separated values in the following form:

<Marker Number>,<Marker Trace>,<X>,<Y>,<Reserved>,<Reserved>

Only markers that are enabled are included. <Reserved> are returned as NaN ("Not a Number", 9.91e+37). The data is returned in the current sort order as displayed in the Marker Table

3.4.1 Measurement Results for n = 1, or no Index Specified

Mode = SA, Radio Std = None, Number of carriers = 1, Only Offset A is On

Returns 3 comma-separated values that correspond to:

#	Item	Unit, if any
1	Reference carrier power	
2	Lower-adjacent channel power of the trace specified by "Measure Trace" on page 3025	dBc
3	Upper-adjacent channel power of the trace specified by "Measure Trace" on page 3025	dBc

The values are in the current Y Axis Unit of the instrument

Meas Method = FAST

See also "Meas Method" on page 719

For the trace specified by "Measure Trace" on page 3025, returns 5 comma-separated scalar results in the following order:

#	Item	Result	Unit, if any
1	Reference carrier	Absolute power	dBm
2	Lower offset A	Absolute power	dBm
3	Upper offset A	Absolute power	dBm
4	Lower offset B	Absolute power	dBm
5	Upper offset B	Absolute power	dBm

Measurement Type = Total Power Reference

Conditions	Results															
Mode: LTEAFDD, LTEATDD, 5GNR, MSR "Power Ref" on page 1996: LRCarriers LRSubblocks MPCSubblock MINSubblock	For the trace specified by "Measure Trace" on page 3025, returns comma-separated scalar results in the following order: <table border="1"> <thead> <tr> <th>#</th> <th>Item</th> <th>Unit, if any</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>0.0</td> <td></td> </tr> <tr> <td>2</td> <td>Total carrier power</td> <td>dBm</td> </tr> <tr> <td>3</td> <td>Left Reference power</td> <td>dBm</td> </tr> <tr> <td>4</td> <td>Right Reference power</td> <td>dBm</td> </tr> </tbody> </table>	#	Item	Unit, if any	1	0.0		2	Total carrier power	dBm	3	Left Reference power	dBm	4	Right Reference power	dBm
#	Item	Unit, if any														
1	0.0															
2	Total carrier power	dBm														
3	Left Reference power	dBm														
4	Right Reference power	dBm														
For all other Power Ref settings, see All other Modes row below																

Conditions	Results
------------	---------

#	Item	Unit, if any
5	Lower offset A - relative power	dB
6	Lower offset A - absolute power	dBm
7	Upper offset A - relative power	dB
8	Upper offset A - absolute power	dBm
9	Lower offset B - relative power	dB
10	Lower offset B - absolute power	dBm
11	Upper offset B - relative power	dB
12	Upper offset B - absolute power	dBm
...	...	

When "Max Num of Offsets" on page 777 is 6, returns 28 results (Offset A-F: $28 = 4 + 4 * 6$) and when set to 12, returns 52 results (Offset A-L: $52 = 4 + 4 * 12$)

If any result is not available, -999.0 is returned

This trace includes only outer offset results and their reference value(s)

All other Modes and Power Ref settings

For the trace specified by "Measure Trace" on page 3025, returns comma-separated scalar results in the following order:

#	Item	Unit, if any
1	0.0	
2	Total carrier power	dBm
3	0.0	
4	Reference power	dBm
5	Lower offset A - relative power	dB
6	Lower offset A - absolute power	dBm
7	Upper offset A - relative power	dB
8	Upper offset A - absolute power	dBm
9	Lower offset B - relative power	dB
10	Lower offset B - absolute power	dBm
11	Upper offset B - relative power	dB
12	Upper offset B - absolute power	dBm
...	...	

When "Max Num of Offsets" on page 777 is 6, returns 28 results (Offset A-F: $28 = 4 + 4 * 6$) and when set to 12, returns 52 results (Offset A-L: $52 = 4 + 4 * 12$)

If any result is not available, -999.0 is returned

For SA Mode, the values are in the current Y Axis Unit of the instrument

Measurement Type = Power Spectral Density Reference

Conditions	Results																																							
Mode: LTEAFDD, LTEATDD, 5G NR, MSR "Power Ref" on page 1996: LRCarriers LRSubblocks MPCSubblock MINSubblock	<p>For the trace specified by "Measure Trace" on page 3025, returns comma-separated scalar results in the following order:</p> <table border="1"> <thead> <tr> <th>#</th> <th>Item</th> <th>Unit, if any</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>0.0</td> <td></td> </tr> <tr> <td>2</td> <td>Total carrier power</td> <td>dBm/Hz or dBm/MHz*</td> </tr> <tr> <td>3</td> <td>Left reference power</td> <td>dBm/Hz or dBm/MHz*</td> </tr> <tr> <td>4</td> <td>Right reference power</td> <td>dBm/Hz or dBm/MHz*</td> </tr> <tr> <td>5</td> <td>Lower offset A - relative power</td> <td>dB</td> </tr> <tr> <td>6</td> <td>Lower offset A - absolute power</td> <td>dBm/Hz or dBm/MHz*</td> </tr> <tr> <td>7</td> <td>Upper offset A - relative power</td> <td>dB</td> </tr> <tr> <td>8</td> <td>Upper offset A - absolute power</td> <td>dBm/Hz or dBm/MHz*</td> </tr> <tr> <td>9</td> <td>Lower offset B - relative power</td> <td>dB</td> </tr> <tr> <td>10</td> <td>Lower offset B - absolute power</td> <td>dBm/Hz or dBm/MHz*</td> </tr> <tr> <td>11</td> <td>Upper offset B - relative power</td> <td>dB</td> </tr> <tr> <td>12</td> <td>Upper offset B - absolute power</td> <td>dBm/Hz or dBm/MHz*</td> </tr> </tbody> </table> <p>When "Max Num of Offsets" on page 777 is 6, returns 28 results (Offset A-F: 28 = 4 + 4*6) and when set to 12, returns 52 results (Offset A-L: 52 = 4 + 4 * 12)</p> <p>*The unit is determined by "PSD Unit" on page 2004: DBMHZ or DBMMHZ</p> <p>If any result is not available, -999.0 is returned</p> <p>This trace includes only outer offset results and their reference value(s)</p>	#	Item	Unit, if any	1	0.0		2	Total carrier power	dBm/Hz or dBm/MHz*	3	Left reference power	dBm/Hz or dBm/MHz*	4	Right reference power	dBm/Hz or dBm/MHz*	5	Lower offset A - relative power	dB	6	Lower offset A - absolute power	dBm/Hz or dBm/MHz*	7	Upper offset A - relative power	dB	8	Upper offset A - absolute power	dBm/Hz or dBm/MHz*	9	Lower offset B - relative power	dB	10	Lower offset B - absolute power	dBm/Hz or dBm/MHz*	11	Upper offset B - relative power	dB	12	Upper offset B - absolute power	dBm/Hz or dBm/MHz*

3.4.2 Measurement Results for n = 2

- For SA Mode, the values are in the current Y Axis Unit of the instrument
- For MSR, LTE Advanced FDD/TDD, and 5G NR Modes, this trace includes only outer offset results and their reference value(s)

Measurement Type = Total power reference

For the trace specified by "Measure Trace" on page 3025, returns comma-separated scalar results in the following order:

#	Item	Result	Unit, if any
1	Channel (1)	Relative power	dB
2	Channel (1)	Absolute power	dBm
3	Channel (2)	Relative power	dB
4	Channel (2)	Absolute power	dBm
...
23	Channel (12)	Relative power	dB
24	Channel (12)	Absolute power	dBm
25	Lower offset A	Relative power	dB
26	Lower offset A	Absolute power	dBm
27	Upper offset A	Relative power	dB
28	Upper offset A	Absolute power	dBm
29	Lower offset B	Relative power	dB
30	Lower offset B	Absolute power	dBm
31	Upper offset B	Relative power	dB

#	Item	Result	Unit, if any
32	Upper offset B	Absolute power	dBm
...	

When "Max Num of Offsets" on page 777 is 6, returns 48 results (Offset A-F: $48 = 24 + 4 \times 6$) and when set to 12, returns 72 results (Offset A-L: $72 = 24 + 4 \times 12$)

If any result is not available, -999.0 is returned

Measurement Type = Power spectral density reference

For the trace specified by "Measure Trace" on page 3025, returns comma-separated scalar results in the following order:

#	Channel	Item	Unit, if any
1	Channel (1)	Relative power	dB
2	Channel (1)	Absolute power	dBm/Hz or dBm/MHz*
3	Channel (2)	Relative power	dB
4	Channel (2)	Absolute power	dBm/Hz or dBm/MHz*
...	
23	Channel (12)	Relative power	dB
24	Channel (12)	Absolute power	dBm/Hz or dBm/MHz*
25	Lower offset A	Relative power	dB
26	Lower offset A	Absolute power	dBm/Hz or dBm/MHz*
27	Upper offset A	Relative power	dB
28	Upper offset A	Absolute power	dBm/Hz or dBm/MHz*
29	Lower offset B	Relative power	dB
30	Lower offset B	Absolute power	dBm/Hz or dBm/MHz*
31	Upper offset B	Relative power	dB
32	Upper offset B	Absolute power	dBm/Hz or dBm/MHz*
...	

When "Max Num of Offsets" on page 777 is 6, returns 48 results (Offset A-F: $48 = 24 + 4 \times 6$) and when set to 12, returns 72 results (Offset A-L: $72 = 24 + 4 \times 12$)

*The unit is determined by "PSD Unit" on page 2004: **DBMHZ** or **DBMMHZ**

If any result is not available, -999.0 is returned

3.4.3 Measurement Results for n = 3

For the trace specified by "Measure Trace" on page 3025, returns scalar pass/fail values (0 = passed, or 1 = failed) determined by comparing the relative to the reference carrier and by testing the absolute power limit of the offset frequencies (measured as total power in dB if "Measurement Type" on page 1996 is Total Pwr Ref, or as power spectral density in dB if Measurement Type is PSD Ref).

When "Max Num of Offsets" on page 777 is 6, returns 24 results (Offset A-F: 24 = 4*6). When set to 12, returns 48 results (Offset A-L: 48 = 4 * 12).

For MSR, LTE-Advanced FDD/TDD, and 5G NR Modes, this trace includes only outer offset results.

#	Item
1	Lower offset A - relative limit result
2	Lower offset A - absolute limit result
3	Upper offset A - relative limit result
4	Upper offset A - absolute limit result
5	Lower offset B - relative limit result
6	Lower offset B - absolute limit result
7	Upper offset B - relative limit result
8	Upper offset B - absolute limit result
...	...

If any result is not available, 1 is returned.

3.4.4 Measurement Results for n = 7

In all cases below:

- for SA Mode, the values are in the current Y Axis Unit of the instrument
- if any result is not available, 9.91E+37 (NaN) is returned

Mode	Max Number of Carriers
MSR	100
LTEAFDD, LTEATDD	5
5G NR	16
All Others	18

Measurement Type = Total power reference

For the trace specified by "Measure Trace" on page 3025, returns (2 * Number of Carriers) comma-separated scalar results in the following order:

#	Channel	Result	Unit, if any
1	Channel (1)	Relative power	dB
2	Channel (1)	Absolute power	dBm
3	Channel (2)	Relative power	dB
4	Channel (2)	Absolute power	dBm
...	...		
2 * Number of Carriers - 1	Channel (Number of Carriers)	Relative power	dB
2 * Number of Carriers	Channel (Number of Carriers)	Absolute power	dBm

Measurement Type = Power spectral density reference

For the trace specified by "Measure Trace" on page 3025, returns (2 * Number of Carriers) comma-separated scalar results in the following order:

#	Channel	Result	Unit, if any
1	Channel (1)	Relative power	dB
2	Channel (1)	Absolute power	dBm/Hz or dBm/MHz*
3	Channel (2)	Relative power	dB
4	Channel (2)	Absolute power	dBm/Hz or dBm/MHz*
...	...		
2 * Number of Carriers - 1	Channel (Number of Carriers)	Relative power	dB
2 * Number of Carriers	Channel (Number of Carriers)	Absolute power	dBm/Hz or dBm/MHz*

*The unit is determined by "PSD Unit" on page 2004: **DBMHZ** or **DBMMHZ**

3.4.5 Measurement Results for n = 8

Only available in LTEAFDD, LTEATDD, 5G NR, MSR Modes

For the trace specified by "Measure Trace" on page 3025, returns scalar results in the following order:

#	Item	Unit, if any
1	0.0	
2	Total carrier power	dBm
3	Reference Power #1 (See "Reference Power Result Details" on page 638)	
4	Reference Power #2 (See "Reference Power Result Details" on page 638)	

#	Item	Unit, if any
	page 638)	
5	Inner Lower offset A - relative power	dB
6	Inner Lower offset A - absolute power	dBm, dBm/Hz or dBm/MHz*
7	Inner Upper offset A - relative power	dB
8	Inner Upper offset A - absolute power	dBm, dBm/Hz or dBm/MHz*
9	Inner Lower offset B - relative power	dB
10	Inner Lower offset B - absolute power	dBm, dBm/Hz or dBm/MHz*
11	Inner Upper offset B - relative power	dB
12	Inner Upper offset B - absolute power	dBm, dBm/Hz or dBm/MHz*
...	...	

This trace includes only inner offset results

When "[Max Num of Offsets](#)" on [page 777](#) is 6, returns 28 results (Offset A-F: $24 = 4 + 4*6$) and when set to 12, returns 52 results (Offset A-L: $52 = 4 + 4 * 12$)

Absolute Power Units

*For Absolute power results, the units depend on the "[Measurement Type](#)" on [page 1996](#) and "[PSD Unit](#)" on [page 2004](#) settings as follows:

Measurement Type	PSD Unit	Unit
Total Pwr Ref	All	dBm
PSD Reference	dBm/Hz, DBMHZ	dBm/Hz
	dBm/MHz, DBMMHZ	dBm/MHz

Reference Power Result Details

The values returned as Reference Power #1 and Reference Power #2 depend on "[Power Ref](#)" on [page 1996](#):

Power Ref Setting	Option	Reference Power #1	Reference Power #2
Left & Right Carriers	LRCarriers	Left or Max Power Carrier in the lower sub-block	Right or Max Power Carrier in the upper sub-block
Max Power Carriers in Sub-block	MPCSubblock	dBm, dBm/Hz or dBm/MHz*	dBm, dBm/Hz or dBm/MHz*
Left & Right Sub-blocks	LRSubblocks	Integrated Power of the lower sub-block	Integrated Power of the upper sub-block

Power Ref Setting	Option	Reference Power #1	Reference Power #2
Others		dBm, dBm/Hz or dBm/MHz* 0.0	dBm, dBm/Hz or dBm/MHz* Reference carrier power dBm, dBm/Hz or dBm/MHz*

*For PSD results, the unit is determined by "PSD Unit" on page 2004. See "Absolute Power Units" on page 638 above

If any result is not available, 9.91E+37 (NaN) is returned

3.4.6 Views

This measurement has two predefined views:

View	Enumerated Parameter	SCPI Number
"Normal" on page 640	PRESult	1
"Carrier Info" on page 640	CINformation	2

These are multiple-window views. When in a multiple-window view, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the view changes, the default menu is **Frequency**, unless otherwise specified in the view description.

NOTE

Y Scale/Div, Y Ref Position, Y Auto Scale, Y Ref Value and Bar Graph affect both views. For example, power bars on the traces in both views appear or disappear when Bar Graph is toggled.

View Selection by Name

Selects the results view. The following command allows you to select the desired measurement view by enumerated parameter.

Remote Command	<code>:DISPlay:ACPower:VIEW[:SElect] PRESult CINformation</code> For view names, see table above <code>:DISPlay:ACPower:VIEW[:SElect]?</code>
Example	<code>:DISP:ACP:VIEW PRES</code> <code>:DISP:ACP:VIEW?</code>
Preset	<code>PRESult</code>
State Saved	Saved in instrument state
Range	<code>PRESult CINformation</code>

View Selection by Number (Remote Command Only)

Selects the results view. The following command allows you to select the desired measurement view numerically.

Remote Command	<code>:DISPlay:ACPower:VIEW:NSElect <integer></code> For view numbers, see table above <code>:DISPlay:ACPower:VIEW:NSElect?</code>
Example	<code>:DISP:ACP:VIEW:NSEL 1</code> <code>:DISP:ACP:VIEW:NSEL?</code>
Dependencies	Available only for LTEAFDD, LTEATDD and 5G NR Modes
Preset	1
State Saved	Saved in instrument state
Min/Max	1 / 2

3.4.6.1 Normal

Windows: "Graph" on page 640, "Metrics" on page 641,
Dual window view of the graph and the metrics.

Example	<code>:DISP:ACP:VIEW PRES</code>
---------	----------------------------------

3.4.6.2 Carrier Info

Windows: "Graph" on page 640, "Metrics" on page 641,
Dual window view of the graph and the metrics.

Example	<code>:DISP:ACP:VIEW CINF</code>
---------	----------------------------------

3.4.7 Windows

This section describes the windows that are available in this measurement.

3.4.7.1 Graph

Window #1

Used to display the spectrum being measured by the ACP measurement.

3 5G NR/5G-A Mode
 3.4 ACP Measurement

The results of the measurement can be displayed as a single spectrum trace view or displayed with a Bar Graph trace on the spectrum trace.

The Graph window appears in several Views, as follows:

View	Size	Position
Normal	Half, full width	Top
Carrier Info	Half, full width	Top
Gate View	One third, full width	Middle

When the Bar Graph is **ON** and Limit Test is **ON**, the color of each bar graph reflects the limit test result. When the limit test fails, the bar color is red, and when limit test passes, the bar color is green.

When RBW is selected as the measurement method, the spectrum trace is not displayed, only the bar graph is displayed. In addition, the Bar Graph control (under the Display front-panel key) is set to **ON** and is grayed-out.

3.4.7.2 Metrics

Window # 2 & 3

Displays the textual results of the ACP measurement.

Views in which the Metrics window appears:

View	Size	Position
Normal	Half, full width	Bottom
Carrier Info	Half, full width	Bottom
Gate View	One Third, full width	Bottom

Metrics Window in Normal view:

		Lower				Upper					
Offs Freq	Integ BW	ACP		Reference		ACP		Reference		Filter	
		dBc	dBm	dBm	Car #	dBc	dBm	dBm	Car #		
A	100.000 MHz	98.280 MHz	-47.03	-75.67	-28.64	1	-53.80	-82.43	-28.64	1	-3 dB
B	200.000 MHz	98.280 MHz	-45.32	-73.96	-28.64	1	-55.30	-83.94	-28.64	1	-3 dB
C	0.0 Hz	98.280 MHz	0.0	-28.64	-28.64	1	0.0	-28.64	-28.64	1	-3 dB
D	0.0 Hz	98.280 MHz	0.0	-28.64	-28.64	1	0.0	-28.64	-28.64	1	-3 dB
E	0.0 Hz	98.280 MHz	0.0	-28.64	-28.64	1	0.0	-28.64	-28.64	1	-3 dB

Metrics Window in Carrier Info view:

Carrier Power	Carrier PSD	Integ BW	Filter	Offset Freq	Measure
CC0	-28.50 dBm	98.280 MHz	-3 dB	0.0 Hz	On
CC1	-28.50 dBm	98.280 MHz	-3 dB	0.0 Hz	On
CC2	-28.50 dBm	98.280 MHz	-3 dB	0.0 Hz	On
CC3	-28.50 dBm	98.280 MHz	-3 dB	0.0 Hz	On
CC4	-28.50 dBm	98.280 MHz	-3 dB	0.0 Hz	On
CC5	-28.50 dBm	98.280 MHz	-3 dB	0.0 Hz	On

The text window displays the following results:

Total Carrier Power

This is the total power of all the carriers with carrier power present set to yes. The power is calculated by integrating across the bandwidth declared by the Carrier Integ BW parameter for each carrier and then totaling the sums. The total integration bandwidth is shown as part of the result. This will be the total of the Carrier Integ Bw of the carriers used in calculating the total carrier power. If the RRC Filter is on, then the integration bandwidth used is $(1 + \alpha)/T$ where $T = 1/(\text{Carrier Integ BW})$ multiplied by the number of carriers with carrier power present set to yes.

Ref Power

This is the power of the reference. The power is calculated by integrating across the bandwidth defined by the Reference Type. The integration bandwidth is shown as a part of the result. For some Power Reference Type, this is the value of the Carrier Integ BW for that carrier unless the RRC Filter is on, then the integration bandwidth used is the displayed value, which is $(1 + \alpha)/T$ where $T = 1/(\text{Carrier Integ BW})$.

Reference

In multi-carrier applications, this row displays what is used as a reference trace power.

Carrier Power

3 5G NR/5G-A Mode

3.4 ACP Measurement

This is the power in all the currently defined carriers. If the carrier has carrier power present, the power will be absolute. If the carrier is defined as not having power present, the power will be relative to the reference carrier. The power is calculated by integrating across the bandwidth declared by the Carrier Integ BW parameter. The integration bandwidth is shown as part of the result. This is the value of the Carrier Integ BW for the carrier unless the RRC Filter is on, then the integration bandwidth used is the displayed value, which is $(1 + \alpha)/T$ where $T = 1/(\text{Carrier Integ BW})$.

Offset Relative Power

This is the power in the offsets relative to the reference carrier. The power is calculated by integrating across the bandwidth declared by the Offset Integ BW parameter. The offset integration bandwidth is shown as part of the result. This is the value on the Offset Integ BW menu unless the RRC Filter is on, then the integration bandwidth used is the displayed value, which is $(1 + \alpha)/T$ where $T = 1/(\text{Offset Integ BW})$.

Offset Absolute Power

This is the absolute power in the offsets. The power is calculated by integrating across the bandwidth declared by the Offset Integ BW parameter. The offset integration bandwidth is shown as part of the result. This is the value on the Offset Integ BW menu unless the RRC Filter is on, then the integration bandwidth used is the displayed value, which is $(1 + \alpha)/T$ where $T = 1/(\text{Offset Integ BW})$.

RF-BW

Displays the total bandwidth from the lowest carrier to the highest carrier whatever their measurement states are on or off.

Integration Bandwidth

Displays the noise bandwidth of each carrier to be measured in the ACP measurement

Measure Trace

See ["Measure Trace" on page 3025](#).

Trace Type

This is the trace type (and view/blank parameter) of a trace specified by Measure Trace.

Measure Trace and Trace Type are displayed only when Meas Method is set to "Integration BW", "Filtered IBW", or "Fast Power"

Filter

Indicates whether RRC filter is used for ACP measurement or not.

Offset Frequency

Shows the offset frequency from the carrier reference frequency in multi-carrier measurements. The carrier frequency display type determines whether the relative frequency or absolute frequency will be displayed.

Sub-block

For intra-band non-contiguous spectrum operation, the sub-block concept is introduced, which refers to one contiguous allocated block of spectrum for transmission and reception in the intra-band non-contiguous aggregation mode. So far we support the two sub-blocks. It displays which sub-block the carrier belongs to in the intra-band non-contiguous aggregation mode. The column will be displayed when the carrier allocation mode is non-contiguous.

Measure

Shows whether the carrier power presents or not.

3.4.7.3 Gate

Window # 4

Turning on Gate View displays the Gate Window, which allows you to see your gating signal at the same time as the measured data. See the description under **Gate View** in the **Trigger, Gate Settings** section.

View	Size	Position
Gate View	One third, full width	Top

3.4.7.4 Marker Table

Window# 5

Displays a table containing detailed information about all the markers in the current measurement. It can be selected from the Data control on the Window Title. There is no specific view in which the **Marker Table** window turns on, it is on by demand.

3.4.8 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.4.8.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The reference line is at the top, center, or bottom of the graticule, depending on the value of the **Ref Position** function.

Remote Command	<code>:DISPlay:ACPower:WINDow[1]:TRACe:Y[:SCALe]:RLEVel <real></code>
Example	<code>:DISP:ACP:WIND:TRAC:Y:RLEV 100</code> <code>:DISP:ACP:WIND:TRAC:Y:RLEV?</code>
Couplings	When "Auto Scaling" on page 647 is ON (default), this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling changes to OFF "Attenuation" on page 2951 is not coupled to Ref Value
Preset	10.00 dBm
State Saved	Saved in instrument state
Min/Max	-250.00 dBm / 250.00 dBm
Annotation	Ref <value> top left of graph
Backwards Compatibility SCPI	<code>:DISPlay:ACPower:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVel</code>

Scale/Div

For measurements that support a logarithmic Y-Axis, **Scale/Div** sets the height of one division of the graticule in the current Y-Axis unit.

Scale/Div also determines the displayed amplitude range in the log plot graph. Since there are usually 10 vertical graticule division on the display, the total amplitude range of the graph is typically 10x this amount. For example, if Scale/Div is 10 dB, then the total range of the graph is 100 dB.

Remote Command	<code>:DISPlay:ACPower:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <rel_ampl></code>
Example	<code>:DISP:ACP:WIND:TRAC:Y:PDIV 5</code> <code>:DISP:ACP:WIND:TRAC:Y:PDIV?</code>

Couplings	Coupled to "Scale Range" on page 1244 as follows: Scale/Div = Scale Range/10 (number of divisions) When "Auto Scaling" on page 647 is ON , this value is automatically determined by the measurement result When you change a value, Auto Scaling automatically changes to Off
Preset	10.00 dB / Div
State Saved	Saved in instrument state
Min	0.10 dB
Max	20 dB
Annotation	<value> dB/ left upper of graph
Backwards Compatibility SCPI	<code>:DISPlay:ACPower:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision</code>

Scale Range

Sets the Y-Axis scale range.

Remote Command	Replace <code><meas></code> with the identifier for the current measurement <code>:DISPlay:<meas>:WINDow[1]:TRACe:Y[:SCALe]:RANGe <rel_amp1></code> <code>:DISPlay:<meas>:WINDow[1]:TRACe:Y[:SCALe]:RANGe?</code>
Example	<code>:DISP:CHP:WIND:TRAC:Y:RANG 100</code> <code>:DISP:CHP:WIND:TRAC:Y:RANG?</code>
Couplings	Coupled to Scale/Div as follows Scale Range = Scale/Div * 10 (number of divisions) When you change this value, Auto Scaling automatically changes to OFF
Preset	100 dB
State Saved	Saved in instrument state
Min	1
Max	200

Ref Position

Positions the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

Remote Command	<code>:DISPlay:ACPower:WINDow[1]:TRACe:Y[:SCALe]:RPOSition TOP CENTER BOTTOm</code> <code>:DISPlay:ACPower:WINDow[1]:TRACe:Y[:SCALe]:RPOSition?</code>
----------------	---

Example	<code>:DISP:ACP:WIND:TRAC:Y:RPOS CENT</code> <code>:DISP:ACP:WIND:TRAC:Y:RPOS?</code>
Preset	TOP
State Saved	Saved in instrument state
Range	TOP CENTER BOTTOM
Annotation	The greater than (>) and less than (<) symbols are displayed on both sides of the graph to indicate the Reference Position
Backwards Compatibility SCPI	<code>:DISPlay:ACPower:VIEW[1]:WINDow[1]:TRACe:Y[:SCALE]:RPOSition</code>

Auto Scaling

Toggles **Auto Scaling** On or Off.

Remote Command	<code>:DISPlay:ACPower:WINDow[1]:TRACe:Y[:SCALE]:COUPle 0 1 OFF ON</code> <code>:DISPlay:ACPower:WINDow[1]:TRACe:Y[:SCALE]:COUPle?</code>
Example	<code>:DISP:ACP:WIND:TRAC:Y:COUP OFF</code> <code>:DISP:ACP:WIND:TRAC:Y:COUP?</code>
Couplings	When Auto Scaling is ON , and the Restart front-panel key is pressed, this function automatically sets the scale per division to 10 dB and determines the reference values based on the measurement results When you change the value of "Scale/Div" on page 645, "Ref Value" on page 645, or "Scale Range" on page 1244, Auto Scaling automatically changes to OFF
Preset	1
State Saved	Saved in instrument state
Range	OFF ON

3.4.8.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See "Dual-Attenuator Configurations" on page 648
- See "Single-Attenuator Configuration" on page 649

Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

Dependencies In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

Configuration 2: Mechanical attenuator, no optional electronic attenuator

Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command `[:SENSe]:POWer[:RF]:FRATten <rel_amp>`
`[:SENSe]:POWer[:RF]:FRATten?`

Note that this is the same command as that for "[Atten >50 GHz](#)" on page 2961 in N9042B

Example	<code>:POW:FRAT 14</code> <code>:POW:FRAT?</code>
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Available on N9041B UXA Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See Reference Level and " Mech Atten " on page 2954 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	<p>When the Input is RF, and the Input Port is RF Input 2, and the Full Range Attenuator is installed: On the Meas Bar, the field "Atten" displays as follows:</p> <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten + Full Range Atten - If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Full Range Atten - If the sweep straddles 50 GHz, the value shown after "Atten:" is preceded by the symbol ">=" and is equal to Full Range Atten <p>In the Amplitude, "Y Scale" on page 2948 menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows:</p> <p>"Total Atten below 50 GHz" followed by the value of Full Range Atten + Mech Atten + Elec Atten "Total Atten above 50 GHz" followed by the value of Full Range Atten</p> <p>For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:</p> <ul style="list-style-type: none"> - Attenuator summary: - Total Atten below 50 GHz: 30 dB - Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "**Internal Preamp**" on page 2979, and any External Gain that is entered, as described in the table below.

See ["Attenuator Configurations and Auto/Man" on page 653](#)

Remote Command	<code>[:SENSe]:POWer[:RF]:ATTenuation <rel_amp></code> <code>[:SENSe]:POWer[:RF]:ATTenuation?</code>
Example	<code>:POW:ATT 20</code> Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of "main" attenuation) In either case, if the attenuator was in Auto, it is set to Manual
Dependencies	Available on benchtop models. Some measurements do not support Auto setting of Mech Atten . In these measurements, the Auto/Man selection is not available, and the Auto/Man toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the Auto/Man toggle function is not available. The state of Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 2957 See "Attenuator Configurations and Auto/Man" on page 653 for more information on the Auto/Man functionality
Couplings	If the RF Input Port is the RF Input: <ul style="list-style-type: none"> - If the USB Preamp is connected to USB, use 0 dB for Mech Atten - Otherwise compute the auto-selected value of Mech Atten based on Reference Level, Int Preamp, External Gain, Ref Level Offset, Max Mixer Level, μW Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) - In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 2953 from the result to determine the Mech Atten. Limit the value so that it is never lower than 0 dB and so that total attenuation, including Full Range Atten, is never less than 6 dB (total attenuation, including Full Range Atten below 6 dB, can never be chosen by Auto) In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when Mech Atten is in Auto , but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is <= 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB
Preset	Auto value if Auto/Manual function is supported The Auto value is various 10 dB if Auto/Manual function is not supported
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input

	<p>circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased</p>						
Max	<table border="1"> <tr> <td>CXA Option 503 or 507</td> <td>50 dB</td> </tr> <tr> <td>EXA</td> <td>60 dB</td> </tr> <tr> <td>All other models</td> <td>70 dB</td> </tr> </table> <p>Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB</p>	CXA Option 503 or 507	50 dB	EXA	60 dB	All other models	70 dB
CXA Option 503 or 507	50 dB						
EXA	60 dB						
All other models	70 dB						
Annotation	<p>The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as:</p> <p><i>Atten: <total> dB (e<elec>)</i></p> <p>The letter e is in amber in Single-Attenuator configurations</p> <p>For example:</p> <p>Dual-Attenuator configuration:</p> <p><i>Atten: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB</p> <p>Single-Attenuator configuration:</p> <p><i>A: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)</p> <p>When in Manual, a # sign appears in front of Atten in the annotation</p> <p>Auto Function</p>						
Remote Command	<pre>[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF ON 0 1 [:SENSe]:POWer[:RF]:ATTenuation:AUTO?</pre>						
Example	<p>Turn Auto Mech AttenON:</p> <pre>:POW:ATT:AUTO ON</pre>						
Dependencies	<p>Available on benchtop models.</p> <p>Available in:</p> <ul style="list-style-type: none"> Spectrum Analyzer Mode – Swept SA measurement Real-Time Spectrum Analyzer Mode – Spectrum & PVT measurement Remote Language Compatibility Mode – Swept SA measurement (Remote command depends on Compatibility Model setting) SCPI Language Compatibility Mode – Swept SA measurement (Remote command depends on Compatibility Model setting) Avionics Mode – all measurements Measuring Receiver Mode – all measurements except for Audio measurements 						
Preset	ON						

Attenuator Configurations and Auto/Man

As described under "Attenuation" on page 2951, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using **Mech Atten** (or `:POW:ATT`) as the "main" attenuation; and the attenuation that is set by `:POW:EATT` as the "soft" attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "Elec Atten" on page 2957 for more about "soft" attenuation.

NOTE

In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see ["More Information" on page 655](#)

Remote Command	<code>[:SENSe] :POWer [:RF] :EATTenuation <rel_amp1></code> <code>[:SENSe] :POWer [:RF] :EATTenuation?</code>
Example	<code>:POW:EATT 10</code> <code>:POW:EATT?</code>
Notes	Electronic Attenuation's specification is defined only when Mech Atten is 6 dB
Dependencies	<p>Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the Attenuation control or <code>:POW:ATT</code>, and affects the total attenuation displayed on the Attenuation control and the Meas Bar</p> <p>The electronic attenuator, and the "soft" attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If "Internal Preamp" on page 2979 is ON (that is, set to Low Band or Full), the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned</p> <p>If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence</p> <p>If the electronic/soft Attenuator is enabled, then the Stop Freq of the instrument is limited to 3.6 GHz and Internal Preamp is unavailable</p> <p>If "LNA" on page 2981 is ON, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out. This coupling works in the following modes/measurements:</p> <ul style="list-style-type: none"> - Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes - Transmit On Off Power measurement in 5GNR Mode - Power vs. Time and Transmit Power measurement in GSM/EDGE Mode - Burst Power measurement in Spectrum Analyzer Mode <p>The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement</p>
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical

	Attenuator Transition Rules" on page 656
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the Mech Atten control description
Auto Function	
Remote Command	<code>[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:EATTenuation:STATe?</code>
Example	<code>:POW:EATT:STAT ON</code> <code>:POW:EATT:STAT?</code>
Preset	OFF (Disabled) for Swept SA measurement ON (Enabled) for all other measurements that support the electronic attenuator

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See ["Using the Electronic Attenuator: Pros and Cons" on page 657](#) for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the "soft" attenuation feature replaces the Dual-Attenuator configuration's electronic attenuator. All the same couplings and limitations apply. See ["Attenuator Configurations and Auto/Man" on page 2956](#)

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Atten >50 GHz

Only appears in N9042B with Option 575 installed.

Modifies the attenuation applied to the internal frequency extender’s frequency path above 50 GHz to 75 GHz. This setting is applicable without an external frequency extender connected.

Remote Command	<code>[:SENSe]:POWer[:RF]:FRATten <rel_amp></code> <code>[:SENSe]:POWer[:RF]:FRATten?</code> Note that this is the same command as that for "Full Range Atten" on page 2953 in N9041B
Example	<code>:POW:FRAT 14</code> <code>:POW:FRAT?</code>
Dependencies	Only appears in N9042B with Option 575, if input RF is selected, and RF Input Port is selected
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB
Max	26 dB
Annotation	When Input is RF , Input Port is RF Input , and the Option 575 Internal Frequency Extender is present:

On the Meas Bar, the field “Atten” displays as follows:

- If the sweep is entirely < 50 GHz, the value shown after “Atten:” is equal to Mech Atten + Elec Atten
- If the sweep is entirely > 50 GHz, the value shown after “Atten:” is equal to Atten > 50 GHz
- If the sweep straddles 50 GHz, the value shown after “Atten:” is the Mech Atten + Elec Atten value, followed by “|” then the Atten >50 GHz. Example “Atten: 20 dB | 24 dB”

In the Amplitude, “Y Scale” on page 2948 menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows:

“Attenuation below 50 GHz” followed by the value of Mech Atten + Elec Atten

“Attenuation above 50 GHz” followed by the value of Atten > 50 GHz

For example, if “Mech Atten” on page 2954 = 6 dB, Elec Atten = 4 dB, Atten > 50 GHz = 20 dB, the summary below is shown:

- Attenuator summary:
- Attenuation below 50 GHz: 10 dB
- Attenuation above 50 GHz: 20 dB

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under “Pre-Adjust for Min Clipping” on page 2963.

Remote Command	<code>[:SENSe] : POWer [:RF] : RANGe : OPTimize IMMEDIATE</code>
Example	<code>: POW : RANG : OPT IMM</code>
Notes	Executing Adjust Atten for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes

Restart Meas on Adjust Atten

Toggles the force restart switch for the “Adjust Atten for Min Clipping” on page 2962 function.

When **ON**, pressing **Adjust Atten for Min Clipping**, or sending `[:SENSe]:POWer [:RF]:RANGe:OPTimize IMMEDIATE` restarts the measurement and then executes the function.

When **OFF**, pressing the control or sending the command neither restarts the measurement nor executes the function until you restart or continue averaging. In this case, pressing the control generates the following advisory message:

"Adjust Atten is deferred until "Restart" or "Continue Averaging" is executed"

This message is *not* generated if the command is sent.

Remote Command	<code>[:SENSe]:POWer [:RF]:RANGe:OPTimize:REStart OFF ON 0 1</code> <code>[:SENSe]:POWer [:RF]:RANGe:OPTimize:REStart?</code>
Example	<code>:POW:RANG:OPT:REST OFF</code> <code>:POW:RANG:OPT:REST?</code>
Dependencies	Available only in measurements that support continuous averaging
Preset	ON
State Saved	Saved

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer [:RF]:RANGe:OPTimize IMMEDIATE` is executed.

Remote Command	<code>[:SENSe]:POWer [:RF]:RANGe:OPTimize:TYPE EONLY COMBined</code> <code>[:SENSe]:POWer [:RF]:RANGe:OPTimize:TYPE?</code>
Example	<code>:POW:RANG:OPT:TYPE EONL</code> <code>:POW:RANG:OPT:TYPE?</code>
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	COMBined
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under "**Adjust Atten for Min Clipping**" on page 2962 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See ["Adjustment Algorithm" on page 661](#)

Selection	SCPI	Note
Off	OFF	This is the default setting
On	ON	Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the ON parameter is supported and mapped to COMBined
Elec Atten Only	ELECtrical	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Elec+Mech Atten	COMBined	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECtrical COMBined [:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?	
Example	:POW:RANG:OPT:ATT OFF :POW:RANG:OPT:ATT?	
Notes	The parameter option ELECtrical sets this function to ON in Single-Attenuator models The parameter option COMBined is mapped to ELECtrical in Single-Attenuator models. If you send COMBined , it sets the function to ON and returns ELEC to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined	
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 2957 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 659 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes	
Preset	OFF when Elec Atten is Disabled at preset, otherwise ELEC	
State Saved	Saved in instrument state	
Range	Dual-Attenuator models:	Off Elec Atten Only Mech + Elec Atten
	Single-Attenuator models:	Off On

Backwards Compatibility Command

Notes	ON aliases to "Elec Atten Only" (:POW:RANG:OPT:ATT ELEC)
-------	---

OFF aliases to "Off" (:POW:RANG:OPT:ATT OFF)
:POW:RANG:AUTO? returns true if :POW:RANG:OPT:ATT is not OFF

Backwards [:SENSe]:POWer[:RF]:RANGe:AUTO ON | OFF | 1 | 0
Compatibility [:SENSe]:POWer[:RF]:RANGe:AUTO?
SCPI

Adjustment Algorithm

The algorithms for the adjustment are documented below:

Single-Attenuator Models

Dual-Attenuator models

"Adjust Atten for Min Clipping" on page 2962 or "Pre-Adjust for Min Clipping" on page 659 selection is Mech + Elec Atten:

"Pre-Adjust for Min Clipping" on page 659 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.

Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command `[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

	<code>[:SENSe] :POWer [:RF] :ATTenuation :STEP [:INCRement] ?</code>
Example	<code>:POW:ATT:STEP 2</code> <code>:POW:ATT:STEP?</code>
Notes	Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.4.8.3 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved	No
-------------	----

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	<code>[:SENSe] :POWer [:RF] :RANGe <real></code> <code>[:SENSe] :POWer [:RF] :RANGe?</code>
Example	<code>:POW:RANG 10 dBm</code> <code>:POW:RANG?</code>
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency . The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min/Max	-/+100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code>
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements

Restart Meas on Adjust Range

The same as "[Restart Meas on Adjust Atten](#)" on page 2962 under "[Attenuation](#)" on page 2951.

Min Acq Time for Adjust Range

The acquisition time of auto range is set up internally, based on application/Mode. For a low-duty-cycle TDD signal, the acquisition of auto range would only capture the noise part, and the calculated range value will be unreasonable. So, in the low-duty-cycle TDD signal case, set **Min Acq Time for Adjust Range** to limit the min acquisition time of auto range. **Min Acq Time for Adjust Range** should be set to a value to make sure the auto range acquisition always covers the signal part.

The default value, 0 s, specifies that there is no user-set **Min Acq Time for Adjust Range**, and the internal calculated time will be used for acquisition. If the user-set **Min Acq Time for Adjust Range** is less than the internally calculated time, it will still result in using the internally calculated time.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TIME:MINimum <time></code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TIME:MINimum?</code>
Example	Set the Min Adjust time to 95 ms: <code>:POW:RANG:OPT:TIME:MIN 95 ms</code> <code>:POW:RANG:OPT:TIME:MIN?</code>
Preset	0 s
State Saved	Saved in instrument state

Offset for Adjust Range

Used when additional optimization is needed to the result of **Adjust Range for Min Clipping**.

When you set **Offset for Adjust Range**, then perform **Adjust Range for Min Clipping**, the new range is as follows:

Range = result of **Adjust Range for Min Clipping** + entered **Offset for Adjust Range**

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:OFFSet?</code>
Example	<code>:POW:RANG:OPT:OFFS 10 dB</code> <code>:POW:RANG:OPT:OFFS?</code>
Notes	Set Offset for Adjust Range before performing Adjust Range for Min Clipping , otherwise the result will not be applied "Input Overload" error might be reported with inappropriate negative value of Offset for Adjust Range
Preset	0 dB
State Saved	Saved in instrument state
Min/Max	-/+20 dB

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under **Adjust Range For Min Clipping** each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code>
Notes	Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELECTrical , COMBined , and ON) are honored and all are mapped to ELECTrical , so if any of these three parameters is sent, a subsequent query will return ELEC
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements
Preset	OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 2972 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	[:SENSe]:POWer[:RF]:RANGe:PARatio <real> [:SENSe]:POWer[:RF]:RANGe:PARatio?	
Example	:POW:RANG:PAR 12 dB	
Notes	In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated	
Dependencies	Does not appear in Spectrum Analyzer Mode	
Preset	VXT Models M9410A/11A	0 dB
	All Others	10 dB
State Saved	Saved in instrument state	

Min	0 dB	
Max	VXT Models M9410A/11A	50 dB
	All Others	20 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 2975. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?</code>	
Example	<code>:POW:RANG:MIX:OFFS -5 dB</code>	
Preset	0 dB	
State Saved	Saved in instrument state	
Min	VXT Models M9410A/11A	-34 dB
	All Others	-35 dB
Max	30 dB	

3.4.8.4 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "[Software Preselection](#)" on page 2992 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy. When **Presel Center** is pressed, the instrument performs centering on the

measurements center frequency.

For the Swept SA measurement of the Spectrum Analyzer mode, Presel Center adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "**Preselector Adjust**" on page 2978 changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "**Proper Preselector Operation**" on page 670.

Remote Command	<code>[:SENSe] :POWer [:RF] :PCENter</code>
Example	<code>:POW:PCEN</code>
Notes	The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command
Dependencies	Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off <ul style="list-style-type: none"> - If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken - Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz - Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in " Preselector Adjust " on page 2978
Status Bits/OPC dependencies	When centering the preselector, *OPC does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to <code>:READ</code> or <code>:MEASure</code> queries The Measuring bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when ["Presel Center" on page 2977](#) is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	<code>[:SENSe] :POWer [:RF] :PADJust <freq></code> <code>[:SENSe] :POWer [:RF] :PADJust?</code>
Example	<code>:POW:PADJ 100KHz</code> <code>:POW:PADJ?</code>
Notes	The value on the control is displayed to 0.1 MHz resolution
Dependencies	<ul style="list-style-type: none"> - Does not appear in CXA-m - Does not appear in VXT Models M9410A/11A/15A/16A - Does not appear in M9410E/11E/15E/16E - Grayed-out if microwave preselector is off

	<ul style="list-style-type: none"> - Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz - Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz - Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Preset	0 MHz
State Saved	The Preselector Adjust value set by " Presel Center " on page 2977, or by manually adjusting Preselector Adjust Not saved in instrument state, and does not survive a Preset or power cycle
Min/Max	-/+500 MHz
Backwards Compatibility SCPI	<code>[:SENSe] :POWer [:RF] :MW:PADJust</code> <code>[:SENSe] :POWer [:RF] :MMW:PADJust</code> Backwards Compatibility Command
Notes	The command has no effect, and the query always returns <code>MWAVE</code>
Backwards Compatibility SCPI	<code>[:SENSe] :POWer [:RF] :PADJust:PRESelector MWAVE MMWave EXTernal</code> <code>[:SENSe] :POWer [:RF] :PADJust:PRESelector?</code>

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	<code>:POW:GAIN OFF</code>	
Low Band	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND LOW</code>	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown

Selection	Example	Note
Full Range	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND FULL</code>	<p>Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp</p> <p>The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear</p>

NOTE

The maximum **Center Frequency for Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:BAND LOW FULL</code> <code>[:SENSe]:POWer[:RF]:GAIN:BAND?</code>
Example	<code>:POW:GAIN:BAND LOW</code> <code>:POW:GAIN:BAND?</code>
Dependencies	<p>Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown</p> <p>Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E</p> <p>If <code>:POW:GAIN:BAND FULL</code> is sent when a low band preamp is available, the preamp band parameter is set to LOW instead of FULL, and an "Option not installed" message is generated</p> <p>Not available when the electronic/soft attenuator is enabled</p>
Preset	LOW
State Saved	Saved in instrument state
Annotation	<p>When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz"</p> <p>When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp)</p>

Auto Function

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN[:STATe]?</code>
Example	<code>:POW:GAIN OFF</code> <code>:POW:GAIN?</code>
Preset	<code>OFF</code>

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to ["Internal Preamp" on page 2979](#). LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, **LNA** can be turned on *together* with ["Internal Preamp" on page 2979](#), although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see ["More Information" on page 673](#)

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?</code>
Example	<code>:POW:GAIN:LNA ON</code>
Dependencies	Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled
Preset	<code>OFF</code>
State Saved	Saved in State

More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:

```
Atten: 8 dB
Pre: Int on, LNA on
μW Path: LNP, On
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to **ON**). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```

Atten: 8 dB
Pre: Int off, LNA on
μW Path: LNP, On
Source: Off

```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21–26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

3 5G NR/5G-A Mode
3.4 ACP Measurement

Path	SCPI	Note
Standard Path	<code>STD</code>	Normal setting for most measurements. μ W Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	<code>LNPath</code>	See " Low Noise Path Enable " on page 678
μ W Preselector Bypass	<code>MPBypass</code>	See " μW Preselector Bypass " on page 680
Full Bypass Enable	<code>FULL</code>	See " Full Bypass Enable " on page 681

Remote Command `[:SENSe]:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL`
`[:SENSe]:POWer[:RF]:MW:PATH?`

Example `:POW:MW:PATH LNP`
 Selects **Low Noise Path Enable**

Notes
 When "[Presel Center](#)" on page 2977 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of **μ W Path Control**
 The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is **Low Noise Path Enable** or **Full Bypass Enable**. In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled
 Alignment switching ignores the settings in this menu, and restores them when finished

Dependencies
 Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing

- The **Low Noise Path Enable** selection does not appear unless Option LNP is present and licensed
- The **μ W Preselector Bypass** selection does not appear unless Option MPB is present and licensed
- The **Full Bypass Enable** selection does not appear unless options LNP and MPB are both present as well as option FBP

In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated
Low Noise Path Enable and **Full Bypass Enable** are grayed-out if the current measurement does not support them
Low Noise Path Enable and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, "Setting Conflict; Feature not supported for this measurement"

Couplings	See " μW Path Control Auto " on page 676 above
Preset	ON
Range	ON OFF

Low Noise Path Enable

SCPI: [LNPath](#)

Provides a lower noise floor under some circumstances, particularly when operating in the 21– 26.5 GHz region. With the Low Noise Path enabled, the low

band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

μW Preselector Bypass

SCPI: [MPBypass](#)

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

SCPI: [FULL](#)

The microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user

interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 2948 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar: "Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

Notes	Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (:POW:MW:PATH STD) The OFF parameter sets path MPB (:POW:MW:PATH MPB)
Preset	ON
Backwards Compatibility SCPI	[:SENSe] :POWer [:RF] :MW:PRESelector [:STATe] ON OFF 0 1 [:SENSe] :POWer [:RF] :MW:PRESelector [:STATe] ?

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender’s preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender

Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

Type	ID	
	159	Settings Alert - DETECTED; Presel/Meas BW conflict

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 2982.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 2982 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 2948 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar: "Full Bypass Enabled, maximum safe input power reduced"

Remote Command `[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL ON | OFF | 1 | 0`
`[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL?`

Example `:POW:MW:PATH:AUTO:FULL ON`
`:POW:MW:PATH:AUTO:FULL?`

Dependencies Only appears if Option FBP is installed, and in the following measurements
 - 5GNRMode: Modulation Analysis and IQ Waveform

	- WLAN Mode: IQ Waveform
	- Channel Quality Mode: Group Delay and Noise Power Ratio
Preset	OFF
State Saved	Saved in instrument state

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M941xA and M941xE

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPreSel:STATe 0 1 ON OFF</code> <code>[:SENSe]:POWer[:RF]:SWPreSel:STAT?</code>
Example	<code>:POW:SWPR:STAT 1</code> <code>:POW:SWPR:STAT?</code>
Dependencies	Only appears in N9041B, N9042B+V2050A, VXT models M941xA and M941xE. Does not appear in all measurements
Couplings	Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state
Preset	N9041B OFF N9042B+V3050A ON M941xA and M941xE ON
State Saved	Saved in instrument state

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are

images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel NORMa1 ADVanced</code> <code>[:SENSe]:POWer[:RF]:SWPResel?</code>
Example	<code>:POW:SWPR NORM</code> <code>:POW:SWPR?</code>
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 2992 is OFF. The grayout message is “Unavailable unless SW Presel enabled”
Preset	N9041B ADVanced N9042B+V3050A NORMa1
State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)
- **NARRow**– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel:BW NORMa1 NARRow</code> <code>[:SENSe]:POWer[:RF]:SWPResel:BW?</code>
----------------	---

Example	<code>:POW:SWPR:BW NARR</code>	
Dependencies	<p>Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method</p> <p>Grayed-out when "Software Preselection" on page 2992 is OFF. The grayout message is "Unavailable unless SW Presel enabled"</p> <p>For N9042B+V3050A, the parameter is SCPI-only, and always set to NARRow when Software Preselection is enabled</p>

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A, M9410E/11E and S9110E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	<code>[:SENSe] : <measurement> : PFILter [:STATe] ON OFF 1 0</code> <code>[:SENSe] : <measurement> : PFILter [:STATe] ?</code>							
Example	<p>Enable High Freq Prefilter for the Complex Spectrum Measurement in BASIC Mode: <code>:SPEC:PFIL ON</code></p> <p>Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes: <code>:WAV:PFIL ON</code></p> <p>Enable High Freq Prefilter for the Swept SA Measurement in SA Mode: <code>:SAN:PFIL ON</code></p>							
Dependencies	<p>Only appears in instruments based on M9410A/11A, e.g. M9411E, S9110E and S9110A. This control is only functional in limited frequency ranges:</p> <table border="1"> <thead> <tr> <th>Frequency range</th> <th>Products or Port</th> </tr> </thead> <tbody> <tr> <td>Above 1310 MHz</td> <td>M9410A/11A</td> </tr> <tr> <td>1310 MHz to 5000 MHz</td> <td>M9410E/11E RF port on S9110E</td> </tr> </tbody> </table>		Frequency range	Products or Port	Above 1310 MHz	M9410A/11A	1310 MHz to 5000 MHz	M9410E/11E RF port on S9110E

3.4.9 BW

Opens the **BW** menu, which contains controls for the Resolution Bandwidth and Video Bandwidth functions of the instrument.

The Resolution BW functions control filter bandwidth and filter type. There are two filter types, Gaussian and Flattop. The Gaussian filters have a response curve that is parabolic on a log scale. The Flattop filter shape is a close approximation of a rectangular filter.

3.4.9.1 Settings

Contains the basic Bandwidth functions. In most measurements it is the only tab under Bandwidth.

Res BW

Activates the resolution bandwidth active function, which allows you to manually set the resolution bandwidth (RBW) of the instrument.

Normally, **Res BW (Auto)** selects automatic coupling of **Res BW** to ["Span" on page 705](#). To decouple the resolution bandwidth, press the **Auto/Man** toggle on the **Res BW** control, or simply enter a different value for **Res BW**.

When **Res BW** is manually selected, it may be returned to the coupled state by pressing the **Auto/Man** toggle on the **Res BW** control. This may also be done by pressing ["Auto Couple" on page 3017](#) or by performing a **Preset**.

For more Mode-specific details, see: ["More Information" on page 690](#)

Remote Command	<code>[:SENSe]:ACPower:BANDwidth[:RESolution] <bandwidth></code> <code>[:SENSe]:ACPower:BANDwidth[:RESolution]?</code>												
Example	<code>:ACP:BAND 5 MHz</code> <code>:ACP:BAND?</code>												
Notes	<p>For numeric entries, all Res BW Types choose the nearest (arithmetically, on a linear scale, rounding up) available Res BW to the value entered</p> <p>The setting and querying of values depend on the current bandwidth type</p> <p>This parameter is preset by "Meas Method" on page 719. Preset values are:</p> <table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td rowspan="2">5GNR, LTEAFDD/TDD, MSR, VMA, SRCOMM</td> <td>IBW 100 kHz</td> </tr> <tr> <td>IBWR 30 kHz</td> </tr> <tr> <td rowspan="2">SA</td> <td>IBW 220 kHz</td> </tr> <tr> <td>IBWR 30 kHz</td> </tr> <tr> <td rowspan="3">WCDMA</td> <td>IBW 100 kHz</td> </tr> <tr> <td>IBWR 27 kHz</td> </tr> <tr> <td>FAST 390 kHz</td> </tr> </tbody> </table> <p>When Meas Method is FPOwer and Fast Power RBW mode is "Best Speed," RBW is calculated as follows: $RBW = \text{Span} \times 2.442 \times 10^{-3}$</p>	Modes	Values	5GNR, LTEAFDD/TDD, MSR, VMA, SRCOMM	IBW 100 kHz	IBWR 30 kHz	SA	IBW 220 kHz	IBWR 30 kHz	WCDMA	IBW 100 kHz	IBWR 27 kHz	FAST 390 kHz
Modes	Values												
5GNR, LTEAFDD/TDD, MSR, VMA, SRCOMM	IBW 100 kHz												
	IBWR 30 kHz												
SA	IBW 220 kHz												
	IBWR 30 kHz												
WCDMA	IBW 100 kHz												
	IBWR 27 kHz												
	FAST 390 kHz												
Dependencies	Disabled when Meas Method is RBW , FAST , or FPOwer , and Fast Power RBW mode is Best Speed If pressed, an advisory message is generated. If the equivalent SCPI command is sent, a "Setting conflict" warning is generated												
Couplings	Sweep time is coupled to RBW. As RBW changes, the sweep time (if set to Auto) is changed to maintain amplitude calibration "Video BW" on page 691 is coupled to Res BW . As the resolution bandwidth changes, the video bandwidth (if set to Auto) changes to maintain the ratio of VBW/RBW (10:1)												

	When Res BW is set to Auto , the resolution bandwidth is auto-coupled to the span. The ratio of Span/RBW is approximately 106:1 when auto coupled. When Res BW is set to Man , and the bandwidths are entered manually, these bandwidths are used regardless of other instrument settings
Preset	Auto, unless noted in "RBW Presets" on page 690
State Saved	Saved in instrument state
Min	1 Hz
Max	8 MHz is the max equivalent -3 dB RBW, which means that the named RBW (the one shown on the control etc.) can actually exceed 8 MHz if using a filter other than -3 dB Gaussian
Annotation	A "#" mark appears before "RBW" in the annotation when it is switched from Auto to Manual coupling
Backwards Compatibility Notes	For backwards compatibility, this command accepts both the BANDwidth and BWIDth forms For ESA, the maximum Res BW was 5 MHz; for X-Series it is 8 MHz The following command is supported <code>[:SENSe] :ACP :SWEep :BANDwidth BWIDth [:RESolution]</code>
	Auto Function
Remote Command	<code>[:SENSe] :ACP :Power :BANDwidth [:RESolution] :AUTO ON OFF 1 0</code> <code>[:SENSe] :ACP :Power :BANDwidth [:RESolution] :AUTO?</code>
Example	<code>:ACP :BAND :AUTO ON</code> <code>:ACP :BAND :AUTO?</code>
Preset	See "RBW Presets" on page 690

RBW Presets

Unless noted in the table below, the Preset value of **Res BW** is **Auto**.

Mode	Preset Value
WCDMA	100 kHz
MSR	100 kHz
SA	220 kHz
5G NR	100 kHz

More Information

When **Res BW** is set to **Auto**, the bandwidth selected depends on "RBW Filter Type" on page 692.

Only certain discrete resolution bandwidths are available. The available bandwidths are dependent on the **RBW Filter Type** or the **EMC Standard**. If an unavailable bandwidth is entered with the numeric keypad, the closest available bandwidth is selected.

In some PowerSuite measurements, in the LTE-Advanced (both FDD and TDD) Modes, when **Res BW** is **Auto**, the resolution bandwidth is predefined based on the

corresponding bandwidth of the single LTE carrier, as shown in the table below. In the Multi-carrier case, the narrowest **Res BW** among the active carriers is used.

LTEAFDD, LTEATDD Modes

Carrier BW	Auto Res BW, kHz
1.4 MHz	51
3 MHz	51
5 MHz	100
10 MHz	100
15 MHz	100
20 MHz	100
200 kHz (NB-IoT in FDD)	10

5G NR Mode

100 kHz for all carrier bandwidths.

Video BW

Lets you change the instrument post-detection filter (VBW or “video bandwidth”) from 1 Hz to 8 MHz in approximately 10% steps. In addition, a wide-open video filter bandwidth may be chosen by selecting 50 MHz. The VBW is annotated at the bottom of the display, in the center.

Normally, **Video BW (Auto)** selects automatic coupling of the Video BW to **"Res BW"** on page 689. To decouple the resolution bandwidth, press the **Auto/Man** toggle on the **Video BW** control, or simply enter a different value for **Video BW**.

When the **Video BW** is manually selected, it may be returned to the coupled state by pressing the **Auto/Man** toggle on the **Video BW** control. This may also be done by pressing **"Auto Couple"** on page 3017 or by performing a **Preset**.

For more information, see **"VBW Presets"** on page 692

Remote Command	<code>[:SENSe]:ACPower:BANDwidth:VIDeo <bandwidth></code> <code>[:SENSe]:ACPower:BANDwidth:VIDeo?</code>
Example	<code>:ACP:BAND:VID 2.4 MHz</code> <code>:ACP:BAND:VID?</code>
Notes	For numeric entries, the instrument chooses the nearest (arithmetically, on a linear scale, rounding up) available VBW to the value entered. The 50 MHz VBW is defined to mean “wide open” The values shown in this table reflect the conditions after Mode Preset
Dependencies	Sometimes the displayed Video BW is not actually used to process the trace data: <ul style="list-style-type: none"> – When the Average Detector is selected and Sweep Type is set to Swept, the video bandwidth

filter cannot be used, because it uses the same hardware as the Average Detector

- When the Quasi-Peak, EMI Average or RMS Average detector is selected the VBW is implemented by the digital IF as part of the detector

When this is the case, the VBW still acts to change the sweep time, if **Sweep Time** is in **Auto**, and still affects the data on other traces for which this is not the case

Disabled when "**Meas Method**" on page 719 is **RBW**, **FAST**, **FPOwer**

If pressed, an advisory message is generated. If the equivalent command is sent, a "Setting conflict" warning is generated

Couplings	Video bandwidth (VBW) is normally coupled to RBW. If VBW is set to Auto , then the VBW is changed as the RBW changes, to maintain the ratio (usually 10:1)
Preset	See " VBW Presets " on page 692 below
State Saved	Saved in instrument state
Min	1 Hz
Max	50 MHz
Annunciation	A "#" mark appears before "VBW" in the annotation when it is not coupled
Annotation	In the bottom center of the screen, "VBW <value> <units>" indicates the current video bandwidth value. Note that for some detectors this is not the value actually used for VBW (see above)
Backwards Compatibility Notes	For backwards compatibility this command accepts both the BANDwidth and BWIDth forms

Auto Function

Remote Command	<code>[:SENSe] :ACPower :BANDwidth :VIDeo :AUTO ON OFF 1 0</code> <code>[:SENSe] :ACPower :BANDwidth :VIDeo :AUTO ?</code>
Example	<code>:ACP :BAND :VID :AUTO ON</code>

VBW Presets

Unless noted in the table below, the Preset value of **Video BW** is **Auto**.

Mode	Preset Value
WCDMA	1 MHz

RBW Filter Type

Selects the type for the resolution bandwidth filters. Historically, the Res BW filters in HP/Agilent/Keysight spectrum analyzers were Gaussian filters, specified using the –3 dB bandwidth of the filter. That is, a 10 MHz Res BW filter was a Gaussian shape with its –3 dB points 10 MHz apart. In X-Series, the **RBW Filter BW** menu lets you choose between a Gaussian and Flat Top filter shape, for varying measurement conditions.

Backwards Compatibility SCPI	[:SENSe]:ACPower:BwIDth:SHAPE	

RBW Filter BW

Selects a Gaussian filter based on its -3 dB (Normal) bandwidth or its -6 dB bandwidth.

Remote Command	[:SENSe]:ACPower:BANDwidth:TYPE DB3 DB6 [:SENSe]:ACPower:BANDwidth:TYPE?	
Example	:ACP:BAND:TYPE DB3 :ACP:BAND:TYPE?	
Dependencies	Disabled when "RBW Filter Type" on page 692 is FLATtop or "Meas Method" on page 719 is RBW, FAST, or Fast Power If pressed, an advisory message is generated. If the equivalent command is sent, a "Setting conflict" warning is generated	
Preset	DB3	
State Saved	Saved in instrument state	
Range	-3 dB (Normal) -6 dB	
Backwards Compatibility SCPI	[:SENSe]:ACPower:BwIDth:TYPE	

3.4.10 Display

Lets you configure display items for the current Mode, Measurement, View, or Window.

3.4.10.1 Meas Display

Contains controls for setting up the display for the current Measurement, View or Window.

Bar Graph On/Off

Turns the Bar Graph On or Off.

Remote Command	<code>:DISPlay:ACPower:WINDow[1]:BGRaph OFF ON 0 1</code> <code>:DISPlay:ACPower:WINDow[1]:BGRaph?</code>
Example	<code>:DISP:ACP:WIND:BGR OFF</code> <code>:DISP:ACP:WIND:BGR?</code>
Dependencies	Always set to ON and grayed-out when the method is RBW
Preset	ON
State Saved	Saved in instrument state
Range	OFF ON
Backwards Compatibility SCPI	<code>:DISPlay:ACPower:VIEW[1]:WINDow[1]:BGRaph</code>

Power Results

Lets you select Power Result Type:

- **OUTer** – Results of outer offsets and carrier powers are shown in this view. Inner offset results are not shown even when Carrier Allocation is Non-Contiguous
- Outer & Inner (**OINNER**) – Results of both inner and outer offsets are shown in this view

Remote Command	<code>:DISPlay:ACPower:VIEW:RTYPE OUTer OINNER</code> <code>:DISPlay:ACPower:VIEW:RTYPE?</code>
Example	<code>:DISP:ACP:VIEW:RTYP OUT</code> <code>:DISP:ACP:VIEW:RTYP?</code>
Dependencies	Only available in MSR, LTEAFDD, LTEATDD and 5G NR Modes

Preset	OUTer
State Saved	Saved in instrument state
Range	Outer Outer & Inner

Carrier Frequency Type

Sets the carrier frequency display type:

- **OFFSet** – The carrier center frequencies are displayed as offset from Carrier Ref Freq
- **ABSolute** – The carrier center frequencies are displayed as absolute frequency

Remote Command	:DISPlay:ACPower:VIEW:WINDow:CINformation:FREQuency OFFSet ABSolute :DISPlay:ACPower:VIEW:WINDow:CINformation:FREQuency?
Example	:DISP:ACP:VIEW:WIND:CINF:FREQ ABS :DISP:ACP:VIEW:WIND:CINF:FREQ?
Dependencies	Only available in MSR, LTEAFDD, LTEATDD and 5G NR Modes
Preset	OFFSet
State Saved	Saved in instrument state
Range	OFFSet ABSolute

3.4.10.2 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	:DISPlay:GRATICule[:STATe] OFF ON 0 1 :DISPlay:GRATICule[:STATe]?
Example	:DISP:GRAT OFF
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	ON
State Saved	Saved in instrument state

Backwards Compatibility SCPI	<code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1</code> <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?</code>
	This command is accepted for backwards compatibility with older instruments, but the WINDow , TRACe and GRID parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	<code>:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:SCReen[:STATe]?</code>
Example	<code>:DISP:ANN:SCR OFF</code>
Dependencies	Grayed-out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

Remote Command	<code>:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0</code> <code>:DISPlay:ANNotation:TRACe[:STATe]?</code>
Example	<code>:DISP:ANN:TRAC OFF</code>
Preset	OFF
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	<code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code>
Example	<code>:DISP:ACT OFF</code>
Dependencies	Grayed out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When **OFF**, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	<code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code>
Example	<code>:DISP:ANN:MBAR OFF</code>
Dependencies	Grayed out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	<code>:DISPlay:VIEW:ADVanced:SElect</code>
Rename User View	<code>:DISPlay:VIEW:ADVanced:REName</code>
Delete User View	<code>:DISPlay:VIEW:ADVanced:DELeTe</code>
Create User View	<code>:DISPlay:VIEW:ADVanced:NAME</code>
Select Screen	<code>:INSTrument:SCReen:SElect</code>
Delete Screen	<code>:INSTrument:SCReen:DELeTe</code>
Delete All But This Screen	<code>:INSTrument:SCReen:DELeTe:ALL</code>
Add Screen	<code>:INSTrument:SCReen:CREate</code>
Rename Screen	<code>:INSTrument:SCReen:REName</code>
Sequencer On/Off	<code>:SYSTem:SEQuencer</code>

Remote Command	<code>:DISPlay:ENABle OFF ON 0 1</code> <code>:DISPlay:ENABle?</code>
Example	<code>:DISP:ENAB OFF</code>
Couplings	<code>:DISP:ENAB OFF</code> turns Backlight OFF and <code>:DISP:ENAB ON</code> turns Backlight ON , but changing Backlight settings does <i>not</i> change the state of <code>:DISP:ENAB</code>
Preset	ON Set by <code>:SYST:DEF MISC</code> , but not affected by <code>*RST</code> or <code>:SYSTem:PRESet</code>
State Saved	Not saved in instrument state
Backwards Compatibility Notes	<code>:SYST:PRES</code> no longer turns on <code>:DISPlay:ENABle</code> as it did in legacy analyzers

3.4.10.3 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See "Views" on page 639.

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:SElect <alphanumeric></code> <code>:DISPlay:VIEW:ADVanced:SElect?</code>
Example	Select Baseband as the current View <code>:DISP:VIEW:ADV:SEL "Baseband"</code>
Notes	<p>You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command</p> <p>For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <p>because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu</p> <p>You <i>cannot</i> use the legacy View parameter (which in this case would be <code>TZOOM</code>) with</p> <pre>:DISP:VIEW:ADV:SEL</pre> <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <pre>:DISP:VIEW:ADV:SEL "TRACE ZOOM"</pre> <p>If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p>
Backwards Compatibility SCPI	<p>The legacy node</p> <pre>:DISPlay:VIEW[:SElect]</pre> <p>is retained for backwards compatibility, but it only supports predefined views</p>

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a “User View”.

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	<code>:DISPlay:VIEW:ADVanced:NAME <alphanumeric></code>
Example	<code>:DISP:VIEW:ADV:NAME "Baseband"</code> Creates a new View named Baseband from the current View, and selects it as the current View
Notes	<code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If <code><alphanumeric></code> name already exists as a View, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; User View SCPI cannot be used while Display is disabled” is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View’s name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	<code>:DISPlay:VIEW:ADVanced:REName <alphanumeric></code>
----------------	---

Example	<code>:DISP:VIEW:ADV:REN "Baseband"</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> specifying the new name is already present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated</p> <p>If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot rename a Predefined View" is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p>

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DElete</code>
Example	<code>:DISP:VIEW:ADV:DEL</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> is not present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> does not exist" is generated</p> <p>If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot delete a Predefined View" is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p>

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DElete:ALL</code>
Example	<code>:DISP:VIEW:ADV:DEL:ALL</code>
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy

nodes, `:DISPlay:VIEW[:SElect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:CATalog?</code>
Example	<code>:DISP:VIEW:ADV:CAT?</code>
Notes	<p>Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for <i>all</i> the Views, including User Views, available for the current Measurement</p> <p>Example: <code>"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"</code></p> <p>No distinction is made between Predefined and User Views</p> <p>If you switch measurements with the display disabled (via <code>:DISP:ENAB OFF</code>), then query the list of available Views, the result is undefined</p>

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:USER:CATalog?</code>
Example	<code>:DISP:VIEW:ADV:USER:CAT?</code>
Notes	<p>Returns a quoted string of the available User Views for the current measurement, separated by commas.</p> <p>Example: <code>"Baseband,myView1,yourView1"</code></p> <p>If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 3004), then query the list of available Views, the result is undefined</p>

3.4.11 Frequency

Contains controls that allow you to control the Frequency and Channel parameters of the instrument.

Some features in the **Frequency** menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example,

the **Center Frequency** setting is the same for all measurements - it does not change as you change measurements.

3.4.11.1 Settings

Contains controls that pertain to the X-Axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

The center frequencies of carriers are defined as offsets from the **Carrier Reference Frequency** value. This frequency is also the reference for carrier configuration preset.

Because LTEAFDD, LTEATDD, MSR and 5G NR measurements often deal with multiple carriers with distinct bandwidths, the simple Center Frequency parameter used in most measurements does not apply here. Instead, the Carrier Reference Frequency is the key parameter. This must be distinct from the **Center Frequency** parameter used in other measurements, because **Center Frequency** can be a global parameter, and it would not make sense for **Carrier Reference Frequency** to take on this global value.

In LTEAFDD, LTEATDD and 5G NR Modes, if the following conditions are satisfied at the same time:

- **Number of Component Carriers** is 1
- Center Freq Offset is 0 Hz
- mode of **Center Frequency** is Auto

then **Center Frequency** is equivalent to **Carrier Reference Frequency**. When **Center Frequency** changes in such conditions, the mode of **Center Frequency** remains as Auto, and **Carrier Reference Frequency** changes to the same value. The major purpose of this coupling is to maintain backwards compatibility with legacy LTE/LTE TDD, in which `:SENSe:FREQuency:CENTer` is used to set up the frequency of the measurement.

See "[More Information](#)" on page 704.

Remote Command	For LTEAFDD, LTEATDD, 5G NR Modes: <code>[:SENSe]:CCARrier:REference <freq></code> <code>[:SENSe]:CCARrier:REference?</code> For MSR Mode: <code>[:SENSe]:CARRier:REference <freq></code>
----------------	--

	<code>[:SENSe] :CARRier :REFerence ?</code>
Example	For LTEAFDD, LTEATDD, 5G NR Modes: <code>:CCAR:REF 2GHz</code> <code>:CCAR:REF?</code> For MSR Mode: <code>:CARR:REF 2GHz</code> <code>:CARR:REF?</code>
Dependencies	Only available in LTEAFDD, LTEATDD, 5G NR and MSR Modes
Preset	1GHz
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum/maximum center frequency

More Information

In most applications, **Center Frequency** is generally where the carrier center is located at and thus plays a very important role. However, in LTEAFDD and LTEATDD Modes, the measurements are done based on carrier center frequencies and its bandwidths, both of which are calculated or obtained according to the carriers' configuration.

The **Center Frequency** defined here is only for the Monitor Spectrum, IQ Waveform and CCDF measurements, because these three are general type measurements and focus on a certain frequency range, which may be the entire BS RF bandwidth, a frequency range of one of the component carriers or a range far away from the component carriers to see spurious. The **Center Frequency** in these three measurements has a different meaning, therefore it should be a separate setting from Carrier Reference Frequency.

Carrier center frequencies are defined using offsets from Carrier Reference Frequency which determines absolute frequency locations, which can be set as both absolute and relative frequency from the carrier reference frequency.

Since **Center Frequency** is only used in those three measurements, Monitor Spectrum, IQ Waveform and CCDF, this control only appears on the **Frequency** menu of these measurements.

When the mode of **Center Frequency** is Auto, **Number of Component Carriers** is 1, and **Center Frequency Offset** is 0 Hz, the Center Frequency is equivalent to Carrier Reference Frequency, which is used to set up the Frequency of all the measurements.

Span

Changes the displayed frequency range symmetrically about **Center Frequency**. While adjusting **Span**, **Center Frequency** is held constant, which means that both start and stop frequencies will change.

If **Span** is set to a value greater than the maximum allowable span of the instrument, an error message is generated indicating the data is out of range and was clipped to upper limit.

The default (and minimum) **Span** is calculated using the number of carriers and the carrier width where;

$$\text{Span} = (\text{Upper Carrier Freq} + (\text{max offset IBW} * (1 + \alpha)) / 2) - (\text{Lower Carrier Freq} - (\text{max offset IBW} * (1 + \alpha)) / 2)$$

Span is increased by a factor of 1 + Filter Alpha if the RRC Filter is on.

Remote Command	<code>[:SENSe] :ACPower:FREQUENCY:SPAN <freq></code> <code>[:SENSe] :ACPower:FREQUENCY:SPAN?</code>
Example	<code>:ACP:FREQ:SPAN 10 MHz</code> <code>:ACP:FREQ:SPAN?</code>
Notes	In Bluetooth Mode, the value of Span has to be an odd MHz
Dependencies	If the electrical attenuator is enabled, any attempt to set Span such that the Stop Frequency would be >3.6 GHz results in an error In instruments with an RF Preselector, such as MXE, you cannot sweep across the band break at 3.6 GHz while the RF Preselector is on in Continuous sweep, as there is a mechanical switch that bypasses the RF Preselector above 3.6 GHz
Couplings	Span affects RBW, sweeptime, FFT & Sweep choice (including FFT Width, Phase Noise Optimization and ADC Dither auto couplings) <ul style="list-style-type: none"> - Any value of Center Frequency or Span that is within the frequency range of the instrument is allowed <i>when</i> the value is being set through the front panel numeric keypad or the SCPI command. The other parameter is forced to a different value if needed, to keep the start and stop frequencies within the instrument's frequency range - When using the knob or the step up/down keys or the UP DOWN keywords in SCPI, the value that is being changed, that is, Center Frequency or Span, is limited so that the other parameter is not forced to a new value - In Bluetooth Mode, if Meas Method is FFT, the max value of Span is coupled to the MAX IFBW of the platform <p>The Span value is clipped when the carrier settings and/or the offset settings are changed. The value is changed to satisfy following formula: $\text{Span} = (\text{Upper Carrier Freq} + (\text{max offset IBW} * (1 + \alpha)) / 2) - (\text{Lower Carrier Freq} - (\text{max offset IBW} * (1 + \alpha)) / 2)$</p>

	This parameter is unavailable when Meas Method is Fast Power. In that case, the span is fixed by the formula above
Preset	Depends on instrument maximum frequency, mode, measurement, and selected input See "Span Presets" on page 706
State Saved	Saved in instrument state
Min/Max	Depends on instrument maximum frequency, mode, measurement, and selected input. See "Span Presets" on page 706
Annotation	Span <value> appears on the first line of the annotation in the lower right corner of display

Span Presets

The following table provides the Max Span, for the various frequency options:

Freq Option	Max Span (can't set higher than this)
503 (all but CXA)	3.7 GHz
503, F03 (CXA, CXA-m)	3.08 GHz
507 (all but CXA)	7.1 GHz
507 (CXA, CXA-m)	7.575 GHz
508 (all but MXE)	8.5 GHz
508 (MXE)	8.5 GHz
513, F13	13.8 GHz
526 (all but CXA and MXE)	27.0 GHz
526 (MXE)	27.0 GHz
526, F26 (CXA, CXA-m)	26.55 GHz
544	44.5 GHz
550	52 GHz
F06 & EP6 (VXT models M9410A/11A)	6.27 GHz
F06 & LFE & EP6 (VXT models M9411A)	6.5999935 GHz
M9415A-F06	6.27 GHz
M9415A-F08	8.27 GHz
M9415A-F12	12.57 GHz

Input 2:

Model	Max Span (can't set higher than this)
CXA opt C75	1.58 GHz
MXE	1.000025 GHz

Note that if you are in External Mixing, the maximum Span will be equal to the Maximum Stop Frequency – Minimum Start Frequency for the currently selected mixer.

Span Presets by Mode

Mode	Preset Value
SA	8 MHz
WCDMA	24.6848 MHz
LTE, LTETDD, LTEAFDD, LTEATDD, MSR	25 MHz
5G NR	500 MHz
Radio Test	175 kHz

3.4.12 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to **POSiTion** (Normal) and places it at the center of the display. If the selected marker is **OFF**, it is set to **POSiTion** and placed at the center of the screen on the trace determined by the **Marker Trace** rules.

Note that this hard key and all sub keys are unavailable when "**Meas Method**" on page 719 is RBW.

3.4.12.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

The **Select Marker** control appears above the menu panel, indicating that it applies to all controls in the **Marker** menu panels. **Select Marker** is blanked if you select a tab whose controls do *not* depend on the selected marker (for example, **Counter**).

On any menu tab in which **Select Marker** appears, the first control is always **Marker Frequency | Time**.

Notes	The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak
Preset	Marker 1
State Saved	The number of the selected marker is saved in instrument state
Annunciation	Appears in the marker results block label for Normal , Delta and Fixed markers

3.4.12.2 Settings

The controls on this tab include the **Marker** active function and a radio button selection of the marker control mode (**POSition**, **DELTA**, or **OFF**) for the selected marker, as well as additional functions that help you use markers.

Marker Frequency

Sets the marker X-Axis value in the current marker X-Axis Scale unit. Has no effect if the control mode is **OFF**, but is the SCPI equivalent of entering an X value if the control mode is **POSition** or **DELTA**.

Remote Command	<code>:CALCulate:ACPower:MARKer[1] 2 ... 12:X <freq></code> <code>:CALCulate:ACPower:MARKer[1] 2 ... 12:X?</code>
Example	<code>:CALC:ACP:MARK3:X 0</code> <code>:CALC:ACP:MARK3:X?</code>
Notes	If no suffix is sent, uses the fundamental units for the current marker X-Axis Scale. If a suffix is sent that does not match the current marker X-Axis Scale unit, an error "Invalid suffix" is generated The query returns the marker's absolute X Axis value if the control mode is POSition , or the offset from the marker's reference marker if the control mode is DELTA . The query is returned in the fundamental units for the current marker X-Axis scale: Hz for Frequency and Inverse Time , seconds for Period and Time
Dependencies	Unavailable when " Meas Method " on page 719 is RBW
Preset	After a preset, all markers are turned OFF , so the query returns Not A Number (NAN)
State Saved	Saved in instrument state
Min/Max	-/+9.9E+37
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Marker X Axis Position (Remote Command Only)

Sets the marker X-Axis Scale position in trace points. This setting has no effect if the control mode is **OFF**, but is the SCPI equivalent of entering a value if the control mode is **POSition** or **DELTA**, except in trace points rather than X-Axis Scale units. The entered value is immediately translated into the current X-Axis Scale units for setting the value of the marker.

Remote Command	<code>:CALCulate:ACPower:MARKer[1] 2 ... 12:X:POSition <real></code> <code>:CALCulate:ACPower:MARKer[1] 2 ... 12:X:POSition?</code>
Example	<code>:CALC:ACP:MARK10:X:POS 0</code> <code>:CALC:ACP:MARK10:X:POS?</code>
Notes	The query returns the marker's absolute X-Axis value in trace points if the control mode is POSition ,

or the offset from the marker's reference marker in trace points if the control mode is **DELTA**. The value is returned as a real number, not an integer, corresponding to the translation from X-Axis Scale units to trace points. When a Marker is turned on, it is placed center of the screen on the trace. Therefore, the default value depends on instrument condition. If the marker is **OFF**, the response is Not A Number

Dependencies	Unavailable when Meas Method is RBW
Preset	After a preset, all markers are turned OFF , so the query returns Not A Number (NAN)
State Saved	Saved in instrument state
Min	-9.9E+37
Max	9.9E+37

Marker Y Axis Value (Remote Query only)

Returns the marker Y-Axis value in the current marker Y-Axis unit.

Remote Command	<code>:CALCulate:ACPower:MARKer[1] 2 ... 12:Y?</code>
Example	<code>:CALC:ACP:MARK11:Y?</code>
Notes	Returns the marker Y-axis result, if the control mode is POSITION or DELTA . If the marker is OFF , the response is Not A Number
Dependencies	Unavailable when " Meas Method " on page 719 is RBW
Preset	Depends on Markers setup and signal source
State Saved	No
Backwards Compatibility SCPI	<code>:CALCulate:ACPower:MARKer[1] 2 ... 12:FUNCTION:RESULT?</code>

Marker Mode

Sets the marker control mode to **POSITION** (Normal), **DELTA**, or **OFF**. All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is **OFF**, pressing **Marker** sets it to **POSITION**, and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, **Marker X Axis Value** appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is **OFF**, there is no active function, and the active function is turned off.

Remote Command	<code>:CALCulate:ACPower:MARKer[1] 2 ... 12:MODE POSITION DELTA OFF</code> <code>:CALCulate:ACPower:MARKer[1] 2 ... 12:MODE?</code>
Example	<code>:CALC:ACP:MARK3:MODE POS</code>

	<code>:CALC:ACP:MARK3:MODE?</code>
Dependencies	Unavailable when Meas Method is RBW
Preset	OFF
State Saved	Saved in instrument state
Range	POSition DELTA OFF
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Backwards Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker that is **OFF** to **ON** (1) puts it in **POSition** mode and places it at the center of the screen.

Example	<code>:CALC:ACP:MARK2:STAT ON</code> <code>:CALC:ACP:MARK2:STAT?</code>
Preset	OFF
State Saved	Saved in instrument state
Range	OFF ON
Backwards Compatibility SCPI	<code>:CALCulate:ACPower:MARKer[1] 2 ... 12:STATe OFF ON 0 1</code> <code>:CALCulate:ACPower:MARKer[1] 2 ... 12:STATe?</code>

Delta Marker (Reset Delta)

Pressing this button has exactly the same effect as pressing **DELTA** in **Marker Mode**. The selected marker becomes a **Delta** marker. If the selected marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the delta to zero.

Marker Settings Diagram

Lets you configure the **Marker** system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command	<code>:CALCulate:ACPower:MARKer:AOFF</code>
Example	<code>:CALC:ACP:MARK:AOFF</code>
Dependencies	Unavailable when " Meas Method " on page 719 is RBW

Couple Markers

When this function is **ON**, moving any marker causes an equal X-Axis movement of every other marker that is not **OFF**. By “equal X-Axis movement” we mean that we preserve the difference between each marker’s X-Axis value (in the fundamental X-Axis units of the trace that marker is on), and the X-Axis value of the marker being moved (in the same fundamental X-Axis units).

This may result in markers going off screen.

Remote Command	<code>:CALCulate:ACPower:MARKer:COUPle[:STATe] ON OFF 1 0</code> <code>:CALCulate:ACPower:MARKer:COUPle[:STATe]?</code>
Example	<code>:CALC:ACP:MARK:COUP ON</code> <code>:CALC:ACP:MARK:COUP?</code>
Dependencies	Unavailable when " Meas Method " on page 719 is RBW
Preset	OFF Presets on Mode Preset and All Markers Off
State Saved	Saved in instrument state

3.4.12.3 Peak Search

The controls on this tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu *and* performs a **Peak Search**.

Pressing the **Peak Search** tab once you are already *in* the **Marker** menu does *not* perform a **Peak Search**.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. It is the same as "**Marker Frequency**" on page 708 on the **Settings** tab.

Peak Search

Pressing the **Peak Search** control moves the selected marker to the trace point which has the maximum Y-Axis value for that marker’s trace.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu *and* performs a peak search.

Remote Command	<code>:CALCulate:ACPower:MARKer[1] 2 ... 12:MAXimum</code>
Example	<code>:CALC:ACP:MARK2:MAX</code> <code>:SYST:ERR?</code> can be used to query the errors to determine if a peak is found. The message “No peak found” will be returned after an unsuccessful search
Notes	Sending this command selects the subopcoded marker

Next Peak

Moves the selected marker to the peak that is next lower in amplitude than the current marker value.

If the selected marker was **OFF**, then it is turned on as a normal marker and a peak search is performed.

Remote Command	<code>:CALCulate:ACPower:MARKer[1] 2 ... 12:MAXimum:NEXT</code>
Example	<code>:CALC:ACP:MARK2:MAX:NEXT</code>
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Next Pk Right

Moves the selected marker to the nearest peak right of the current marker.

If the selected marker was **OFF**, then it is turned on as a normal marker and a peak search is performed.

Remote Command	<code>:CALCulate:ACPower:MARKer[1] 2 ... 12:MAXimum:RIGHT</code>
Example	<code>:CALC:ACP:MARK2:MAX:RIGH</code>
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Next Pk Left

Moves the selected marker to the nearest peak left of the current marker.

3 5G NR/5G-A Mode
3.4 ACP Measurement

If the selected marker was **OFF**, then it is turned on as a normal marker and a peak search is performed.

Remote Command	:CALCulate:ACPower:MARKer[1] 2 ... 12:MAXimum:LEFT
Example	:CALC:ACP:MARK2:MAX:LEFT
State Saved	Not part of saved state

Minimum Peak

Moves the selected marker to the minimum Y-Axis value on the current trace.

If the selected marker is **OFF**, it is turned on before the minimum search is performed.

Remote Command	:CALCulate:ACPower:MARKer[1] 2 ... 12:MINimum
Example	:CALC:ACP:MARK:MIN
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Pk-Pk Search

Finds and displays the amplitude and frequency (or time, if in zero span) differences between the highest and lowest Y-Axis value. It places the selected marker on the minimum value on its selected trace, and places that marker's reference marker on the peak of its selected trace.

This function turns on the reference marker and sets its mode to **POSITION** if it is not already on. (These markers may be on two different traces.)

If the selected marker is **OFF**, a delta type marker is turned on and the peak-to-peak search is done. If the selected marker is on, but it is not a delta marker, then it is changed to delta, which turns on the reference marker if needed, and then it performs the peak-to-peak function.

Remote Command	:CALCulate:ACPower:MARKer[1] 2 ... 12:PTPeak
Example	:CALC:ACP:MARK:PTP
Notes	Turns on the Marker D active function Sending this command selects the subopcoded marker
Dependencies	Pk-Pk Search is not available when Coupled Markers is on
Couplings	The selected marker becomes a delta marker if not already in delta mode
State Saved	Not part of saved state

Marker Delta

Pressing this button has exactly the same effect as pressing **DELTA** in **Marker Mode** on the **Settings** tab. The selected marker becomes a **Delta** marker. If the selected marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the delta to zero.

The control is duplicated here to allow you to conveniently perform a peak search and change the marker's control mode to **Delta** without having to access two separate menus.

3.4.12.4 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. It is the same as "**Marker Frequency**" on page 708 on the **Settings** tab.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the "reference marker" for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	<code>:CALCulate:ACPower:MARKer[1] 2 ... 12:REFerence <integer></code> <code>:CALCulate:ACPower:MARKer[1] 2 ... 12:REFerence?</code>
Example	<code>:CALC:ACP:MARK2:REF 6</code> <code>:CALC:ACP:MARK2:REF?</code>
Notes	Causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself" When queried a single value is returned (the specified marker numbers relative marker)
Dependencies	Unavailable when " Meas Method " on page 719 is RBW
Couplings	If the reference marker is OFF , it is turned on in POSition mode at the delta marker location

Preset	The preset default “Relative To” marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then its default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using Restore Mode Defaults . This is not reset by Marker Off , All Markers Off , or Preset
State Saved	Saved in instrument state. Not affected by Marker Off and hence not affected by Preset or power cycle
Min	1
Max	12
Annunciation	Appears in the marker label of a Delta marker

Marker Trace

Selects the trace on which you want your marker placed. A marker is associated with one and only one trace. This trace is used to determine the placement, result, and X-Axis Scale of the marker. All markers have an associated trace; it is from that trace that they determine their attributes and behaviors, and it is to that trace that they go when they become Normal markers.

Specifying a **Marker Trace** manually or with this command associates the marker with the specified trace. If the marker is not **OFF**, it moves the marker from the trace it was on to the new trace. If the marker is **OFF**, it stays off but is now associated with the specified trace.

The query returns the number of the trace on which the marker is currently placed.

Remote Command	<code>:CALCulate:ACPower:MARKer[1] 2 ... 12:TRACe 1 2 3</code> <code>:CALCulate:ACPower:MARKer[1] 2 ... 12:TRACe?</code>
Example	<code>:CALC:ACP:MARK2:TRAC 2</code> <code>:CALC:ACP:MARK2:TRAC?</code>
Notes	A marker may be placed on a blanked and/or inactive trace, even though the trace is not visible and/or updating An application may register a trace name to be displayed on the control instead of a trace number
Couplings	The state of Marker Trace is not affected by " Auto Couple " on page 3017 Sending the remote command causes the addressed marker to become selected
Preset	1
State Saved	Saved in instrument state
Min	1
Max	3

Marker Settings Diagram

Lets you configure the **Marker** system using a visual utility. It is the same as "**Marker Settings Diagram**" on page 710 on the **Settings** tab.

3.4.13 Meas Setup

Contains functions for setting up the measurement parameters, and for setting up parameters global to all measurements in the Mode.

3.4.13.1 Settings

Contains frequently-used functions to which you will want the fastest access.

Avg | Hold Number

Specifies the number of measurement averages used to calculate the measurement result. The average will be displayed at the end of each sweep. After the specified number of average counts, the average mode (termination control) setting determines the average action.

Remote Command	<code>[:SENSe] :ACPower :AVERage :COUNT <integer></code> <code>[:SENSe] :ACPower :AVERage :COUNT?</code>
Example	<code>:ACP :AVER :COUN 250</code> <code>:ACP :AVER :COUN?</code>
Notes	The BAF backwards Compatibility SCPI command, <code>[:SENSe] :ACPR :AVERage [:STATe]</code> , is provided to support same functionality as <code>[:SENSe] :ACPr :AVERage [:STATe]</code> (PSA W-CDMA, PSA cdma2000 and PSA 1xEVDO) due to ACPr node conflicts with ACPower node
Preset	10
State Saved	Saved in instrument state
Min/Max	1/1000
Annotation	Avg Number is displayed in the Measurement Bar
Backwards Compatibility SCPI	<code>[:SENSe] :ACPR :AVERage :COUNT</code> <code>[:SENSe] :MCPower :AVERage :COUNT</code> Power Suite, W-CDMA

Continue Averaging

Continue Averaging is designed for acquiring the trace average through multiple sets of DUT conditions, in order to meet requirements such as those for an OTA measurement.

NOTE

You must be in **Single** sweep/measurement to use **Continue Averaging**. Go to **Single** and press **Restart** to get your first set of averages, then **Continue Averaging** will be available.

Use **:FETCh:<meas>?** to retrieve the data as it waits for completion of **Continue Averaging**. ***OPC?** doesn't wait for completion and returns true immediately.

Pressing this control adds (to the already averaged trace or measurement) a number of averages equal to "**Avg | Hold Number**" on page 716. Every time you press it, the terminal count increases by the current value of **Avg | Hold Number**. You can change your test setup (for example, the DUT position or antenna) after each average count reaches the terminal count.

You could also accomplish the same thing by manually increasing **Avg | Hold Number**, but by using **Continue Averaging** you are guaranteed to get the same number of averages at each step in the process, and you always keep **Avg | Hold Number** the same so you do not lose its value.

Remote Command	<code>[:SENSe] :ACPower :AVERage :CONTinue</code>
Example	<code>:ACP :AVER :CONT</code>
Dependencies	Enabled when you change the Sweep mode to Single and the Average Count reaches the Average Number . Otherwise, grayed-out

Terminal Count (Remote Query Only)

Query only.

Returns the terminal count that shows the target average number after **Continue Averaging** is pressed. Every time you press **Continue Averaging**, the terminal count increases to 2N, 3N and so on. The value is the same as "**Avg | Hold Number**" on page 716 unless **Continue Averaging** is pressed, and is reset to match **Avg | Hold Number** when **Restart** is pressed.

Remote Command	<code>[:SENSe] :ACPower :AVERage :COUNT :TERMinal?</code>
Example	<code>:ACP :AVER :COUN :TERM?</code>

Averaging On/Off

Turns averaging on or off.

NOTE

In this measurement, the **Average Type** is preset to the **Log-Pwr Avg (Video)** method. Other averaging methods are not available.

Remote Command	<code>[:SENSe]:ACPower:AVERage[:STATe] OFF ON 0 1</code> <code>[:SENSe]:ACPower:AVERage[:STATe]?</code>
Example	<code>:ACP:AVER OFF</code> <code>:ACP:AVER?</code>
Preset	<code>ON</code>
State Saved	Yes
Range	<code>OFF ON</code>
Backwards Compatibility SCPI	<code>[:SENSe]:ACPR:AVERage[:STATe]</code> <code>[:SENSe]:MCPower:AVERage[:STATe]</code> Power Suite, W-CDMA

Avg Mode

Sets the Averaging Mode. This determines the averaging action after the specified number of data acquisitions (average count) is reached.

- When set to **EXponential**, the measurement averaging continues using the specified number of averages to compute each averaged value. The average will be displayed at the end of each sweep
- When set to **REPeat**, the measurement resets the average counter each time the specified number of averages is reached

Remote Command	<code>[:SENSe]:ACPower:AVERage:TCONtrol EXponential REPeat</code> <code>[:SENSe]:ACPower:AVERage:TCONtrol?</code>
Example	<code>:ACP:AVER:TCON EXP</code> <code>:ACP:AVER:TCON?</code>
Notes	The backwards-compatibility SCPI command, <code>[:SENSe]:ACPR:AVERage:TCONtrol</code> , is provided to support same functionality as <code>[:SENSe]:ACPr:AVERage:TCONtrol</code> (PSA W-CDMA, PSA cdma2000 and PSA 1xEVDO) due to ACPr node conflicts with ACPower node
Preset	<code>EXponential</code>
State Saved	Saved in instrument state
Range	<code>EXponential REPeat</code>
Backwards Compatibility SCPI	<code>[:SENSe]:ACPR:AVERage:TCONtrol</code> Power Suite, W-CDMA: <code>[:SENSe]:MCPower:AVERage:TCONtrol</code>

Meas Method

Sets the desired method to measure ACP. The options are:

Integration BW IBW	One sweep of the trace is taken, and the band power for each offset is computed. Depending on "Measurement Type" on page 1996 (Total Power Reference or PSD Reference), results are displayed relative to the total power or the power spectral density. The display reflects either the current trace or a bar graph view
Filtered IBW IBWRange (max dynamic range)	The ACP Path is used to compute ACP when an ACP path is available. This method increases dynamic range, but increases measurement time as it limits the resolution bandwidth. This method is useful for improving dynamic range on a W-CDMA signal because a sharp cutoff bandpass filter is used. The accuracy of the adjacent channel power ratio is not degraded by this method, but the absolute accuracy of both adjacent channel power and carrier power are degraded by up to about 0.5 dB
RBW RBW	The algorithm uses zero-span and an appropriate RBW setting to capture all of the power in the carrier channel and the offsets. The zero-span algorithm (RBW method) is slower than the IBW method, but greatly improves repeatability
Fast FAST	WCDMA Mode or SA Mode with 3GPP WCDMA radio standard selected: Provides the same method as the Integration BW method, but is optimized for speed to measure a W-CDMA signal SA Mode with CDMA2K radio standard selected: Provides faster measurement using the FFT method with a limited parameter flexibility. When this is selected, CDMA2K preset offsets are given and control of the following are unavailable: <ul style="list-style-type: none">- BW menu- Sweep/Control menu except Pause/Resume- Trace/Detector menu- Carrier Setup, Offset Limit, RRC Weighting, Filter Alpha, and Noise Correction in Meas Setup menu
Fast Power FPower (Option FP2 required)	This provides faster measurement using the Hardware accelerated FFT method with a limited parameter flexibility. When this is selected, the following parameters are not available: <ul style="list-style-type: none">- Points and Auto Sweep Points under Sweep<ul style="list-style-type: none">- When changing Meas Method to Fast Power, Auto Sweep Points is turned on and grayed-out (Sweep Points will change according to the Fast Power setting)- When returning Meas Method to any setting other than Fast Power, Auto Sweep Points stays on and becomes available (Sweep Points will change according to the auto sweep points calculation algorithm)- Trace Type, Restart Averaging and View/Blank under Trace when Select Trace is Trace 2 or Trace3- Span under Frequency- Res BW, Video BW, Filter Type and Filter BW of Offset > Advanced dialog of Carr/Offset/Limits Config control under Meas Setup- For Trigger, only Free Run, External 1 and External 2 are supported

When in microwave frequency and measurement span is > 40MHz, RF preselector must be turned off

Remote Command	<code>[:SENSe] :ACPowEr :METHod IBW IBWRanGe FAST RBW FPOWer</code> <code>[:SENSe] :ACPowEr :METHod ?</code>
Example	<code>:ACP :METH IBW</code> <code>:ACP :METH ?</code>
Notes	FAST mode is only supported for WCDMA and C2K signals. You must be in WCDMA or SA Modes, with 3GPP WCDMA or CDMA2K radio standard. Otherwise, a setting conflict error message is reported MSR, LTEAFDD, LTEATDD and 5G NR Modes support only Integration BW, Filtered IBW and Fast Power methods
Dependencies	When RBW , FAST or FPOWer is selected, Gate function is not available. If you try to turn GateON while Meas Method is RBW , FAST or FPOWer , an error is generated When Gate function is ON , RBW , FAST and FPOWer are not available. If you try to change Meas Method to RBW , FAST or FPOWer , an error is generated VXT Models M9420A/10A/11A support only the Integration BW method
Couplings	IBW (Range) restricts the Res BW available for making this measurement to 30 kHz. When selected, Res BW is clipped to this value if required and an error number displayed
Preset	IBW
State Saved	Saved in instrument state
Range	IBW IBWRanGe FAST RBW FPOWer
Backwards Compatibility SCPI	<code>[:SENSe] :ACPR :SWEp :TYPE</code> (Power Suite, WCDMA) <code>[:SENSe] :MCPowEr :METHod</code>

Carrier/Offset/Limits Config

Opens a dialog that lets you set Carriers, Offset, and Limits parameters.

Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your 5G NR signal.

Number of Component Carriers

Specifies how many component carriers are included in the 5G NR measurements. The 5G NR supports the maximum of 16 component carriers.

Remote Command	<code>[:SENSe] :CCARrier :COUNT <integer></code> <code>[:SENSe] :CCARrier :COUNT ?</code>
----------------	--

Example	<code>:CCAR:COUN 1</code> <code>:CCAR:COUN?</code>
Preset	1
State Saved	Yes
Min	1
Max	16

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous NCONTiguous</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation?</code>
Example	<code>:CCAR:CONF:ALL CONT</code> <code>:CCAR:CONF:ALL?</code>
Preset	<code>CONTiguous</code>
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 ... CC15</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?</code>
Example	<code>:CCAR:CONF:ALL:NCON:ABP CC0</code> <code>:CCAR:CONF:ALL:NCON:ABP?</code>
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0-CC1 if the number of Component Carriers is 2
Preset	<code>CC0</code>
State Saved	Saved in instrument state
Range	<code>CC0 ... CC15</code>

Configure Comp Carriers

This dialog lets you perform a detailed configuration of your component carriers, including number of carriers, bandwidth, offset, integration bandwidth, and so on.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

More Information

"Measure Carrier" on page 3057	"Sidelink" on page 1627	"Bandwidth" on page 3057	"Freq Range" on page 3058
"Freq Offset" on page 3058	"Cell ID Auto" on page 3059	"Cell ID Value" on page 3059	"Demod Spectrum" on page 3060
"CHP Power Integration Bandwidth" on page 3060	"ACP Power Integration Bandwidth" on page 3061	"SEM Power Integration Bandwidth" on page 3062	"N_Grid_Size (Display Only)" on page 3062
"SCS (Power Meas)" on page 3063			

Number of Component Carriers

This is the same as the control on the menu panel. See "[Number of Component Carriers](#)" on page 3052.

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	<code>[:SENSe]:CCARrier:AFOffset OFF ACRA100K ACRA15K ACRA60K CARA100K CARA15K CARA60K</code> <code>[:SENSe]:CCARrier:AFOffset?</code>								
Example	<code>:CCAR:AFOF ACRA100K</code> <code>:CCAR:AFOF?</code>								
Notes	When you change the value to OFF , nothing happens								
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate frequency offset unless OFF is selected When CC's Frequency Offset is manually changed, this parameter is set to OFF This feature isn't supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CCO Freq Offset is automatically adjusted to 0 Hz								
Preset	OFF								
State Saved	Yes								
Range	The cascading list is shown below								
	<table border="1"> <tr> <td>Channel Spacing for</td> <td>Channel Raster</td> </tr> <tr> <td>Adjacent NR Carriers</td> <td>100 kHz</td> </tr> <tr> <td>Carrier Aggregation</td> <td>15 kHz</td> </tr> <tr> <td>Off</td> <td>60 kHz</td> </tr> </table>	Channel Spacing for	Channel Raster	Adjacent NR Carriers	100 kHz	Carrier Aggregation	15 kHz	Off	60 kHz
Channel Spacing for	Channel Raster								
Adjacent NR Carriers	100 kHz								
Carrier Aggregation	15 kHz								
Off	60 kHz								
	<table border="1"> <tr> <td>Channel Spacing for</td> <td>Channel Raster</td> </tr> <tr> <td>Adjacent NR Carriers</td> <td>100 kHz</td> </tr> <tr> <td>Carrier Aggregation</td> <td>15 kHz</td> </tr> <tr> <td>Off</td> <td>60 kHz</td> </tr> </table>	Channel Spacing for	Channel Raster	Adjacent NR Carriers	100 kHz	Carrier Aggregation	15 kHz	Off	60 kHz
Channel Spacing for	Channel Raster								
Adjacent NR Carriers	100 kHz								
Carrier Aggregation	15 kHz								
Off	60 kHz								
	<table border="1"> <tr> <td>Channel Spacing for</td> <td>Channel Raster</td> </tr> <tr> <td>Adjacent NR Carriers</td> <td></td> </tr> <tr> <td>Carrier Aggregation</td> <td></td> </tr> <tr> <td>Off</td> <td></td> </tr> </table>	Channel Spacing for	Channel Raster	Adjacent NR Carriers		Carrier Aggregation		Off	
Channel Spacing for	Channel Raster								
Adjacent NR Carriers									
Carrier Aggregation									
Off									

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous NCONTiguous</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation?</code>
Example	<code>:CCAR:CONF:ALL CONT</code> <code>:CCAR:CONF:ALL?</code>
Preset	CONTiguous
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command `[:SENSe]:CCARrier:CONFig:ALLocation:NCONTiguous:ABPoint CC0 | ... | CC15`

	<code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?</code>
Example	<code>:CCAR:CONF:ALL:NCON:ABP CC0</code> <code>:CCAR:CONF:ALL:NCON:ABP?</code>
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	<code>CC0</code>
State Saved	Saved in instrument state
Range	<code>CC0 ... CC15</code>

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe] OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe]?</code>
Example	<code>:CCAR0 ON</code> <code>:CCAR0?</code>
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action "Apply Preset (to All CCs)" is executed
Preset	ON
State Saved	Saved in instrument state

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth B3M B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth?</code>
Example	<code>:CCAR4:RAD:STAN:BAND B50M</code>
Dependencies	When " Sidelink " on page 1627 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	B100M unless noted below

	<ul style="list-style-type: none"> - Option B25: B20M - Option B40: B35M - Option B85: B80M
State Saved	Yes
Range	3 MHz 5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge FR1 FR2</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge?</code>
Example	<code>:CCAR1:RAD:STAN:FRAN FR1</code>
Dependencies	Available selections differ depending on "Bandwidth" on page 3057 as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only
Couplings	This value will be preset to the Frequency Range value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	<code>FR1</code>
State Saved	Yes
Range	<code>FR1 FR2</code>

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	<code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq></code> <code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet?</code>
Example	<code>:CCAR4:FREQ:OFFS 10MHz</code> <code>:CCAR4:FREQ:OFFS?</code>
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range

of the sub-op code is determined by the number of component carriers
 Frequency Offset of CC0 to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly

Also, in some cases, make sure if the “Non-Contiguous Break at” parameter is set to the intended value since it’s often left unchanged after Frequency Offset of CCs are changed

Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Cell ID Auto

Enable and disable Cell ID auto detection based on SSB.

NOTE This setting is available for EVM measurement only.

Remote Command	<code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE AUTO MANua1 [:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE?</code>
Example	<code>:EVM:CCAR:CID:MODE MAN :EVM:CCAR:CID:MODE?</code>
Preset	<code>MANua1</code>
State Saved	Saved in instrument state

Cell ID Value

Specify Cell ID for the component carrier.

NOTE This setting is available for EVM measurement only.

Remote Command	<code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID <integer> [:SENSe]:EVM:CCARrier[0] 1 ... 15:CID?</code>
Example	<code>:EVM:CCAR4:CID 0 :EVM:CCAR4:CID?</code>
Couplings	Invalid when Cell ID Auto is on
Preset	0

State Saved	Saved in instrument state
Min	0
Max	1007

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum NORMal INVert</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum?</code>
Example	<code>:CCAR0:SPEC INV</code> <code>:CCAR0:SPEC?</code>
Preset	<code>NORM</code>
State Saved	Yes
Range	Normal Invert

CHP Power Integration Bandwidth

This column specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

NOTE This setting is *not* available for EVM.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration?</code>
Example	<code>:CCAR0:CHP:BAND:INT 20MHz</code> <code>:CCAR0:CHP:BAND:INT?</code>
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:ACP:BAND:INT 20MHz</code> <code>:CCAR0:ACP:BAND:INT?</code>
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS

Couplings When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table
 When Freq Range is FR1

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
3 MHz	2.700	2.715
5 MHz	4.500	4.515
10 MHz	9.360	9.375
15 MHz	14.220	14.235
20 MHz	19.080	19.095
25 MHz	23.940	23.955
30 MHz	28.800	28.815
35 MHz	33.840	33.855
40 MHz	38.880	38.895
45 MHz	43.560	43.575
50 MHz	48.600	48.615
60 MHz	58.320	58.350
70 MHz	68.040	68.070
80 MHz	78.120	78.150
90 MHz	88.200	88.230
100 MHz	98.280	98.310

When Freq Range is FR2

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
-----------	----------------------------------	--------------------------------

	50 MHz	47.520	47.580
	100 MHz	95.040	95.160
	200 MHz	190.080	190.20
	400 MHz	380.160	380.280
	800 MHz	714.24	715.20
	1600 MHz	1428.48	1429.44
	2000 MHz	1704.96	1705.92
Preset	98.280 MHz 98.310 MHz		
State Saved	Yes		
Min	100 kHz		
Max	2000 MHz		

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:SEM:BAND:INT 20MHz</code> <code>:CCAR0:SEM:BAND:INT?</code>
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

N_Grid_Size (Display Only)

Display Max RB Number for each available numerology. To adjust this setting please switch to Resource Grid tab.

NOTE

This setting is available for EVM measurement only.

3GPP TS38.104 or TS38.101-1 Table 5.3.2-1: Maximum transmission bandwidth configuration N_{RB} for FR1

3GPP TS38.104 Tables 5.3.2-2 and 5.3.2-3 or TS38.101-2 Table 5.3.2-1: Maximum transmission bandwidth configuration N_{RB} for FR2

SCS	50 MHz	100 MHz	200 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	66	132	264	N.A	N.A	N.A	N.A
120	32	66	132	264	N.A	N.A	N.A
480	N.A	N.A	N.A	66	124	248	N.A
960	N.A	N.A	N.A	33	62	124	148

NOTE: For the “N.A” value in above table, the value will be set to 0 and displayed as “---”.

SCS (Power Meas)

Queries the SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier set with **"SCS Enabled" on page 3066**.

It is used to calculate the aggregated channel bandwidth when Power Reference is set to Aggregated Chan BW.

Power Integration Bandwidth values are not affected even if SCS (Power Meas) is changed.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RGRid:PMSCs?</code>
Example	<code>:CCAR3:RGR:PMSC?</code>
Notes	<p>Query-only</p> <p>Returns one of the following values: NONE, SCS15K, SCS30K, SCS60K, SCS120K, SCS240K, SCS480K, SCS960K</p>

Resource Grid

Enables you to configure resource grid for each available numerology of each component carrier.

NOTE

This tab and the following controls are available only for Modulation Analysis measurement.

Component Carrier (GUI only)

Selects the Component Carrier to configure its resource grid for each available numerology.

Bandwidth

This is the same as the Bandwidth column in the Configure CCs table. See ["Bandwidth" on page 3057](#).

Freq Range

This is the same as the Freq Range column in the Configure CCs table. See ["Freq Range" on page 3058](#)

Configuration Mode

Selects the configuration mode for resource grid table:

- Auto – always reset N_grid_start and N_grid_size when the frequency range and bandwidth of component carrier are changed. SCS enable/disable state will not be changed, unless enabled SCS is invalid for new frequency range and bandwidth. If all enabled SCS are invalid for new frequency range and bandwidth, 30K SCS will be enabled for frequency range 1 and 120K SCS will be enabled for frequency range 2

3 5G NR/5G-A Mode
3.4 ACP Measurement

- Man – keep the value in grid table when the frequency range and bandwidth of component carrier are changed, unless a value is invalid for new frequency range and bandwidth

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO ON OFF 1 0</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO?</code>
Example	<code>:EVM:CCAR:RGR:CONF:AUTO 0</code> <code>:EVM:CCAR:RGR:CONF:AUTO?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON 0 1

When the configuration mode is Auto, the default N_{grid_start} is set to 0 and N_{grid_size} is set according to tables below:

Table 5.3.2-1: Transmission bandwidth configuration N_{RB} for FR1

S	5	1	1	2	2	3	3	4	4	5	6	7	8	9	1

960	N.A	N.A	N.A	33	62	124	148

SCS Enabled

The Enabled column lets you enable or disable selected SCS for current component carrier.

Remote Command	<pre>[:SENSe][:EVM]:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k [:STATe] OFF ON 0 1 [:SENSe][:EVM]:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k [:STATe]?</pre>
Example	<pre>:EVM:CCAR:RGR:SCS15 ON :EVM:CCAR:RGR:SCS15?</pre>
Notes	<p>Only valid numerology for selected frequency range and bandwidth will be visible. Some SCS are disabled if they are “N.A” in Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104)” in the Section 3.2.5.1.15, N_Grid_Size (Display Only)</p> <p>In EVM, if Configuration Mode is Auto and Freq Range is changed, the Grid Start and Grid Size will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p> <p>In measurements other than EVM, when Freq Range is changed, the parameter will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p>
Preset	<pre>SCS 15k : OFF SCS 30k : ON SCS 60k : OFF SCS 120k: OFF SCS240K: OFF SCS480K:OFF SCS960K:OFF</pre>
State Saved	Yes

N_grid_start

This column lets you set the Grid Start value for the selected numerology.

Remote Command	<pre>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:STARt <integer> [:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:STAR- t?</pre>
Example	<pre>:EVM:CCAR:RGRid:SCS15k:STAR 0 :EVM:CCAR:RGRid:SCS15k:STAR?</pre>
Preset	Depends on frequency range, bandwidth and numerology

State Saved	Yes
Min	0
Max	Depends on frequency range, bandwidth and numerology

N_grid_size

This column lets you set the Grid Size for the selected numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE <integer></code> <code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:SIZE 270</code> <code>:EVM:CCAR:RGR:SCS15k:SIZE?</code>
Notes	Grid Size should not exceed the Nrb in Table 5.3.2-1 or Table 5.3.2-2 of 3GPP TS38.104 and TS38.101-1 & -2
Preset	Depends on frequency range and bandwidth
State Saved	Yes
Min	6
Max	Depends on frequency range, bandwidth and numerology
Backwards Compatibility SCPI	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RBNumber:SCS15k SCS30k SCS60k SCS120k SCS240k</code>

k0 (Display Only)

This column displays the k0 value for the selected Numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:k0?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:k0?</code>

More Information

See picture below for illustration how k0 is calculated.

Intra-Cell Guard Band

Enter a comma-separated string to set guard band. Consecutive numbers will be merged into one guard band. At most, 4 guard bands are allowed and the rest will be omitted. Colon-separated numbers represent the start and stop of a guard band.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:SCS15k SCS30k:GBANd <string></code>
Example	<code>:EVM:CCAR:RGR:SCS15k:GBAN "0:9"</code> <code>:EVM:CCAR:RGR:SCS15k:GBAN?</code>
Couplings	Only visible for Uplink and only available for 15kHz/30kHz numerology
State Saved	Yes

RB Set (Display Only)

Display the RB set according to Intra-Cell Guard Band setting.

Point A Frequency (Display Only)

This figure displays the Point A Freq for the resource grid.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:REFA?</code>
Example	<code>:EVM:CCAR:RGR:REFA?</code>

LTE Coexistence

This tab and the following controls are available only for Modulation Analysis measurement, and it will only appear for DL FR1 component carriers.

Add LTE (GUI only)

Pressing this control inserts a new LTE-CRS configuration into the list, the maximum number of LTE-CRS configurations is 4.

Delete LTE (GUI only)

Pressing this control deletes selected LTE-CRS configuration from the list.

Clear All (GUI only)

Pressing this control deletes all LTE-CRS configurations from the list.

Effective LTE Number (Remote Command only)

Specifies how many LTE-CRS configurations are effective. This SCPI only command is used to provide similar functions such as “Add LTE” and “Delete LTE”.

Note that all 4 LTE-CRS configurations can be modified through SCPI, but ineffective LTE-CRS configurations (index > Effective LTE Number) will not be included in the measurement no matter whether its state is “On” or “Off”.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:NUMBER:LTE <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:NUMBER:LTE?</code>
Example	<code>:EVM:CCAR:NUMB:LTE 2</code> <code>:EVM:CCAR:NUMB:LTE?</code>
Couplings	Max value is 4 If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	4

State

Enable or disable the LTE coexistence.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATe]?</code>
Example	<code>:EVM:CCAR:LTE1 OFF</code>

	<code>:EVM:CCAR:LTE1?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message This control is available only when 15K SCS is enabled in the resource grid
Preset	<code>OFF</code>
State Saved	Yes

Bandwidth

Set the LTE bandwidth.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW B1M4 B3M B5M B10M B15M B20M</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW?</code>
Example	<code>:EVM:CCAR:LTE1:BW B20M</code> <code>:EVM:CCAR:LTE1:BW?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	<code>B5M</code>
State Saved	Yes
Range	1.4 MHz 3 MHz 5 MHz 10 MHz 15 MHz 20 MHz

Carrier Offset to Point A

Sets the LTE carrier center subcarrier location determined by the offset from point A using 15K SCS.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset?</code>
Example	<code>:EVM:CCAR:LTE1:COFF 0</code> <code>:EVM:CCAR:LTE1:COFF?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	0
State Saved	Yes
Min	0
Max	16383

MBSFN Subframes

Sets the subframe index that can be configured as MBSFN subframes in LTE.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame <string></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame?</code>
Example	<code>:EVM:CCAR:LTE:MBSF:SFR "2:9"</code> <code>:EVM:CCAR:LTE:MBSF:SFR?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
State Saved	Yes

Number of CRS Antenna Ports

Set the number of antenna ports for LTE-CRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer N1 N2 N4</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB N1</code> <code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	N1
State Saved	Yes
Range	1 2 4

v-shift

Set the v-shift value for LTE-CRS; it is given by LTE Cell ID mod 6.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:VSH 0</code> <code>:EVM:CCAR:LTE1:CRS:VSH?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error

	message
Preset	0
State Saved	Yes
Min	0
Max	5

Advanced Acquisition

This menu is available only for the Modulation Analysis measurement. It enables you to configure selected RF settings for each component carrier and channel.

Number of Component Carriers

This is the same as the control on the menu panel. See ["Number of Component Carriers" on page 3052](#).

Input Channel (GUI Only)

Select the input channel to configure its settings.

State Saved	No
-------------	----

Use Advanced Acquisition Table

Specify if the settings in Advanced Acquisition Table will be applied.

Remote Command	<code>[:SENSe]:RF:ACQuistion:ATABle OFF ON 0 1</code> <code>[:SENSe]:RF:ACQuistion:ATABle?</code>
Example	<code>:RF:ACQ:ATAB 1</code> <code>:RF:ACQ:ATAB?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON

IF Path Auto

Specify if the IF path in Advanced Acquisition Table will be automatically or manually selected.

Remote	<code>[:SENSe]:RF:ACQuistion:ATABle:IFPath:AUTO ON OFF 1 0</code>
--------	--

Command	<code>[:SENSe]:RF:ACQuisition:ATABle:IFPath:AUTO?</code>
Example	<code>:RF:ACQ:ATAB:IFP:AUTO 1</code> <code>:RF:ACQ:ATAB:IFP:AUTO?</code>
Preset	ON
State Saved	Yes
Range	OFF ON

Mechanical Attenuation

Set mechanical attenuation for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:ATT 20</code>
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. To get to a value below 6 dB it has to be directly entered from the keypad or via SCPI. This protects from adjusting the attenuation to a dangerously small value which can put the instrument at risk of damage to input circuitry. However, if the current mechanical attenuation is below 6 dB it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB

Elec Attenuation

Set electronic attenuation for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:EATT 20</code>
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual attenuator configuration: 24 dB Single attenuator configuration: the total of ATT and EATT cannot exceed 50 dB, so if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB

LNA

Turn on/off Low Noise Amplifier (LNA) for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:LNA ON</code>
Dependencies	Requires option LNA
Preset	OFF
State Saved	Saved in State

Internal Preamp

Turn on/off internal preamp for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:PREamp OFF LOW FULL</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:PREamp?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:PRE LOW</code> <code>:CCAR0:RF:CHAN1:GAIN:PRE?</code>
Dependencies	Preamp is not available on all hardware platforms. If the preamp is not present or is unlicensed, the control is not shown
Preset	OFF
State Saved	Saved in instrument state

uW Path Control

Select uW Path for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH STD LNPath MPBypass FULL</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH?</code>
Example	<code>:CCAR0:RF:CHAN1:MW:PATH LNP</code> <code>:CCAR0:RF:CHAN1:MW:PATH?</code>
Preset	MPB option present and licensed: MPB MPB option not present and licensed: STD
State Saved	Save in instrument state
Range	Standard Path Low Noise Path Enable μW Presel Bypass Full Bypass Enable

IF Gain

Set IF Gain for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:IF:GAIN:LEVel <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:IF:GAIN:LEVel?</code>
Example	<code>:CCAR0:RF:CHAN1:IF:GAIN:LEV -10</code> <code>:CCAR0:RF:CHAN1:IF:GAIN:LEV?</code>
Notes	Not available for B25 IF bandwidth option
Preset	0
State Saved	Save in instrument state
Min	Depends on CC Bandwidth
Max	Depends on CC Bandwidth

IF Path

Specify IF path manually for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath B10M B25M B40M B85M B125M B140M B160M B255M B510M B1G B1500M B2G B4G</code> <code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath?</code>
Example	<code>:CCAR0:RF:CHAN1:IFP B160M</code> <code>:CCAR0:RF:CHAN1:IFP?</code>
Notes	B10M = 10 MHz B25M = 25 MHz B40M = 40 MHz B85M = 85 MHz B125M = 125 MHz B140M = 140 MHz B160M = 160 MHz B255M = 255 MHz B510M = 510 MHz B1G = 1 GHz B1500M = 1.5 GHz B2G = 2 GHz B4G = 4 GHz In cases where the path is not available but is selected from SCPI, it generates an error - 241, "Hardware missing; Option not installed"

Dependencies	Gray out if IF Path Auto is On
Preset	Automatically selected IF path according to measurement required IFBW and available HW bandwidth
State Saved	Saved in instrument state

Measure CC

Selects the component carrier to be measured in the uplink time mask measurement.

NOTE The parameter is available only for the Transmit On|Off Power measurement.

Remote Command	<code>[:SENSe]:PVTime:ULINK:CCARrier CC0 ... CC15</code> <code>[:SENSe]:PVTime:ULINK:CCARrier?</code>
Example	<code>:PVT:ULINK:CCAR CC0</code> <code>:PVT:ULINK:CCAR?</code>
Dependencies	Available only when Radio Direction is Uplink
Preset	<code>CC0</code>
State Saved	Yes
Range	CC0 CC1 CC2 CC3 CC4 CC5 CC6 CC7 CC8 CC9 CC10 CC11 CC12 CC13 CC14 CC15

Offset

Lets you configure the spacing of the offset regions.

Offset Frequency Define

Lets you select offset frequency definition. Each standard defines each offset frequency from Carrier.

For example, 3GPP2 requires the “From Carrier Center to Integ BW Closer Edge” definition. LTE conformance test requires “From Carrier Edge to Integ BW Center” and/or “From Carrier Edge to Integ BW Closer Edge” definition.

CTOCenter	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the center frequency of each Offset Integ BW
CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the closest edge frequency of each Offset Integ BW
ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of each Offset Integ BW

3 5G NR/5G-A Mode
3.4 ACP Measurement

ETOEdge	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the closest edge of each Offset Integ BW
CTOCenter	From either the lower or upper RF BW** edge frequency to the center frequency of each Offset Integ BW
5G NR Mode only	
CTOEdge	From either the lower or upper RF BW** edge frequency to the closest edge frequency of each Offset Integ BW
5G NR Mode only	
CTOCenter	From the center frequency of RF BW** to the center frequency of each Offset Integ BW
5G NR Mode only	
SCTOCenter	From the center frequency of sub-block** to the center frequency of each Offset Integ BW
5G NR Mode only	

** RF BW = $BW_{channel,CA}$ which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or Disabled. When the Number of Component Carrier = 1, $RF\ BW = BW_{channel} = 2 \times F_{offset,RAT}$

** sub-block (bandwidth) = $BW_{channel,block}$ which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or Disabled. When the Number of Component Carrier within each sub-block = 1, sub-block (bandwidth) = $BW_{channel} = 2 \times F_{offset,RAT}$.

See "Diagrams for Offset Freq Define" on page 746.

Modes other than MSR, LTEAFDD, LTEATDD, 5G NR

Remote Command	<code>[:SENSe] :ACPpower :OFFSet [1] 2 [:OUTer] :TYPE CTOCenter CTOEdge ETOCenter ETOEdge</code> <code>[:SENSe] :ACPpower :OFFSet [1] 2 [:OUTer] :TYPE ?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS:TYPE ETOC</code> <code>:ACP:OFFS:TYPE?</code>
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored
Preset	<code>CTOCenter</code>
State Saved	Saved in instrument state
Range	<code>CTOCenter CTOEdge ETOCenter ETOEdge</code>

Mode: MSR, LTEAFDD, LTEATDD

Remote Command	<code>[[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:TYPE CTOCenter CTOEdge ETOCenter ETOEdge</code> <code>[[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:TYPE?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS:TYPE ETOC</code> <code>:ACP:OFFS:TYPE?</code>
Preset	<code>CTOCenter</code>
State Saved	Saved in instrument state
Range	<code>CTOCenter CTOEdge ETOCenter ETOEdge</code>

Mode: 5G NR

Example	<code>:ACP:OFFS:TYPE ETOC</code> <code>:ACP:OFFS:TYPE?</code>
Preset	<code>CTOCenter</code>
State Saved	Saved in instrument state
Range	<code>CTOCenter CTOEdge ETOCenter ETOEdge RTOCenter RTOEdge RCTOCenter SCTOCenter</code>

Diagrams for Offset Freq Define

Details depend on the selected mode.

Diagram for Modes other than MSR, LTEAFDD, LTEATDD, 5G NR

Diagram for MSR, LTEAFDD, LTEATDD, 5G NR

Note:

RF BW Edge and Outermost Carrier Edge are not always the same.
e.g.) 5G NR (3GPP) defines BW_channel, CA which calculates $F_{\text{offset,high}}$ and $F_{\text{offset,low}}$ asymmetrically with SCS shift.

(*) For MSR, $F_{\text{offset,high (or ,low)}} = F_{\text{offset,RAT,high (or ,low)}}$

Offset Freq

Determines the frequency difference between the center of the main channel and the center of the carrier.

Each **Offset Freq** state value is entered individually by selecting the desired carrier.

3 5G NR/5G-A Mode
3.4 ACP Measurement

The list contains up to six (6) entries, depending on the mode selected, for offset frequencies. Each offset frequency in the list corresponds to a reference bandwidth in the bandwidth list.

An offset frequency of zero turns the display of the measurement for that offset off, but the measurement is still made and reported. You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet:LIST:STATe`.

Turning the offset off has the same effect as setting the frequency of the offset to 0 Hz, and causes it to be removed from the results screen.

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST[:FREQuency] <freq>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST[:FREQuency]?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink												
Example	<code>:ACP:OFFS1:LIST 0,0,0,0,0,0</code> <code>:ACP:OFFS1:LIST?</code>												
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, unless the number of values sent is greater than the number of carriers, in which case subsequent values are ignored												
Couplings	Changing Offset Frequency might affect "Span" on page 705												
Preset	When "Max Num of Offsets" on page 777 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value

Range	OFF ON												

Integ BW

Sets the Integration Bandwidth for the offsets. Each resolution bandwidth in the list corresponds to an offset frequency in the list defined by `[:SENSe]:ACP:OFFSet[n] [:OUTer]:LIST[:FREquency]`.

Enter each value individually by selecting the desired offset, then enter the Offset Integration Bandwidth.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n] [:OUTer]:LIST:STATe`.

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:BANDwidth[:INTEgration] <freq>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:BANDwidth[:INTEgration]?</code>
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:LIST:BAND 2MHz,2MHz,2MHz,2MHz,2MHz,2MHz</code> <code>:ACP:OFFS2:LIST:BAND?</code>
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, so, if you want to change the second value, you must send all values up to that. Subsequent values remain unchanged, unless the number of values sent is greater than the number of carriers, then subsequent values is ignored

Couplings	Changing Integ BW might affect "Span" on page 705												
Preset	When "Max Num of Offsets" on page 777 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value												
	<table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>SA</td> <td>2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz 2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz</td> </tr> <tr> <td>WCDMA</td> <td>3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz</td> </tr> <tr> <td>LTEAFDD, LTEATDD, MSR</td> <td>4.515 MHz, 4.515 MHz, 4.515 MHz, 4.515 MHz, 4.515 MHz, 4.515 MHz 4.5 MHz, 4.5 MHz, 4.5 MHz, 4.5 MHz, 4.5 MHz</td> </tr> <tr> <td>5G NR</td> <td>98.28 MHz, 98.28 MHz, 98.28 MHz, 98.28 MHz, 98.28 MHz, 98.28 MHz 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz</td> </tr> <tr> <td>Radio Test</td> <td>25 kHz, 25 kHz, 25 kHz, 25 kHz, 25 kHz, 25 kHz</td> </tr> </tbody> </table>	Modes	Values	SA	2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz 2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz	WCDMA	3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz	LTEAFDD, LTEATDD, MSR	4.515 MHz, 4.515 MHz, 4.515 MHz, 4.515 MHz, 4.515 MHz, 4.515 MHz 4.5 MHz, 4.5 MHz, 4.5 MHz, 4.5 MHz, 4.5 MHz	5G NR	98.28 MHz, 98.28 MHz, 98.28 MHz, 98.28 MHz, 98.28 MHz, 98.28 MHz 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz	Radio Test	25 kHz, 25 kHz, 25 kHz, 25 kHz, 25 kHz, 25 kHz

Offset Side

Specifies which offset side to measure.

You can turn off (not use) specific offsets with `[:SENSe] :ACPower :OFFSet [1] | 2 [:OUTer] :LIST :SIDE`.

NEGative	Negative (lower) sideband only
BOTH	Both of the negative (lower) and positive (upper) sidebands
POSitive	Positive (upper) sideband only

The figure below shows the relation between the negative/positive offset side setups and the upper/lower results in MSR, LTEAFDD and LTEATDD Modes.

Remote Command	<pre>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:SIDE NEGative BOTH POSitive, ... [:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:SIDE?</pre> <p>Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink</p>
Example	<pre>:ACP:OFFS:LIST:SIDE BOTH :ACP:OFFS:LIST:SIDE?</pre>
Notes	<p>Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored</p> <p>If you set POS or NEG in an offset, result of the inactive side returns -999</p>
Preset	<p>When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is BOTH</p> <p>BOTH, BOTH, BOTH, BOTH, BOTH, BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH</p>
State Saved	Saved in instrument state
Range	NEGative BOTH POSitive

Method

Allows you to turn RRC filtering of each offset on or off. The value (roll off) for the filter will be set to the value of the **Filter Alpha** parameter.

Remote Command	<pre>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:FILTer[:RRC][:STATe] ON OFF 1 0,...</pre> <pre>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:FILTer[:RRC][:STATe]?</pre> <p>Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink</p>
Example	<pre>:ACP:OFFS:LIST:FILT 1,0,0 :ACP:OFFS:LIST:FILT?</pre>
Notes	<p>1 ON = RRC Weighted, 0 OFF = Integ BW</p> <p>Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored</p>
Preset	<p>When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value</p>

	Mode	Values
	SA	0, 0, 0, 0, 0, 0 0, 0, 0, 0, 0, 0
	WCDMA	1, 1, 1, 1, 1, 1 1, 1, 1, 1, 1, 1
	LTEAFDD, LTEATDD, 5G NR, MSR	0, 0, 0, 0, 0, 0 0, 0, 0, 0, 0, 0
	Radio Test	0, 0, 0, 0, 0, 0
State Saved	Saved in instrument state	
Range	Integ BW RRC Weighted	

Filter Alpha

Sets the alpha value for the RRC Filter for each offset.

Remote Command	<pre>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:FILTer:ALPHa <real>,...</pre> <pre>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:FILTer:ALPHa?</pre>	
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink	
Example	<pre>:ACP:OFFS:LIST:FILT:ALPH 0.5,0.5,0.5,0.5,0.5,0.5</pre> <pre>:ACP:OFFS:LIST:FILT:ALPH?</pre>	
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored	
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value	
	SA	0.22,0.22,0.22,0.22,0.22,0.22 0.22,0.22,0.22,0.22,0.22,0.22
	WCDMA	0.22,0.22,0.22,0.22,0.22,0.22 0.22,0.22,0.22,0.22,0.22,0.22
	LTEAFDD, LTEATDD, 5G NR, MSR	0.22,0.22,0.22,0.22,0.22,0.22 0.22,0.22,0.22,0.22,0.22,0.22
State Saved	Saved in instrument state	
Min/Max	0.01/1.00	

Advanced (Offset)

Opens a further menu page, which lets you set advanced properties of the Inner Offset, such as Res BW, Video BW, and Filter parameters.

Offset Freq

This column is the same as "[Offset Freq](#)" on page 2016 in the main **Offset** menu.

Res BW

Sets the resolution bandwidth. If an unavailable bandwidth is entered with the numeric keypad, the closest available bandwidth is selected.

Remote Command	<pre>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:BANDwidth:RESolution <freq>,...</pre> <pre>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:BANDwidth:RESolution?</pre> <p>Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink</p>						
Example	<pre>:ACP:OFFS2:LIST:BAND:RES 220kHz,220kHz,220kHz,220kHz,220kHz,220kHz</pre> <pre>:ACP:OFFS2:LIST:BAND:RES?</pre>						
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored						
Dependencies	When " Meas Method " on page 719 is RBW, FAST or Fast Power, this cell is grayed-out and disabled. If the cell is pressed, an advisory message is generated. If the equivalent SCPI remote command is sent, a "Setting conflict" warning is generated						
Couplings	When Res BW Mode is Auto , this value is exactly same as Res BW . When you change this value, Res BW Mode also changes to Man						
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value						
	<table border="1"> <tr> <td>SA</td> <td>220 kHz, 220 kHz, 220 kHz, 220 kHz, 220 kHz, 220 kHz</td> </tr> <tr> <td>WCDMA</td> <td>100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz</td> </tr> <tr> <td>LTEAFDD, LTEATDD, 5G NR, MSR</td> <td>100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz</td> </tr> </table>	SA	220 kHz, 220 kHz, 220 kHz, 220 kHz, 220 kHz, 220 kHz	WCDMA	100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz	LTEAFDD, LTEATDD, 5G NR, MSR	100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz

Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored

Dependencies	When "RBW Filter Type" on page 692 is Flattop, or "Res BW" on page 689 Mode for the offset is Auto , this cell is grayed-out and disabled. Since Res BW Mode for the offset is preset to Auto on changing "Meas Method" on page 719 to RBW, FAST or Fast Power, this cell is grayed-out and disabled too. If the cell is pressed, an advisory message is generated. If the equivalent remote command is sent, a "Setting conflict" warning is generated
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is DB3 DB3, DB3, DB3, DB3, DB3, DB3
State Saved	Saved in instrument state
Range	-3 dB (Normal) -6 dB
Backwards Compatibility SCPI	<code>[:SENSe]:ACPower:OFFSet[1] 2:LIST:BWIDth:TYPE</code>

Limits

Lets you configure the limits that are used to determine whether the offset regions **PASS** or **FAIL** the limit test.

Limit Test

This checkbox is the same as "Limit Test" on page 757 in the **Meas Setup, Settings** tab.

Offset Freq

This column is the same as "Offset Freq" on page 2016 in the **Offset** index tab.

Abs Limit

Specifies an absolute limit value, which sets the absolute amplitude levels to test against for each of the custom offsets. The list must contain 6 entries. If there is more than one offset, the offset closest to the carrier channel is the first one in the list. `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with the `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:STATE` command.

The query returns the six (6) sets of real numbers that are the current absolute amplitude test limits.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:ABSolute < real>,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:ABSolute?</code>
----------------	---

Rel Limit (Car)

Enters a relative limit value for the carrier level. This sets the amplitude levels to test against for the specified offsets.

The amplitude level is relative to the carrier amplitude. If multiple offsets are available, the list contains 6 entries. The offset closest to the carrier channel is the first one in the list.

`[:SENSe]:ACP:OFFSet[n] [:OUTer]:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n] [:OUTer]:LIST:STATE`.

The query returns the 6 sets of real numbers that are the current amplitude test limits, relative to the carrier, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote	<code>[:SENSe]:ACPPower:OFFSet[1] 2 [:OUTer]:LIST:RCARrier <real>,...</code>
--------	--

Command	<code>[[:SENSE]:ACPower:OFFSet[1] 2[:OUTer]:LIST:RCARrier?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink												
Example	<code>:ACP:OFFS2:LIST:RCAR 0,0,0,0,0,0</code> <code>:ACP:OFFS2:LIST:RCAR?</code>												
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored

Min/Max	-150.0/50.0
Backwards Compatibility SCPI	<code>:CALCulate:MCPower:OFFSet:LIST:LIMit:NEGative[:UPPer]:DATA</code> (Power Suite, WCDMA)

Rel Limit (PSD)

Enters a relative limit value for the level of the power spectral density. This sets the amplitude levels to test against for any custom offsets. The amplitude level is relative to the power spectral density. If multiple offsets are available, the list contains 6 entries. The offset closest to the carrier channel is the first one in the list.

`[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:STATE`.

The query returns the 6 sets of real numbers that are the current amplitude test limits, relative to the power spectral density, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:RPSDensity <rel_ampl>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:RPSDensity?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:LIST:RPSD 10,10,10,10,10,10</code> <code>:ACP:OFFS2:LIST:RPSD?</code>
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
SA	-28.87 dB, -43.87 dB, 0 dB, 0 dB, 0 dB, 0 dB -28.87 dB, -43.87 dB, 0 dB, 0 dB, 0 dB, 0 dB
WCDMA	-44.2 dB, -49.2 dB, -49.2 dB, -49.2 dB, -49.2 dB, -49.2 dB -32.2 dB, -42.2 dB, -42.2 dB, -42.2 dB, -42.2 dB
LTEAFDD, LTEATDD, 5G NR, MSR	0, 0, 0, 0, 0, 0 0, 0, 0, 0, 0, 0
Radio Test	-60, -60, -60, 0, 0, 0

State Saved	Saved in instrument state
Min/Max	-150.0 dB/50.0 dB

Fail Mask

Accesses a menu that lets you select one of the logics for the fail conditions between the measurement results and the test limits. The setting defines the type of testing to be done at any custom offset frequencies. The measured powers are tested against the absolute values defined with `[:SENSe]:ACP:OFFSet[n] [:OUTer]:LIST:ABSolute`, or the relative values defined with `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:RPSDensity` and `[:SENSe]:ACP:OFFSet[n] [:OUTer]:LIST:RCARrier`.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n] [:OUTer]:LIST:STATE`.

Absolute	ABSolute	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit
Relative	RELative	Fail is shown if one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
Abs AND Rel	AND	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit and one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
Abs OR Rel	OR	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit or one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)

Remote Command	<code>[:SENSe]:ACP:Power:OFFSet[1] 2 [:OUTer]:LIST:TEST ABSolute AND OR RELative,...</code> <code>[:SENSe]:ACP:Power:OFFSet[1] 2 [:OUTer]:LIST:TEST?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
----------------	--

Example	<code>:ACP:OFFS2:LIST:TEST ABS,ABS,ABS,ABS,ABS,ABS</code> <code>:ACP:OFFS2:LIST:TEST?</code>
---------	---

Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored
-------	--

Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Inner Offset

Accesses a menu of functions that contains Offset, Offset Freq/Offset To Edge, Offset Integ BW, Upper Offset Limit and Lower Offset parameters.

Offset Frequency Define

Allows you to select “Offset” definition:

CTOCenter	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the center frequency of each Offset Integ BW
CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the closest edge frequency of each Offset Integ BW
ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of each Offset Integ BW
ETOEdge	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the closest edge frequency of each Offset Integ BW
STOCenter	From either the lower or upper sub-block edge frequency to the center frequency of each Offset Integ BW
STOEdge	From either the lower or upper sub-block edge frequency to the closest edge frequency of each Offset Integ BW
SCTOCenter	From the center frequency of sub-block** to the center frequency of each Offset Integ BW

5G NR Mode only

** sub-block (bandwidth) = $BW_{channel,block}$ which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or Disabled. When the Number of Component Carrier within each sub-block = 1, sub-block (bandwidth) = $BW_{channel} = 2 \times F_{offset,RAT}$.

See ["Diagram for Offset Freq Define" on page 765](#)

Mode: MSR, LTEAFDD, LTEATDD

Remote Command	<code>[:SENSE]:ACPower:OFFSet[1] 2:INNER:TYPE CTOCenter CTOEdge ETOCenter ETOEdge STOCenter STOEdge</code> <code>[:SENSE]:ACPower:OFFSet[1] 2:INNER:TYPE?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS:INN:TYPE ETOC</code> <code>:ACP:OFFS:INN:TYPE?</code>
Preset	<code>STOCenter</code>
State Saved	Saved in instrument state
Range	<code>CTOCenter CTOEdge ETOCenter ETOEdge STOCenter STOEdge</code>

Mode: 5G NR

Remote Command	<code>[:SENSE]:ACPower:OFFSet[1] 2:INNER:TYPE CTOCenter CTOEdge ETOCenter ETOEdge STOCenter STOEdge SCTOCenter</code> <code>[:SENSE]:ACPower:OFFSet[1] 2:INNER:TYPE?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS:INN:TYPE ETOC</code> <code>:ACP:OFFS:INN:TYPE?</code>
Preset	<code>STOCenter CTOCenter</code>
State Saved	Saved in instrument state
Range	<code>CTOCenter CTOEdge ETOCenter ETOEdge STOCenter STOEdge SCTOCenter</code>

Diagram for Offset Freq Define

Note:

RF BW Edge and Outermost Carrier Edge are not always same.
 e.g.) 5G NR (3GPP) defines BW_channel,CA which calculates $F_{\text{offset,high}}$ and $F_{\text{offset,low}}$ asymmetrically with SCS shift

(*) For MSR, $F_{\text{offset,high (or ,low)}} = F_{\text{offset,RAT,high (or ,low)}}$

Offset Freq

Determines the frequency difference between the center of the main channel and the center of the carrier. When set to Offset to Edge, this parameter determines the frequency difference between the center of the main channel and the near edge of the offset.

Each **Offset Freq** state value is entered individually by selecting the desired carrier. Use the **Enabled** checkbox to turn the **Offset Freq** State on or off.

The list contains up to 6 entries, depending on the mode selected, for offset frequencies. Each offset frequency in the list corresponds to a reference bandwidth in the bandwidth list.

An offset frequency of zero turns the display of the measurement for that offset off, but the measurement is still made and reported. You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n]:INNeR:LIST:STATE`.

Turning the offset off has the same effect as setting the frequency of the offset to 0 Hz, and causes it to be removed from the results screen.

Remote Command	<code>[:SENSe]:ACP:Power:OFFSet[1] 2:INNeR:LIST[:FREQUENCY] <freq>,...</code> <code>[:SENSe]:ACP:Power:OFFSet[1] 2:INNeR:LIST[:FREQUENCY]?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink						
Example	<code>:ACP:OFFS1:INN:LIST 0,0,0,0,0,0</code> <code>:ACP:OFFS1:INN:LIST?</code>						
Notes	When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, unless the number of values sent is greater than the number of carriers, then subsequent values are ignored						
Couplings	Changing Offset Frequency might affect "Span" on page 705						
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value						
	<table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>5G NR</td> <td>10 MHz, 30 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz 100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz</td> </tr> <tr> <td>All Others</td> <td>2.5MHz,7.5MHz,0,0,0,0 2.5MHz,7.5MHz,0,0,0,0</td> </tr> </tbody> </table>	Modes	Values	5G NR	10 MHz, 30 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz 100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz	All Others	2.5MHz,7.5MHz,0,0,0,0 2.5MHz,7.5MHz,0,0,0,0
Modes	Values						
5G NR	10 MHz, 30 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz 100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz						
All Others	2.5MHz,7.5MHz,0,0,0,0 2.5MHz,7.5MHz,0,0,0,0						
State Saved	Saved in instrument state						
Min/Max	0 Hz/Depends on instrument maximum frequency. Same as Max Span of the Swept SA Measurement Auto Function						
Remote Command	<code>[:SENSe]:ACP:Power:OFFSet[1] 2:INNeR:LIST:STATE OFF ON 0 1,...</code> <code>[:SENSe]:ACP:Power:OFFSet[1] 2:INNeR:LIST:STATE?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink						
Example	<code>:ACP:OFFS2:INN:LIST:STAT 1,1,0,0,0,0</code> <code>:ACP:OFFS2:INN:LIST:STAT?</code>						
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value <code>ON, ON, OFF, OFF, OFF, OFF ON, OFF, OFF, OFF, OFF, OFF</code>						
State Saved	Yes						

Integ BW

Sets the Integration Bandwidth for the offsets. Each resolution bandwidth in the list corresponds to an offset frequency in the list defined by `[:SENSe]:ACPower:OFFSet [n]:INNER:LIST[:FREQUENCY]`.

Enter each value individually by selecting the desired offset on the **Offset** menu key using the up down arrows, the knob, or the numeric keypad, then enter the Offset Integration Bandwidth using the **Offset Integration Bandwidth** menu key.

You can turn off (not use) specific offsets with `[:SENSe]:ACPower:OFFSet [n]:INNER:LIST:STATE`.

Remote Command	<code>[:SENSe]:ACPower:OFFSet [1] 2:INNER:LIST:BANDwidth[:INTEgration] <freq>, ... [:SENSe]:ACPower:OFFSet [1] 2:INNER:LIST:BANDwidth[:INTEgration]?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink								
Example	<code>:ACP:OFFS2:INN:LIST:BAND 2MHz, 2MHz, 2MHz, 2MHz, 2MHz, 2MHz :ACP:OFFS2:INN:LIST:BAND?</code>								
Notes	When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, so, if you want to change the second value you must send all values up to it. Subsequent values remain unchanged								
Couplings	Changing Integ BW might affect " Span " on page 705								
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value								
	<table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>LTEAFDD</td> <td>3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz</td> </tr> <tr> <td>MSR, LTEATDD</td> <td>4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz</td> </tr> <tr> <td>5G NR</td> <td>19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz</td> </tr> </tbody> </table>	Modes	Values	LTEAFDD	3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz	MSR, LTEATDD	4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz	5G NR	19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz
Modes	Values								
LTEAFDD	3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz								
MSR, LTEATDD	4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz								
5G NR	19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz								
State Saved	Saved in instrument state								
Min/Max	10 Hz/Depends on instrument maximum frequency. Same as Max Span of the Swept SA Measurement								

Offset Side

Lets you turn off (not use) specific offsets with `[:SENSe]:ACPower:OFFSet [1] | 2:INNER:LIST:SIDE`.

- **NEGative** - The upper side in the sub-block gap only (that is, negative sideband of the upper sub-block) is enabled

- **BOTH** - Both sides in the sub-block gap are enabled
- **POSitive** - The lower side in the sub-block gap only (that is, positive sideband of the lower sub-block) is enabled

The diagram below shows the relation between the negative/positive offset side setups and the upper/lower results in the MSR, LTEAFDD and LTEATDD Modes.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:SIDE NEGative BOTH POSitive, ...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:SIDE?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS:INN:LIST:SIDE BOTH</code> <code>:ACP:OFFS:INN:LIST:SIDE?</code>
Notes	If you set POS or NEG in an offset, result of the inactive side returns -999
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH
State Saved	Saved in instrument state
Range	NEGative BOTH POSitive

Method

Lets you turn RRC filtering of each offset on or off. The value (roll off) for the filter is set to the value of the Filter Alpha parameter.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:FILTer[:RRC][:STATe] ON OFF 1 0,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:FILTer[:RRC][:STATe]?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS:INN:LIST:FILT 1,0,0</code> <code>:ACP:OFFS:INN:LIST:FILT?</code>
Notes	1 ON = RRC Weighted, 0 OFF = Integ BW

Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value						
	<table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>LTEAFDD</td> <td>1,1,1,1,1,1 1,1,1,1,1,1</td> </tr> <tr> <td>MSR, LTEATDD, 5G NR</td> <td>0,0,0,0,0,0 0,0,0,0,0,0</td> </tr> </tbody> </table>	Modes	Values	LTEAFDD	1,1,1,1,1,1 1,1,1,1,1,1	MSR, LTEATDD, 5G NR	0,0,0,0,0,0 0,0,0,0,0,0
Modes	Values						
LTEAFDD	1,1,1,1,1,1 1,1,1,1,1,1						
MSR, LTEATDD, 5G NR	0,0,0,0,0,0 0,0,0,0,0,0						
State Saved	Saved in instrument state						
Range	Integ BW RRC Weighted						

Filter Alpha

Sets the alpha value for the RRC Filter for each offset.

Remote Command	<pre>[:SENSe]:ACPower:OFFSet[1] 2:INNER:LIST:FILTer:ALPHa <real>,...</pre> <pre>[:SENSe]:ACPower:OFFSet[1] 2:INNER:LIST:FILTer:ALPHA?</pre> <p>Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink</p>
Example	<pre>:ACP:OFFS:INN:LIST:FILT:ALPH 0.5,0.5,0.5,0.5,0.5,0.5</pre> <pre>:ACP:OFFS:INN:LIST:FILT:ALPH?</pre>
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is 0.22 0.22,0.22,0.22,0.22,0.22,0.22 0.22,0.22,0.22,0.22,0.22,0.22
State Saved	Saved in instrument state
Min/Max	0.01/1.00

Advanced (Inner Offset)

Opens a further menu page that lets you set advanced properties of the Inner Offset, such as Res BW, Video BW, Filter and "[Power Ref](#)" on page 1996 parameters.

Offset Freq

The same as "[Offset Freq](#)" on page 2030 in the main **Inner Offset** menu.

Res BW

Sets the Resolution Bandwidth. If an unavailable bandwidth is entered with the numeric keypad, the closest available bandwidth is selected.

Remote Command	<pre>[:SENSe]:ACPower:OFFSet[1] 2:INNER:LIST:BANDwidth:RESolution <freq>,...</pre> <pre>[:SENSe]:ACPower:OFFSet[1] 2:INNER:LIST:BANDwidth:RESolution?</pre>
----------------	---

	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:BAND:RES 220kHz,220kHz,220kHz,220kHz,220kHz,220kHz</code> <code>:ACP:OFFS2:INN:LIST:BAND:RES?</code>
Dependencies	When " Meas Method " on page 719 is RBW, FAST or Fast Power, this control is grayed-out and disabled. If the cell is pressed, an advisory message is generated. If the equivalent SCPI remote command is sent, a "Setting conflict" warning is generated
Couplings	When " Res BW " on page 689 Mode is Auto , this value is exactly the same as Res BW . When you change this value, Res BW Mode also changes to Man
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is 100 kHz 100 kHz, 100 kHz, 100 kHz, 100 kHz 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz
State Saved	Saved in instrument state
Min/Max	1 Hz/8 MHz

Auto Function

Remote Command	<code>[:SENSe] :ACP:Power:OFFSet[1] 2:INNER:LIST:BANDwidth:RESolution:AUTO ON OFF 1 0,...</code> <code>[:SENSe] :ACP:Power:OFFSet[1] 2:INNER:LIST:BANDwidth:RESolution:AUTO?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:BAND:RES:AUTO 1,1,1,1,1,1</code> <code>:ACP:OFFS2:INN:LIST:BAND:RES:AUTO?</code>
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is 1 1, 1, 1, 1, 1, 1
State Saved	Yes

Video BW

Lets you change the instrument post-detection filter (VBW).

Remote Command	<code>[:SENSe] :ACP:Power:OFFSet[1] 2:INNER:LIST:BANDwidth:VIDeo <freq>,...</code> <code>[:SENSe] :ACP:Power:OFFSet[1] 2:INNER:LIST:BANDwidth:VIDeo?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:BAND:VID 5MHz,5MHz,5MHz,5MHz,5MHz,5MHz</code> <code>:ACP:OFFS2:INN:LIST:BAND:VID?</code>
Notes	The values shown in this table reflect the conditions after Mode Preset
Dependencies	When " Meas Method " on page 719 is RBW, FAST or Fast Power, this cell is grayed-out and disabled. If the cell is pressed, an advisory message is generated. If the equivalent remote command is sent, a "Setting conflict" warning is generated
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is 1 MHz 1 MHz, 1 MHz, 1 MHz, 1 MHz, 1 MHz, 1 MHz

3 5G NR/5G-A Mode
3.4 ACP Measurement

State Saved	Yes
Min/Max	1 Hz/50 MHz
	Auto Function
Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:BANDwidth:VIDeo:AUTO OFF ON 0 1,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:BANDwidth:VIDeo:AUTO?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:BAND:VID:AUTO 0,0,0,0,1,1</code> <code>:ACP:OFFS2:INN:LIST:BAND:VID:AUTO?</code>
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is ON ON, ON, ON, ON, ON, ON
State Saved	Yes

Filter Type

Selects the type of bandwidth filter that is used.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:BANDwidth:SHAPE GAUSSian FLATtop,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:BANDwidth:SHAPE?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:BAND:SHAP FLAT,GAUS,GAUS,GAUS,GAUS,GAUS</code> <code>:ACP:OFFS2:INN:LIST:BAND:SHAP?</code>
Dependencies	When " Res BW " on page 689 Mode for the offset is Auto , this cell is grayed-out and disabled. Since Res BW Mode for the offset is preset to Auto on changing " Meas Method " on page 719 to RBW, FAST or Fast Power, this cell is grayed-out and disabled. If the cell is pressed, an advisory message is generated. If the equivalent remote command is sent, a "Setting conflict" warning is generated
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is GAUSSian GAUSSian, GAUSSian, GAUSSian, GAUSSian, GAUSSian, GAUSSian
State Saved	Saved in instrument state
Range	GAUSSian FLATtop

Filter BW

Selects a Gaussian filter based on its –3 dB (Normal) bandwidth or its –6 dB bandwidth.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:BANDwidth:TYPE DB3 DB6,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:BANDwidth:TYPE?</code>
----------------	---

	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:BAND:TYPE DB3,DB3,DB3,DB3,DB3</code> <code>:ACP:OFFS2:INN:LIST:BAND:TYPE?</code>
Dependencies	When "RBW Filter Type" on page 692 is FLATtop or "Res BW" on page 689 Mode for the offset is Auto , this cell is grayed-out and disabled. Since Res BW Mode for the offset is preset to Auto on changing "Meas Method" on page 719 to RBW, FAST or Fast Power, this cell is also grayed-out and disabled. If the cell is pressed, an advisory message is generated. If the equivalent remote command is sent, a "Setting conflict" warning is generated
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is DB3 DB3, DB3, DB3, DB3, DB3, DB3
State Saved	Saved in instrument state
Range	-3 dB (Normal) -6 dB

Power Ref Type

Lets you set reference types of inner offsets.

CUMulative Cumulated power of the upper and lower sub-block carriers is the reference level. This selection is effective only when one of the following "Power Ref" on page 1996 values is selected:

Left & Right Carriers	LRCarriers
Max Power Carrier in Sub-block	MPCSubblock
Min Power Carrier in Sub-block	MINSubblock
Left & Right Sub-blocks	LRSubblocks
Manual	MANual

When one of the other **Power Ref** values is selected, carrier powers are not cumulated, and the reference level is equivalent to Normal

NORMal Power of specified carrier or the manual reference level is the reference level

Remote Command	<code>[:SENSe]:ACP:Power:OFFSet[1] 2:INNER:LIST:PREference CUMulative NORMal,</code> ... <code>[:SENSe]:ACP:Power:OFFSet[1] 2:INNER:LIST:PREference?</code>
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS:INN:LIST:PREF CUM,CUM,NORM,NORM,NORM,NORM</code> <code>:ACP:OFFS:INN:LIST:PREF?</code>
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is NORMal NORMal, NORMal, NORMal, NORMal, NORMal, NORMal
State Saved	Saved in instrument state
Range	CUMulative NORMal

Auto Function

3 5G NR/5G-A Mode
 3.4 ACP Measurement

Remote Command	<pre>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:PREFeRence:AUTO OFF ON 0 1, ... [:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:PREFeRence:AUTO?</pre> <p>Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink</p>																												
Example	<pre>:ACP:OFFS:INN:LIST:PREF:AUTO OFF,OFF,OFF,OFF,OFF,OFF</pre> <pre>:ACP:OFFS:INN:LIST:PREF:AUTO?</pre>																												
Dependencies	Available only in LTEAFDD, LTEATDD and 5G NR Modes																												
Couplings	<p>When in the LTEAFDD, LTEATDD Modes, the inner power ref type is set automatically when the power ref type state is auto according to the scopes of the sub-block gap in the following table</p> <table border="1"> <thead> <tr> <th>Sub-block Gap</th> <th>Inner ACP offset</th> <th>Power Ref Type</th> </tr> </thead> <tbody> <tr> <td rowspan="2">Wgap <5MHz</td> <td>1st (2.5MHz)</td> <td>Normal</td> </tr> <tr> <td>2nd (7.5MHz)</td> <td>Normal</td> </tr> <tr> <td rowspan="2">5MHz ≤ Wgap <10MHz</td> <td>1st (2.5MHz)</td> <td>Cumulative</td> </tr> <tr> <td>2nd (7.5MHz)</td> <td>Normal</td> </tr> <tr> <td rowspan="2">10MHz ≤ Wgap <15MHz</td> <td>1st (2.5MHz)</td> <td>Cumulative</td> </tr> <tr> <td>2nd (7.5MHz)</td> <td>Cumulative</td> </tr> <tr> <td rowspan="2">15MHz ≤ Wgap <20MHz</td> <td>1st (2.5MHz)</td> <td>Normal</td> </tr> <tr> <td>2nd (7.5MHz)</td> <td>Cumulative</td> </tr> <tr> <td rowspan="2">20MHz ≤ Wgap</td> <td>1st (2.5MHz)</td> <td>Normal</td> </tr> <tr> <td>2nd (7.5MHz)</td> <td>Normal</td> </tr> </tbody> </table> <p>When in 5G NR Mode, Power Ref Type “Auto” sets the power reference type of inner-ACLR offset automatically</p> <p>Downlink: “Cumulative” or “Normal” is selected accordingly when the inner-offsets are configured to meet the test requirements as follows:</p> <p>FR1, 3GPP TS 38.141-1 v16.5.0 (2020-09) Section 6.6.3.5.3 BS type 1-C:</p> <ul style="list-style-type: none"> – Table 6.6.3.5.2-3: Base Station ACLR limit in non-contiguous spectrum or multiple bands – Table 6.6.3.5.2-4: Base station CACLR limit <p>FR2, 3GPP TS 38.141-2 v16.5.0 (2020-09) Section 6.7.3.5.3 BS type 2-O:</p> <ul style="list-style-type: none"> – Table 6.7.3.5.2-3: BS type 2-O ACLR limit in non-contiguous spectrum – Table 6.7.3.5.2-4: BS type 2-O CACLR limit in non-contiguous spectrum <p>Uplink: “Normal” is always selected</p>	Sub-block Gap	Inner ACP offset	Power Ref Type	Wgap <5MHz	1st (2.5MHz)	Normal	2nd (7.5MHz)	Normal	5MHz ≤ Wgap <10MHz	1st (2.5MHz)	Cumulative	2nd (7.5MHz)	Normal	10MHz ≤ Wgap <15MHz	1st (2.5MHz)	Cumulative	2nd (7.5MHz)	Cumulative	15MHz ≤ Wgap <20MHz	1st (2.5MHz)	Normal	2nd (7.5MHz)	Cumulative	20MHz ≤ Wgap	1st (2.5MHz)	Normal	2nd (7.5MHz)	Normal

Range	Auto Man																												

Inner Limits

Accesses a menu of functions that contains Select Offset, Abs Limit, Rel Limit and Fail Mask parameters.

Limit Test

This checkbox is the same as "Limit Test" on page 800 in the Settings tab.

Offset Freq

This column is the same as "Offset Freq" on page 2030 in the Offset tab.

Abs Limit

Specifies an absolute limit value, which sets the absolute amplitude levels to test against for each of the custom offsets. The list must contain 6 entries. If there is more than one offset, the offset closest to the carrier channel is the first one in the list. `[:SENSe]:ACP:OFFSet[n]:INNER:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n]:INNER:LIST:STATE`.

The query returns the 6 sets of real numbers that are the current absolute amplitude test limits.

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2:INNER:LIST:ABSolute < real>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2:INNER:LIST:ABSolute?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink						
Example	<code>:ACP:OFFS2:INN:LIST:ABS -10,-10,-10,-10,-10,-10</code> <code>:ACP:OFFS2:INN:LIST:ABS?</code>						
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value <table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>5G NR</td> <td>-2.2, -2.2, -2.2, -2.2, -2.2, -2.2 -50.0,-50.0,-50.0,-50.0,-50.0,-50.0</td> </tr> <tr> <td>All Others</td> <td>-8.45,-8.45,-8.45,-8.45,-8.45,-8.45 -50.0,-50.0,-50.0,-50.0,-50.0,-50.0</td> </tr> </tbody> </table>	Modes	Values	5G NR	-2.2, -2.2, -2.2, -2.2, -2.2, -2.2 -50.0,-50.0,-50.0,-50.0,-50.0,-50.0	All Others	-8.45,-8.45,-8.45,-8.45,-8.45,-8.45 -50.0,-50.0,-50.0,-50.0,-50.0,-50.0
Modes	Values						
5G NR	-2.2, -2.2, -2.2, -2.2, -2.2, -2.2 -50.0,-50.0,-50.0,-50.0,-50.0,-50.0						
All Others	-8.45,-8.45,-8.45,-8.45,-8.45,-8.45 -50.0,-50.0,-50.0,-50.0,-50.0,-50.0						
State Saved	Saved in instrument state						
Min/Max	-200.0 dBm/50.0 dBm						

Rel Limit (Car)

Specifies a relative limit value for the carrier level. This sets the amplitude levels to test against for the specified offsets.

The amplitude level is relative to the carrier amplitude. If multiple offsets are available, the list contains 6 entries. The offset closest to the carrier channel is the first one in the list. `[:SENSe] :ACP:OFFSet [n] :INNER:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe] :ACP:OFFSet [n] :INNER:LIST:STATe`.

The query returns the 6 sets of real numbers that are the current amplitude test limits, relative to the carrier, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	<code>[:SENSe] :ACP:OFFSet [1] 2 :INNER:LIST:RCARrier <real>, ...</code> <code>[:SENSe] :ACP:OFFSet [1] 2 :INNER:LIST:RCARrier?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink						
Example	<code>:ACP:OFFS2:INN:LIST:RCAR 0,0,0,0,0,0</code> <code>:ACP:OFFS2:INN:LIST:RCAR?</code>						
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value <table border="1" data-bbox="389 1165 1406 1291"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>5G NR</td> <td>-43.8, -43.8, 43.8, -43.8, -43.8, -43.8 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2</td> </tr> <tr> <td>All Others</td> <td>-44.2, -44.2, -44.2, -44.2, -44.2, -44.2 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2</td> </tr> </tbody> </table>	Modes	Values	5G NR	-43.8, -43.8, 43.8, -43.8, -43.8, -43.8 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2	All Others	-44.2, -44.2, -44.2, -44.2, -44.2, -44.2 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2
Modes	Values						
5G NR	-43.8, -43.8, 43.8, -43.8, -43.8, -43.8 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2						
All Others	-44.2, -44.2, -44.2, -44.2, -44.2, -44.2 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2						
State Saved	Saved in instrument state						
Min/Max	-150/50.0						

Rel Limit (PSD)

Specifies a relative limit value for the level of the power spectral density. This sets the amplitude levels to test against for any custom offsets. The amplitude level is relative to the power spectral density. If multiple offsets are available, the list contains 6 entries. The offset closest to the carrier channel is the first one in the list.

`[:SENSe] :ACP:OFFSet [n] :INNER:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe] :ACP:OFFSet [n] :INNER:LIST:STATe`.

The query returns the 6 sets of real numbers that are the current amplitude test limits, relative to the power spectral density, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:RPSDensity <rel_ampl>,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:RPSDensity?</code>
Example	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink <code>:ACP:OFFS2:INN:LIST:RPSD 10,10,10,10,10,10</code> <code>:ACP:OFFS2:INN:LIST:RPSD?</code>
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is 0 0, 0, 0, 0, 0, 0 0, 0, 0, 0, 0, 0
State Saved	Saved in instrument state
Min/Max	-150.0 dB/50.0 dB

Fail Mask

Accesses a menu that enables you to select one of the logics for the fail conditions between the measurement results and the test limits. The setting defines the type of testing to be done at any custom offset frequencies. The measured powers are tested against the absolute values defined with `[:SENSe]:ACP:OFFSet[n]:INNeR:LIST:ABSolute`, or the relative values defined with `[:SENSe]:ACP:OFFSet[n]:INNeR:LIST:RPSDensity` and `[:SENSe]:ACP:OFFSet[n]:INNeR:LIST:RCARrier`.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n]:INNeR:LIST:STATe`.

Option	SCPI	Description
Absolute	<code>ABSolute</code>	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit
Relative	<code>RELative</code>	Fail is shown if one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
Abs AND Rel	<code>AND</code>	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit <i>and</i> one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
Abs OR Rel	<code>OR</code>	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit <i>or</i> one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:TEST ABSolute AND OR RELative,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:TEST?</code>
----------------	--

	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:TEST ABS,ABS,ABS,ABS,ABS,ABS</code> <code>:ACP:OFFS2:INN:LIST:TEST?</code>
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is AND AND, AND, AND, AND, AND, AND AND, AND, AND, AND, AND, AND
State Saved	Saved in instrument state
Range	ABSolute AND OR RELative

Max Num of Offsets

Sets the max number of offsets: either 6 or 12.

This setting applies only to SCPI operations. To specify the same behavior as that of the previous version, selecting 6 offsets is recommended. If you select 12 offsets, the results returned by the `:READ|:FETCh` queries increase accordingly.

Example:

When you select 6 offsets, querying the offset state returns 6 values, as below.

```
-> :SENSe:ACPower:OFFSet:LIST:STATe?
<- 1,0,0,0,0,0
```

When you select 12 offsets, sending the same query returns 12 values, as below.

```
-> :SENSe:ACPower:OFFSet:LIST:STATe?
<- 1,0,0,0,0,0,0,0,0,0,0,0
```

If your program depends on the number of returned values, you should select 6 offsets, or else change your program.

Remote Command	<code>[:SENSe]:ACPower:OFFSet:MAXNumber NUM6 NUM12</code> <code>[:SENSe]:ACPower:OFFSet:MAXNumber?</code>
Example	<code>:ACP:OFFS:MAXN NUM12</code> <code>:ACP:OFFS:MAXN?</code>
Preset	NUM6
State Saved	Saved in instrument state
Range	6 12

Limit Test

Turns limit checking for each offset On or Off. The limits may be specified in the **Offset** menu, for each offset, both sides of the carrier. For results that fail the limit, a red F is appended. In the **Combined** view, the bar turns red.

Remote Command	<code>:CALCulate:ACPower:LIMit:STATe OFF ON 0 1</code> <code>:CALCulate:ACPower:LIMit:STATe?</code>
Example	<code>:CALC:ACP:LIM:STAT OFF</code> <code>:CALC:ACP:LIM:STAT?</code>
Preset	SA OFF WCDMA, LTEAFDD, LTEATDD, 5G NR, MSR ON
State Saved	Saved in instrument state
Range	ON OFF
Backwards Compatibility SCPI	<code>[:SENSe]:MCPower:LIMit[:STATe]</code> <code>[:SENSe]:ACPower:LIMit[:STATe]</code>

Spur Avoidance

Because VXT models M9410A/11A/15A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The **Spur Avoidance** function is provided to eliminate this spur, at the expense of some measurement speed.

When **Spur Avoidance** is enabled (the default), the instrument uses a software algorithm to remove this spur from the displayed measurement data, but the algorithm only operates under certain conditions. Specifically, it only operates in multiple capture case.

You can disable this function to speed up your measurement by setting **Spur Avoidance** to **Disabled**.

Note that when **Spur Avoidance** is not in effect, either because you have disabled it or because you are not in multiple capture, the following warning message appears in the status bar:

`Settings Alert;Spur Avoidance Off`

This is to alert you that measurement accuracy might be impacted by the fact that **Spur Avoidance** is not in effect.

Remote Command	<code>[:SENSe]:ACPower:SAVoid[:STATe] ON OFF 0 1</code> <code>[:SENSe]:ACPower:SAVoid[:STATe]?</code>
Example	<code>:ACP:SAVoid ON</code> <code>:ACP:SAVoid?</code>
Dependencies	Only appears in VXT models M9410A/11A/15A
Preset	OFF

State Saved	Saved in instrument state
Range	ON OFF

Meas Setup Summary Table

Lets you view and access many of the parameters in the **Meas Setup** menus on one screen.

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see "[Measurement-Specific Details](#)" on page 780 below.

Remote Command	:COUPle ALL
Example	:COUP ALL
Backwards Compatibility SCPI	:COUPLE ALL NONE
Backwards Compatibility Notes	:COUP:NONE puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is <i>not</i> recommended for making measurements or new designs

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple** *does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all measurement parameters to their default values.

Remote Command	:CONFigure:ACPower
Example	:CONF:ACP
Couplings	Selecting Meas Preset restores all measurement parameters to their default values

3.4.13.2 Reference

All ACP measurements are taken relative to a specific carrier frequency, relative to whose power the offset channel power is measured.

The controls on this tab let you specify the reference carrier frequency and other parameters relevant to the reference carrier.

Carrier/Offset/Limits Config

This is the same dialog as "[Carrier/Offset/Limits Config](#)" on page 720 in the **Settings** menu.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

More Information

"Measure Carrier" on page 3057	"Sidelink" on page 1627	"Bandwidth" on page 3057	"Freq Range" on page 3058

"CHP Power Integration Bandwidth" on page 3060	"ACP Power Integration Bandwidth" on page 3061	"SEM Power Integration Bandwidth" on page 3062	"N_Grid_Size (Display Only)" on page 3062
"SCS (Power Meas)" on page 3063			

Number of Component Carriers

This is the same as the control on the menu panel. See "[Number of Component Carriers](#)" on page 3052.

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	[:SENSe]:CCARrier:AFOffset OFF ACRA100K ACRA15K ACRA60K CARA100K CARA15K CARA60K [:SENSe]:CCARrier:AFOffset?	
Example	:CCAR:AFOF ACRA100K :CCAR:AFOF?	
Notes	When you change the value to OFF , nothing happens	
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate frequency offset unless OFF is selected When CC's Frequency Offset is manually changed, this parameter is set to OFF This feature isn't supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CCO Freq Offset is automatically adjusted to 0 Hz	
Preset	OFF	
State Saved	Yes	
Range	The cascading list is shown below	
	Channel Spacing for	Channel Raster
	Adjacent NR Carriers	100 kHz
	Carrier Aggregation	15 kHz
	Off	60 kHz
	Channel Spacing for	Channel Raster
	Adjacent NR Carriers	100 kHz
	Carrier Aggregation	15 kHz
	Off	60 kHz
	Channel Spacing for	Channel Raster
	Adjacent NR Carriers	
	Carrier Aggregation	
	Off	

Carrier Allocation

This is the same as the control on the menu panel. See ["Carrier Allocation" on page 3056](#).

Non-Contiguous Break at

This is the same as the control on the menu panel. See ["Non-Contiguous Break at" on page 3056](#).

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe] OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe]?</code>
Example	<code>:CCAR0 ON</code> <code>:CCAR0?</code>
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action "Apply Preset (to All CCs)" is executed
Preset	ON
State Saved	Saved in instrument state

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth B3M B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth?</code>
Example	<code>:CCAR4:RAD:STAN:BAND B50M</code>
Dependencies	When "Sidelink" on page 1627 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed

Preset	B100M unless noted below <ul style="list-style-type: none"> - Option B25: B20M - Option B40: B35M - Option B85: B80M
State Saved	Yes
Range	3 MHz 5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge FR1 FR2</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge?</code>
Example	<code>:CCAR1:RAD:STAN:FRAN FR1</code>
Dependencies	Available selections differ depending on "Bandwidth" on page 3057 as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only
Couplings	This value will be preset to the Frequency Range value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	<code>FR1</code>
State Saved	Yes
Range	<code>FR1 FR2</code>

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	<code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq></code> <code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet?</code>
Example	<code>:CCAR4:FREQ:OFFS 10MHz</code> <code>:CCAR4:FREQ:OFFS?</code>

Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers Frequency Offset of CCO to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly Also, in some cases, make sure if the “Non-Contiguous Break at” parameter is set to the intended value since it’s often left unchanged after Frequency Offset of CCs are changed
Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SPECtrum NORMal INVert</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SPECtrum?</code>
Example	<code>:CCAR0:SPEC INV</code> <code>:CCAR0:SPEC?</code>
Preset	<code>NORM</code>
State Saved	Yes
Range	Normal Invert

CHP Power Integration Bandwidth

This column specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

NOTE This setting is *not* available for EVM.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTegration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTegration?</code>
Example	<code>:CCAR0:CHP:BAND:INT 20MHZ</code> <code>:CCAR0:CHP:BAND:INT?</code>

Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:ACPower:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:ACPower:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:ACP:BAND:INT 20MHz</code> <code>:CCAR0:ACP:BAND:INT?</code>
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS

Couplings When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table
When Freq Range is FR1

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
3 MHz	2.700	2.715
5 MHz	4.500	4.515
10 MHz	9.360	9.375
15 MHz	14.220	14.235
20 MHz	19.080	19.095
25 MHz	23.940	23.955
30 MHz	28.800	28.815
35 MHz	33.840	33.855
40 MHz	38.880	38.895
45 MHz	43.560	43.575
50 MHz	48.600	48.615
60 MHz	58.320	58.350
70 MHz	68.040	68.070
80 MHz	78.120	78.150
90 MHz	88.200	88.230
100 MHz	98.280	98.310

3 5G NR/5G-A Mode
3.4 ACP Measurement

When Freq Range is FR2		
Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
50 MHz	47.520	47.580
100 MHz	95.040	95.160
200 MHz	190.080	190.20
400 MHz	380.160	380.280
800 MHz	714.24	715.20
1600 MHz	1428.48	1429.44
2000 MHz	1704.96	1705.92
Preset	98.280 MHz 98.310 MHz	
State Saved	Yes	
Min	100 kHz	
Max	2000 MHz	

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:SEM:BAND:INT 20MHz</code> <code>:CCAR0:SEM:BAND:INT?</code>
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

Offset

Lets you configure the spacing of the offset regions.

Offset Frequency Define

Lets you select offset frequency definition. Each standard defines each offset frequency from Carrier.

For example, 3GPP2 requires the “From Carrier Center to Integ BW Closer Edge” definition. LTE conformance test requires “From Carrier Edge to Integ BW Center” and/or “From Carrier Edge to Integ BW Closer Edge” definition.

CTOCenter	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the center frequency of each Offset Integ BW
CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the closest edge frequency of each Offset Integ BW
ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of each Offset Integ BW
ETOEdge	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the closest edge of each Offset Integ BW
RTOCenter 5G NR Mode only	From either the lower or upper RF BW** edge frequency to the center frequency of each Offset Integ BW
RTOEdge 5G NR Mode only	From either the lower or upper RF BW** edge frequency to the closest edge frequency of each Offset Integ BW
RCTOCenter 5G NR Mode only	From the center frequency of RF BW** to the center frequency of each Offset Integ BW
SCTOCenter 5G NR Mode only	From the center frequency of sub-block** to the center frequency of each Offset Integ BW

** RF BW = $BW_{channel,CA}$ which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or Disabled. When the Number of Component Carrier = 1, RF BW = $BW_{channel} = 2 \times F_{offset,RAT}$

** sub-block (bandwidth) = $BW_{channel,block}$ which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or Disabled. When the Number of Component Carrier within each sub-block = 1, sub-block (bandwidth) = $BW_{channel} = 2 \times F_{offset,RAT}$.

See "Diagrams for Offset Freq Define" on page 790.

Diagrams for Offset Freq Define

Details depend on the selected mode.

Diagram for Modes other than MSR, LTEAFDD, LTEATDD, 5G NR

Diagram for MSR, LTEAFDD, LTEATDD, 5G NR

Note:

RF BW Edge and Outermost Carrier Edge are not always the same.
 e.g.) 5G NR (3GPP) defines BW_channel, CA which calculates F_offset,high and F_offset,low asymmetrically with SCS shift.

(*) For MSR, F_offset,high (or ,low) = F_offset,RAT,high (or ,low)

Offset Freq

Determines the frequency difference between the center of the main channel and the center of the carrier.

Each **Offset Freq** state value is entered individually by selecting the desired carrier.

The list contains up to six (6) entries, depending on the mode selected, for offset frequencies. Each offset frequency in the list corresponds to a reference bandwidth in the bandwidth list.

An offset frequency of zero turns the display of the measurement for that offset off, but the measurement is still made and reported. You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet:LIST:STATe`.

Turning the offset off has the same effect as setting the frequency of the offset to 0 Hz, and causes it to be removed from the results screen.

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST[:FREQUENCY] <freq>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST[:FREQUENCY]?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink												
Example	<code>:ACP:OFFS1:LIST 0,0,0,0,0,0</code> <code>:ACP:OFFS1:LIST?</code>												
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, unless the number of values sent is greater than the number of carriers, in which case subsequent values are ignored												
Couplings	Changing Offset Frequency might affect "Span" on page 705												
Preset	When "Max Num of Offsets" on page 777 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value

State Saved	Yes												
Range	OFF ON												

Integ BW

Sets the Integration Bandwidth for the offsets. Each resolution bandwidth in the list corresponds to an offset frequency in the list defined by `[:SENSe]:ACP:OFFSet[n] [:OUTer]:LIST[:FREQuency]`.

Enter each value individually by selecting the desired offset, then enter the Offset Integration Bandwidth.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n] [:OUTer]:LIST:STATe`.

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2 [:OUTer]:LIST:BANDwidth [:INTEgration] <freq>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2 [:OUTer]:LIST:BANDwidth [:INTEgration]?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:LIST:BAND 2MHz,2MHz,2MHz,2MHz,2MHz,2MHz</code> <code>:ACP:OFFS2:LIST:BAND?</code>
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, so, if you want to change the second value, you must send all values up to that. Subsequent values remain unchanged, unless the number of values sent is greater than the number of carriers, then subsequent values is ignored

Couplings	Changing Integ BW might affect " Span " on page 705												
Preset	When " Max Num of Offsets " on page 777 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value												
	<table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>SA</td> <td>2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz 2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz</td> </tr> <tr> <td>WCDMA</td> <td>3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz</td> </tr> <tr> <td>LTEAFDD, LTEATDD, MSR</td> <td>4.515 MHz, 4.515 MHz, 4.515 MHz, 4.515 MHz, 4.515 MHz, 4.515 MHz 4.5 MHz, 4.5 MHz, 4.5 MHz, 4.5 MHz, 4.5 MHz</td> </tr> <tr> <td>5G NR</td> <td>98.28 MHz, 98.28 MHz, 98.28 MHz, 98.28 MHz, 98.28 MHz, 98.28 MHz 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz</td> </tr> <tr> <td>Radio Test</td> <td>25 kHz, 25 kHz, 25 kHz, 25 kHz, 25 kHz, 25 kHz</td> </tr> </tbody> </table>	Modes	Values	SA	2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz 2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz, 2 MHz	WCDMA	3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz, 3.84 MHz	LTEAFDD, LTEATDD, MSR	4.515 MHz, 4.515 MHz, 4.515 MHz, 4.515 MHz, 4.515 MHz, 4.515 MHz 4.5 MHz, 4.5 MHz, 4.5 MHz, 4.5 MHz, 4.5 MHz	5G NR	98.28 MHz, 98.28 MHz, 98.28 MHz, 98.28 MHz, 98.28 MHz, 98.28 MHz 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz	Radio Test	25 kHz, 25 kHz, 25 kHz, 25 kHz, 25 kHz, 25 kHz

Offset Side

Specifies which offset side to measure.

You can turn off (not use) specific offsets with `[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:SIDE`.

NEGative	Negative (lower) sideband only
BOTH	Both of the negative (lower) and positive (upper) sidebands
POSitive	Positive (upper) sideband only

The figure below shows the relation between the negative/positive offset side setups and the upper/lower results in MSR, LTEAFDD and LTEATDD Modes.

3 5G NR/5G-A Mode
3.4 ACP Measurement

Remote Command	<pre>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:SIDE NEGative BOTH POSitive, ... [:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:SIDE?</pre> <p>Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink</p>
Example	<pre>:ACP:OFFS:LIST:SIDE BOTH :ACP:OFFS:LIST:SIDE?</pre>
Notes	<p>Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored</p> <p>If you set POS or NEG in an offset, result of the inactive side returns -999</p>
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is BOTH BOTH, BOTH, BOTH, BOTH, BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH
State Saved	Saved in instrument state
Range	NEGative BOTH POSitive

Method

Allows you to turn RRC filtering of each offset on or off. The value (roll off) for the filter will be set to the value of the **Filter Alpha** parameter.

Remote Command	<pre>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:FILTer[:RRC][:STATe] ON OFF 1 0, ... [:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:FILTer[:RRC][:STATe]?</pre> <p>Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink</p>
Example	<pre>:ACP:OFFS:LIST:FILT 1,0,0 :ACP:OFFS:LIST:FILT?</pre>
Notes	<p>1 ON = RRC Weighted, 0 OFF = Integ BW</p> <p>Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored</p>
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value

	Mode	Values
	SA	0, 0, 0, 0, 0, 0 0, 0, 0, 0, 0, 0
	WCDMA	1, 1, 1, 1, 1, 1 1, 1, 1, 1, 1, 1
	LTEAFDD, LTEATDD, 5G NR, MSR	0, 0, 0, 0, 0, 0 0, 0, 0, 0, 0, 0
	Radio Test	0, 0, 0, 0, 0, 0
State Saved	Saved in instrument state	
Range	Integ BW RRC Weighted	

Filter Alpha

Sets the alpha value for the RRC Filter for each offset.

Remote Command	<pre>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:FILTer:ALPHa <real>,...</pre> <pre>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:FILTer:ALPHa?</pre>	
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink	
Example	<pre>:ACP:OFFS:LIST:FILT:ALPH 0.5,0.5,0.5,0.5,0.5,0.5</pre> <pre>:ACP:OFFS:LIST:FILT:ALPH?</pre>	
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored	
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value	
	SA	0.22,0.22,0.22,0.22,0.22,0.22 0.22,0.22,0.22,0.22,0.22,0.22
	WCDMA	0.22,0.22,0.22,0.22,0.22,0.22 0.22,0.22,0.22,0.22,0.22,0.22
	LTEAFDD, LTEATDD, 5G NR, MSR	0.22,0.22,0.22,0.22,0.22,0.22 0.22,0.22,0.22,0.22,0.22,0.22
State Saved	Saved in instrument state	
Min/Max	0.01/1.00	

Advanced (Offset)

Opens a further menu page, which lets you set advanced properties of the Inner Offset, such as Res BW, Video BW, and Filter parameters.

Offset Freq

This column is the same as "[Offset Freq](#)" on page 2016 in the main **Offset** menu.

Res BW

Sets the resolution bandwidth. If an unavailable bandwidth is entered with the numeric keypad, the closest available bandwidth is selected.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:BANDwidth:RESolution <freq>,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:BANDwidth:RESolution?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink						
Example	<code>:ACP:OFFS2:LIST:BAND:RES 220kHz,220kHz,220kHz,220kHz,220kHz,220kHz</code> <code>:ACP:OFFS2:LIST:BAND:RES?</code>						
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored						
Dependencies	When " Meas Method " on page 719 is RBW, FAST or Fast Power, this cell is grayed-out and disabled. If the cell is pressed, an advisory message is generated. If the equivalent SCPI remote command is sent, a "Setting conflict" warning is generated						
Couplings	When Res BW Mode is Auto , this value is exactly same as Res BW . When you change this value, Res BW Mode also changes to Man						
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value						
	<table border="1"> <tr> <td>SA</td> <td>220 kHz, 220 kHz, 220 kHz, 220 kHz, 220 kHz, 220 kHz</td> </tr> <tr> <td>WCDMA</td> <td>100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz</td> </tr> <tr> <td>LTEAFDD, LTEATDD, 5G NR, MSR</td> <td>100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz</td> </tr> </table>	SA	220 kHz, 220 kHz, 220 kHz, 220 kHz, 220 kHz, 220 kHz	WCDMA	100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz	LTEAFDD, LTEATDD, 5G NR, MSR	100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz
SA	220 kHz, 220 kHz, 220 kHz, 220 kHz, 220 kHz, 220 kHz						
WCDMA	100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz						
LTEAFDD, LTEATDD, 5G NR, MSR	100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz						
State Saved	Saved in instrument state						
Min/Max	1 Hz/8 MHz						
Backwards Compatibility SCPI	<code>[:SENSe]:ACPower:OFFSet[1] 2:LIST:BWIDth:RESolution</code>						
	Auto Function						
Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:BANDwidth:RESolution:AUTO ON OFF 1 0,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:BANDwidth:RESolution:AUTO?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink						
Example	<code>:ACP:OFFS2:LIST:BAND:RES:AUTO 1,1,1,1,1,1</code> <code>:ACP:OFFS2:LIST:BAND:RES:AUTO?</code>						
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is 1 1, 1, 1, 1, 1, 1						
State Saved	Yes						

Backwards Compatibility SCPI `[:SENSe]:ACPower:OFFSet[1]|2:LIST:BWIDth:RESolution:AUTO`

Video BW

Enables you to change the instrument post-detection filter (VBW).

Remote Command `[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:BANDwidth:VIDeo <freq>,...`
`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:BANDwidth:VIDeo?`
 Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example `:ACP:OFFS2:LIST:BAND:VID 5MHz,5MHz,5MHz,5MHz,5MHz,5MHz`
`:ACP:OFFS2:LIST:BAND:VID?`

Notes The values shown in this table reflect the conditions after **Mode Preset**.
 Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored.

Dependencies When "**Meas Method**" on page 719 is RBW, FAST or Fast Power, this cell is grayed-out and disabled. If the cell is pressed, an advisory message is generated. If the equivalent remote command is sent, a "Setting conflict" warning is generated.

Preset When "**Max Num of Offsets**" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
SA	22 kHz, 22 kHz, 22 kHz, 22 kHz, 22 kHz, 22 kHz
WCDMA	1 MHz, 1 MHz, 1 MHz, 1 MHz, 1 MHz, 1 MHz

Example `:ACP:OFFS2:LIST:BAND:VID:AUTO 0,0,0,0,1,1`
`:ACP:OFFS2:LIST:BAND:VID:AUTO?`

Preset When "**Max Num of Offsets**" on page 777 is 12, the preset value of Offset G ~ L is **ON**
ON, ON, ON, ON, ON, ON

State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:BWIDth:VIDeo:AUTO</code>

Filter Type

Selects the type of bandwidth filter that is used.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:BAWIDth:SHAPE GAUSSsian FLATtop,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:BAWIDth:SHAPE?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:LIST:BAWIDth:SHAPE FLAT,GAUSS,GAUSS,GAUSS,GAUSS,GAUSS</code> <code>:ACP:OFFS2:LIST:BAWIDth:SHAPE?</code>
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored
Dependencies	When " Res BW " on page 689 Mode for the offset is Auto , this cell is grayed out and disabled. Since Res BW Mode for the offset is preset to Auto on changing " Meas Method " on page 719 to RBW, FAST or Fast Power, this cell is grayed-out and disabled too. If the cell is pressed, an advisory message is generated. If the equivalent remote command is sent, a "Setting conflict" warning is generated
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is GAUSSsian GAUSSsian, GAUSSsian, GAUSSsian, GAUSSsian, GAUSSsian, GAUSSsian
State Saved	Saved in instrument state
Range	GAUSSsian FLATtop
Backwards Compatibility SCPI	<code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:BAWIDth:SHAPE</code>

Filter BW

Selects a Gaussian filter based on its -3 dB (Normal) bandwidth or its -6 dB bandwidth.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:BAWIDth:TYPE DB3 DB6,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:BAWIDth:TYPE?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:LIST:BAWIDth:TYPE DB3,DB3,DB3,DB3,DB3</code> <code>:ACP:OFFS2:LIST:BAWIDth:TYPE?</code>
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored

Dependencies	When "RBW Filter Type" on page 692 is Flattop, or "Res BW" on page 689 Mode for the offset is Auto , this cell is grayed-out and disabled. Since Res BW Mode for the offset is preset to Auto on changing "Meas Method" on page 719 to RBW, FAST or Fast Power, this cell is grayed-out and disabled too. If the cell is pressed, an advisory message is generated. If the equivalent remote command is sent, a "Setting conflict" warning is generated
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is DB3 DB3, DB3, DB3, DB3, DB3, DB3
State Saved	Saved in instrument state
Range	-3 dB (Normal) -6 dB
Backwards Compatibility SCPI	<code>[:SENSe] : ACPower : OFFSet [1] 2 : LIST : BWIDth : TYPE</code>

Limits

Lets you configure the limits that are used to determine whether the offset regions **PASS** or **FAIL** the limit test.

Limit Test

This checkbox is the same as "Limit Test" on page 800 in the **Meas Setup, Settings** tab.

Offset Freq

This column is the same as "Offset Freq" on page 2016 in the **Offset** index tab.

Abs Limit

Specifies an absolute limit value, which sets the absolute amplitude levels to test against for each of the custom offsets. The list must contain 6 entries. If there is more than one offset, the offset closest to the carrier channel is the first one in the list. `[:SENSe] : ACP : OFFSet [n] [:OUTer] : LIST : TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with the `[:SENSe] : ACP : OFFSet [n] [:OUTer] : LIST : STATE` command.

The query returns the six (6) sets of real numbers that are the current absolute amplitude test limits.

Remote Command	<code>[:SENSe] : ACPower : OFFSet [1] 2 [:OUTer] : LIST : ABSolute < real > , ...</code> <code>[:SENSe] : ACPower : OFFSet [1] 2 [:OUTer] : LIST : ABSolute ?</code>
----------------	---

	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink										
Example	<code>:ACP:OFFS2:LIST:ABS -10, -10, -10, -10, -10</code> <code>:ACP:OFFS2:LIST:ABS?</code>										
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored

Rel Limit (Car)

Enters a relative limit value for the carrier level. This sets the amplitude levels to test against for the specified offsets.

The amplitude level is relative to the carrier amplitude. If multiple offsets are available, the list contains 6 entries. The offset closest to the carrier channel is the first one in the list.

`[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:STATE`.

The query returns the 6 sets of real numbers that are the current amplitude test limits, relative to the carrier, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote	<code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:RCARrier <real>,...</code>

Min/Max	-150.0/50.0
Backwards Compatibility SCPI	<code>:CALCulate:MCPower:OFFSet:LIST:LIMit:NEGative[:UPPer]:DATA</code> (Power Suite, WCDMA)

Rel Limit (PSD)

Enters a relative limit value for the level of the power spectral density. This sets the amplitude levels to test against for any custom offsets. The amplitude level is relative to the power spectral density. If multiple offsets are available, the list contains 6 entries. The offset closest to the carrier channel is the first one in the list.

`[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:STATE`.

The query returns the 6 sets of real numbers that are the current amplitude test limits, relative to the power spectral density, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:RPSDensity <rel_ampl>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:RPSDensity?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:LIST:RPSD 10,10,10,10,10,10</code> <code>:ACP:OFFS2:LIST:RPSD?</code>
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
SA	-28.87 dB, -43.87 dB, 0 dB, 0 dB, 0 dB, 0 dB -28.87 dB, -43.87 dB, 0 dB, 0 dB, 0 dB, 0 dB

State Saved	Saved in instrument state
Min/Max	-150.0 dB/50.0 dB

Fail Mask

Accesses a menu that lets you select one of the logics for the fail conditions between the measurement results and the test limits. The setting defines the type of testing to be done at any custom offset frequencies. The measured powers are tested against the absolute values defined with `[:SENSe]:ACP:OFFSet[n]` `[:OUTer]:LIST:ABSolute`, or the relative values defined with `[:SENSe]:ACP:OFFSet[n]` `[:OUTer]:LIST:RPSDensity` and `[:SENSe]:ACP:OFFSet[n]` `[:OUTer]:LIST:RCARrier`.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n]` `[:OUTer]:LIST:STATe`.

Absolute	ABSolute	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit
Relative	RELative	Fail is shown if one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
Abs AND Rel	AND	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit and one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
Abs OR Rel	OR	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit or one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)

Remote Command	<code>[:SENSe]:ACP:Power:OFFSet[1] 2[:OUTer]:LIST:TEST ABSolute AND OR RELative,...</code> <code>[:SENSe]:ACP:Power:OFFSet[1] 2[:OUTer]:LIST:TEST?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
----------------	--

Example	<code>:ACP:OFFS2:LIST:TEST ABS,ABS,ABS,ABS,ABS,ABS</code> <code>:ACP:OFFS2:LIST:TEST?</code>
---------	---

Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored

Backwards Compatibility SCPI	[:SENSe] :MCPower:OFFSet[1] 2:LIST:TEST

Inner Offset

Accesses a menu of functions that contains Offset, Offset Freq/Offset To Edge, Offset Integ BW, Upper Offset Limit and Lower Offset parameters.

Offset Frequency Define

Allows you to select “Offset” definition:

CTOCenter	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the center frequency of each Offset Integ BW
CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the closest edge frequency of each Offset Integ BW
ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of each Offset Integ BW
ETOEdge	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the closest edge frequency of each Offset Integ BW
STOCenter	From either the lower or upper sub-block edge frequency to the center frequency of each Offset Integ BW
STOEdge	From either the lower or upper sub-block edge frequency to the closest edge frequency of each Offset Integ BW
SCTOCenter	From the center frequency of sub-block** to the center frequency of each Offset Integ BW

5G NR Mode only

** sub-block (bandwidth) = $BW_{\text{channel,block}}$ which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or Disabled. When the Number of Component Carrier within each sub-block = 1, sub-block (bandwidth) = $BW_{\text{channel}} = 2 \times F_{\text{offset,RAT}}$.

See ["Diagram for Offset Freq Define" on page 808](#)

Diagram for Offset Freq Define

Note:

RF BW Edge and Outermost Carrier Edge are not always same.
e.g.) 5G NR (3GPP) defines $BW_{\text{channel,CA}}$ which calculates $F_{\text{offset,high}}$ and $F_{\text{offset,low}}$ asymmetrically with SCS shift

(*) For MSR, $F_{\text{offset,high (or,low)}} = F_{\text{offset,RAT,high (or,low)}}$

Offset Freq

Determines the frequency difference between the center of the main channel and the center of the carrier. When set to Offset to Edge, this parameter determines the frequency difference between the center of the main channel and the near edge of the offset.

Each **Offset Freq** state value is entered individually by selecting the desired carrier. Use the **Enabled** checkbox to turn the **Offset Freq** State on or off.

The list contains up to 6 entries, depending on the mode selected, for offset frequencies. Each offset frequency in the list corresponds to a reference bandwidth in the bandwidth list.

An offset frequency of zero turns the display of the measurement for that offset off, but the measurement is still made and reported. You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n]:INNeR:LIST:STATE`.

Turning the offset off has the same effect as setting the frequency of the offset to 0 Hz, and causes it to be removed from the results screen.

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2:INNeR:LIST[:FREQuency] <freq>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2:INNeR:LIST[:FREQuency]?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink						
Example	<code>:ACP:OFFS1:INN:LIST 0,0,0,0,0,0</code> <code>:ACP:OFFS1:INN:LIST?</code>						
Notes	When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, unless the number of values sent is greater than the number of carriers, then subsequent values are ignored						
Couplings	Changing Offset Frequency might affect "Span" on page 705						
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value						
	<table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>5G NR</td> <td>10 MHz, 30 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz 100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz</td> </tr> <tr> <td>All Others</td> <td>2.5MHz,7.5MHz,0,0,0,0 2.5MHz,7.5MHz,0,0,0,0</td> </tr> </tbody> </table>	Modes	Values	5G NR	10 MHz, 30 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz 100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz	All Others	2.5MHz,7.5MHz,0,0,0,0 2.5MHz,7.5MHz,0,0,0,0

Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value <code>ON, ON, OFF, OFF, OFF, OFF ON, OFF, OFF, OFF, OFF, OFF</code>						
State Saved	Yes						

Integ BW

Sets the Integration Bandwidth for the offsets. Each resolution bandwidth in the list corresponds to an offset frequency in the list defined by `[:SENSe] :ACP:OFFSet [n] :INNeR:LIST [:FREQuency]`.

Enter each value individually by selecting the desired offset on the **Offset** menu key using the up down arrows, the knob, or the numeric keypad, then enter the Offset Integration Bandwidth using the **Offset Integration Bandwidth** menu key.

You can turn off (not use) specific offsets with `[:SENSe] :ACP:OFFSet [n] :INNeR:LIST:STATe`.

Remote Command	<code>[:SENSe] :ACP:OFFSet [1] 2:INNeR:LIST:BA NDwidth [:INTEgration] <freq>, ...</code> <code>[:SENSe] :ACP:OFFSet [1] 2:INNeR:LIST:BA NDwidth [:INTEgration] ?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink								
Example	<code>:ACP:OFFS2:INN:LIST:BA ND 2MHz, 2MHz, 2MHz, 2MHz, 2MHz, 2MHz</code> <code>:ACP:OFFS2:INN:LIST:BA ND?</code>								
Notes	When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, so, if you want to change the second value you must send all values up to it. Subsequent values remain unchanged								
Couplings	Changing Integ BW might affect "Span" on page 705								
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value								
	<table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>LTEAFDD</td> <td>3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz</td> </tr> <tr> <td>MSR, LTEATDD</td> <td>4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz</td> </tr> <tr> <td>5G NR</td> <td>19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz</td> </tr> </tbody> </table>	Modes	Values	LTEAFDD	3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz	MSR, LTEATDD	4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz	5G NR	19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz
Modes	Values								
LTEAFDD	3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz								
MSR, LTEATDD	4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz								
5G NR	19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz								
State Saved	Saved in instrument state								
Min/Max	10 Hz/Depends on instrument maximum frequency. Same as Max Span of the Swept SA Measurement								

Offset Side

Lets you turn off (not use) specific offsets with `[:SENSe] :ACP:OFFSet [1] | 2:INNeR:LIST:SIDE`.

- **NEGative** - The upper side in the sub-block gap only (that is, negative sideband of the upper sub-block) is enabled

- **BOTH** - Both sides in the sub-block gap are enabled
- **POSitive** - The lower side in the sub-block gap only (that is, positive sideband of the lower sub-block) is enabled

The diagram below shows the relation between the negative/positive offset side setups and the upper/lower results in the MSR, LTEAFDD and LTEATDD Modes.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:SIDE NEGative BOTH POSitive, ...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:SIDE?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS:INN:LIST:SIDE BOTH</code> <code>:ACP:OFFS:INN:LIST:SIDE?</code>
Notes	If you set POS or NEG in an offset, result of the inactive side returns -999
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH
State Saved	Saved in instrument state
Range	NEGative BOTH POSitive

Method

Lets you turn RRC filtering of each offset on or off. The value (roll off) for the filter is set to the value of the Filter Alpha parameter.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:FILTer[:RRC][:STATe] ON OFF 1 0, ...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:FILTer[:RRC][:STATe]?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS:INN:LIST:FILT 1,0,0</code> <code>:ACP:OFFS:INN:LIST:FILT?</code>
Notes	1 ON = RRC Weighted, 0 OFF = Integ BW

Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value						
	<table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>LTEAFDD</td> <td>1,1,1,1,1,1 1,1,1,1,1,1</td> </tr> <tr> <td>MSR, LTEATDD, 5G NR</td> <td>0,0,0,0,0,0 0,0,0,0,0,0</td> </tr> </tbody> </table>	Modes	Values	LTEAFDD	1,1,1,1,1,1 1,1,1,1,1,1	MSR, LTEATDD, 5G NR	0,0,0,0,0,0 0,0,0,0,0,0
Modes	Values						
LTEAFDD	1,1,1,1,1,1 1,1,1,1,1,1						
MSR, LTEATDD, 5G NR	0,0,0,0,0,0 0,0,0,0,0,0						
State Saved	Saved in instrument state						
Range	Integ BW RRC Weighted						

Filter Alpha

Sets the alpha value for the RRC Filter for each offset.

Remote Command	<pre>[:SENSe]:ACPower:OFFSet[1] 2:INNER:LIST:FILTer:ALPHa <real>,...</pre> <pre>[:SENSe]:ACPower:OFFSet[1] 2:INNER:LIST:FILTer:ALPHa?</pre> <p>Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink</p>
Example	<pre>:ACP:OFFS:INN:LIST:FILT:ALPH 0.5,0.5,0.5,0.5,0.5,0.5</pre> <pre>:ACP:OFFS:INN:LIST:FILT:ALPH?</pre>
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is 0.22 0.22,0.22,0.22,0.22,0.22,0.22 0.22,0.22,0.22,0.22,0.22,0.22
State Saved	Saved in instrument state
Min/Max	0.01/1.00

Advanced (Inner Offset)

Opens a further menu page that lets you set advanced properties of the Inner Offset, such as Res BW, Video BW, Filter and "Power Ref" on page 1996 parameters.

Offset Freq

The same as "Offset Freq" on page 2030 in the main Inner Offset menu.

Res BW

Sets the Resolution Bandwidth. If an unavailable bandwidth is entered with the numeric keypad, the closest available bandwidth is selected.

Remote Command	<pre>[:SENSe]:ACPower:OFFSet[1] 2:INNER:LIST:BANDwidth:RESolution <freq>,...</pre> <pre>[:SENSe]:ACPower:OFFSet[1] 2:INNER:LIST:BANDwidth:RESolution?</pre>
----------------	---

3 5G NR/5G-A Mode
3.4 ACP Measurement

	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:BAND:RES 220kHz,220kHz,220kHz,220kHz,220kHz</code> <code>:ACP:OFFS2:INN:LIST:BAND:RES?</code>
Dependencies	When "Meas Method" on page 719 is RBW, FAST or Fast Power, this control is grayed-out and disabled. If the cell is pressed, an advisory message is generated. If the equivalent SCPI remote command is sent, a "Setting conflict" warning is generated
Couplings	When "Res BW" on page 689 Mode is Auto , this value is exactly the same as Res BW . When you change this value, Res BW Mode also changes to Man
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is 100 kHz 100 kHz, 100 kHz, 100k Hz, 100 kHz 100 kHz,100 kHz, 100 kHz,100 kHz, 100 kHz, 100 kHz
State Saved	Saved in instrument state
Min/Max	1 Hz/8 MHz

Auto Function

Remote Command	<code>[:SENSe]:ACPpower:OFFSet[1] 2:INNER:LIST:BANDwidth:RESolution:AUTO ON OFF 1 0,...</code> <code>[:SENSe]:ACPpower:OFFSet[1] 2:INNER:LIST:BANDwidth:RESolution:AUTO?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:BAND:RES:AUTO 1,1,1,1,1,1</code> <code>:ACP:OFFS2:INN:LIST:BAND:RES:AUTO?</code>
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is 1 1, 1, 1, 1, 1, 1
State Saved	Yes

Video BW

Lets you change the instrument post-detection filter (VBW).

Remote Command	<code>[:SENSe]:ACPpower:OFFSet[1] 2:INNER:LIST:BANDwidth:VIDeo <freq>,...</code> <code>[:SENSe]:ACPpower:OFFSet[1] 2:INNER:LIST:BANDwidth:VIDeo?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:BAND:VID 5MHz,5MHz,5MHz,5MHz,5MHz,5MHz</code> <code>:ACP:OFFS2:INN:LIST:BAND:VID?</code>
Notes	The values shown in this table reflect the conditions after Mode Preset
Dependencies	When "Meas Method" on page 719 is RBW, FAST or Fast Power, this cell is grayed-out and disabled. If the cell is pressed, an advisory message is generated. If the equivalent remote command is sent, a "Setting conflict" warning is generated
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is 1 MHz 1 MHz, 1 MHz, 1 MHz, 1 MHz, 1 MHz, 1 MHz

State Saved	Yes
Min/Max	1 Hz/50 MHz
	Auto Function
Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:BAWdwidth:VIDeo:AUTO OFF ON 0 1,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:BAWdwidth:VIDeo:AUTO?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:BAWd:VID:AUTO 0,0,0,0,1,1</code> <code>:ACP:OFFS2:INN:LIST:BAWd:VID:AUTO?</code>
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is ON ON, ON, ON, ON, ON, ON
State Saved	Yes

Filter Type

Selects the type of bandwidth filter that is used.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:BAWdwidth:SHApe GAUSSian FLATtop,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:BAWdwidth:SHApe?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:BAWd:SHAP FLAT,GAUS,GAUS,GAUS,GAUS,GAUS</code> <code>:ACP:OFFS2:INN:LIST:BAWd:SHAP?</code>
Dependencies	When "Res BW" on page 689 Mode for the offset is Auto , this cell is grayed-out and disabled. Since Res BW Mode for the offset is preset to Auto on changing "Meas Method" on page 719 to RBW, FAST or Fast Power, this cell is grayed-out and disabled. If the cell is pressed, an advisory message is generated. If the equivalent remote command is sent, a "Setting conflict" warning is generated
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is GAUSSian GAUSSian, GAUSSian, GAUSSian, GAUSSian, GAUSSian, GAUSSian
State Saved	Saved in instrument state
Range	GAUSSian FLATtop

Filter BW

Selects a Gaussian filter based on its –3 dB (Normal) bandwidth or its –6 dB bandwidth.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:BAWdwidth:TYPE DB3 DB6,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:BAWdwidth:TYPE?</code>
----------------	---

3 5G NR/5G-A Mode
 3.4 ACP Measurement

	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:BAND:TYPE DB3,DB3,DB3,DB3,DB3</code> <code>:ACP:OFFS2:INN:LIST:BAND:TYPE?</code>
Dependencies	When "RBW Filter Type" on page 692 is FLATtop or "Res BW" on page 689 Mode for the offset is Auto , this cell is grayed-out and disabled. Since Res BW Mode for the offset is preset to Auto on changing "Meas Method" on page 719 to RBW, FAST or Fast Power, this cell is also grayed-out and disabled. If the cell is pressed, an advisory message is generated. If the equivalent remote command is sent, a "Setting conflict" warning is generated
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is DB3 DB3, DB3, DB3, DB3, DB3, DB3
State Saved	Saved in instrument state
Range	-3 dB (Normal) -6 dB

Power Ref Type

Lets you set reference types of inner offsets.

CUMulative Cumulated power of the upper and lower sub-block carriers is the reference level. This selection is effective only when one of the following "Power Ref" on page 1996 values is selected:

Left & Right Carriers	LRCarriers
Max Power Carrier in Sub-block	MPCSubblock
Min Power Carrier in Sub-block	MINSubblock
Left & Right Sub-blocks	LRSubblocks
Manual	MANual

When one of the other **Power Ref** values is selected, carrier powers are not cumulated, and the reference level is equivalent to Normal

NORMal Power of specified carrier or the manual reference level is the reference level

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2:INNeR:LIST:PREFeRence CUMulative NORMal,</code> <code>...</code> <code>[:SENSe]:ACP:OFFSet[1] 2:INNeR:LIST:PREFeRence?</code>
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS:INN:LIST:PREF CUM,CUM,NORM,NORM,NORM,NORM</code> <code>:ACP:OFFS:INN:LIST:PREF?</code>
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is NORMal NORMal, NORMal, NORMal, NORMal, NORMal, NORMal
State Saved	Saved in instrument state
Range	CUMulative NORMal

Auto Function

Remote Command	<pre>[:SENSe]:ACPower:OFFSet[1] 2:INNER:LIST:PREFERENCE:AUTO OFF ON 0 1, ... [:SENSe]:ACPower:OFFSet[1] 2:INNER:LIST:PREFERENCE:AUTO?</pre> <p>Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink</p>																												
Example	<pre>:ACP:OFFS:INN:LIST:PREF:AUTO OFF,OFF,OFF,OFF,OFF,OFF</pre> <pre>:ACP:OFFS:INN:LIST:PREF:AUTO?</pre>																												
Dependencies	Available only in LTEAFDD, LTEATDD and 5G NR Modes																												
Couplings	<p>When in the LTEAFDD, LTEATDD Modes, the inner power ref type is set automatically when the power ref type state is auto according to the scopes of the sub-block gap in the following table</p> <table border="1"> <thead> <tr> <th>Sub-block Gap</th> <th>Inner ACP offset</th> <th>Power Ref Type</th> </tr> </thead> <tbody> <tr> <td rowspan="2">Wgap <5MHz</td> <td>1st (2.5MHz)</td> <td>Normal</td> </tr> <tr> <td>2nd (7.5MHz)</td> <td>Normal</td> </tr> <tr> <td rowspan="2">5MHz ≤ Wgap <10MHz</td> <td>1st (2.5MHz)</td> <td>Cumulative</td> </tr> <tr> <td>2nd (7.5MHz)</td> <td>Normal</td> </tr> <tr> <td rowspan="2">10MHz ≤ Wgap <15MHz</td> <td>1st (2.5MHz)</td> <td>Cumulative</td> </tr> <tr> <td>2nd (7.5MHz)</td> <td>Cumulative</td> </tr> <tr> <td rowspan="2">15MHz ≤ Wgap <20MHz</td> <td>1st (2.5MHz)</td> <td>Normal</td> </tr> <tr> <td>2nd (7.5MHz)</td> <td>Cumulative</td> </tr> <tr> <td rowspan="2">20MHz ≤ Wgap</td> <td>1st (2.5MHz)</td> <td>Normal</td> </tr> <tr> <td>2nd (7.5MHz)</td> <td>Normal</td> </tr> </tbody> </table> <p>When in 5G NR Mode, Power Ref Type “Auto” sets the power reference type of inner-ACLR offset automatically</p> <p>Downlink: “Cumulative” or “Normal” is selected accordingly when the inner-offsets are configured to meet the test requirements as follows:</p> <p>FR1, 3GPP TS 38.141-1 v16.5.0 (2020-09) Section 6.6.3.5.3 BS type 1-C:</p> <ul style="list-style-type: none"> - Table 6.6.3.5.2-3: Base Station ACLR limit in non-contiguous spectrum or multiple bands - Table 6.6.3.5.2-4: Base station CAACLR limit <p>FR2, 3GPP TS 38.141-2 v16.5.0 (2020-09) Section 6.7.3.5.3 BS type 2-O:</p> <ul style="list-style-type: none"> - Table 6.7.3.5.2-3: BS type 2-O ACLR limit in non-contiguous spectrum - Table 6.7.3.5.2-4: BS type 2-O CAACLR limit in non-contiguous spectrum <p>Uplink: “Normal” is always selected</p>	Sub-block Gap	Inner ACP offset	Power Ref Type	Wgap <5MHz	1st (2.5MHz)	Normal	2nd (7.5MHz)	Normal	5MHz ≤ Wgap <10MHz	1st (2.5MHz)	Cumulative	2nd (7.5MHz)	Normal	10MHz ≤ Wgap <15MHz	1st (2.5MHz)	Cumulative	2nd (7.5MHz)	Cumulative	15MHz ≤ Wgap <20MHz	1st (2.5MHz)	Normal	2nd (7.5MHz)	Cumulative	20MHz ≤ Wgap	1st (2.5MHz)	Normal	2nd (7.5MHz)	Normal

20MHz ≤ Wgap	1st (2.5MHz)	Normal																											
	2nd (7.5MHz)	Normal																											
Preset	<p>When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value</p> <pre>ON, ON, ON, ON, ON, ON OFF, OFF, OFF, OFF, OFF, OFF</pre>																												
State Saved	Saved in instrument state																												
Range	Auto Man																												

Inner Limits

Accesses a menu of functions that contains Select Offset, Abs Limit, Rel Limit and Fail Mask parameters.

Limit Test

This checkbox is the same as "Limit Test" on page 800 in the **Settings** tab.

Offset Freq

This column is the same as "Offset Freq" on page 2030 in the **Offset** tab.

Abs Limit

Specifies an absolute limit value, which sets the absolute amplitude levels to test against for each of the custom offsets. The list must contain 6 entries. If there is more than one offset, the offset closest to the carrier channel is the first one in the list. `[:SENSe] :ACP:OFFSet [n] :INNeR:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe] :ACP:OFFSet [n] :INNeR:LIST:STATe`.

The query returns the 6 sets of real numbers that are the current absolute amplitude test limits.

Remote Command	<code>[:SENSe] :ACP:OFFSet [1] 2 :INNeR:LIST:ABSolute < real >, ...</code> <code>[:SENSe] :ACP:OFFSet [1] 2 :INNeR:LIST:ABSolute?</code>						
Example	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink <code>:ACP:OFFS2:INN:LIST:ABS -10, -10, -10, -10, -10, -10</code> <code>:ACP:OFFS2:INN:LIST:ABS?</code>						
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value						
	<table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>5G NR</td> <td>-2.2, -2.2, -2.2, -2.2, -2.2, -2.2 -50.0, -50.0, -50.0, -50.0, -50.0, -50.0</td> </tr> <tr> <td>All Others</td> <td>-8.45, -8.45, -8.45, -8.45, -8.45, -8.45 -50.0, -50.0, -50.0, -50.0, -50.0, -50.0</td> </tr> </tbody> </table>	Modes	Values	5G NR	-2.2, -2.2, -2.2, -2.2, -2.2, -2.2 -50.0, -50.0, -50.0, -50.0, -50.0, -50.0	All Others	-8.45, -8.45, -8.45, -8.45, -8.45, -8.45 -50.0, -50.0, -50.0, -50.0, -50.0, -50.0
Modes	Values						
5G NR	-2.2, -2.2, -2.2, -2.2, -2.2, -2.2 -50.0, -50.0, -50.0, -50.0, -50.0, -50.0						
All Others	-8.45, -8.45, -8.45, -8.45, -8.45, -8.45 -50.0, -50.0, -50.0, -50.0, -50.0, -50.0						
State Saved	Saved in instrument state						
Min/Max	-200.0 dBm/50.0 dBm						

Rel Limit (Car)

Specifies a relative limit value for the carrier level. This sets the amplitude levels to test against for the specified offsets.

The amplitude level is relative to the carrier amplitude. If multiple offsets are available, the list contains 6 entries. The offset closest to the carrier channel is the first one in the list. `[:SENSe]:ACP:OFFSet[n]:INNeR:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n]:INNeR:LIST:STATe`.

The query returns the 6 sets of real numbers that are the current amplitude test limits, relative to the carrier, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2:INNeR:LIST:RCARrier <real>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2:INNeR:LIST:RCARrier?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink						
Example	<code>:ACP:OFFS2:INN:LIST:RCAR 0,0,0,0,0,0</code> <code>:ACP:OFFS2:INN:LIST:RCAR?</code>						
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is the same as the Offset F value <table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>5G NR</td> <td>-43.8, -43.8, 43.8, -43.8, -43.8, -43.8 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2</td> </tr> <tr> <td>All Others</td> <td>-44.2, -44.2, -44.2, -44.2, -44.2, -44.2 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2</td> </tr> </tbody> </table>	Modes	Values	5G NR	-43.8, -43.8, 43.8, -43.8, -43.8, -43.8 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2	All Others	-44.2, -44.2, -44.2, -44.2, -44.2, -44.2 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2
Modes	Values						
5G NR	-43.8, -43.8, 43.8, -43.8, -43.8, -43.8 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2						
All Others	-44.2, -44.2, -44.2, -44.2, -44.2, -44.2 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2						
State Saved	Saved in instrument state						
Min/Max	-150/50.0						

Rel Limit (PSD)

Specifies a relative limit value for the level of the power spectral density. This sets the amplitude levels to test against for any custom offsets. The amplitude level is relative to the power spectral density. If multiple offsets are available, the list contains 6 entries. The offset closest to the carrier channel is the first one in the list.

`[:SENSe]:ACP:OFFSet[n]:INNeR:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n]:INNeR:LIST:STATe`.

The query returns the 6 sets of real numbers that are the current amplitude test limits, relative to the power spectral density, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:RPSDensity <rel_ampl>,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:RPSDensity?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:RPSD 10,10,10,10,10,10</code> <code>:ACP:OFFS2:INN:LIST:RPSD?</code>
Preset	When "Max Num of Offsets" on page 777 is 12, the preset value of Offset G ~ L is 0 0, 0, 0, 0, 0, 0 0, 0, 0, 0, 0, 0
State Saved	Saved in instrument state
Min/Max	-150.0 dB/50.0 dB

Fail Mask

Accesses a menu that enables you to select one of the logics for the fail conditions between the measurement results and the test limits. The setting defines the type of testing to be done at any custom offset frequencies. The measured powers are tested against the absolute values defined with `[:SENSe]:ACP:OFFSet [n]:INNeR:LIST:ABSolute`, or the relative values defined with `[:SENSe]:ACP:OFFSet [n]:INNeR:LIST:RPSDensity` and `[:SENSe]:ACP:OFFSet [n]:INNeR:LIST:RCARrier`.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet [n]:INNeR:LIST:STATE`.

Option	SCPI	Description
Absolute	<code>ABSolute</code>	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit
Relative	<code>RELative</code>	Fail is shown if one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
Abs AND Rel	<code>AND</code>	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit <i>and</i> one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
Abs OR Rel	<code>OR</code>	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit <i>or</i> one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:TEST ABSolute AND OR RELative,...</code>
----------------	---

	<code>[:SENSe]:ACP:Power:OFFSet[1] 2:INNER:LIST:TEST?</code>
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:OFFS2:INN:LIST:TEST ABS,ABS,ABS,ABS,ABS,ABS</code> <code>:ACP:OFFS2:INN:LIST:TEST?</code>
Preset	When " Max Num of Offsets " on page 777 is 12, the preset value of Offset G ~ L is <code>AND AND, AND, AND, AND, AND, AND AND, AND, AND, AND, AND, AND</code>
State Saved	Saved in instrument state
Range	<code>ABSolute AND OR RELative</code>

Reference Carrier (Carrier Index)

Sets the reference carrier. Relative power measurements are made from the reference carrier.

If set to **Auto**, the measurement selects the carrier with the highest power as the reference carrier and the Ref Carrier parameter is updated. If a value is entered when Ref Carrier Mode is set to **Auto**, the mode changes to **Man**.

If set to **Man**, the value that you enter for the Ref Carrier is used as the reference carrier.

In MSR, LTEAFDD, LTEATDD and 5G NR Modes, this control is called **Carrier Index** and has a different SCPI command. In these Modes, it sets the carrier index of the reference power. The power of the carrier selected by this index becomes reference power when "[Power Ref](#)" on page 1996 is **Carrier Index**. Any value up to the MAX can be set, though the measurement only deals with number of carriers specified by Carrier. If the index is larger than Carrier, reference power in this measurement becomes **NaN** and therefore all relative power results are **NaN**.

For more information, see "[Carrier Index \(Modes: MSR, LTEAFDD, LTEATDD, and 5GNR\)](#)" on page 821.

Remote Command	<code>[:SENSe]:ACP:Power:CARRier[1] 2:RCARrier <integer></code> <code>[:SENSe]:ACP:Power:CARRier[1] 2:RCARrier?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:CARR:RCAR 1</code> <code>:ACP:CARR:RCAR?</code>
Notes	Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored For LTEAFDD and LTEATDD Modes, this control is not shown. In order to maintain backwards compatibility with legacy LTE FDD/TDD Modes, the SCPI command is supported in the LTE & LTE-A converged applications
Dependencies	Grayed-out if there is only one carrier

3 5G NR/5G-A Mode
3.4 ACP Measurement

	Does not appear in MSR, LTEAFDD, LTEATDD and 5G NR Modes
Couplings	If you enter a carrier value that is currently configured as having no power present, that carrier changes to having power present
Preset	Auto determined
State Saved	Saved in instrument state
Min/Max	1/Number of available carriers
Backwards Compatibility SCPI	<code>[:SENSe]:MCPower:RCARrier[1] 2</code>

Remote Command	<code>[:SENSe]:ACPPower:CARRier[1] 2:RCARrier:AUTO OFF ON 0 1</code> <code>[:SENSe]:ACPPower:CARRier[1] 2:RCARrier:AUTO?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:CARR:RCAR:AUTO OFF</code> <code>:ACP:CARR:RCAR:AUTO?</code>
Couplings	If you enter a ref carrier this parameter will be set to manual
Preset	1
State Saved	Yes
Range	Auto Man
Backwards Compatibility SCPI	<code>[:SENSe]:MCPower:RCARrier[1] 2:AUTO</code> (Power Suite)

Carrier Index (Modes: MSR, LTEAFDD, LTEATDD, and 5G NR)

Remote Command	<code>[:SENSe]:ACPPower:CARRier[1] 2:INDex <integer></code> <code>[:SENSe]:ACPPower:CARRier[1] 2:INDex?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:CARR:IND 1</code> <code>:ACP:CARR:IND?</code>
Notes	Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Dependencies	Only appears in MSR, LTEAFDD, LTEATDD and 5G NR Modes
Preset	1
State Saved	Saved in instrument state
Min/Max	LTEAFDD, LTEATDD: 1/Dependent on Num Component Carriers 5G NR: 1/Dependent on Num Component Carriers MSR: 1/100

Carrier Index Zero Base (Remote Command Only)

Remote Command	<code>[:SENSe]:ACPower:CARRier[1] 2:RCARrier:ZBAsE <integer></code> <code>[:SENSe]:ACPower:CARRier[1] 2:RCARrier:ZBASe?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:CARR:RCAR:ZBAS 1</code> <code>:ACP:CARR:RCAR:ZBAS?</code>
Notes	Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Dependencies	Not available in multicarrier applications (MSR, 5GNR, LTE Modes)
Couplings	Coupled with: <code>[:SENSe]:ACPower:CARRier[1] 2:RCARrier <integer></code>
Preset	0
State Saved	Saved in instrument state
Min	0
Max	9

Measurement Type

Changes the reference used for the measurement. This allows you to make absolute and relative power measurements of either total power or the power normalized to the measurement bandwidth.

- Total Pwr Ref (**TPRef**) sets the reference to the total carrier power
- PSD Ref (**PSDRef**) sets the reference to the power spectral density of the carrier

Remote Command	<code>[:SENSe]:ACPower:TYPE TPRef PSDRef</code> <code>[:SENSe]:ACPower:TYPE?</code>
Example	<code>:ACP:TYPE PSDR</code> <code>:ACP:TYPE?</code>
Preset	TPRef
State Saved	Saved in instrument state
Range	Total Power Ref PSD Ref

Power Ref

Selects the power reference type. This control has two different forms, depending on the currently-selected Mode:

- "Power Ref (Modes: SA, WCDMA, VMA, SRComms)" on page 823
- "Power Ref (Modes: LTEAFDD, LTEATDD, 5G NR, MSR)" on page 823

Power Ref (Modes: SA, WCDMA, VMA, SRComms)

Type	Option	Description
Ref Carrier	<code>RCARrier</code>	Power of the specified carrier is the reference of measurement. Use the Reference Carrier control to select Carrier Index
Manual Power	<code>MANual</code>	Power or PSD specified by the user is the reference of measurement
Total Multicarriers	<code>TMCarrriers</code>	Total Power of multi carriers is the power reference of measurement. Each carrier power is calculated with its own carrier configuration settings
Remote Command	<code>[:SENSe]:ACPpower:CARRier[1] 2:PREFERENCE:TYPE RCARrier MANual TMCarrriers</code> <code>[:SENSe]:ACPpower:CARRier[1] 2:PREFERENCE:TYPE?</code>	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:CARR:PREF:TYPE RCARrier</code> <code>:ACP:CARR:PREF:TYPE?</code>	
Notes		Available only in SA, WCDMA, VMA and Short-Range Comms Modes Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Preset	<code>RCARrier</code>	
State Saved		Saved in instrument state
Range	<code>RCARrier MANual TMCarrriers</code>	

Power Ref (Modes: LTEAFDD, LTEATDD, 5G NR, MSR)

Selects the power reference type:

Type	Option	Description
Left & Right Carriers	<code>LRCarrriers</code>	Powers of leftmost and rightmost carriers with Measure Carrier On in a sub-block are the references of left and right sides respectively. Left and right carriers are determined based on the carrier center frequencies. If Measure Carriers of all the carriers in a sub-block are off, the reference power in a sub-block and all the relative power results are NaN. Relative limits are not evaluated
Max Power Carrier	<code>MPCarrier</code>	Maximum carrier power among the carriers of Measure Carrier On is the reference of measurement. If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NaN . Relative limits are not evaluated

Type	Option	Description
Min Power Carrier 5G NR only	MINPcarrier	Minimum carrier power among the carriers of Measure Carrier On is the reference of measurement. If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NAN . Relative limits are not evaluated
Carrier Index	CINdex	Power of the specified carrier is the reference of measurement. If Measure Carriers of this carrier index is off, the reference power and all the relative power results are NAN . Relative limits are not evaluated
Manual	MANual	Power or PSD specified by the user is the reference of measurement
Aggregated Chan BW LTEAFDD, LTEATDD, 5G NR only	ACBbandwidth	The assigned aggregated channel bandwidth power which is measured with a rectangular filter with measurement bandwidth specified as aggregated channel bandwidth based on the definition of each 3GPP standard. Calculated from the carrier configuration including SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier. If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NAN . Relative limits are not evaluated
Max Power Carrier in Sub-block	MPCSubblock	Maximum carrier power among the sub-block carriers of Measure Carrier On is the reference of measurement. If Measure Carriers of all the carriers in a sub-block are off, the reference power of the sub-block and all the relative power results referring to this sub-block are NAN , and these relative limits are not evaluated
Total Multicarriers MSR only	TMCarrriers	Total power of multi carriers is the power reference of measurement. Each carrier power is calculated with its own carrier configuration settings
Min Power Carrier in Sub-block 5G NR only	MINSubbloc	Minimum carrier power among the sub-block carriers of Measure Carrier On is the reference of measurement. If Measure Carriers of all the carriers in a sub-block are off, the reference power of the sub-block and all the relative power results referring to this sub-block are NAN , and these relative limits are not evaluated
Left & Right Sub-blocks 5G NR only	LRSubblocks	The reference depends on the number of Component Carriers (CC) and Carrier Allocation as follows: <ul style="list-style-type: none"> - Num of CC is 1: the carrier power is the reference - Num of CC is 2 or more & Carrier Allocation is Contiguous: Aggregated Channel power is the reference - Num of CC is 2 or more & Carrier Allocation is Non-Contiguous: Aggregated powers of left and right sub-blocks are the references. Left and right sub-blocks are determined by component carrier configuration

The powers of carriers are not included in the reference power when their Measure Carriers are Off. When Measure Carriers of all the carriers in a sub-block are Off, the reference power and all the relative power results are **NaN**. Therefore, relative limits are not evaluated.

Measurement Type = Total Power Ref

Measurement Type = PSD Ref

Remote

[:SENSe] :ACPower:CARRier[1] | 2:PREference:TYPE LRCarriers | MPCarrier |

Command	CINdEx MANual MPCSubblock ACBandwidth TMCarrriers MINPcarrier MINSubblock LRSubblocks [:SENSe] :ACPoweR :CARRier [1] 2 :PREFeRence :TYPE ? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:CARR:PREF:TYPE CIND :ACP:CARR:PREF:TYPE?
Notes	Available only in MSR, LTEAFDD, LTEATDD and 5G NR Modes ACBandwidth is available only in LTEAFDD, LTEATDD and 5G NR Modes TMCarrriers is available only in MSR Mode MINPcarrier, MINSubblock, and LRSubblocks are available only in 5G NR Mode Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Preset	MPCarrier
State Saved	Saved in instrument state

Power Ref State (Remote Command Only)

Remote Command	[:SENSe] :ACPoweR :CARRier [1] 2 :AUTO [:STATe] OFF ON 0 1 [:SENSe] :ACPoweR :CARRier [1] 2 :AUTO [:STATe] ? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:CARR:AUTO OFF :ACP:CARR:AUTO?
Preset	ON

Total Power Ref

Sets manual total power reference.

This control has two different forms, depending on the currently-selected Mode:

- ["Total Power Ref \(Modes: SA, WCDMA, VMA, SRComms\)" on page 827](#)
- ["Total Power Ref \(Modes: LTEAFDD, LTEATDD, 5G NR, MSR\)" on page 827](#)

Total Power Ref (Modes: SA, WCDMA, VMA, SRComms)

This is used when Power Ref is Manual and "Measurement Type" on page 1996 is Total Power.

Remote Command	<code>[:SENSe]:ACPower:CARRier[1] 2[:POWer] <real></code> <code>[:SENSe]:ACPower:CARRier[1] 2[:POWer]?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:CARR 10</code> <code>:ACP:CARR?</code>
Notes	Although the default value is defined, the value is recalculated by the measurement result just after measurement Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored The Unit Terminators differ depending on whether or not the mode supports Y Axis Unit and also which Y Axis Unit is selected
Dependencies	Available only when Measurement Type is TPRef , otherwise grayed-out
Preset	0.0
State Saved	Saved in instrument state
Min/Max	-200 dBm/200 dBm
Backwards Compatibility SCPI	<code>[:SENSe]:MCPower:CARRier[1] 2[:POWer]</code>

Total Power Ref (Modes: LTEAFDD, LTEATDD, 5G NR, MSR)

Sets the multi-carrier power reference. This is used when Power Ref is Manual and "Measurement Type" on page 1996 is Total Power.

When set to **Auto**, the carrier power result reflects the measured power value in the selected reference carrier.

When set to **Man**, the result is referenced to the last measured value, or you may specify the reference for the multi-carrier power measurement. Relative values are displayed, referenced to the "Power Reference" value.

Remote Command	<code>[:SENSe]:ACPower:CARRier[1] 2[:POWer] <real></code> <code>[:SENSe]:ACPower:CARRier[1] 2[:POWer]?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:CARR 10</code> <code>:ACP:CARR?</code>

Notes	<p>Although the default value is defined, the value is recalculated by the measurement result just after measurement</p> <p>Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored</p> <p>The Unit Terminators differ depending on whether or not the mode supports Y Axis Unit and also which Y Axis Unit is selected</p>
Dependencies	Enabled when " Measurement Type " on page 1996 is Total Power and " Power Ref " on page 1996 is Manual
Preset	0.0
State Saved	Saved in instrument state
Min/Max	-200 dBm/200 dBm
Backwards Compatibility SCPI	<code>[:SENSe] :MCPower :CARRier [1] 2 [:POWer]</code>

PSD Ref

Sets manual PSD reference.

This control has two different forms, depending on the currently-selected Mode:

- "[PSD Ref \(Modes: SA, WCDMA, VMA, SRComms\)](#)" on page 828
- "[PSD Ref \(Modes: LTEAFDD, LTEATDD, 5GNR, MSR\)](#)" on page 829

PSD Ref (Modes: SA, WCDMA, VMA, SRComms)

This is used when "[Power Ref](#)" on page 1996 is Manual and "[Measurement Type](#)" on page 1996 is PSD.

Sets the power spectral density in the carrier (main channel) that is used to compute the relative power spectral density values for the offsets when **Measurement Type** is PSD Ref.

Remote Command	<code>[:SENSe] :ACPower :CARRier [1] 2 :CPSD <real></code> <code>[:SENSe] :ACPower :CARRier [1] 2 :CPSD?</code> Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	<code>:ACP:CARR:CPSD 25</code> <code>:ACP:CARR:CPSD?</code>
Notes	<p>Although the default value is defined, the value is recalculated by the measurement result just after measurement</p> <p>Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored</p>

Dependencies	Available only when Measurement Type is PSDRef , otherwise grayed-out
Couplings	The value of PSD Ref is automatically converted when PSD Unit is changed
Preset	0.0
State Saved	Saved in instrument state
Min/Max	-999/999

Power Ref State (Backwards Compatibility SCPI)

Sets the Power Reference State to auto or manual.

Example	<pre>:ACP:CARR:AUTO OFF :ACP:CARR:AUTO? :MCP:CARR:AUTO ON :MCP:CARR:AUTO?</pre>
Notes	<p>For backwards compatibility with legacy SA and WCDMA, this command is supported</p> <p>When ON, corresponds to the Ref Carrier of the "Power Ref" on page 1996 selection</p> <p>When OFF, corresponds to the Manual of the Power Ref selection</p>
Preset	ON
State Saved	Saved in instrument state
Range	Auto Man
Backwards Compatibility SCPI	<pre>[:SENSe]:ACPower:CARRier[1] 2:AUTO[:STATe] OFF ON 0 1 [:SENSe]:ACPower:CARRier[1] 2:AUTO[:STATe]? [:SENSe]:MCPower:CARRier[1] 2:AUTO[:STATe] OFF ON 0 1 [:SENSe]:MCPower:CARRier[1] 2:AUTO[:STATe]?</pre>

PSD Ref (Modes: LTEAFDD, LTEATDD, 5GNR, MSR)

Sets manual PSD reference. This is used when "Power Ref" on page 1996 is **Manual** and "Measurement Type" on page 1996 is **PSD**.

Sets the power spectral density in the carrier (main channel) that is used to compute the relative power spectral density values for the offsets when **Measurement Type** is set to **PSD Ref**. When the **PSD Ref** state is set to **Auto**, this will be set to the measured carrier power spectral density.

Remote Command	<pre>[:SENSe]:ACPower:CARRier[1] 2:CPSD <real> [:SENSe]:ACPower:CARRier[1] 2:CPSD?</pre> <p>Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink</p>
Example	<pre>:ACP:CARR:CPSD 25</pre>

:ACP:CARR:CPSD?	
Notes	Although the default value is defined, the value is recalculated by the measurement result just after measurement Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Dependencies	Enabled when " Measurement Type " on page 1996 is PSD Reference and Power Ref is Manual
Couplings	The value of PSD is automatically converted when PSD Unit is changed
Preset	0.0
State Saved	Saved in instrument state
Min/Max	-/+999

PSD Unit

Sets the unit bandwidth for Power Spectral Density. The available units are dBm/Hz (**DBMHZ**) and dBm/MHz (**DBMMHZ**).

Remote Command	:UNIT:ACPower:POWer:PSD DBMHZ DBMMHZ :UNIT:ACPower:POWer:PSD?
Example	:UNIT:ACP:POW:PSD DBMMHZ :UNIT:ACP:POW:PSD?
Dependencies	Enabled when " Measurement Type " on page 1996 is PSD Reference
Couplings	When the PSD unit is changed, the PSD reference result of :MEAS READ FETCH:ACP[n]? is also changed by the PSD unit basis (in either dBm/Hz or dBm/MHz)
Preset	DBMHZ
State Saved	Saved in instrument state
Range	dBm/Hz dBm/MHz

3.4.13.3 Radio

The Radio tab contains controls to select link direction.

Direction

Direction specifies whether the 5G NR signal is an uplink signal or a downlink signal. This control allows you to set the Direction of the signal being measured.

Remote Command	[:SENSe]:RADio:STANdard:DIRectioN DLINk ULINk [:SENSe]:RADio:STANdard:DIRectioN?
----------------	---

3 5G NR/5G-A Mode
3.4 ACP Measurement

Example	<code>:RAD:STAN:DIR DLIN</code>
Dependencies	When N9085EM0E is not installed and N9085EM4E is installed, only Uplink is available
Couplings	<p>Changing the direction affects the gate source as follows</p> <ul style="list-style-type: none"> - If changed to uplink: RF burst - If changed to downlink: External 1 <p>In Transmit On Off Power, changing the direction affects the trigger source as follows</p> <ul style="list-style-type: none"> - If changed to uplink: Periodic - If changed to downlink: External 1 except for models with the H1G option. With the H1G option, the trigger source changes as follows. <ul style="list-style-type: none"> - External 1, when Info BW \leq 255 MHz - External 3, when Info BW \geq 256 MHz <p>Changing the direction affects many other modulation analysis setup parameters</p>
Preset	ULINK when N9085EM0E is not installed and N9085EM4E is installed Otherwise, DLINK
State Saved	Yes
Range	Uplink only when N9085EM0E is not installed and N9085EM4E is installed Otherwise, Downlink Uplink

MIMO

Indicates input Signal is MIMO (including MISO) or SISO.

NOTE

This setting is available for EVM.

Remote Command	<code>[:SENSe]:RADio:MIMO[:STATe] ON OFF 0 1</code> <code>[:SENSe]:RADio:MIMO[:STATe]?</code>
Example	<code>:RAD:MIMO ON</code> <code>:RAD:MIMO?</code>
Preset	OFF
State Saved	Yes
Range	ON OFF

When input signal is MIMO, there are two use models depends on input data channel number.

- Input data channel number = 1
This means the MIMO signal has been combined into one channel (MISO), in this condition only part of measurements results are valid:
MIMO Info table
Spectrum trace
Raw Main Time trace
- Input data channel number > 1
Input data channels may come from:
Recall IQ data for multiple channels

Reference Input Channel

Specifies reference channel in MIMO mode.

NOTE

This setting is available for EVM when "MIMO" on page 3020 is set to On.

Remote Command	<code>[:SENSe]:RADio:MIMO:CHANnel:REFerence CHANne11 ... CHANne18</code> <code>[:SENSe]:RADio:MIMO:CHANnel:REFerence?</code>
Example	<code>:RAD:MIMO:CHAN:REF CHAN1</code> <code>:RAD:MIMO:CHAN:REF?</code>
Couplings	This key is grayed-out when MIMO is off The available selections depend on Total input channel number
Preset	<code>CHAN1</code>
State Saved	Yes

Multi Channel Synchronous Acquisition (UXM Only)

Enables you to perform multiple synchronous acquisition. When On, acquires signals simultaneously from multiple inputs specified in the Multi Channel Config dialog. The acquired data is assigned to each trace according to the Channel Assignment settings in the Trace Settings Table dialog.

Remote Command	<code>[:SENSe]:RADio:MCHannel:SACQuisition[:STATe] ON OFF 1 0</code> <code>[:SENSe]:RADio:MCHannel:SACQuisition[:STATe]?</code>
Example	<code>:RAD:MCH:SACQ ON</code> <code>:RAD:MCH:SACQ?</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel

	synchronous acquisition
Preset	OFF
State Saved	Yes

Multi Channel Config

Lets you perform a detailed configuration of each input channel. This will be used for three cases:

- MIMO (EVM only): Meas Setup > Radio (N9042B and UXM model E7515B only)
- ccEVM (EVM only): Meas Setup > Advanced
- Multiple Synchronous Acquisition (PowerSuite measurements supporting multi-channel synchronous acquisition): Meas Setup > Radio (UXM model E7515B only)

Multi Channel Configuration

Enables you to configure multiple channel receiver. Different hardware platforms have different parameters.

This menu is available for the following measurements:

- EVM in N9042B, VXT2/3, UXM model E7515B
- PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "[Multi Channel Synchronous Acquisition \(UXM Only\)](#)" on page 3021

Input Port (UXM)

Select input port for channel configuration.

Remote Command	<code>[:SENSe]:RADio:MCHannel:PORT[1] 2 RFI01 ... RFI08</code> <code>[:SENSe]:RADio:MCHannel:PORT[1] 2?</code>
Example	<code>:RAD:MCH:PORT2 RFI02</code> <code>:RAD:MCH:PORT2?</code>
Dependencies	This control appears only in the EVM and PowerSuite measurement supporting multiport synchronous

	<p>acquisition in the UXM model E7515B</p> <p>When "Lock (UXM)" on page 3023 is On, the selections are grayed out and cannot be changed.</p> <p>When "Lock (UXM)" on page 3023 is OFF, the label "Channel x" changes to "Unused"</p> <p>Selections are the same as those of RF Input Port and either RFIO1 to RFIO8 or RFIO1 to RFIO16 depending on the hardware configuration</p>
Preset	RFIO1 RFIO2
State Saved	Yes
Range	RFIO 1 RFIO 2 RFIO 3 RFIO 4 RFIO 5 RFIO 6 RFIO 7 RFIO 8 or RFIO 1 RFIO 2 RFIO 3 RFIO 4 RFIO 5 RFIO 6 RFIO 7 RFIO 8 RFIO 9 RFIO 10 RFIO 11 RFIO 12 RFIO 13 RFIO 14 RFIO 15 RFIO 16
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2</code>

Lock (UXM)

Enables you to lock/unlock the input port. When locked, the selected input port is assigned to a channel.

Remote Command	<code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed?</code>
Example	<code>:RAD:MCH:PORT2:LOCK ON</code> <code>:RAD:MCH:PORT2:LOCK?</code>
Dependencies	This control appears only in the EVM and PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2:LOCKed</code>

Input Channel IP address

Set instrument IP address for channel configuration, "local" is used for current instrument.

Remote Command	<code>[:SENSe]:RADio:MCHannel:IPAddress[1] 2 ... 4 <String></code> <code>[:SENSe]:RADio:MCHannel:IPAddress[1] 2 ... 4?</code>
Example	<code>:RAD:MCH:IPAD '192.168.1.2'</code>
Dependencies	Appears only in the EVM measurement
Preset	local

State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4</code>

Input Channel Instrument port

Set instrument port for channel configuration.

Remote Command	<code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:PORT <int></code> <code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:PORT?</code>
Example	<code>:RAD:MCH:IPAD:PORT 3574</code>
Dependencies	Available only for the EVM measurement. Only visible on VXT platforms
Preset	3574
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4:PORT</code>

Lock

Lock instrument and assign to a channel in sequence.

Remote Command	<code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:LOCKed?</code>
Example	<code>:RAD:MCH:IPAD1:LOCK 1</code> <code>:RAD:MCH:IPAD1:LOCK?</code>
Dependencies	Appears only in the EVM measurement
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4:LOCKed</code>

Channel Configuration Information (Remote Query only)

This SCPI query reads back channel configuration information.

Remote Command	<code>[:SENSe]:RADio:MCHannel:CHANnel:INFO?</code>
Example	<code>:RAD:MCH:CHAN:INFO?</code>
Dependencies	Available only for the EVM measurement
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:CHANnel:INFO</code>

Trace Settings Table

Lets you set a configuration of multiport synchronous acquisition.

	Channel	Input Port	Trace Type	View/Blank	Math		
					Function	Operand 1	Operand 2
Trace 1	Channel 1	RFIO 1	Trace Average	Active	Off	Trace 2	Trace 3
Trace 2	Channel 2	RFIO 2	Trace Average	Active	Off	Trace 3	Trace 1
Trace 3	Channel1		Clear / Write	Active	Power Sum	Trace 1	Trace 2

Dependencies Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "[Multi Channel Synchronous Acquisition \(UXM Only\)](#)" on page 3021

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a **:READ** or **:FETCh** query:

- Trace 1
- Trace 2
- Trace 3

Remote Command `:CALCulate:<meas>:MTRace TRACe1 | TRACe2 | TRACe3`
`:CALCulate:<meas>:MTRace?`
 <meas> is the identifier for the current measurement; any one of `CHPower` | `ACPower` | `OBWidth` | `SEMAsk` | `SPURious` | `PVTime`

Example Channel Power
`:CALC:CHP:MTR TRAC1`
`:CALC:CHP:MTR?`

Dependencies In the ACP measurement, this control is grayed-out when **Meas Method** is set to **RBW** or **FAST**, and only Trace 1 is enabled

Preset	TRACe1
State Saved	No
Range	Trace 1 Trace 2 Trace 3

Channel Assignment

Selects the channel for each trace in the specified measurement. A port selected at "Input Port (UXM)" on page 3022 is assigned to a trace. This setting is valid when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3025 is ON.

Multi Channel Synchronous Acquisition is performed under the following conditions:

- All Input Port Channel Lock is set to ON
- Multi Channel Synchronous Acquisition is set to ON

The selected input port is shown in the Trace Setup Summary table, on the trace and at the bottom of the Trace Control menu panel.

Remote Command	:TRACe[1] 2 3:<meas>:CHANne1 CHANne11 CHANne12 :TRACe[1] 2 3:<meas>:CHANne1?
Example	For the ACP measurement Trace 2 :TRAC2:ACP:CHAN CHAN2
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3025 is On The unlocked channel is grayed-out
Preset	CHAN1 CHAN2 CHAN1
State Saved	Yes
Range	Channel 1 Channel 2

Input Port

Read-only information. Indicates which input data is displayed in each trace. This setting is valid when Multi Channel Synchronous Acquisition is ON.

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3021 is On This column is blank when Math Function is other than Off
--------------	--

Advanced Acquisition

This is the same as "Advanced Acquisition" on page 3072 in the Configure Comp Carriers dialog. See "Advanced Acquisition" on page 3072.

EIRP (Synchronous Acquisition) (UXM Only)

Enables you to preset the following parameters. Preset is made such that Trace 3 becomes the sum of Trace 1 and Trace 2 to which data from Channel 1 and Channel 2 are assigned. The measurement result is calculated based on Trace 3.

This parameter is useful when performing the EIRP measurement by acquiring signals from two ports simultaneously.

Multi Channel Synchronous Acquisition	On
--	-----------

Target trace parameters are those of the PowerSuite measurements supporting multi channel synchronous acquisition in the UXM model E7515B.

	Trace 1	Trace 2	Trace 3
Channel Assignment	Channel 1	Channel 2	Channel 1
Trace Type	Trace Average	Trace Average	Clear / Write
View/Blank	Active	Active	Active
Math Function	Off	Off	Power Sum
Operand 1	N/A	N/A	Trace 1
Operand 2	N/A	N/A	Trace 2
Math Trace	Trace 3		

Remote Command	<code>[:SENSe] :RADio :MCHannel :PRESet :EIRP</code>
Example	<code>:RAD :MCH :PRES :EIRP</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Restore Defaults (UXM Only)

Enables you to preset the following parameters.

Multi Channel Synchronous Acquisition	Off		
Measure Trace	Trace1		
	Trace 1	Trace 2	Trace 3
View/Blank	Active	Blank	Blank
Math Function	Off	Off	Off

Remote Command	<code>[:SENSe]:RADio:MCHannel:PRESet:DEFault</code>
Example	<code>:RAD:MCH:PRES:DEF</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Interfering Signal Present

Sets whether interference signal for the intermodulation tests exists or not. If exists, limits are not evaluated over the interference signal frequency range specified by the span and the center frequency parameters in Adjacent Channel, Spectrum Emission Mask and Spurious Emissions measurements.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference[:STATe] OFF ON 0 1</code> <code>[:SENSe]:RADio:IMODulation:INTerference[:STATe]?</code>
Example	<code>:RAD:IMOD:INT 1</code> <code>:RAD:IMOD:INT?</code>
Preset	OFF
State Saved	Saved in instrument state
Range	On Off

Freq Offset From Edge

Sets the center frequency of the interference signal for intermodulation tests. The frequency is set as offset frequency from the BS RF bandwidth edge. Interference Offset Side determines on which side of the BS RF bandwidth the interference signal exists.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet <freq></code> <code>[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet?</code>
Example	<code>:RAD:IMOD:INT:FREQ:OFFS 5MHz</code> <code>:RAD:IMOD:INT:FREQ:OFFS?</code>
Preset	5MHz
State Saved	Saved in instrument state
Min	0 Hz
Max	400 MHz

Span

Sets the span of the interference signal for intermodulation tests.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:SPAN <freq></code> <code>[:SENSe]:RADio:IMODulation:INTerference:SPAN?</code>
Example	<code>:RAD:IMOD:INT:SPAN 5MHz</code> <code>:RAD:IMOD:INT:SPAN?</code>
Preset	5 MHz
State Saved	Saved in instrument state
Min	200 kHz
Max	400 MHz

Offset Side

Sets which side of the BS RF bandwidth the interference signal exists on.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:SIDE NEGative POSitive</code> <code>[:SENSe]:RADio:IMODulation:INTerference:SIDE?</code>
Example	<code>:RAD:IMOD:INT:SIDE POS</code> <code>:RAD:IMOD:INT:SIDE?</code>
Preset	<code>POSitive</code>
State Saved	Saved in instrument state

Non-Contiguous Interference Region

Sets the region the interfering signal exists at in the Non-Contiguous mode:

- Inner – The interfering signal exists at the inner region. This setting is only effective when Carrier Alloc is Non-Contiguous. When in Contiguous, the interference region is always outside regardless of the selection of this parameter
- Outer – The interfering signal exists at either of the outer regions

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:REGion INNer OUTer</code> <code>[:SENSe]:RADio:IMODulation:INTerference:REGion?</code>
Example	<code>:RAD:IMOD:INT:REG OUT</code> <code>:RAD:IMOD:INT:REG?</code>
Preset	<code>OUTer</code>
State Saved	Saved in instrument state

Interfering Signal Exclude Range

Enables you to select the offset range to be excluded from the measurement.

- Offset Integ BW (OIBW) – Exclude an entire ACP offset range where the interfering signal is allocated
- Interfering Signal Span (ISSP) – Exclude only the span where the interfering signal is occupied

NOTE

This setting is available only for the ACP and Modulation Analysis measurements.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:RANGe:EXCLude[1] 2 OIBW ISSPan</code> <code>[:SENSe]:RADio:IMODulation:INTerference:RANGe:EXCLude[1] 2?</code>
Example	<code>RAD:IMOD:INT:RANG:EXCL OIBW</code> <code>RAD:IMOD:INT:RANG:EXCL?</code>
Notes	Subopcode 1 for Downlink, 2 for Uplink. Default is Downlink.
Preset	Downlink: ISSPan Uplink: OIBW
State Saved	Saved in instrument state
Range	Offset Integ BW Interfering Signal Span

3.4.13.4 Meas Standard

The tab contains settings which let you configure the analyzer to match the measurement standard in your 5G NR signal.

The section entitled “Configure Preset” lets you configure the preset values for the Component Carriers. Once you have set all the controls in the “Configure Preset” section to the desired value, press the “Apply Preset (to all CCs)” control and your

presets will be applied to each Component Carrier. Furthermore, any new Component Carriers will take on the same values you have applied.

NOTE

You must press *Apply Preset (to all CCs)* or the values on the controls will *not* affect the Component Carriers.

When you need to configure more parameters, select Advanced Preset Parameters to open a dialog and set advanced parameters for multiple measurements on one screen.

Bandwidth

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **"Bandwidth" on page 3057** of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “Configure Preset” section then press **Apply Preset (to all CCs)**.

NOTE

You must press *Apply Preset (to all CCs)* or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 3052** will also take on this value.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth] B3M B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth]?</code>
Example	<code>:RAD:STAN:PRES:CARR B5M</code> <code>:RAD:STAN:PRES:CARR?</code>
Dependencies	Selections other than 10 MHz, 20 MHz, 30 MHz, and 40 MHz are unavailable when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X If you change "Uplink Carrier Mode" on page 3041 to Sidelink - V2X when this parameter is set to a value other than 10 MHz, 20 MHz, 30 MHz, or 40 MHz, it is forcefully set to 10 MHz
Preset	When N9085EM0E is not installed and N9085EM4E is installed: B10M Otherwise: B100M
State Saved	Yes
Range	3MHz 5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet[:BANDwidth]</code>

Frequency Range

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **"Freq Range" on page 3058** of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “**Configure Preset**” section then press **Apply Preset (to all CCs)**.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 3052** will also take on this value.

Remote Command `[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe FR1 | FR2 | FR21 | FR22`
`[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe?`

Example `:RAD:STAN:PRES:FREQ:RANG FR1`
`:RAD:STAN:PRES:FREQ:RANG?`

Notes SCPI enum “FR2” is retained for backwards compatibility. When you change Bandwidth, this parameter changes as shown in **"Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility" on page 843** depending on the currently selected value.

Dependencies Available selections differ depending on Bandwidth as follows:

Bandwidth	FR
3 MHz, ..., 100 MHz	FR1
50 MHz, 100 MHz, 200 MHz, 400 MHz	FR2, FR2-1
100 MHz, 400 MHz, 800 MHz, 1600 MHz, 2000 MHz	FR2, FR2-2

When **"Uplink Carrier Mode" on page 3041** is Sidelink - V2X, FR2 is unavailable

Preset `FR1`

State Saved Yes

Range `FR1|FR2|FR2-1|FR2-2`

Backwards Compatibility SCPI `[:SENSe]:RADio:STANdard:PRESet:FRANge`

Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility

Current FR value	Bandwidth selection changes to:					
	3,...,45 MHz	50 MHz	100 MHz	200 MHz	400 MHz	800,...2000 MHz

	60,...90 MHz					
FR1	FR1	FR1	FR1	FR2	FR2	FR2
FR2	FR1	FR2	FR2	FR2	FR2	FR2
FR2-1	FR1	FR2-1	FR2-1	FR2-1	FR2-1	FR2
FR2-2	FR1	FR2	FR2-2	FR2	FR2-2	FR2-2

FR2 behaves as A.35.00 backwards compatibility mode.

Duplex Mode

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Duplex Mode of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 3052** will also take on this value.

FDD, TDD, User Defined are supported.

- FDD: RB allocation is filled with all slots and symbols
- TDD: When the Direction is Downlink and any of NR Test Models is selected for RB Alloc Preset, then, RB allocation is filled with the specified TDD slots and symbols only, based on the 3GPP Tx Conformance Test specification definition
- User Defined: Allows you to configure Transmission Periodicity, Number of Slots and Symbols where RB allocation is filled with in TDD slots and symbols

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DMODE FDD TDD UDEFined</code> <code>[:SENSe]:RADio:STANdard:PRESet:DMODE?</code>
Example	<code>:RAD:STAN:PRES:DMOD TDD</code> <code>:RAD:STAN:PRES:DMOD?</code>
Dependencies	Available selections depend on Frequency Range When FR1 is selected, all three selections are available. When FR2, FR2-1, or FR2-2 is selected, only TDD and User Defined are available
Preset	TDD
State Saved	Yes
Range	FDD TDD User Defined

TDD / User Def. Configuration

Lets you access TDD slot configuration parameters on one screen.

Duplex Mode

This is the same as "Duplex Mode" on page 3033 in the Meas Standard menu panel.

DL FR1 NR-TM Reference Standard Selection

This is the same as "DL FR1 NR-TM Reference Standard Selection " on page 3041 in Meas Standard > Advanced Preset Parameters.

Transmission Periodicity

Allows you to select transmission periodicity that determines the User Defined TDD slot configuration pattern repetition period.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmiSSion:PERiodicity P0_5MS P0_625MS P1MS P1_25MS P2MS P2_5MS P5MS P10MS</code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmiSSion:PERiodicity?</code>
Example	<code>:RAD:STAN:PRES:TRAN:PER P0_5MS</code> <code>:RAD:STAN:PRES:TRAN:PER?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	P5MS
State Saved	Yes
Range	0.5 ms 0.625 ms 1 ms 1.25 ms 2 ms 2.5 ms 5 ms 10 ms

Number of Downlink Slots

Specifies how many downlink slots are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SLOT:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SLOT:COUNT?</code>
Example	<code>:RAD:STAN:PRES:DLIN:SLOT:COUN 1</code> <code>:RAD:STAN:PRES:DLIN:SLOT:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined

Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	7
State Saved	Yes
Min	1
Max	Max slot count in the transmission periodicity

Number of Downlink Symbols

Specifies how many downlink symbols are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SYMBOL:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SYMBOL:COUNT?</code>
Example	<code>:RAD:STAN:PRES:DLIN:SYMB:COUN 1</code> <code>:RAD:STAN:PRES:DLIN:SYMB:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	6
State Saved	Yes
Min	1
Max	14

Number of Uplink Slots

Specifies how many uplink slots are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SLOT:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SLOT:COUNT?</code>
Example	<code>:RAD:STAN:PRES:ULIN:SLOT:COUN 1</code> <code>:RAD:STAN:PRES:ULIN:SLOT:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	2
State Saved	Yes
Min	1
Max	Max slot count in the transmission periodicity.

Number of Uplink Symbols

Specifies how many uplink symbols are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SYMBol:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SYMBol:COUNT?</code>
Example	<code>:RAD:STAN:PRES:ULIN:SYMB:COUN 1</code> <code>:RAD:STAN:PRES:ULIN:SYMB:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	4
State Saved	Yes
Min	1
Max	14

Number of Special Slots (Remote Query Only)

Queries the number of special slots in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SPECial:SLOT:COUNT?</code>
Example	<code>:RAD:STAN:PRES:SPEC:SLOT:COUN?</code>
Preset	1
Min	1
Max	Max slot count in the transmission periodicity - 1

TDD Slot Allocation(Remote Query Only)

Queries TDD slot allocation in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SLOT:ALLocation?</code>
Example	<code>:RAD:STAN:PRES:SLOT:ALL?</code>
Preset	"DDDDDDDSUU"

Ignore Duplex Mode for Fulfilled RB Alloc

This is the same as ["Ignore Duplex Mode for Fulfilled RB Alloc" on page 3050](#).

SCS

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the subcarrier spacing of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers” on page 3052** will also take on this value.

In 5G, subcarrier spacing is governed by $2^n * 15$ kHz subcarrier spacings (where n is 0, 1, 2, or 3). 15, 30, and 60 kHz subcarrier spacings are used for the lower frequency bands, and 60 and 120 kHz subcarrier spacings are used for the higher frequency bands.

Remote Command	<pre>[:SENSe]:RADio:STANdard:PRESet:SCS SCS15K SCS30K SCS60K SCS120K SCS480K SCS960K</pre> <p>For option details, see “Selections & Dependencies” on page 848</p> <pre>[:SENSe]:RADio:STANdard:PRESet:SCS?</pre> <pre>[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe] OFF ON 0 1</pre> <pre>[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe]?</pre>
Example	<pre>:RAD:STAN:PRE:SCS SCS30K</pre> <pre>:RAD:STAN:PRE:SCS?</pre> <pre>:RAD:STAN:PRE:SCS:AUTO 0</pre> <pre>:RAD:STAN:PRE:SCS:AUTO?</pre>
Notes	Not preset to the selection until Apply Preset (to All CCs) is executed

	800, 1600 MHz	480K*/960K	SCS480K, SCS960K
	2000 MHz	960K*	SCS960K

(*) When in Auto, the narrowest available SCS is selected.

RB Alloc Preset

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Resource Block Allocation Preset of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 3052** will also take on this value.

The RB Alloc Preset presets the Resource Block (RB) allocation mapping to a selected predefined pattern in the list:

“Fulfilled-xxx” is to fill out all maximum available RBs in each CC with one specified modulation type (Pi/2-BPSK | QPSK | 16 QAM | 64 QAM | 256 QAM | 1024 QAM), and “DL-NR-TM x.x” is to map RBs in each CC based on the NR Test Model definition according to the section 4.9.2 in 3GPP TS38.141-1 or -2.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:RBALloc FQPSK FQAM16 FQAM64 FQAM256 FQAM1024 DLTM1DOT1 DLTM1DOT2 DLTM2 DLTM2Q16 DLTM2QPS DLTM2A DLTM2B DLTM3DOT1 DLTM3DOT1Q16 DLTM3DOT1QPS DLTM3DOT1A DLTM3DOT1B DLTM3DOT2 DLTM3DOT3 FPIBPSK DLTM1DOT1P1</code>

Advanced Preset Parameters

Lets you access advanced preset parameters on one screen.

Uplink Carrier Mode

Allows you to select the uplink carrier mode: either Normal Uplink or Sidelink - V2X.

Remote Command	<code>[:SENSe] :RADio :STANdard :PRESet :ULINK :CARRier NORMa1 V2X</code> <code>[:SENSe] :RADio :STANdard :PRESet :ULINK :CARRier ?</code>
Example	<code>:RAD :STAN :PRES :ULIN :CARR NORM</code> <code>:RAD :STAN :PRES :ULIN :CARR ?</code>
Dependencies	Available when the required license is installed and Direction is Uplink
Preset	When N9085EM0E is not installed and N9085EM4E is installed: V2X Otherwise: NORMa1
State Saved	Saved
Range	Normal Uplink Sidelink-V2X

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles.

Remote Command	<code>[:SENSe] :RADio :STANdard :PRESet :DLINK :NRTM TS38 TS37CS1617</code> <code>[:SENSe] :RADio :STANdard :PRESet :DLINK :NRTM ?</code>
Example	<code>RAD :STAN :PRES :DLIN :NRTM TS38</code> <code>RAD :STAN :PRES :DLIN :NRTM ?</code>

Dependencies	Grayed out when Radio Direction is Uplink.
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed.
Preset	TS38
State Saved	Yes
Range	TS38.141-1 TS37.141 BC3 CS16/17

OFDM Type

This control is part of the “Preset for Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you specify the OFDM Type to configure preset values for the Component Carriers:

- CP-OFDM
- DFT-s-OFDM

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the Number of Component Carriers will also take on this value.

This parameter is valid only for the Modulation Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:OTYPe CPOFdm DFTSofdm</code> <code>[:SENSe]:RADio:STANdard:PRESet:OTYPe?</code>
Example	<code>:RAD:STAN:PRES:OTYP CPOF</code> <code>:RAD:STAN:PRES:OTYP?</code>
Dependencies	DFT-s-OFDM is grayed out when Radio Direction is Downlink DFT-s-OFDM is grayed-out when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	<code>CPOFdm</code>
State Saved	Yes
Range	CP-OFDM DFT-s-OFDM

Adjust Limit Mask for Freq Range

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the frequency range for

preset.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press *Apply Preset (to all CCs)* or the value on this controls will *not* affect the Component Carriers.

When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0. Values to be preset will be preset to the values described in the Values for Meas Standard section when Apply Preset is executed.

When in Manual, values to be preset will be preset to the values described in Values or Meas Standard according to this value when Apply Preset is executed.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command `[:SENSe]:RADio:STANdard:PRESet:ADJJust:FRANge NONE | FT01 | F1T03 | F3T04P2 | F4P2T06 | F6T07 | F24P25T029P5 | F37T040 | F43T048 | F52T071`

For option details, see "[Selections & Dependencies](#)" on page 854

`[:SENSe]:RADio:STANdard:PRESet:ADJJust:FRANge?`

`[:SENSe]:RADio:STANdard:PRESet:ADJJust:FRANge:AUTO OFF | ON | 0 | 1`

`[:SENSe]:RADio:STANdard:PRESet:ADJJust:FRANge:AUTO?`

Example `:RAD:STAN:PRES:ADJ:FRAN F1T03`

`:RAD:STAN:PRES:ADJ:FRAN?`

`:RAD:STAN:PRES:ADJ:FRAN:AUTO 1`

`:RAD:STAN:PRES:ADJ:FRAN:AUTO?`

Dependencies Available selections depend on Frequency Range. See "[Selections & Dependencies](#)" on page 854

Couplings When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0

Not preset to the selection until **Apply Preset (to All CCs)** is executed

Preset Automatically selected

The selection depends on which listed range the CC0 center freq is in

ON

BS Type

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Type for preset:

- 1-C (FR1 Conducted)
- 1-O (FR1 Radiated)
- 2-O (FR2 Radiated)

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE FR1C FR1O FR2O</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE?</code>
Example	<code>:RAD:STAN:PRES:DLIN:BS:TYPE FR1C</code> <code>:RAD:STAN:PRES:DLIN:BS:TYPE?</code>
Dependencies	Grayed out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed

Preset	FR1C
State Saved	Yes
Range	1-C (FR1 Conducted) 1-0 (FR1 Radiated) 2-0 (FR2 Radiated)

BS Category

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Category for preset:

- Category A Wide Area BS
- Category B Wide Area BS
- Category A Medium Range BS
- Category B Medium Range BS
- Category A Medium Range BS (Low Power rated)
- Category B Medium Range BS (Low Power rated)
- Category A Local Area BS
- Category B Local Area BS

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:CATegory AWARea BWARea AMRRange BMRRange AMRLow BMRLow ALARea BLARea</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:CATegory?</code>
Example	<code>:RAD:STAN:PRESet:DLINK:BS:CAT BWAR</code> <code>:RAD:STAN:PRESet:DLINK:BS:CAT?</code>
Dependencies	Grayed-out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed
Preset	BWARea

State Saved	Yes
Range	Category A Wide Area BS Category B Wide Area BS Category A Medium Range BS Category B Medium Range BS Category A Medium Range BS (Low Power rated) Category B Medium Range BS (Low Power rated) Category A Local Area BS Category B Local Area BS

Assumed Adjacent Channels

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you set the Assumed Adjacent Channels for carrier configuration preset. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Downlink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE] NR EUTRa NREutra</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:DLIN:ACH NR</code> <code>:RAD:STAN:PRES:DLIN:ACH?</code>
Dependencies	UTRA and NR+UTRA are grayed-out when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X
Preset	NR
State Saved	Yes
Range	NR (same BW) E-UTRA NR + E-UTRA

Uplink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE] NR UTRa NRUTra</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:ULIN:ACH NR</code> <code>:RAD:STAN:PRES:ULIN:ACH?</code>
Preset	NR
State Saved	Yes
Range	NR (same BW) UTRA NR + UTRA

UE Power Class

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you select the UE Power Class for preset from Power Class 1 to 4.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP and Mod Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PCLass CLASS1 ... CLASS4</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PCLass?</code>
Example	<code>:RAD:STAN:PRES:ULIN:PCL CLASS3</code> <code>:RAD:STAN:PRES:ULIN:PCL?</code>
Dependencies	Grayed out when Radio Direction is Downlink Power Class 4 is grayed out when Frequency Range is FR1 Power Class 1, 2, and 4 are grayed-out when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X
Preset	CLASS3
State Saved	Yes
Range	1 2 3 4

Uplink Channel Type

This control is part of the “Preset for Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you set the Uplink Channel Type to preset parameters for the Transmit On|Off Power measurement. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe NONE PUS PRA4 PRA160S15 PRA160S30 PRA12 PRA123S15 PRA123S30 SRS PRA0S60 PRA0S120</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe?</code>
Example	<code>:RAD:STAN:PRES:ULIN:CTYP PUS</code> <code>:RAD:STAN:PRES:ULIN:CTYP?</code>
Dependencies	Available selections differ depending on the combination of Freq Range and Duplex Mode as follows: When Freq Range is FR1 and Duplex Mode is FDD: - PUSCH, PRACH Config Index4, PRACH Config Index160 and SRS When Freq Range is FR1 and Duplex Mode is TDD: - PUSCH, PRACH Config Index12, PRACH Config Index123 and SRS When Freq Range is FR2: - PUSCH, PRACH Config Index0, SRS
Preset	PUS

State Saved	Yes
Range	PUSCH PRACH Config Index 4 PRACH Config Index 160 (15 kHz SCS) PRACH Config Index 160 (30 kHz SCS) PRACH Config Index 12 PRACH Config Index 123 (15 kHz SCS) PRACH Config Index 123 (30 kHz SCS) PRACH Config Index 0 (60 kHz SCS) PRACH Config Index 0 (120 kHz SCS) SRS

Apply Preset (to All CCs)

This is the same as the Apply Preset (to All CCs) control on the Meas Standard menu panel tab under Meas Standard.

See ["Apply Preset \(to All CCs\)" on page 3051](#).

More Advanced Preset Parameters

Enables you to configure more advanced Apply Preset features.

Include RB Alloc Preset for Mod Analysis

Enables you to select whether or not RB Alloc Preset is preset when “Apply Preset (to All CCs)” is executed.

Remote Command	<code>[:SENSe] :RADio :STANdard :PRESet :INCLude :EVM :RBALloc OFF ON 0 1</code> <code>[:SENSe] :RADio :STANdard :PRESet :INCLude :EVM :RBALloc ?</code>
Example	<code>:RAD :STAN :PRES :INCL :EVM :RBAL 1</code> <code>:RAD :STAN :PRES :INCL :EVM :RBAL ?</code>
Notes	When Exclude is selected, the indicator “Exclude EVM RB Alloc” appears on the Meas Setup menu panel
Preset	ON
State Saved	Yes

Include Gate Source

Enables you to select whether or not Gate Source is preset when “Apply Preset (to All CCs)” is executed.

Remote Command	<code>[:SENSe] :RADio :STANdard :PRESet :INCLude :EGATe :SOURce OFF ON 0 1</code> <code>[:SENSe] :RADio :STANdard :PRESet :INCLude :EGATe :SOURce ?</code>
Example	<code>:RAD :STAN :PRES :INCL :EGAT :SOUR 1</code> <code>:RAD :STAN :PRES :INCL :EGAT :SOUR ?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Period

Enables you to select whether or not Periodic Timer Period is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:PER 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:PER?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Source

Enables you to select whether or not Periodic Timer Sync Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce] OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce]?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:SYNC?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Holdoff

Enables you to select whether or not Periodic Timer Sync Holdoff is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD?</code>
Preset	ON
State Saved	Yes

Ignore Duplex Mode for Fulfilled RB Alloc

Enables you to select in Modulation Analysis measurement whether or not to ignore Duplex Mode for Fulfilled preset when “Apply Preset (to All CCs)” is executed. This parameter is valid only for the TDD duplex mode.

On: for fulfill preset FDD preset will be applied to modulation analysis measurement regardless of Duplex Mode setting

Off: for fulfill preset TDD preset based on the DL NR-TM will be applied to modulation analysis measurement

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDCon-fig]:RBALloc:FULFilled:IGNore:DMODE OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDCon-fig]:RBALloc:FULFilled:IGNore:DMODE?</code>
Example	<code>:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD 1</code> <code>:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD?</code>
Notes	Only apply to Modulation Analysis measurement
Dependencies	Unavailable when Duplex Mode is FDD, or Duplex Mode is User Defined, or Frequency Range is FR2, or RB Alloc Preset is DL NR TM
Preset	ON
State Saved	Yes

Adjust Meas Time Length for TM

Enables you to select in Modulation Analysis measurement whether or not to adjust Meas Time settings when Test Model preset is selected and “Apply Preset (to All CCs)” is executed.

None: do not adjust Meas Time settings for Test Model

1 Frame: adjust Meas Time settings for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
All	22 msec	10 Sub Frame	10 Sub Frame	Frame

3GPP: adjust Meas Time Setting for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
FR1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-2 (120K SCS)	32 msec	160 slots	160 slots	slot

	FR2-2 (480K SCS)	17 msec	160 slots	160 slots	slot
	FR2-2 (960K SCS)	14.5 msec	160 slots	160 slots	slot
Remote Command	[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth NONE FRAME GPP				
Example	[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth?				
Notes	Only apply to Modulation Analysis measurement				
State Saved	Yes				

Apply Preset (to All CCs)

When you press this control, parameters of each component carrier are configured to the values of parameters in the Meas Standard menu. These values will also be used for any subsequent Component Carriers created.

NOTE

You must press **“Apply Preset (to all CCs)”** or the values on the controls in the **“Configure Presets”** section of the menu panel will *not* affect the Component Carriers.

Remote Command	[:SENSe]:RADio:STANdard:PRESet:IMMEDIATE				
Example	:RAD:STAN:PRES:IMM				
Notes	Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until “Apply Preset” is executed again				
	<ul style="list-style-type: none"> - Start-up - Mode Preset - Recall 				

Apply Preset (to CC)

When you press this control, parameters of the component carrier (specified by Apply Preset To) are configured to the values of parameters in the Meas Standard menu.

NOTE

This action is available only for EVM.

You must press “Apply Preset (to CC)” or the values on the controls in the “Configure Presets” section of the menu panel will not affect the Component Carriers.

Remote Command	<code>[:SENSe] :EVM :CCARrier0 ... 15 :RADio :STANdard :PRESet :IMMediate</code>
Example	<code>:EVM :CCAR :RAD :STAN :PRES :IMM</code>
Notes	Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until “Apply Preset” is executed again <ul style="list-style-type: none"> - Start-up - Mode Preset - Recall

Apply Preset To

Specifies the component carrier for Apply Preset (to CC).

NOTE This action is available only for EVM.

Preset	All
State Saved	Saved in instrument state
Range	CC0 CC1 CC2 CC3 CC4 CC5 CC6 CC7 CC8 CC9 CC10 CC11 CC12 CC13 CC14 CC15 ALL

NOTE

3.4.13.5 Values for Meas Standard

For parameters to be preset when executing "Apply Preset", see "[Values for Meas Standard](#)" on page 2614 and its subsections under **Monitor Spectrum**.

3.4.13.6 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your 5G NR signal.

Number of Component Carriers

Specifies how many component carriers are included in the 5G NR measurements. The 5G NR supports the maximum of 16 component carriers.

Remote Command	<code>[:SENSe]:CCARrier:COUNT <integer></code> <code>[:SENSe]:CCARrier:COUNT?</code>
Example	<code>:CCAR:COUN 1</code> <code>:CCAR:COUN?</code>
Preset	1
State Saved	Yes
Min	1
Max	16

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous NCONtiguous</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation?</code>
Example	<code>:CCAR:CONF:ALL CONT</code> <code>:CCAR:CONF:ALL?</code>
Preset	<code>CONTiguous</code>
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

3 5G NR/5G-A Mode
3.4 ACP Measurement

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALlocation:NCONtiguous:ABPoint CC0 ... CC15</code> <code>[:SENSe]:CCARrier:CONFig:ALlocation:NCONtiguous:ABPoint?</code>
Example	<code>:CCAR:CONF:ALL:NCON:ABP CC0</code> <code>:CCAR:CONF:ALL:NCON:ABP?</code>
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0-CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Saved in instrument state
Range	CC0 ... CC15

Configure Comp Carriers

This dialog lets you perform a detailed configuration of your component carriers, including number of carriers, bandwidth, offset, integration bandwidth, and so on.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

More Information

"Measure Carrier" on page 3057	"Sidelink" on page 1627	"Bandwidth" on page 3057	"Freq Range" on page 3058
"Freq Offset" on page 3058	"Cell ID Auto" on page 3059	"Cell ID Value" on page 3059	"Demod Spectrum" on page 3060
"CHP Power Integration Bandwidth" on page 3060	"ACP Power Integration Bandwidth" on page 3061	"SEM Power Integration Bandwidth" on page 3062	"N_Grid_Size (Display Only)" on page 3062
"SCS (Power Meas)" on page 3063			

Number of Component Carriers

This is the same as the control on the menu panel. See "[Number of Component Carriers](#)" on page 3052.

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	[:SENSe]:CCARrier:AFOffset OFF ACRA100K ACRA15K ACRA60K CARA100K CARA15K CARA60K [:SENSe]:CCARrier:AFOffset?	
Example	:CCAR:AFOF ACRA100K :CCAR:AFOF?	
Notes	When you change the value to OFF , nothing happens	
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate frequency offset unless OFF is selected When CC's Frequency Offset is manually changed, this parameter is set to OFF This feature isn't supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CCO Freq Offset is automatically adjusted to 0 Hz	
Preset	OFF	
State Saved	Yes	
Range	The cascading list is shown below	
	Channel Spacing for	Channel Raster
	Adjacent NR Carriers	100 kHz
	Carrier Aggregation	15 kHz
	Off	60 kHz
	Channel Spacing for	Channel Raster
	Adjacent NR Carriers	100 kHz
	Carrier Aggregation	15 kHz
	Off	60 kHz
	Channel Spacing for	Channel Raster
	Adjacent NR Carriers	
	Carrier Aggregation	
	Off	

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous NCONtiguous</code> <code>[[:SENSe]:CCARrier:CONFig:ALLocation?</code>
Example	<code>:CCAR:CONF:ALL CONT</code> <code>:CCAR:CONF:ALL?</code>
Preset	<code>CONtiguous</code>
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 ... CC15</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?</code>
Example	<code>:CCAR:CONF:ALL:NCON:ABP CC0</code> <code>:CCAR:CONF:ALL:NCON:ABP?</code>
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	<code>CC0</code>
State Saved	Saved in instrument state
Range	<code>CC0 ... CC15</code>

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe] OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe]?</code>
Example	<code>:CCAR0 ON</code> <code>:CCAR0?</code>
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action "Apply Preset (to All CCs)" is executed
Preset	ON
State Saved	Saved in instrument state

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth B3M B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth?</code>
Example	<code>:CCAR4:RAD:STAN:BAND B50M</code>
Dependencies	When " Sidelink " on page 1627 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed

3 5G NR/5G-A Mode
3.4 ACP Measurement

Preset	B100M unless noted below <ul style="list-style-type: none"> - Option B25: B20M - Option B40: B35M - Option B85: B80M
State Saved	Yes
Range	3 MHz 5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge FR1 FR2</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge?</code>
Example	<code>:CCAR1:RAD:STAN:FRAN FR1</code>
Dependencies	Available selections differ depending on "Bandwidth" on page 3057 as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only
Couplings	This value will be preset to the Frequency Range value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	<code>FR1</code>
State Saved	Yes
Range	<code>FR1 FR2</code>

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	<code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq></code> <code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet?</code>
Example	<code>:CCAR4:FREQ:OFFS 10MHz</code> <code>:CCAR4:FREQ:OFFS?</code>

Notes	<p>Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers</p> <p>Frequency Offset of CC0 to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly</p> <p>Also, in some cases, make sure if the “Non-Contiguous Break at” parameter is set to the intended value since it’s often left unchanged after Frequency Offset of CCs are changed</p>
Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Cell ID Auto

Enable and disable Cell ID auto detection based on SSB.

NOTE

This setting is available for EVM measurement only.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE AUTO MANua1</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE?</code>
Example	<code>:EVM:CCAR:CID:MODE MAN</code> <code>:EVM:CCAR:CID:MODE?</code>
Preset	<code>MANua1</code>
State Saved	Saved in instrument state

Cell ID Value

Specify Cell ID for the component carrier.

NOTE

This setting is available for EVM measurement only.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID?</code>
Example	<code>:EVM:CCAR4:CID 0</code> <code>:EVM:CCAR4:CID?</code>
Couplings	Invalid when Cell ID Auto is on

Preset	0
State Saved	Saved in instrument state
Min	0
Max	1007

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum NORMal INVert</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum?</code>
Example	<code>:CCAR0:SPEC INV</code> <code>:CCAR0:SPEC?</code>
Preset	<code>NORM</code>
State Saved	Yes
Range	Normal Invert

CHP Power Integration Bandwidth

This column specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

NOTE This setting is *not* available for EVM.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration?</code>
Example	<code>:CCAR0:CHP:BAND:INT 20MHz</code> <code>:CCAR0:CHP:BAND:INT?</code>
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:ACPower:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:ACPower:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:ACP:BAND:INT 20MHz</code> <code>:CCAR0:ACP:BAND:INT?</code>
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS

Couplings When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table

When Freq Range is FR1

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
3 MHz	2.700	2.715
5 MHz	4.500	4.515
10 MHz	9.360	9.375
15 MHz	14.220	14.235
20 MHz	19.080	19.095
25 MHz	23.940	23.955
30 MHz	28.800	28.815
35 MHz	33.840	33.855
40 MHz	38.880	38.895
45 MHz	43.560	43.575
50 MHz	48.600	48.615
60 MHz	58.320	58.350
70 MHz	68.040	68.070
80 MHz	78.120	78.150
90 MHz	88.200	88.230
100 MHz	98.280	98.310

When Freq Range is FR2

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
-----------	----------------------------------	--------------------------------

3 5G NR/5G-A Mode
3.4 ACP Measurement

	50 MHz	47.520	47.580
	100 MHz	95.040	95.160
	200 MHz	190.080	190.20
	400 MHz	380.160	380.280
	800 MHz	714.24	715.20
	1600 MHz	1428.48	1429.44
	2000 MHz	1704.96	1705.92
Preset	98.280 MHz 98.310 MHz		
State Saved	Yes		
Min	100 kHz		
Max	2000 MHz		

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	<code>[:SENSe] :CCARrier[0] 1 ... 15 :SEMAsk :BANDwidth[1] 2 :INTEgration <freq></code> <code>[:SENSe] :CCARrier[0] 1 ... 15 :SEMAsk :BANDwidth[1] 2 :INTEgration?</code>
Example	<code>:CCAR0:SEM:BAND:INT 20MHz</code> <code>:CCAR0:SEM:BAND:INT?</code>
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

N_Grid_Size (Display Only)

Display Max RB Number for each available numerology. To adjust this setting please switch to Resource Grid tab.

NOTE

This setting is available for EVM measurement only.

3GPP TS38.104 or TS38.101-1 Table 5.3.2-1: Maximum transmission bandwidth configuration N_{RB} for FR1

3GPP TS38.104 Tables 5.3.2-2 and 5.3.2-3 or TS38.101-2 Table 5.3.2-1: Maximum transmission bandwidth configuration N_{RB} for FR2

SCS	50 MHz	100 MHz	200 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	66	132	264	N.A	N.A	N.A	N.A
120	32	66	132	264	N.A	N.A	N.A
480	N.A	N.A	N.A	66	124	248	N.A
960	N.A	N.A	N.A	33	62	124	148

NOTE: For the “N.A” value in above table, the value will be set to 0 and displayed as “---”.

SCS (Power Meas)

Queries the SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier set with "**SCS Enabled**" on page 3066.

It is used to calculate the aggregated channel bandwidth when Power Reference is set to Aggregated Chan BW.

Power Integration Bandwidth values are not affected even if SCS (Power Meas) is changed.

Remote Command	<code>[:SENSe] :CCARrier [0] 1 ... 15 :RGRid :PMSCs ?</code>
Example	<code>:CCAR3 :RGR :PMSC ?</code>
Notes	Query-only Returns one of the following values: NONE, SCS15K, SCS30K, SCS60K, SCS120K, SCS240K, SCS480K, SCS960K

Resource Grid

Enables you to configure resource grid for each available numerology of each component carrier.

NOTE

This tab and the following controls are available only for Modulation Analysis measurement.

Component Carrier (GUI only)

Selects the Component Carrier to configure its resource grid for each available numerology.

Bandwidth

This is the same as the Bandwidth column in the Configure CCs table. See ["Bandwidth" on page 3057](#).

Freq Range

This is the same as the Freq Range column in the Configure CCs table. See ["Freq Range" on page 3058](#)

Configuration Mode

Selects the configuration mode for resource grid table:

- Auto – always reset N_grid_start and N_grid_size when the frequency range and bandwidth of component carrier are changed. SCS enable/disable state will not be changed, unless enabled SCS is invalid for new frequency range and bandwidth. If all enabled SCS are invalid for new frequency range and bandwidth, 30K SCS will be enabled for frequency range 1 and 120K SCS will be enabled for frequency range 2

- Man – keep the value in grid table when the frequency range and bandwidth of component carrier are changed, unless a value is invalid for new frequency range and bandwidth

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO ON OFF 1 0</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO?</code>
Example	<code>:EVM:CCAR:RGR:CONF:AUTO 0</code> <code>:EVM:CCAR:RGR:CONF:AUTO?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON 0 1

When the configuration mode is Auto, the default N_{grid_start} is set to 0 and N_{grid_size} is set according to tables below:

Table 5.3.2-1: Transmission bandwidth configuration N_{RB} for FR1

SCS	5 MHz	10 MHz	15 MHz	20 MHz	25 MHz	30 MHz	35 MHz	40 MHz	45 MHz	50 MHz	60 MHz	70 MHz	80 MHz	90 MHz	100 MHz
60	66	132	198	264	330	396	462	528	594	660	N.A.	N.A.	N.A.	N.A.	N.A.
120	32	66	99	132	165	198	231	264	297	330	N.A.	N.A.	N.A.	N.A.	N.A.
240	N.A.	N.A.	N.A.	N.A.	N.A.	N.A.	N.A.	66	99	132	198	264	330	396	462
480	N.A.	N.A.	N.A.	N.A.	N.A.	N.A.	N.A.	33	49	66	99	132	198	264	330
960	N.A.	N.A.	N.A.	N.A.	N.A.	N.A.	N.A.	16	24	33	49	66	99	132	165

Table 5.3.2-2: Transmission bandwidth configuration N_{RB} for FR2

SCS	50 MHz	100 MHz	200 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}						
60	66	132	264	N.A.	N.A.	N.A.	N.A.
120	32	66	132	264	N.A.	N.A.	N.A.
480	N.A.	N.A.	N.A.	66	124	248	N.A.
960	N.A.	N.A.	N.A.	33	62	124	148

SCS Enabled

The Enabled column lets you enable or disable selected SCS for current component carrier.

Remote Command	<pre>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k [:STATe] OFF ON 0 1 [:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k [:STATe]?</pre>
Example	<pre>:EVM:CCAR:RGR:SCS15 ON :EVM:CCAR:RGR:SCS15?</pre>
Notes	<p>Only valid numerology for selected frequency range and bandwidth will be visible. Some SCS are disabled if they are "N.A" in Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104)" in the Section 3.2.5.1.15, N_Grid_Size (Display Only)</p> <p>In EVM, if Configuration Mode is Auto and Freq Range is changed, the Grid Start and Grid Size will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p> <p>In measurements other than EVM, when Freq Range is changed, the parameter will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p>
Preset	<pre>SCS 15k : OFF SCS 30k : ON SCS 60k : OFF SCS 120k: OFF SCS240K: OFF SCS480K:OFF SCS960K:OFF</pre>
State Saved	Yes

N_grid_start

This column lets you set the Grid Start value for the selected numerology.

Remote Command	<pre>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:STARt <integer> [:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:STAR- t?</pre>
Example	<pre>:EVM:CCAR:RGRid:SCS15k:STAR 0 :EVM:CCAR:RGRid:SCS15k:STAR?</pre>
Preset	Depends on frequency range, bandwidth and numerology

State Saved	Yes
Min	0
Max	Depends on frequency range, bandwidth and numerology

N_grid_size

This column lets you set the Grid Size for the selected numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE <integer></code> <code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:SIZE 270</code> <code>:EVM:CCAR:RGR:SCS15k:SIZE?</code>
Notes	Grid Size should not exceed the Nrb in Table 5.3.2-1 or Table 5.3.2-2 of 3GPP TS38.104 and TS38.101-1 & -2
Preset	Depends on frequency range and bandwidth
State Saved	Yes
Min	6
Max	Depends on frequency range, bandwidth and numerology
Backwards Compatibility SCPI	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RBNumber:SCS15k SCS30k SCS60k SCS120k SCS240k</code>

k0 (Display Only)

This column displays the k0 value for the selected Numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:k0?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:k0?</code>

More Information

See picture below for illustration how k0 is calculated.

3 5G NR/5G-A Mode

3.4 ACP Measurement

Intra-Cell Guard Band

Enter a comma-separated string to set guard band. Consecutive numbers will be merged into one guard band. At most, 4 guard bands are allowed and the rest will be omitted. Colon-separated numbers represent the start and stop of a guard band.

Remote Command	<code>[:SENSe] :EVM:CCARrier[0] 1 ... 15:RGRid:SCS15k SCS30k:GBAND <string></code>
Example	<code>:EVM:CCAR:RGR:SCS15k:GBAN "0:9"</code> <code>:EVM:CCAR:RGR:SCS15k:GBAN?</code>
Couplings	Only visible for Uplink and only available for 15kHz/30kHz numerology
State Saved	Yes

RB Set (Display Only)

Display the RB set according to Intra-Cell Guard Band setting.

Point A Frequency (Display Only)

This figure displays the Point A Freq for the resource grid.

Remote Command	<code>[:SENSe] :EVM:CCARrier[0] 1 ... 15:RGRid:REFA?</code>
Example	<code>:EVM:CCAR:RGR:REFA?</code>

LTE Coexistence

This tab and the following controls are available only for Modulation Analysis measurement, and it will only appear for DL FR1 component carriers.

Add LTE (GUI only)

Pressing this control inserts a new LTE-CRS configuration into the list, the maximum number of LTE-CRS configurations is 4.

Delete LTE (GUI only)

Pressing this control deletes selected LTE-CRS configuration from the list.

Clear All (GUI only)

Pressing this control deletes all LTE-CRS configurations from the list.

Effective LTE Number (Remote Command only)

Specifies how many LTE-CRS configurations are effective. This SCPI only command is used to provide similar functions such as “Add LTE” and “Delete LTE”.

Note that all 4 LTE-CRS configurations can be modified through SCPI, but ineffective LTE-CRS configurations (index > Effective LTE Number) will not be included in the measurement no matter whether its state is “On” or “Off”.

Remote Command	<code>[:SENSE]:EVM:CCARrier[0] 1 ... 15:NUMBER:LTE <integer></code> <code>[:SENSE]:EVM:CCARrier[0] 1 ... 15:NUMBER:LTE?</code>
Example	<code>:EVM:CCAR:NUMB:LTE 2</code> <code>:EVM:CCAR:NUMB:LTE?</code>
Couplings	Max value is 4 If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	4

State

Enable or disable the LTE coexistence.

Remote Command	<code>[:SENSE]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATE] OFF ON 0 1</code> <code>[:SENSE]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATE]?</code>
Example	<code>:EVM:CCAR:LTE1 OFF</code>

	<code>:EVM:CCAR:LTE1?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message This control is available only when 15K SCS is enabled in the resource grid
Preset	<code>OFF</code>
State Saved	Yes

Bandwidth

Set the LTE bandwidth.

Remote Command	<code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW B1M4 B3M B5M B10M B15M B20M</code> <code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW?</code>
Example	<code>:EVM:CCAR:LTE1:BW B20M</code> <code>:EVM:CCAR:LTE1:BW?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	<code>B5M</code>
State Saved	Yes
Range	1.4 MHz 3 MHz 5 MHz 10 MHz 15 MHz 20 MHz

Carrier Offset to Point A

Sets the LTE carrier center subcarrier location determined by the offset from point A using 15K SCS.

Remote Command	<code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset <integer></code> <code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset?</code>
Example	<code>:EVM:CCAR:LTE1:COFF 0</code> <code>:EVM:CCAR:LTE1:COFF?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	0
State Saved	Yes
Min	0
Max	16383

MBSFN Subframes

Sets the subframe index that can be configured as MBSFN subframes in LTE.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame <string></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame?</code>
Example	<code>:EVM:CCAR:LTE:MBSF:SFR "2:9"</code> <code>:EVM:CCAR:LTE:MBSF:SFR?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
State Saved	Yes

Number of CRS Antenna Ports

Set the number of antenna ports for LTE-CRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer N1 N2 N4</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB N1</code> <code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	N1
State Saved	Yes
Range	1 2 4

v-shift

Set the v-shift value for LTE-CRS; it is given by LTE Cell ID mod 6.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:VSH 0</code> <code>:EVM:CCAR:LTE1:CRS:VSH?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message

Preset	0
State Saved	Yes
Min	0
Max	5

Advanced Acquisition

This menu is available only for the Modulation Analysis measurement. It enables you to configure selected RF settings for each component carrier and channel.

Number of Component Carriers

This is the same as the control on the menu panel. See ["Number of Component Carriers" on page 3052](#).

Input Channel (GUI Only)

Select the input channel to configure its settings.

State Saved	No
-------------	----

Use Advanced Acquisition Table

Specify if the settings in Advanced Acquisition Table will be applied.

Remote Command	<code>[:SENSe]:RF:ACQuIstion:ATABle OFF ON 0 1</code> <code>[:SENSe]:RF:ACQuIstion:ATABle?</code>
Example	<code>:RF:ACQ:ATAB 1</code> <code>:RF:ACQ:ATAB?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON

IF Path Auto

Specify if the IF path in Advanced Acquisition Table will be automatically or manually selected.

Remote Command	<code>[:SENSe]:RF:ACQuIstion:ATABle:IFPath:AUTO ON OFF 1 0</code> <code>[:SENSe]:RF:ACQuIstion:ATABle:IFPath:AUTO?</code>
----------------	--

Example	<code>:RF:ACQ:ATAB:IFP:AUTO 1</code> <code>:RF:ACQ:ATAB:IFP:AUTO?</code>
Preset	ON
State Saved	Yes
Range	OFF ON

Mechanical Attenuation

Set mechanical attenuation for each component carriers.

Remote Command	<code>[[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation <rel_ampl></code> <code>[[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:ATT 20</code>
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. To get to a value below 6 dB it has to be directly entered from the keypad or via SCPI. This protects from adjusting the attenuation to a dangerously small value which can put the instrument at risk of damage to input circuitry. However, if the current mechanical attenuation is below 6 dB it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB

Elec Attenuation

Set electronic attenuation for each component carriers.

Remote Command	<code>[[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation <rel_ampl></code> <code>[[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:EATT 20</code>
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual attenuator configuration: 24 dB Single attenuator configuration: the total of ATT and EATT cannot exceed 50 dB, so if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB

LNA

Turn on/off Low Noise Amplifier (LNA) for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:LNA ON</code>
Dependencies	Requires option LNA
Preset	<code>OFF</code>
State Saved	Saved in State

Internal Preamp

Turn on/off internal preamp for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:PREamp OFF LOW FULL</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:PREamp?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:PRE LOW</code> <code>:CCAR0:RF:CHAN1:GAIN:PRE?</code>
Dependencies	Preamp is not available on all hardware platforms. If the preamp is not present or is unlicensed, the control is not shown
Preset	<code>OFF</code>
State Saved	Saved in instrument state

uW Path Control

Select uW Path for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH STD LNPath MPBypass FULL</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH?</code>
Example	<code>:CCAR0:RF:CHAN1:MW:PATH LNP</code> <code>:CCAR0:RF:CHAN1:MW:PATH?</code>
Preset	MPB option present and licensed: <code>MPB</code> MPB option not present and licensed: <code>STD</code>
State Saved	Save in instrument state
Range	Standard Path Low Noise Path Enable μW Presel Bypass Full Bypass Enable

IF Gain

Set IF Gain for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:IF:GAIN:LEVel <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:IF:GAIN:LEVel?</code>
Example	<code>:CCAR0:RF:CHAN1:IF:GAIN:LEV -10</code> <code>:CCAR0:RF:CHAN1:IF:GAIN:LEV?</code>
Notes	Not available for B25 IF bandwidth option
Preset	0
State Saved	Save in instrument state
Min	Depends on CC Bandwidth
Max	Depends on CC Bandwidth

IF Path

Specify IF path manually for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath B10M B25M B40M B85M B125M B140M B160M B255M B510M B1G B1500M B2G B4G</code> <code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath?</code>
Example	<code>:CCAR0:RF:CHAN1:IFP B160M</code> <code>:CCAR0:RF:CHAN1:IFP?</code>
Notes	B10M = 10 MHz B25M = 25 MHz B40M = 40 MHz B85M = 85 MHz B125M = 125 MHz B140M = 140 MHz B160M = 160 MHz B255M = 255 MHz B510M = 510 MHz B1G = 1 GHz B1500M = 1.5 GHz B2G = 2 GHz B4G = 4 GHz In cases where the path is not available but is selected from SCPI, it generates an error - 241, "Hardware missing; Option not installed"

Dependencies	Gray out if IF Path Auto is On
Preset	Automatically selected IF path according to measurement required IFBW and available HW bandwidth
State Saved	Saved in instrument state

Measure CC

Selects the component carrier to be measured in the uplink time mask measurement.

NOTE

The parameter is available only for the Transmit On|Off Power measurement.

Remote Command	<code>[:SENSe]:PVTime:ULINK:CCARrier CC0 ... CC15</code> <code>[:SENSe]:PVTime:ULINK:CCARrier?</code>
Example	<code>:PVT:ULINK:CCAR CC0</code> <code>:PVT:ULINK:CCAR?</code>
Dependencies	Available only when Radio Direction is Uplink
Preset	<code>CC0</code>
State Saved	Yes
Range	CC0 CC1 CC2 CC3 CC4 CC5 CC6 CC7 CC8 CC9 CC10 CC11 CC12 CC13 CC14 CC15

3.4.13.7 Advanced

Contains controls for setting advanced functions of the instrument.

This tab does *not* appear in the following instruments:

- EXM
- VXT model M9420A

Phase Noise Opt

Selects the LO (local oscillator) phase noise behavior for various operating conditions.

Remote Command	<code>[:SENSe]:ACPower:FREQuency:SYNThesis[:STATe] 1 ... 5</code> For the meaning of each numeric option value, see " Parameter Options, Installed Options, Auto Rules & Ranges " on page 888 below <code>[:SENSe]:ACPower:FREQuency:SYNThesis[:STATe]?</code>
Example	<code>:ACP:FREQ:SYNT 1</code>

<code>:ACP:FREQ:SYNT?</code>	
Dependencies	Does not appear in all models. For models that do not display this control, the SCPI command is accepted for compatibility (although no action is taken) Not available in VXT models M9410A/11A/15A
Preset	Because this function is in Auto after preset, the state of this function after Preset will be automatically calculated
State Saved	Saved in instrument state
Range	See "Ranges" on page 893 below
Auto Function	
Remote Command	<code>[:SENSe] :ACP:Power:FREQuency:SYNThesis:AUTO[:STATe] OFF ON 0 1</code> <code>[:SENSe] :ACP:Power:FREQuency:SYNThesis:AUTO[:STATe] ?</code>
Example	<code>:ACP:FREQ:SYNT:AUTO 1</code> <code>:ACP:FREQ:SYNT:AUTO?</code>
Preset	ON

Parameter Options, Installed Options, Auto Rules & Ranges

The Phase Noise Optimization control lets you optimize the setup and behavior of the Local Oscillator (LO) depending on your specific measurement conditions. You may wish to trade off noise and speed, for example, to make a measurement faster without regard to noise or with optimum noise characteristics without regard to speed.

Parameter Values Summary

Option	#	Description
"Balanced" on page 889	1	<ul style="list-style-type: none"> In instruments with EPO, balances close-in phase noise with spur avoidance In instruments without EPO optimizes phase noise for small frequency offsets from the carrier
"Best Wide-offset" on page 890	2	Optimizes phase noise for wide frequency offsets from the carrier
"Fast Tuning" on page 890	3	Optimizes LO for tuning speed
"Best Close-in" on page 889	4 or 1*	<ul style="list-style-type: none"> In instruments with EPO, emphasizes close-in phase noise performance without regard to spur avoidance In instruments without EPO, this setting is accepted but no action is taken
"Best Spurs" on page 889	5	In instruments with EPO, emphasizes spur avoidance over close-in

Option	#	Description
page 890		phase noise performance - In instruments without EPO, this setting is accepted but no action taken
Auto	-	Automatically selects LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions

*Dependent on Option EPO installation. See "[Best Close-in](#)" on page 889 below.

The actual behavior varies somewhat depending on model number and option; for example, you always get Fast Tuning by choosing Option #3, but in some models, "[Fast Tuning](#)" on page 890 is identical in effect to "[Best Close-in](#)" on page 889.

Best Close-in

Without option EPO

`:FREQ:SYNT 1`

The LO phase noise is optimized for smaller offsets from the carrier, at the expense of phase noise farther out.

The actual frequency offset within which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset <20 kHz]

With option EPO

`:FREQ:SYNT 4`

In instruments with Option EPO, the LO is configured for the best possible close-in phase noise (offsets up to 600 kHz from the carrier), regardless of spurious products that occur with some center frequencies. Because this is generally less desirable for close-in measurements than the "[Balanced](#)" on page 889 setting, parameter 1 selects "[Balanced](#)" on page 889 in EPO instruments, in the interests of optimizing code compatibility across the family. Parameter 4 selects "[Best Close-in](#)" on page 889, which is usually not as good a choice as "[Balanced](#)" on page 889.

Balanced

`:FREQ:SYNT 1`

In instruments with EPO, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ± 1 octave around 400 kHz offset. The spurs will always be below -70 dBc.

Best Spurs

:FREQ:SYNT 5

In instruments with EP0, the LO is configured for better phase noise than the "Best Wide-offset" on page 890 case close to the carrier, but the configuration has 11 dB worse phase noise than the "Best Close-in" on page 889 case mostly within ± 1 octave around 300 kHz offset. Spurs are even lower than in the "Balanced" on page 889 case at better than -90 dBc, whether or not the carrier is on-screen.

This setting is never selected when Phase Noise Optimization is in Auto, you must select it manually.

Best Wide-offset

:FREQ:SYNT 2

The LO phase noise is optimized for wider offsets from the carrier. Optimization is especially improved for offsets from 70 kHz to 300 kHz. Closer offsets are compromised and the throughput of measurements (especially remote measurements where the center frequency is changing rapidly), is reduced.

The actual frequency offset beyond which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset >30 kHz]

In instruments with Option EP0, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ± 1 octave around 400 kHz offset. The spurs will always be below -70 dBc.

Fast Tuning

:FREQ:SYNT 3

In this mode, the LO behavior compromises phase noise at many offsets from the carrier in order to allow rapid measurement throughput when changing the center frequency or span. The term "Fast Tuning" on page 890 refers to the time it takes to move the local oscillator to the start frequency and begin a sweep; this setting does not impact the actual sweep time in any way.

In instruments with EP1, the LO behavior compromises phase noise at offsets below 4 MHz in order to improve measurement throughput. The throughput is especially affected when moving the LO more than 2.5 MHz and up to 10 MHz from the stop frequency to the next start frequency.

In instruments with Option EP0, this is the same configuration as "Best Spurs" on page 890. It is available with the "Fast Tuning" on page 890 label for convenience,

and to make the user interface more consistent with other X-Series instrument family members.

(In models whose hardware does not provide for a "Fast Tuning" on page 890 option, the settings for "Best Close-in" on page 889 are used if "Fast Tuning" on page 890 is selected. This gives the fastest possible tuning for that hardware set.)

Auto

`:FREQ:SYNT:AUTO ON`

Selects the LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions. The selection rules are as follows.

Auto Optimization Rules

X-Series instruments have several grades of LO, offering different configurations when in the Auto Mode. The rules for Auto selection are as follows:

Models with Option	Conditions	Selection
EPO Models with option EPO have a two stage local oscillator, which switches to a single loop for fast tuning (available in UXA)	Center frequency is < 699.9 kHz Span > 114.1 MHz, <i>or</i> RBW > 800 kHz RBW > 290 kHz, <i>or</i> Span > 4.2 MHz Other conditions	"Balanced" on page 889 "Fast Tuning" on page 890 "Best Wide-offset" on page 890 "Balanced" on page 889
EP1 Models with option EP1 have a two-loop local oscillator, which switches to a single loop for fast tuning (available in PXA)	Span > 44.44 MHz, <i>or</i> RBW > 1.9 MHz, <i>or</i> Source Mode is set to "Tracking" Center frequency is < 195 kHz, <i>or</i> CF >= 1 MHz <i>and</i> Span <= 1.3 MHz <i>and</i> RBW <= 75 kHz All other conditions	"Fast Tuning" on page 890 "Best Close-in" on page 889 "Best Wide-offset" on page 890
EP2 Models with option EP2 use a different loop bandwidth for the fast-tuning choice, which is a compromise	CF < 130 kHz, <i>or</i> CF > 12 MHz <i>and</i> Span < 495 kHz <i>and</i> RBW < 40 kHz	"Best Close-in" on page 889

Models with Option	Conditions	Selection
<p>between tuning speed and phase noise, giving good tuning speed at all offsets. Although not as good as for "Best Close-in" on page 889; this is useful when you have to look across a wide range of spans (available, for example, in MXA for excellent phase noise)</p>	<p>Span > 22 MHz, <i>or</i> RBW > 400 kHz, <i>or</i> CF ≤ 12 MHz <i>and</i> Span < 495 kHz <i>and</i> RBW < 23 kHz All other conditions</p>	<p>"Fast Tuning" on page 890</p> <p>"Best Wide-offset" on page 890</p>
<p>EP4 (available in CXA for improved phase noise)</p>	<p>Span > 101 MHz <i>or</i> RBW > 1.15 MHz <i>or</i> Source Mode is set to "Tracking" CF is < 109 kHz <i>or</i> CF ≥ 4.95 MHz <i>and</i> Span ≤ 666 kHz <i>and</i> RBW < 28 kHz All other conditions</p>	<p>"Fast Tuning" on page 890</p> <p>"Best Close-in" on page 889</p> <p>"Best Wide-offset" on page 890</p>
<p>All Other Models Note that in these models, the hardware does not actually provide for an extra-fast tuning option, so the settings for "Fast Tuning" on page 890 are actually the same as "Best Close-in" on page 889, but the rules are implemented this way so that the user who doesn't care about phase noise but does care about tuning speed doesn't have to remember which of the other two settings gives faster tuning</p>	<p>Span > 12.34 MHz, <i>or</i> RBW > 250 kHz, <i>or</i> Source Mode is set to "Tracking" Center frequency is < 25 kHz, <i>or</i> CF ≥ 1 MHz <i>and</i> Span ≤ 141.4 kHz <i>and</i> RBW ≤ 5 kHz All other conditions</p>	<p>"Fast Tuning" on page 890</p> <p>"Best Close-in" on page 889</p> <p>"Best Wide-offset" on page 890</p>

In all the above cases:

- The RBW to be used in the calculations is the equivalent -3 dB bandwidth of the current RBW filter
- The rules apply whether in swept spans, zero span, or FFT spans

Ranges

Option	Option #	Phase Noise Option	Range
No EPx Option	1	Best Close-in	[offset < 20 kHz]
	2	Best Wide-offset	[offset > 30 kHz]
	3	Fast Tuning	[same as Best Close-In]
EP0	4	Best Close-in	[offset < 600 kHz]
	1	Balanced	[offset < 600 kHz]
	5	Best Spurs	[offset < 600 kHz]
	2	Best Wide-offset	[offset > 800 kHz]
EP1	3	Fast Tuning	[same as Best Close-In]
	1	Best Close-in	[offset < 140 kHz]
	2	Best Wide-offset	[offset > 160 kHz]
EP2, EP3, EP5	3	Fast Tuning	[single loop]
	1	Best Close-in	[offset < 70 kHz]
	2	Best Wide-offset	[offset > 100 kHz]
EP4	3	Fast Tuning	[medium loop bw]
	1	Best Close-in	[offset < 90 kHz]
	2	Best Wide-offset	[offset > 130 kHz]
	3	Fast Tuning	[same as Best Close-In]

Noise Correction

Sets the measurement noise floor correction function to On or Off. On enables measurement noise correction when the measured power in the reference channel or any offset is close to the noise floor of the instrument. Off turns these corrections off.

In instruments with the noise floor extensions option (option NFE) enabled, there are two ways to compensate for the analyzer noise floor: through the NFE and through this noise corrections control. The techniques are results are similar but not identical. NFE uses a model of the analyzer noise floor, adapted to the current conditions such as center frequency, RBW and ambient temperature. The parameters of this model are measured in the factory or field calibration in a highly averaged measurement. So, they are consistent. However, because the model is imperfect, the corrections are imperfect. Using NFE is very convenient; the user need not wait for the ACP noise corrections calibration to occur. The ACP NC calibration, though, has advantages of being measured very recently, at the current ambient, and the exact center frequency, with no requirement that the model be perfect. So, it will often (but not always) have slightly better dynamic range. If both

ACP NC is turned on and NFE is turned on, the instrument uses only the ACP NC. When ACP NC is turned off, but NFE is on, NFE is used, and performance should still be excellent.

When **Meas Method** is Fast Power, HW supported noise correction works when either or both of Noise Correction and NFE is on.

Remote Command	<code>[:SENSe]:ACPower:CORRection:NOISe[:AUTO] OFF ON 0 1</code> <code>[:SENSe]:ACPower:CORRection:NOISe[:AUTO]?</code>
Example	<code>:ACP:CORR:NOIS OFF</code> <code>:ACP:CORR:NOIS?</code>
Dependencies	Not available when " Meas Method " on page 719 is RBW or Fast
Preset	0
State Saved	Saved in instrument state
Range	OFF ON

Noise Floor Extension

Lets you configure **Noise Floor Extension** (NFE). All Modes that support NFE let you set it on or off. Additionally, some Modes support two “on” states for NFE, **Full** and **Adaptive**, as described below.

Adaptive Option Support

At present (Release: X-Apps 2024), support for **Adaptive** NFE is as follows:

Mode	Measurements	Supports Adaptive NFE?
BT	ACP, IBEM, IBSP	No
CQM	MON	Yes
EDGE GSM	EORF, ETSP, MON	No
EMI	APD, DAN, FSC, MON, RTSC, SCH	Yes
LTEAFDD	PVT	No
LTEATDD	PVT	No
MSR	ACP, CHP, MON, OBW, SEM, SPUR	Yes
NR5G	PVT	No
PNOISE	LPL, MON, SFR	No
SA	SAN	Yes
SRCOMMS	ACP, CHP, MON, OBW, SEM, SPUR	Yes
VMA	ACP, CHP, OBW, SEM, SPUR	Yes
WCDMA	ACP, CHP, MON, OBW, SEM, SPUR	Yes
WLAN	CHP, MON, OBW, SEM, SPUR	Yes

The menus and command options are as follows:

NFE State	Modes with Adaptive NFE	Modes without Adaptive NFE	SCPI
Off	Off	Off	See "NFE On/Off Command" on page 896
On	Full	On	
Adaptive	Adaptive	n/a	See "Adaptive NFE Command" on page 897

As shown in the table above, the **On** state (in Modes that do not support **Adaptive NFE**) matches the **Full** state in Modes that *do* support **Adaptive NFE**.

To maintain SCPI backwards compatibility, the existing command to turn NFE on or off is retained, and a new command is added to set the state to turn **AdaptiveON** or **OFF**:

- `[[:SENSe]:CORRection:NOISe:FLOOr ON|OFF|1|0]` is retained, with the default changed to **ON** for Modes that support **Adaptive NFE**
- `[[:SENSe]:CORRection:NOISe:FLOOr:ADAPtive ON|OFF|1|0]` is added (for certain Modes), default = **ON**

When NFE is **On** or **Full**, the expected noise power of the instrument (derived from a factory calibration) is subtracted from the trace data. This will usually reduce the apparent noise level by about 10 dB in low band, and 8 dB in high band (>~3.6 GHz).

NFE works with any RBW, VBW, detector, any setting of **Average Type**, any amount of trace averaging, and any signal type. It is ineffective when the trace is not smoothed (smoothing processes include narrow VBWs, trace averaging, and long sweep times with the detector set to **Average** or **Peak**). It works best with extreme amounts of smoothing, and with the average detector, with the **Average Type** set to **Power**.

In those cases where the cancellation is ineffective, it nonetheless has no undesirable side-effects. There is no significant speed impact to having **Noise Floor Extension** on.

The best accuracy is achieved when substantial smoothing occurs in each point before trace averaging. Thus, when using the **Average** detector, results are better with long sweep times and fewer trace averages. When using the **Sample** detector, the VBW filter should be set narrow with less trace averaging, instead of a wide VBW filter with more trace averaging.

NOTE

Noise Floor Extension has no effect unless the RF Input is selected, so when **External Mixing** is selected, it does nothing.

For more details, see "Optimal Detector & Averaging Selections" on page 897 and "Recalibration of Noise Floor" on page 898.

Pros & Cons of Adaptive NFE

Adaptive NFE provides an alternative to fully-on or fully-off NFE. Fully-on NFE can, notably in cases with little or no averaging of the spectrum, result in a display that is distractingly unfamiliar in the variability in response to low level signals. Fully-off NFE fails to achieve the potential improvement in dynamic range and associated accuracy of measurement of low-level signals. **Adaptive** NFE controls the degree of potential improvement in the noise floor to give more improvement for those instrument settings that can make good use of the potential improvement—those settings with high degrees of variance reduction through some variant of averaging. When the potential improvement is small, the display acts like the fully-off case, and when it is high, it acts like the fully-on case, and in-between, application is a compromise between attractiveness and effectiveness.

In **Adaptive** NFE, there is not the same dramatic visual impact on the noise floor as there is in **Full** NFE. **Adaptive** NFE controls the amount of correction that is applied based on other instrument settings like RBW, averaging and sweep time. **Adaptive** NFE controls the degree of potential improvement in the noise floor to give more improvement for those instrument settings that can make good use of the potential improvement, such as settings that provide more averaging. The result is that when not much averaging is being performed, the signal displays more like the fully-off case; and when lots of averaging is being performed, the signal displays more like the **Full** NFE case.

Adaptive NFE is recommended for general-purpose use. For fully-ATE (automatic test equipment) applications, where possible distraction of the instrument user is not a risk, **Full** NFE is recommended.

NFE On/Off Command

Remote Command	<code>[:SENSe]:CORRection:NOISe:FLOor ON OFF 1 0</code> <code>[:SENSe]:CORRection:NOISe:FLOor?</code>
Example	<code>:CORR:NOIS:FLO ON</code>
Dependencies	Only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear. In those cases, the SCPI command is accepted without error, but has no effect
Couplings	When NFE is enabled in any Mode manually, a prompt is displayed reminding you to perform the Characterize Noise Floor operation if it is needed When NFE is enabled through SCPI, and a Characterize Noise Floor operation is needed, an error is entered in the system error queue
Preset	Unaffected by Mode Preset . Turned ON at startup and by Restore Mode Defaults in Modes that support Adaptive . Turned OFF at startup and by Restore Mode Defaults in Modes that do <i>not</i> support Adaptive In Modes that support Adaptive NFE, the default (preset) state of NFE is Adaptive . In Modes that do not support Adaptive NFE, the default state of NFE is Off
State Saved	No

Adaptive NFE Command

Only effective in instruments with the NFE or NF2 license installed, and in Modes that support **Adaptive** NFE. For coverage, see "[Adaptive Option Support](#)" on page 894 above.

For all other cases, the SCPI command below is accepted without error, but has no effect.

Remote Command	<code>[[:SENSe]:CORRection:NOISe:FLOor:ADAPtive ON OFF 1 0 [:SENSe]:CORRection:NOISe:FLOor:ADAPtive?</code>
Example	First turn NFE on, this is Full mode <code>:CORR:NOIS:FLO ON</code> Then set it to Adaptive <code>:CORR:NOIS:FLO:ADAP ON</code>
Couplings	To maintain backwards compatibility, sending <code>:CORR:NOIS:FLO ON</code> turns NFE AdaptiveOFF . To turn Adaptive on, you must issue the commands in the proper order, as shown in the example above
Preset	Not affected by Mode Preset , but set to ON at startup and by Restore Mode Defaults
State Saved	No

Optimal Detector & Averaging Selections

Note that some measurements do not allow you to switch the **Detector** type (which is set by default to **Average**), so the discussion of detector types here is irrelevant for those measurements. Similarly, some measurements do not allow you to set **Average Type** (set by default to **LOG**), so that discussion here is irrelevant in those cases.

The instrument is characterized in the factory (or during a field calibration) with a model of the noise, referred to the input mixer, versus frequency in each band and path combination. Bands are 0 (low band) and 1 through 4 (high band) in a 26.5 GHz instrument, for example. Paths include normal paths, preamp paths, the electronic attenuator, etc.

In most band/path combinations, the noise can be well characterized based on just two parameters and the instrument frequency response before compensation for frequency-dependent losses.

After the noise density at the input mixer is estimated, the effects of the input attenuator, RBW, detector, etc. are computed to obtain the estimated input-port-referred noise level.

In the simplest case, the measured power (signal plus analyzer noise) in each display point (bucket) is compensated by subtracting the estimated noise power,

leaving just the signal power. This is the operation when **Detector** is **Average** and **Average Type** is set to **Power (RMS)**.

For best operation, **AverageDetector** (default) and **Average Type. = Power** are recommended, as already stated. In other cases, operation is often not quite as good but still highly effective. Other **Detector** options, when available, behave as follows:

Positive Peak	<p>The noise floor is estimated based on the RBW and the duration of the bucket using the same equations used in the noise marker function. The voltage of the noise is subtracted from the voltage of the observed signal-plus-noise measurement to compute the estimated signal voltage</p> <p>Positive Peak is one example of processing that varies with detector to give good estimates of the signal level without the analyzer noise</p> <p>For pulsed-RF, Positive Peak can still give excellent effectiveness</p> <p>FFT analysis does not work well, and does not perform NFE well, with pulsed-RF signals, so this combination is <i>not</i> recommended</p>
Negative Peak	Not very useful
Sample	Works well, but never better than Average , because it does not smooth as well
Normal	A combination of peak and negative peak behaviors, and works about as well as these

For best operation, extreme smoothing is desirable, as already stated. Using narrow VBWs works well, but using very long bucket durations and the average detector works best. Reducing the number of trace points makes the buckets longer.

For best operation, **Average Type = Power (RMS)** is optimal (when this option is available). When making CW measurements in the presence of noise without NFE, averaging on the decibel scale has the advantage of reducing the effect of noise. Using NFE with **Average Type = Log-Power (LOG)** is not synergistic, though; NFE with **Average Type = Power (RMS)** works a little better than NFE with **LOG**.

The results from NFE with internal preamp can often be lower than the theoretical noise in a signal source at room temperature, a noise density of -174 dBm/Hz. This is expected and useful behavior, because NFE is designed to report the amount of input signal that exceeds the thermal noise, not the amount that includes the thermal noise. This can be a useful behavior because thermal noise often interferes with what you want to measure, instead of being part of what you want to measure. Note that NFE is not adequately accurate to always be able to read below kTB.

Recalibration of Noise Floor

In instruments with the NF2 license installed, the calibrated noise floor used by **Noise Floor Extension** should be refreshed periodically. Keysight recommends that the **Characterize Noise Floor** operation be performed after the first 500 hours of

operation, and once every calendar year. To do this, use **"Characterize Noise Floor"** on page 3196, under **System, Alignments, Advanced**. If you have not done this yourself at the recommended interval, then when you turn on **Noise Floor Extension**, the instrument will prompt you to do so with a dialog stating:

This action will take several minutes to perform. Please disconnect all cables from the RF input and press Enter to proceed. Press ESC to cancel, or Postpone to postpone for a week

If you cancel, you will be prompted again the next time you turn NFE on. If you postpone, you will be prompted again after a week passes and you then turn NFE on.

Fast Power RBW Mode

Specifies RBW behavior of Fast Power under **Meas Method**.

Option	SCPI	Description
Best Speed	<code>SPEed</code>	The acquisition RBW is set to be configured for best speed. The RBW is automatically calculated, and is not configurable
Explicit	<code>EXPLicit</code>	You can configure RBW manually

Remote Command	<code>[:SENSe]:ACPower:BANDwidth[:RESolution]:FPOWer:MODE SPEed EXPLicit</code> <code>[:SENSe]:ACPower:BANDwidth[:RESolution]:FPOWer:MODE?</code>	
Example	<code>:ACP:BAND:FPOW:MODE EXPL</code> <code>:ACP:BAND:FPOW:MODE?</code>	
Dependencies	Grayed-out when "Meas Method" on page 719 is not Fast Power Not available in VXT models M9410A/11A/15A	
Couplings	If <code>EXPLicit</code> is selected, "Res BW" on page 689 is configurable. If not, Res BW is grayed-out	
Preset	<code>SPEed</code>	
State Saved	Saved in instrument state	

Fast Power IF Gain Offset

Lets you optimize for dynamic range versus input signal level.

Remote Command	<code>[:SENSe]:ACPower:IF:GAIN:FPOWer <integer></code> <code>[:SENSe]:ACPower:IF:GAIN:FPOWer?</code>	
Example	<code>:ACP:IF:GAIN:FPOW 10</code> <code>:ACP:IF:GAIN:FPOW?</code>	
Dependencies	Grayed-out when "Meas Method" on page 719 is not Fast Power Not available in VXT models M9410A/11A/15A	

Preset	0
State Saved	Saved in instrument state
Min/Max	-20/20

Integration BW

Selects an Integration BW passband from either -3 dB (**DB3**) or -6 dB (**DB6**).

Remote Command	<code>[:SENSe]:ACPower:FILTer:BA NDwidth[:INTEGRation] DB3 DB6</code> <code>[:SENSe]:ACPower:FILTer:BA NDwidth[:INTEGRation]?</code>
Example	<code>:ACP:FILT:BA ND DB3</code> <code>:ACP:FILT:BA ND?</code>
Dependencies	Applicable for carriers and offsets whose filter method is not RRC, and when " Meas Method " on page 719 is other than RBW
Preset	DB3
State Saved	Saved in instrument state
Range	-3 dB -6 dB

3.4.13.8 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, "**Global Center Freq**" on page 3077) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to **ON**, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched **ON**, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is **ON**, modifies the **Global Center Freq**.

When **Global Center Freq** is switched **OFF**, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is **ON**, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to **OFF** when "**Restore Defaults**" on page 3079 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTRument:COUPle:FREQuency:CENTer ALL NONE</code> <code>:INSTRument:COUPle:FREQuency:CENTer?</code>
Example	<code>:INST:COUP:FREQ:CENT ALL</code> <code>:INST:COUP:FREQ:CENT?</code>
Preset	Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes
Range	ALL NONE
Preset	OFF
Backwards Compatibility SCPI	<code>:GLOBal:FREQuency:CENTer[:STATe] 1 0 ON OFF</code> <code>:GLOBal:FREQuency:CENTer[:STATe]?</code>

Global EMC Std

When this control is switched **ON**, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the **Global EMC Std**, so you can switch between any of these Modes and the EMC Std remains unchanged.

Adjusting the EMC Std of any Mode that supports Global settings, while **Global EMC Std** is **ON** modifies the **Global EMC Std**.

When **Global EMC Std** is switched **OFF**, the EMC Std of the current Mode remains unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is **ON**, **Global EMC Std** is preset to the preset EMC Std of the current Mode.

This function resets to **OFF** when "**Restore Defaults**" on page 3079 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTRument:COUPle:EMC:STANdard ALL NONE</code> <code>:INSTRument:COUPle:EMC:STANdard?</code>
Example	<code>:INST:COUP:EMC:STAN ALL</code> <code>:INST:COUP:EMC:STAN?</code>
Dependencies	Only available if Option EMC is installed
Preset	Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes

Range ALL | NONE

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned **ON**, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System > Service > Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function resets to **OFF** when "Restore Defaults" on page 3079 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	:INSTrument:COUPle:FREQuency:BAND:EXTend 0 1 ON OFF :INSTrument:COUPle:FREQuency:BAND:EXTend?
Example	:INST:COUP:FREQ:BAND:EXT 1 :INST:COUP:FREQ:BAND:EXT?
Preset	Set to OFF by Global Settings > Restore Defaults and System > Restore Defaults > All Modes
Range	ON OFF

Restore Defaults

Resets all functions in the **Global** settings menu to **OFF**. Pressing **System, Restore Defaults, All Modes** has the same effect.

Remote Command	:INSTrument:COUPle:DEFault
Example	:INST:COUP:DEF
Backwards Compatibility SCPI	:GLOBal:DEFault

3.4.13.9 Offset RRC Weighting (Backwards Compatibility SCPI)

Example	:ACP:FILT OFF :ACP:FILT?
Couplings	This command is an alias of: [:SENSe]:ACPpower:OFFSet[1] 2:LIST:FILTer[:RRC][:STATe] Sending the command sets values of all offsets for BS and MS, but the query always returns a value of

3 5G NR/5G-A Mode

3.4.14 Sweep

Accesses controls to configure and control the acquisition of data, and the X-axis parameters of the instrument.

Depending on the selected mode and measurement, these controls might include: **Sweep Time**, **Continuous/Single**, **Pause/Resume**, **X Scale** and **Number of Points**.

3.4.14.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep Time

Controls the time the instrument takes to sweep the current frequency span in swept measurements, displays the sweep time in swept measurements, and displays the equivalent Sweep Time in FFT measurements.

When **Sweep Time** is in Auto, the instrument computes a time that will give accurate measurements based on other settings, such as RBW and VBW.

You can select a shorter sweep time to improve the measurement throughput (with some potential unspecified accuracy reduction), but the **Meas Uncal** indicator will appear if the sweep time you set is less than the calculated Auto Sweep time.

You can also select a longer sweep time, which can be useful (for example) for obtaining accurate insertion loss measurements on very narrowband filters.

NOTE

Significantly faster sweep times are available with Option FS1.

NOTE The **Meas Uncal** (measurement uncalibrated) warning is displayed in the Status Bar at the bottom of the screen when the manual Sweep time entered is faster than the time computed by the instrument's Sweep time equations, that is, the Auto Sweep Time. The instrument's computed Sweep time will provide accurate measurements; if you sweep faster than this your measurements may be inaccurate. A **Meas Uncal** condition may be corrected by returning the Sweep Time to Auto; by entering a longer Sweep Time; or by choosing a wider RBW and/or VBW.

NOTE On non-sweeping hardware, this control is grayed-out. The value shown on this control is an estimate. It is the measurement's turnaround time, which is the sum of signal acquisition time, FFT time, and other overhead time, to complete the entire span of the measurement. If you need to specify the same "Sweep Time" as you would for sweeping hardware, send `[:SENSe] :<meas> :SWEp:TIME <time>`. The measurement emulates the "Sweep Time" effect, but this emulation is not straightforward, and therefore the behavior is not specified. Instead, we recommend using Minimum Acquisition Time, which provides better control.

Remote Command `[:SENSe] :<meas> :SWEp:TIME <time>`
`[:SENSe] :<meas> :SWEp:TIME?`

Example Channel Power measurement:
`:CHP:SWE:TIME 25ms`
`:CHP:SWE:TIME?`

Notes In the ACP measurement in WCDMA Mode, this parameter is preset by **Meas Method** selection. Preset values are as follows:

- IBW: 29 ms
- IBWR: 108 ms
- FAST 7.5 ms

Dependencies On non-sweeping hardware, this control is grayed out, and the Auto/Man toggle disappears. The read-only control shows estimated sweep time
In those instruments, "[Minimum Acquisition Time](#)" on page 2722 is available

Couplings Coupled to **Span**, **RBW**, **VBW**, and **Sweep Time Rules** when **Sweep Time** is set to Auto; **Sweep Time** changes when these parameters are changed
When you manually set a value when in the **Auto** state, the state automatically changes to **Man**

Preset Automatically Calculated unless noted below
WCDMA Mode

- Channel Power: 1.0 msOBW: 32.6 ms
- ACP: 29 ms

State Saved	Saved in instrument state
Min	Other than non-sweeping hardware: Typically, 1 ms Non-sweeping hardware: N/A In the ACP measurement, when Meas Method is Fast Power , the minimum sweep time is span-dependent and automatically calculated
Max	Other than non-sweeping hardware: 4000 s Non-sweeping hardware: N/A
Annotation	The sweep time is displayed in the lower-right corner of the screen. The number of points is displayed parenthetically, as: Sweep 13.3 ms (1001 points) A “#” mark appears before “Sweep” in the annotation when it is switched from Auto to Manual coupling
Status Bits/OPC dependencies	Meas Uncal is Bit 0 in the register: <code>STATus:QUESTIONable:INTEgrity:UNCalibrated</code> Auto Function
Remote Command	<code>[:SENSe]:<meas>:SWEep:TIME:AUTO OFF ON 0 1</code> <code>[:SENSe]:<meas>:SWEep:TIME:AUTO?</code>
Example	Channel Power measurement: <code>:CHP:SWE:TIME:AUTO OFF</code> <code>:CHP:SWE:TIME:AUTO?</code>
Preset	WCDMA Mode OFF All others ON

Minimum Acquisition Time

Available on non-sweeping hardware.

Specifies the minimum acquisition time for each “chunk” of the measurement result. The instrument automatically divides Span into multiple chunks if needed. Therefore, the total signal acquisition time for the entire Span is:

$\sim(\sim\text{Minimum Acquisition Time}) * (\text{The number of chunks})$

When in Auto, this parameter’s value is determined by other parameters, such as **Span**, **RBW** and **VBW**.

You can manually increase this parameter value from this Auto value.

If increased, the instrument acquires signal for the specified time duration for each chunk. It performs additional FFTs, and averages or peak-holds the FFT results for a chunk, depending on **Detector** settings.

Note that the actual acquisition time for each chunk may exceed the **Minimum Acquisition Time** value, in order to satisfy FFT time required by other parameters, and to perform an integer number of FFTs.

Remote Command	<pre>[:SENSe]:<meas>:SWEep:ACQuisition:TIME <time> [:SENSe]:<meas>:SWEep:ACQuisition:TIME? <meas> is the identifier for the current measurement; any one of CHPower- ACPower OBWidth MONitor</pre>
Example	<pre>Channel Power measurement :CHP:SWE:ACQ:TIME 500 ms :CHP:SWE:ACQ:TIME?</pre>
Dependencies	Available only on non-sweeping hardware
Couplings	<p>Coupled to Span, RBW, and VBW when in the Auto state</p> <p>When you manually set a value when in the Auto state, the state automatically changes to Man</p>
Preset	Automatically calculated
State Saved	Saved in instrument state
Min	100 ns
Max	4.00 ks
Auto Function	
Remote Command	<pre>[:SENSe]:<meas>:SWEep:ACQuisition:TIME:AUTO OFF ON 0 1 [:SENSe]:<meas>:SWEep:ACQuisition:TIME:AUTO? <meas> is the identifier for the current measurement; any one of CHPower- ACPower OBWidth MONitor</pre>
Example	<pre>Channel Power measurement: :CHP:SWE:ACQ:TIME:AUTO OFF</pre>
Preset	ON

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "[More Information](#)" on page 908

Remote Command	<pre>:INITiate:CONTinuous OFF ON 0 1 :INITiate:CONTinuous?</pre>
Example	<pre>Put instrument into Single measurement operation: :INIT:CONT 0</pre>

	<code>:INIT:CONT OFF</code>
	Put instrument into Continuous measurement operation:
	<code>:INIT:CONT 1</code>
	<code>:INIT:CONT ON</code>
Preset	ON
	Note that <code>:SYST:PRES</code> sets <code>:INIT:CONT</code> to ON , but <code>*RST</code> sets <code>:INIT:CONT</code> to OFF
State Saved	Saved in instrument state
Annunciation	The Single/Continuous icon in the Meas Bar changes depending on the setting: <ul style="list-style-type: none"> - A line with an arrow is Single - A loop with an arrow is Continuous
Backwards Compatibility Notes	X-Series A-models had Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and <code>INIT:CONT ON</code>) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep

More Information

Continuous Mode	<p>The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num, the count stops incrementing, but the instrument keeps sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>
Single Mode	<p>The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num, then the count stops incrementing, and the instrument stops sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- `:INIT:CONT 1` has no effect
- `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See "[Restart](#)" on page 3081 for details of `:INIT:IMMEDIATE`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See "[More Information](#)" on page 910

Remote Command	<code>:INITiate[:IMMEDIATE]</code> <code>:INITiate:REStart</code>
Example	<code>:INIT:IMM</code> <code>:INIT:REST</code>
Notes	<code>:INIT:REST</code> and <code>:INIT:IMM</code> perform exactly the same function

Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	<p>This is an Overlapped command</p> <p>The STATUS:OPERation register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous</p> <p>The STATUS:QUESTIONable register bit 9 (INTEgrity sum) is cleared</p> <p>The SWEEPING bit is set</p> <p>The MEASURING bit is set</p>
Backwards Compatibility Notes	<p>For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the :INIT:REST command restarted trace averages (displayed average count reset to 1) for a trace in Clear Write, but did not restart Max Hold and Min Hold</p> <p>In X-Series, the Restart hardkey and the :INIT:REST command restart not only Trace Average, but MaxHold and MinHold traces as well</p>

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger

condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k . This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N , as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, **K**, shows the count for the sweep (data acquisition) in progress. $K = k + 1$, with a limit of N. The displayed value **K** changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** unpauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command	<code>:INITiate:PAUSE</code> <code>:INITiate:RESume</code>
Example	<code>:INIT:PAUS</code> <code>:INIT:RES</code>
Dependencies	Not displayed in Modes that do not support pausing
Annotation	Only on control

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when `:ABORt` is sent, the alignment finishes *before* the abort function is performed, so `:ABORt` does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an `:INIT:IMM` command is received.

Remote Command	<code>:ABORt</code>
Example	<code>:ABOR</code>
Notes	If <code>:INIT:CONT</code> is ON , then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met If <code>:INIT:CONT</code> is OFF , then <code>:INIT:IMM</code> is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met
Dependencies	For continuous measurement, <code>:ABORt</code> is equivalent to the Restart key Not all measurements support this command
Status Bits/OPC dependencies	The <code>STATus:OPERation</code> register bits 0 through 8 are cleared, <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous

The **STATUS:QUESTIONABLE** register bit 9 (**INTEGRITY** sum) is cleared
 Since all the bits that feed into OPC are cleared by **:ABORT**, the Abort command will cause the ***OPC** query to return true

Sweep Time Annotation (Remote Query Only)

Returns the **Sweep Time Annotation** value. Available only on non-sweeping hardware.

This value is also displayed in the result trace window.

The value returned is the estimated turnaround time of each measurement cycle, in seconds. The turnaround time is the sum of the signal acquisition time, FFT time, and other overhead time, to complete the entire span of each measurement cycle.

Remote Command	[:SENSE] : <meas> : SWEEP : ETIME ? <meas> is the identifier for the current measurement; any one of CHPower- ACPower OBwidth MONitor
Example	Channel Power measurement : CHP : SWE : ETIME ?
Dependencies	Available only on non-sweeping hardware
Preset	Automatically calculated

3.4.14.2 Sweep Config

Accesses controls that enable you to configure the Sweep and Control functions of the instrument.

Sweep Time Rules

Switches the instrument between **NORMa1** and **ACCuracy** sweep states.

Setting **Auto Sweep Time** to **ACCuracy** results in slower sweep times, usually about three times as long, but yields better amplitude accuracy for CW signals. The instrument amplitude accuracy specifications only apply when **Auto Sweep Time** is set to **ACCuracy**.

Additional amplitude errors that occur when **Auto Sweep Time** is set to **NORMa1** are usually well under 0.1 dB, though this is not guaranteed. Because of the faster sweep times and still low errors, **NORMa1** is the preferred setting of **Auto Sweep Time**. **Auto Sweep Time** is set to **NORMa1** on a **Preset**. This means that in the **Preset** state, instrument amplitude accuracy specifications do not apply.

Remote Command	[:SENSE] : ACPower : SWEEP : TIME : AUTO : RULES NORMa1 ACCuracy
----------------	---

	<code>[:SENSe] :ACPower :SWEep :TIME :AUTO :RULes ?</code>								
Example	<code>:ACP :SWE :TIME :AUTO :RUL NORM</code> <code>:ACP :SWE :TIME :AUTO :RUL ?</code>								
Dependencies	Does not appear in Spectrum Analyzer Mode in VXT model M9420A

State Saved	Saved in instrument state								
Range	NORMa1 ACCuracy								

Points

Sets the number of points taken per sweep, and displayed in the traces. The current value of points is displayed parenthetically, next to the sweep time in the lower-right corner of the display. Using more points provides greater resolution. Using fewer points compacts the data and decreases the time required to access a trace over the remote interface.

Increasing the number of points does not increase the sweep time. However, it can slightly impact the trace processing time and therefore the overall measurement speed. Decreasing the number of points does not decrease the sweep time, but it may speed up the measurement, depending on the other sweep settings (for example, in FFT sweeps). Fewer points will always speed up the I/O.

Due to minimum sweep rate limitations of the hardware, the minimum sweep time available will increase above its normal value of 1 ms as the number of sweep points increases above 15001.

Changing the number of sweep points has several effects on the instrument. Since markers are read at the point location, the marker reading may change. The sweep time resolution changes. Trace data for all the traces is cleared and, if **Sweep** is in **Cont**, a new trace is taken. If any trace is in average or hold, the averaging starts over.

Because of sweep time quantization issues, the knob and up/down keys cannot be used to adjust the number of points.

When in a split screen display each window may have its own value for points.

When sweep points is changed, an informational message "Sweep points changed, all traces cleared" is displayed and in 5G NR Mode, **Auto Sweep Points** is set to **OFF** (0).

3 5G NR/5G-A Mode
3.4 ACP Measurement

Remote Command	<code>[:SENSe]:ACPower:SWEEP:POINTS <integer></code> <code>[:SENSe]:ACPower:SWEEP:POINTS?</code>	
Example	<code>:ACP:SWE:POIN 500</code> <code>:ACP:SWE:POIN?</code>	
Dependencies	<p>Not available when Signal ID is On in External Mixing</p> <p>Neither the knob nor the step keys can be used to change this value. If it is tried, a warning is given</p> <p>Not displayed in Modes that do not support Swept</p> <p>This parameter is automatically calculated and not configurable when Meas Method is set to Fast Power</p>	
Couplings	<p>Whenever the number of sweep points change:</p> <ul style="list-style-type: none"> - All trace data is erased - Any traces with Update Off will also go to Display OffSweep time is re-quantized - Any limit lines that are on will be updated - If averaging/hold is on, averaging/hold starts over - Auto Sweep Points is set to OFF (5G NR Mode only) <p>The resolution of setting the sweep time depends on the number of points selected</p>	
Preset	5G NR Mode, in all models except M9410A/11A/15A	5001
	All others	1001
State Saved	Saved in instrument state	
Min	1	
Max	20001	
Annotation	On second line of annotations, in lower right corner in parenthesis behind the sweep annotation	

Auto Sweep Points

When **Auto Sweep Points** is **ON**, the instrument determines the points using the following calculation formula.

$$\# \text{ points} = \text{ceil}(\text{Span} / (\text{Rbw} * 1 \text{e}3)) * 1000 + 1$$

Where $\text{ceil}(x)$ returns the smallest possible integer value that is greater than or equal to x .

Remote Command	<code>[:SENSe]:ACPower:SWEEP:POINTS:AUTO[:STATe] OFF ON 0 1</code> <code>[:SENSe]:ACPower:SWEEP:POINTS:AUTO[:STATe]?</code>	
Example	<code>:ACP:SWE:POIN:AUTO 0</code>	

	<code>:ACP:SWE:POIN:AUTO?</code>
Dependencies	Available only in 5G NR Mode
Preset	ON
State Saved	Yes
Range	OFF ON

3.4.14.3 X Scale

Accesses controls that enable you to set the horizontal scale parameters.

Auto Scaling

Toggles the scale coupling function On or Off.

Remote Command	<code>:DISPlay:ACPower:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:COUPle 0 1 OFF ON</code>
Example	<code>:DISP:ACP:WIND:TRAC:X:COUP ON</code> <code>:DISP:ACP:WIND:TRAC:X:COUP?</code>
Couplings	When Auto Scaling is ON and the "Restart" on page 3081 front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to OFF
Preset	OFF
State Saved	Saved in instrument state
Range	OFF ON
Backwards Compatibility SCPI	<code>:DISPlay:ACPower:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:COUPle</code>

3.4.15 Trace

Lets you control the acquisition, display, storage, detection and manipulation of trace data for the available traces. The Trace Control tab of this menu contains radio-button selections for the trace type (**Clear/Write**, **Trace Average**, **Max Hold**, **Min Hold**) and **View/Blank** setting for the selected trace.

For the Spectrum Analyzer Mode, when in **Single** Mode, Measurements and their Views save the trace data from the last acquisition. This is true for multiple screens. The marker and trace data will be present whenever the measurement is brought

back into focus. The measurement switches for these measurements do not clear the traces, so the data will be present until the next acquisition is completed.

3.4.15.1 Select Trace

Specifies the *selected trace*, which is the trace that will be affected when you change trace settings.

Select Trace appears above the menu panel, indicating that it applies to *all* controls in the menu panel. **Select Trace** is blanked if you select a tab whose controls do *not* depend on the selected trace (for example, **Trace Function**).

Notes	The selected trace is remembered even when not in the Trace menu
Dependencies	For the Swept SA measurement: <ul style="list-style-type: none">- In Image Suppress mode, when you select a trace it becomes the active trace, and the formerly active trace goes into View- When you turn on Image Suppress, Update turns off for all traces except the selected trace For the ACP measurement, when Meas Method is RBW , FAST or FPOwer , Select Trace is disabled
Preset	Trace 1
State Saved	Yes

3.4.15.2 Trace Control

The controls on this tab allow you to set the "[Trace Type](#)" on page 2927 and its update mode.

There are up to four **Trace Types** (although some measurements do not support all types):

- **Clear/Write**
- **Trace Average**
- **Max Hold**
- **Min Hold**

Each type handles data in a different way.

Each trace also has two values that determine whether it is being written or not, and whether it is being displayed or not. These values, **Update** and **Display**, are described fully in the "[View/Blank](#)" on page 2932 control description. Essentially, when **Update** is **ON**, a trace is updating, and when **Update** is **OFF** it is not. When **Display** is **ON**, it is visible and when **Display** is **OFF** it is not. These terms are used throughout the descriptions in this section.

Trace Type

There are four trace Types:

Option	Parameter	SCPI Example	Details
Clear/Write	WRITE	:TRAC2:TYPE WRIT	See: "Clear/Write" on page 921
Trace Average	AVERage	:TRAC2:TYPE AVER	See: "Trace Average" on page 921
Maximum Hold	MAXHold	:TRAC3:TYPE MAXH	See: "Max Hold" on page 922
Minimum Hold	MINHold	:TRAC5:TYPE MINH	See: "Min Hold" on page 922

NOTE

Some measurements do not support the **Trace Average** or **Min Hold** options.

Full descriptions of each type are provided below. You may select one of these types for each trace. Re-selecting the current **Trace Type** initiates the same action that selecting it the first time did, even though it is already selected. For example, selecting **Clear/Write** while **Clear/Write** is already selected will nonetheless clear the trace and begin rewriting it.

Besides the **Trace Type**, the ["View/Blank" on page 2932](#) state must be set to **Active** (**Update: ON**, **Display: ON**) for a trace to be updating and visible. Selecting any **Trace Type** automatically makes the trace **Active**.

See also: ["Trace Mode Backwards Compatibility Commands" on page 919](#)

Remote
Command

For Swept SA Measurement (in SA Mode):
`:TRACe[1]|2|...|6:TYPE WRITE | AVERage | MAXHold | MINHold`
`:TRACe[1]|2|...|6:TYPE?`

For all other measurements:
`:TRACe[1]|2|3:<meas>:TYPE WRITE | AVERage | MAXHold | MINHold`
`:TRACe[1]|2|3:<meas>:TYPE?`

where `<meas>` is the identifier for the current measurement

Example

`:TRAC:TYPE WRIT`
`:TRAC:TYPE?`

Couplings

Selecting a **Trace Type** (by pressing any of the Trace Type selections or sending `:TRAC:TYPE`) sets the Trace to **Active** (**Update: ON**, **Display: OFF**), even if the same trace type was already selected

When **Detector** setting is "Auto" (`[:SENSe] : <meas> : DETector : AUTO?`), **Detector** (`[:SENSe] : <meas> : DETector [:FUNCTION] ?`) switches aligning with the switch of this parameter: "NORMal" with **WRITE** (Clear Write), "AVERage" with **AVERage**, "POSitive (peak)" with **MAXHold**, and "NEGative (peak)" with **MINHold**

Preset

Swept SA, Monitor Spectrum, and I/Q Waveform measurements: **WRITE**
 Complex Spectrum measurement: **WRITE | AVERage | WRITE**
 All other measurements: **AVERage**

	Following Preset , all traces are cleared (all trace points set to <i>mintracevalue</i>)
State Saved	The type of each trace is saved in instrument state
Annunciation	The type for each trace is indicated in the Trace annunciator panel on the Measurement Bar

Trace Mode Backwards Compatibility Commands

In earlier instruments, the “Trace Modes” were: Clear/Write, Max Hold, Min Hold, View and Blank. Averaging was global to all traces and was controlled under the **BW/Avg** menu.

In X-Series, trace averaging can be done on a per-trace basis. The Trace Modes (now called **Trace Types**) are **Clear/Write**, **Trace Average**, **Max Hold** and **Min Hold**. **View** and **Blank** are set separately under "**View/Blank**" on page 2932.

While this provides more flexibility, it also gives rise to potential backwards-compatibility problems. To mitigate these, the old Trace Mode command has been retained and a new **Trace Type** command has been added. The **:TRACe:MODE** command is retained for backwards compatibility, and the **:TRACe:TYPE**, **:TRACe:UPDate** and **:TRACe:DISPlay** commands introduced for ongoing use. The old Trace Modes are selected using **:TRAC:MODE**, whose parameters are mapped into calls to **:TRACe:TYPE**, **:TRACe:UPDate** and **:TRACe:DISPlay**, and the old global Averaging command **[:SENSe]:AVERage[:STATe]** is provided for backwards compatibility. See the individual command descriptions for details.

When **Average/Hold** in the **Meas Setup, Legacy Compatibility** menu is **ON**, the following is true for traces in **Max Hold** and **Min Hold**:

- They ignore the **Average/Hold** number; **Single** for **Max Hold** causes one sweep only, so switching to **Single** stops after the current sweep, and switching to **Cont** starts again without clearing the accumulated result
- **Max Hold** is not cleared on a **Restart**, **Single** or **:INIT:IMM**, but changing a measurement parameter, like frequency or bandwidth etc., still restarts the **Max Hold**

Preset	WRITE
State Saved	The trace mode is an alias only
Backwards Compatibility SCPI	:TRACe[1] 2 ... 6:MODE WRITE MAXHold MINHold VIEW BLANK :TRACe[1] 2 ... 6:MODE?
Backwards Compatibility Notes	The legacy :TRACe:MODE command is retained for backwards compatibility. In conjunction with the legacy :AVERage command, it works as follows: <ul style="list-style-type: none"> – :AVERage ON OFF sets/clears a variable that we will call average for the sake of this discussion. This variable is maintained by the instrument solely for backwards compatibility. See the [:SENSe]:AVERage[:STATe] command description below – :TRACe:MODE WRITE sets :TRACe:TYPE WRITE (Clear/Write) unless average is true, in

which case it sets it to `:TRACe:TYPE AVErAge`. It also sets `:TRACe:UPDate ON`, `:TRACe:DISPly ON`, for the selected trace

- `:TRACe:MODE MAXHold` sets `:TRACe:TYPE MAXHold` (Max Hold). It also sets `:TRACe:UPDate ON`, `:TRACe:DISPly ON`, for the selected trace
- `:TRACe:MODE MINHold` sets `:TRACe:TYPE MINHold` (Min Hold). It also sets `:TRACe:UPDate ON`, `:TRACe:DISPly ON`, for the selected trace
- `:TRACe:MODE VIEW` sets `:TRACe:UPDate OFF`, `:TRACe:DISPly ON`, for the selected trace
- `:TRACe:MODE BLANK` sets `:TRACe:UPDate OFF`, `:TRACe:DISPly OFF`, for the selected trace

The query returns the same value as `:TRACe:TYPE?`, meaning that if you set `:TRACe:MODE:VIEW` or `:TRACe:MODE:BLANK`, the query response will not be what you sent

`:TRACe[n]:MODE` was formerly used to set the type or “writing mode” of the trace. At that time, View and Blank were writing modes. The new `:TRACe:TYPE` command should be used in the future, but `:TRACe:MODE` is retained to provide backwards compatibility

In X-Series, unlike earlier instruments, Max Hold and Min Hold now obey the Average Number and counts up to a terminal value as Average always has

As the **Average/Hold Number** now affects **Min Hold** and **Max Hold**, the operations that restart Averaging (for example, the **Restart** key) now also restart **Min Hold** and **Max Hold**

As a result of these changes, legacy code that restarts averaging while retaining a running Max Hold will need to be rewritten, because the Max Hold will now restart when the Average does

Also, previous to X-Series:

- Pressing **Max Hold** while already in **Max Hold** (or doing so remotely) had no effect. Now it will clear the trace and restart the sweep and the Max Hold sequence
- Changing the vertical scale (Log/Lin or dB/div) of the display restarted **Max Hold** and **Min Hold**. This is no longer the case

Backwards Compatibility Command

Preset	<code>OFF</code>
State Saved	The state of Average is saved in Instrument State for ghosting purposes
Backwards Compatibility SCPI	<code>[:SENSe] :AVERAge [:STATe] ON OFF 1 0</code> <code>[:SENSe] :AVERAge [:STATe] ?</code>
Backwards Compatibility Notes	<p>Previous to X-Series, Averaging (also sometimes known as trace averaging) was global to all traces, that is, it was either on or off for all active traces. The legacy command <code>[:SENSe] :AVERAge [:STATe] ON OFF 1 0</code> was used to turn Averaging on or off</p> <p>In X-Series, Averaging is turned on or off on a per-trace basis, so it can be on for one trace and off for another</p> <p>For backwards compatibility, the old global Average State variable is retained solely as a legacy variable, turned on and off and queried by the legacy command <code>[:SENSe] :AVERAge [:STATe]</code></p>

OFF|ON|0|1. When **Averaging** is turned on, any trace in **Clear/Write** will get put into Average. While **Averaging** is on, any trace put into **Clear/Write** by the old **:TRAC:MODE** command will instead get put into Average. When **Averaging** is turned off, any trace in Average will get put into **Clear/Write**

Trace Type Details

Clear/Write

Each trace update replaces the old data in the trace with new data.

Pressing **Clear/Write** for the selected trace, or sending **:TRAC:TYPE WRIT** for the specified trace, sets the trace type to **Clear/Write** and clears the trace, even if you are already in **Clear/Write**. Then a new sweep is initiated. Trigger conditions must be met before the sweep actually starts, and if in **Single** the sweep won't start until **Restart** is pressed.

Pressing **Clear/Write** stops the current sweep and initiates a new one, so **Trace Average**, **Max Hold** and **Min Hold** data may be interrupted in mid-sweep when **Clear/Write** is pressed, and therefore may not accurately reflect the displayed count. Therefore, when **Clear/Write** is pressed for one trace, **Trace Average**, **Max Hold** and **Min Hold** must restart for all traces.

When in **Clear/Write**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), a new sweep is initiated but the trace is not cleared.

Trace Average

The instrument maintains and displays an average trace, which represents the cumulative average on a point-by-point basis of the new trace data and previous averaged trace data.

Pressing **Trace Average** (for the selected trace), or sending **:TRAC:TYPE AVER** (for the specified trace), sets the trace type to **Trace Average**, clears the trace, initiates a new sweep, and restarts the Average sequence.

Details of the count limiting behavior and the averaging calculations may be found under **Avg|Hold Number** and **Average Type** under **Meas Setup**.

When in **Trace Average**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the average restarts and a new sweep is initiated but the trace is not cleared.

Restarting the average means:

- The average/hold count k is set to 1, so that the next time the average trace is displayed it simply represents one trace of new data
- A new sweep is initiated
- Once the new sweep starts, the trace is overwritten with current trace data as the first trace of the new average

Remember that restarting averaging also restarts **Max Hold** and **Min Hold**, as there is only one count for Trace Average and Hold.

Max Hold

The instrument maintains and displays a max hold trace, which represents the maximum data value on a point-by-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under **Meas Setup**.

Pressing **Max Hold** for the selected trace, or sending `:TRAC:TYPE MAXH` for the specified trace, sets the Trace Type to **Max Hold**, clears the trace, initiates a new sweep, and restarts the hold sequence, even if you are already in **Max Hold**.

When in **Max Hold**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Max Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Max Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the max hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated.

Remember that restarting **Max Hold** also restarts averaging and **Min Hold**, as there is only one count for Trace Average and Hold.

Min Hold

The instrument maintains and displays a min hold trace, which represents the minimum data value on a point-by-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under the **Meas Setup** functions.

Pressing **Min Hold** for the selected trace, or sending `:TRAC:TYPE MINH` for the specified trace, sets the Trace Type to **Min Hold**, clears the trace, initiates a new sweep, and restarts the hold sequence, even if you are already in **Min Hold**.

When in **Min Hold**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the

Min Hold sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Min Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the min hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated

Remember that restarting **Min Hold** also restarts **Max Hold** and averaging, because there is only one count for Trace Average and Hold.

Clear and Write | Restart Averaging | Restart Max/Min Hold

Starts the trace writing, as though the "Trace Type" on page 2927 had just been selected. The effect is exactly the same as reselecting the current **Trace Type** again – the control is provided because it may not be obvious that reselecting the same selection from a radio button menu will take any action.

This control displays different labels, depending on the selected Trace Type:

- **Clear/Write**: Clear and Write
- **Trace Average**: Restart Averaging
- **Max Hold**: Restart Max Hold
- **Min Hold**: Restart Min Hold

NOTE

Some measurements do not support the **Trace Average** or **Min Hold** options.

View/Blank

Lets you set the state of the two trace variables: **Update** and **Display**. The choices available in this dropdown menu are:

Active	Update and Display both ON
View	Update OFF ; Display ON
Blank	Update OFF ; Display OFF
Background	Update ON , Display OFF Allows a trace to be blanked <i>and</i> continue to update "in the background", which was not possible in the past

In the Swept SA measurement, a trace with **DisplayOFF** is indicated by a strikethrough of the type letter in the trace annotation panel in the Measurement Bar. A trace with **UpdateOFF** is indicated by dimming the type letter in the trace annotation panel in the Measurement Bar. In the example below, Traces 3, 4, 5 and 6 have **UpdateOFF**, and Traces 4 and 6 have **DisplayOFF**.

See: "[More Information](#)" on page 925

Notes	For the commands to control the two variables, Update and Display, see " Trace Update State On/Off " on page 924 and " Trace Display State On/Off " on page 925 below
Dependencies	When Signal ID is on, this key is grayed-out
Couplings	<p>Selecting a Trace Type for a trace (pressing the key or sending the equivalent command) puts the trace in Active (Update ON and Display ON), even if that trace type was already selected</p> <p>Selecting a detector for a trace (pressing the key or sending <code>[:SENS] :DET :TRAC</code>) puts the trace in Active (UpdateON and DisplayON), even if that detector was already selected</p> <p>Selecting a "Math Function" on page 2935 other than OFF for a trace (pressing the key or sending the equivalent command) puts the trace in Active (UpdateON and DisplayON), even if that Math Mode was already selected</p> <p>Loading a trace from a file puts that trace in View regardless of the state it was in when it was saved; as does being the target of a Copy or a participant in an Exchange</p>

Trace Update State On/Off

Remote Command	<p>For Swept SA Measurement (in SA Mode):</p> <pre>:TRACe[1] 2 ... 6:UPDate[:STATe] ON OFF 1 0</pre> <pre>:TRACe[1] 2 ... 6:UPDate[:STATe]?</pre> <p>For all other measurements:</p> <pre>:TRACe[1] 2 3:<meas>;UPDate[:STATe] ON OFF 1 0</pre> <pre>:TRACe[1] 2 3:<meas>;UPDate[:STATe]?</pre> <p>where <code><meas></code> is the identifier for the current measurement</p>
Example	<p>Make trace 2 inactive (stop updating):</p> <pre>:TRAC2:UPD 0</pre>
Couplings	Whenever you set Update to ON for any trace, the Display is set to ON for that trace
Preset	<p>For Swept SA Measurement (in SA Mode)</p> <pre>1 0 0 0 0 0</pre> <p>ON for Trace 1; OFF for 2–6</p> <p>For Complex Spectrum measurement:</p> <pre>1 1 0</pre>

	<p>ON for Trace 1 and Trace 2; OFF for 3</p> <p>For all other measurements: <code>1 0 0</code></p> <p>ON for Trace 1; OFF for 2 & 3</p>
State Saved	Saved in instrument state

Trace Display State On/Off

Remote Command	<p>For Swept SA Measurement (in SA Mode): <code>:TRACe[1] 2 ... 6:DISPlay[:STATe] ON OFF 1 0</code> <code>:TRACe[1] 2 ... 6:DISPlay[:STATe]?</code></p> <p>For all other measurements: <code>:TRACe[1] 2 3:<meas>:DISPlay[:STATe] ON OFF 1 0</code> <code>:TRACe[1] 2 3:<meas>:DISPlay[:STATe]?</code></p> <p>where <code><meas></code> is the identifier for the current measurement</p>
----------------	---

Example	<p>Make trace 1 visible: <code>:TRAC2:DISP 1</code></p> <p>Blank trace 3: <code>:TRAC3:DISP 3</code></p>
---------	--

Couplings Whenever you set **Update** to **ON** for any trace, the **Display** is set to **ON** for that trace

Preset	<p>For Swept SA Measurement (in SA Mode): <code>1 0 0 0 0 0</code></p> <p>ON for Trace 1; OFF for 2–6</p> <p>For Complex Spectrum measurement: <code>1 1 0</code></p> <p>ON for Trace 1 and Trace 2; OFF for 3</p> <p>For all other measurements: <code>1 0 0</code></p> <p>ON for Trace 1; OFF for 2 & 3</p>
--------	--

State Saved	Saved in instrument state
-------------	---------------------------

More Information

When a trace becomes inactive, any update from the `:SENSE` system (detectors) immediately stops, without waiting for the end of the sweep. The trace data remains unchanged, but stops updating. If the trace is blanked, this still does not affect the data in the trace. Traces that are blanked (**Display=OFF**) do not display nor appear on printouts, but their data stays intact, they may be queried, and markers may be placed on them

In most cases, inactive traces are static and unchanging; however, there are cases when an inactive trace will update, specifically:

- if data is written to that trace from remote
- if trace data is loaded from mass storage
- if the trace is the target of a **Copy** or participant in an **Exchange**
- if the trace is cleared using **Clear Trace**

Inactive traces that are also being displayed (traces in **View**) are displayed at half intensity. Traces in **View** display across the entire X-Axis of the instrument. Their horizontal placement does not change, even if X-Axis settings subsequently are changed, although Y-Axis settings do affect the vertical placement of data.

When a trace becomes active (**Update=ON**), the trace is cleared, the average count is reset, and a new sweep is initiated.

Note that putting a trace into **Display=OFF** and/or **Update=OFF** does *not* restart the sweep and does *not* restart Averaging or Hold functions for any traces.

Trace Settings Table (UXM Only)

Lets you configure the Trace system using a visual utility.

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition
--------------	---

Multi Channel Configuration

Enables you to configure multiple channel receiver. Different hardware platforms have different parameters.

This menu is available for the following measurements:

- EVM in N9042B, VXT2/3, UXM model E7515B
- PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "[Multi Channel Synchronous Acquisition \(UXM Only\)](#)" on page 3021

Input Port (UXM)

Select input port for channel configuration.

Remote Command	<code>[:SENSe]:RADio:MCChannel:PORT[1] 2 RFI01 ... RFI08</code> <code>[:SENSe]:RADio:MCChannel:PORT[1] 2?</code>
Example	<code>:RAD:MCH:PORT2 RFI02</code> <code>:RAD:MCH:PORT2?</code>
Dependencies	This control appears only in the EVM and PowerSuite measurement supporting multiport synchronous acquisition in the UXM model E7515B When "Lock (UXM)" on page 3023 is On, the selections are grayed out and cannot be changed. When "Lock (UXM)" on page 3023 is OFF, the label "Channel x" changes to "Unused" Selections are the same as those of RF Input Port and either RFI01 to RFI08 or RFI01 to RFI016 depending on the hardware configuration
Preset	RFI01 RFI02
State Saved	Yes
Range	RFI01 RFI02 RFI03 RFI04 RFI05 RFI06 RFI07 RFI08 or RFI01 RFI02 RFI03 RFI04 RFI05 RFI06 RFI07 RFI08 RFI09 RFI10 RFI11 RFI12 RFI13 RFI14 RFI15 RFI16
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2</code>

Lock (UXM)

Enables you to lock/unlock the input port. When locked, the selected input port is assigned to a channel.

Remote Command	<code>[:SENSe]:RADio:MCChannel:PORT[1] 2:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADio:MCChannel:PORT[1] 2:LOCKed?</code>
Example	<code>:RAD:MCH:PORT2:LOCK ON</code> <code>:RAD:MCH:PORT2:LOCK?</code>
Dependencies	This control appears only in the EVM and PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2:LOCKed</code>

Trace Settings Table

Lets you set a configuration of multiport synchronous acquisition.

	Channel	Input Port	Trace Type	View/Blank	Math		
					Function	Operand 1	Operand 2
Trace 1	Channel 1	RFIO 1	Trace Average	Active	Off	Trace 2	Trace 3
Trace 2	Channel 2	RFIO 2	Trace Average	Active	Off	Trace 3	Trace 1
Trace 3	Channel1		Clear / Write	Active	Power Sum	Trace 1	Trace 2

Dependencies Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "[Multi Channel Synchronous Acquisition \(UXM Only\)](#)" on page 3021

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a **:READ** or **:FETCh** query:

- Trace 1
- Trace 2
- Trace 3

Remote Command `:CALCulate:<meas>:MTRace TRACe1 | TRACe2 | TRACe3`
`:CALCulate:<meas>:MTRace?`
 <meas> is the identifier for the current measurement; any one of `CHPower` | `ACPower` | `OBWidth` | `SEMAsk` | `SPURious` | `PVTime`

Example Channel Power
`:CALC:CHP:MTR TRAC1`
`:CALC:CHP:MTR?`

Dependencies In the ACP measurement, this control is grayed-out when **Meas Method** is set to **RBW** or **FAST**, and only Trace 1 is enabled

Preset	TRACe1
State Saved	No
Range	Trace 1 Trace 2 Trace 3

Channel Assignment

Selects the channel for each trace in the specified measurement. A port selected at "Input Port (UXM)" on page 3022 is assigned to a trace. This setting is valid when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3025 is ON.

Multi Channel Synchronous Acquisition is performed under the following conditions:

- All Input Port Channel Lock is set to ON
- Multi Channel Synchronous Acquisition is set to ON

The selected input port is shown in the Trace Setup Summary table, on the trace and at the bottom of the Trace Control menu panel.

Remote Command	:TRACe[1] 2 3:<meas>:CHANne1 CHANne11 CHANne12 :TRACe[1] 2 3:<meas>:CHANne1?
Example	For the ACP measurement Trace 2 :TRAC2:ACP:CHAN CHAN2
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3025 is On The unlocked channel is grayed-out
Preset	CHAN1 CHAN2 CHAN1
State Saved	Yes
Range	Channel 1 Channel 2

Input Port

Read-only information. Indicates which input data is displayed in each trace. This setting is valid when Multi Channel Synchronous Acquisition is ON.

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3021 is On This column is blank when Math Function is other than Off
--------------	--

3.4.15.3 Math

Lets you turn on and configure Trace Math functions.

Math Function

Trace Math functions perform mathematical operations between traces and, in some cases, user-specified offsets. When in a Trace Math function, the indicated function is performed during the sweep with the math function used in place of a detector. The trace operands for the math function are set using the "Operand 1 / Operand 2" on page 2942 controls.

See "How trace math is processed" on page 934

Note that, in RTSA Mode, only **Spectrum** traces can participate in **Trace Math** functions.

Remote Command	<p>For option details, see "Trace Math Options" on page 932</p> <p>For Swept SA Measurement in SA Mode and Spectrum & PVT measurement in RTSA Mode:</p> <pre style="font-family: monospace;">:CALCulate:MATH <trace_num>, PDIFference PSUM LOFFset LDIFference OFF, <trace_num>, <trace_num>, <real>, <real> :CALCulate:MATH? <trace_num></pre> <p>where <trace_num> is any one of:</p> <pre style="font-family: monospace;">TRACE1 TRACE2 TRACE3 TRACE4 TRACE5 TRACE6</pre> <p>For all other measurements:</p> <pre style="font-family: monospace;">:CALCulate:<meas>:MATH <trace_num>, PDIFference PSUM LOFFset LDIFference OFF, <trace_num>, <trace_num>, <real>,<real> :CALCulate[:<meas>]:MATH? <trace_num></pre> <p>where:</p> <p><meas> is the identifier for the current measurement, and</p> <p><trace_num> is any one of:</p> <pre style="font-family: monospace;">TRACe1 TRACe2 TRACe3</pre> <p>Note that the format of the TRACe<n> parameter differs from that for the Swept SA Measurement</p>
----------------	---

Example	<pre style="font-family: monospace;">:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0</pre> <p>Sets Trace 3 to Power Diff trace math function, and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2</p> <pre style="font-family: monospace;">:CALC:MATH TRACE3,PSUM,TRACE1,TRACE2,0,0</pre> <p>Sets Trace 3 to Power Sum trace math function and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2</p> <pre style="font-family: monospace;">:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0</pre> <p>Sets Trace 3 to Log Offset trace math function, sets the First Trace operand (for Trace 3) to Trace 1,</p>
---------	---

3 5G NR/5G-A Mode
3.4 ACP Measurement

	<p>leaves the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and sets the Log Offset (for Trace 3) to -6 dB</p> <p><code>:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00</code></p> <p>Sets Trace 3 to Log Diff trace math function, sets the First Trace operand (for Trace 3) to Trace 1, sets the Second Trace operand (for Trace 3) to Trace 2, and sets the Log Difference reference (for Trace 3) to -6 dBm</p> <p><code>:CALC:MATH TRACE1,OFF,TRACE2,TRACE3,0,0</code></p> <p>Turns off trace math for trace 1</p>
Notes	<p>The Trace Math Function command has 6 main set of parameters:</p> <ul style="list-style-type: none"> - Set 1 defines the “result trace”: <code>TRACE1 ... TRACE6</code> - Set 2 defines the “function”: <code>PDifference PSUM LOffset LDifference OFF</code> - Set 3 is a “trace operand” (1): <code>TRACE1 ... TRACE6</code> - Set 4 is a “trace operand” (2): <code>TRACE1 ... TRACE6</code> - Set 5 defines the “Log Offset” (in dB) - Set 6 defines the “Log Difference Reference” (in dBm) <p>Note that the trace math mode is an enumeration; that is, when a math function is set for a trace, it turns off any math function that is on for that trace, then sets the new math function</p> <p>The parameters sent in the command are reflected in the values in the control menu. There is no default for any parameter; all 6 parameters must be sent to satisfy the parser. Failure to specify a parameter will result in a missing parameter message</p> <p>The query returns the math mode, the operand traces, the offset and the reference for the specified trace, all separated by commas</p>
Dependencies	<p>Trace Math is not available if Normalize is on</p> <p>Trace Math is not available if Signal ID is on</p> <p>None of the trace operands can be the destination trace. If any of the three trace math commands is sent with a destination trace number matching one of the operands, a warning is generated, and the function does not turn on</p>
Couplings	When a math function is changed for a trace, that trace is set to Display = ON ; and Update = ON
Preset	<p>For Swept SA Measurement (in SA Mode):</p> <p><code>OFF,TRACE5,TRACE6,0,0 OFF,TRACE6,TRACE1,0,0 OFF,TRACE1,TRACE2,0,0 </code> <code>OFF,TRACE2,TRACE3,0,0 OFF,TRACE3,TRACE4,0,0 OFF,TRACE4,TRACE5,0,0</code></p> <p>For all other measurements:</p> <p><code>OFF,TRACE2,TRACE3,0,0 OFF,TRACE3,TRACE1,0,0 OFF,TRACE1,TRACE2,0,0</code></p>
State Saved	The trace math function for each trace is saved in instrument state
Annunciation	An “P” is shown on the trace annunciation panel in the Measurement Bar when a math function is on; and the function is annotated on the trace if Trace Annotation is on

Status Bits/OPC dependencies *OPC can be used to detect the completion of a sweep, which will also correspond to the completion of the math operation, since all math takes place during the sweep

Trace Math Options

IMPORTANT

To generate a trace math result, *you must take a sweep*. The trace math engine, described below, operates in concert with the sweep engine in the instrument. Until a sweep has been taken, even if the constituent traces are not in Update mode, no result is generated.

Note that certain events can affect the trace in ways that affects all points at once. This can happen in any number of ways, including:

- A trace clear taking place
- A trace being loaded from the file system
- Trace data being sent in from the remote interface
- A copy or exchange of trace data

You should try to avoid these occurrences during a sweep, as they will tend to invalidate the math result being accumulated.

The Trace Math functions are:

Power Diff (Op1 - Op2)

Calculates a power difference between the **First Trace** operand and the **Second Trace** operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace:

$$\text{DestinationTrace} = 10 \log_{10}(1/10)(\text{FirstTrace}) - 10(1/10)(\text{SecondTrace})$$

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in **FirstTrace** is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

Otherwise, if the result of the subtraction is less than or equal to 0, the resultant point is **mintracevalue**.

Power Sum (Op1 + Op2)

Calculates a power sum between the **First Trace** operand and the **Second Trace** operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

$$\text{DestinationTrace} = 10 \log_{10}(10^{(1/10)(\text{FirstTrace})} + 10^{(1/10)(\text{SecondTrace})})$$

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in either trace operand is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

Log Offset (Op1 + Offset)

Calculates a log offset from the **First Trace** operand and puts the result in the destination trace. This is like the B-DL function in some older instruments. The offset is entered on the **Offset** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own offset.

During the sweep, the following formula is executed for each point in the trace operand, and the corresponding point is generated for the destination trace.

$$\text{DestinationTrace} = \text{FirstTrace} + \text{Offset}$$

The values of the trace points are assumed to be in dBm (as they are internally stored) and the offset is in dB.

If a point in the trace operand is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

If a point in the trace operand is equal to **mintracevalue**, the resultant point is also **mintracevalue**.

Example: If offset is 25 dB, then our destination trace will be higher than the operand trace by 25 dB.

Note that the **Second Trace** operand is not used for this function.

Log Diff (Op1 - Op2 + Ref)

Offsets the difference between the **First Trace** operand and the **Second Trace** operand by a reference and puts the result in the destination trace. This is like the A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

Offsets the difference between the **First Trace** operand and the **Second Trace** operand by a reference and puts the result in the destination trace. This is like the

A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

$$\text{DestinationTrace} = (\text{FirstTrace} - \text{SecondTrace}) + \text{Reference}$$

The values of the operand trace points are assumed to be in decibel units (as they are internally stored) and the reference is in dBm so the result is in dBm.

Example: If the first operand trace 1 is at 5 dBm, the second operand trace 2 is at -5 dBm, and the reference is -25 dBm, then the destination trace will be -15 dBm.

Example: If the first operand trace 1 is at 60 dBuV, the second operand trace 2 is at 50 dBuV, and the reference is 35 dBuV, then the destination trace will be 45 dBuV.

If a point in **FirstTrace** is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

If a point in **FirstTrace** is equal to **mintracevalue**, the resultant point is also **mintracevalue**.

If neither of the above is true for a given point, then:

- If that point in **SecondTrace** is equal to **maxtracevalue**, the resultant point is **mintracevalue**.
- If that point in **SecondTrace** is equal to **mintracevalue**, the resultant point is **maxtracevalue**.

How trace math is processed

Whenever a trace math function is turned on, or the parameters and/or operands of an existing trace math function are changed, the destination trace is cleared. After the trace is cleared, all x-axis values in the trace, and the domain of the trace, are set to match the X-Axis settings of the first trace operand. When this is complete, a new sweep is initiated.

The process of acquiring data, processing it using the math and Average/Hold functions, and presenting it as trace data, consists of several functional blocks, as shown below:

For each active trace, the current trace point is processed for **Trace 1**, then **Trace 2**, then **Trace 3**, etc. Trace data is taken from either the detector for that trace, or

from the mathematical result of up to two other traces and an offset, depending on whether trace math is on or not. The resultant data is then fed to the Average/Hold processing block, where (if the trace type is **Average**, **Max Hold**, or **Min Hold**) it is processed with previous trace data. The new trace data resulting from this process is then available for display, storage or remote output.

When the processing is complete for **Trace 1**, **Trace 2** is processed, and so on until all six traces have been processed. This allows a downstream trace to use as one of its math components a fully processed upstream trace. In other words, if math is **ON** for **Trace 4**, and its operand traces are **Trace 2** and **Trace 3**, then all detector, math, average and hold processing for Traces 2 and 3 is completed before the math is performed for **Trace 4**. When the current trace point is completed for all traces, the instrument moves on to the next trace point.

This allows very flexible and powerful math functions to be configured. For example, **Trace 1** can be an average trace, which can be fed with an offset to **Trace 2**, which can also be in **Max Hold**, allowing you to obtain the **Max Hold** of an Average trace.

Note that none of this processing is performed on inactive traces.

Note also that for any active trace with math **ON**, the Operand traces should have *lower* numbers than the trace (for example, using **Trace 4** as an operand for **Trace 1** will cause the data coming from **Trace 4** to be delayed by one sweep).

Operand 1 / Operand 2

These two controls select the first and second trace operands to be used for the trace math functions for the destination trace. The operands are common to all math functions for a given trace. The most recently sent **:CALCulate:MATH** command for a given trace sets the operands for that trace. Those settings are displayed on the trace operand controls for that trace.

Example	<p>The following examples are for the Swept SA measurement</p> <p>Set Trace 3 to Power Diff trace math function. Set the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2:</p> <pre>:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0</pre> <p>Set Trace 3 to Log Offset trace math function. Set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB:</p> <pre>:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0</pre>
Notes	See " Math Function " on page 2935 for how to specify Operands 1 and 2 using :CALCulate:MATH
Dependencies	The destination trace cannot be an operand. The destination trace number is grayed-out on the dropdown
Preset	Operand 1: Trace number minus 2 (wraps at 1). For example, for Trace 1, Operand 1 presets to Trace

	5; for Trace 6, it presets to Trace 4 Operand 2: Trace number minus 1 (wraps at 1). For example, for Trace 1, Operand 2 presets to Trace 6; for Trace 6, it presets to Trace 5
State Saved	Operands 1 and 2 for each trace are stored in instrument state

Offset

Used by the Log Offset math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Offset trace math function, set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB: <code>:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0</code>
State Saved	The Log Offset value for each trace is saved in Instrument State
Min/Max	-/+100 dB

Reference

Used by the Log Diff math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Diff trace math function, set the First Trace operand (for Trace 3) to Trace 1, set the Second Trace operand (for Trace 3) to Trace 2, and set the Log Difference reference (for Trace 3) to -6 dBm: <code>:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00</code>
State Saved	The Log Difference reference value for each trace is saved in instrument state
Min/Max	Same as reference level

3.4.15.4 Detector

Lets you choose and configure detectors for the selected trace.

Detector

Selects a detector to be used by the instrument for the current measurement. Allows up to three (3) traces, but each use the same detector type choice. The following choices are available:

Option	Parameters	Description
Auto	See "Detector"	Detector selected depends on marker functions, trace functions, average type, and

Option	Parameters	Description
	Select Auto/Man" on page 939	the trace averaging function When in AUTO , the detector selected is set to AVERage , unless the Radio Standard defaults state otherwise, for example, it is set to POS for Radio Standard = PDC when Device = both MS and BTS, and when Radio Standard = NADC and Device = MS
Normal	NORMa1	Detector determines the peak of the CW-like signals, and yields alternating maximums and minimums of noise-like signals. This is also referred to as Rosenfell detection
Average	AVERage RMS	Detector determines the average of the signal within the sweep points, using RMS averaging
Peak (Positive)	POSitive	Detector determines the maximum of the signal within the sweep points
Sample	SAMPle	Detector indicates the instantaneous level of the signal at the center of the sweep points represented by each display point
Negative Peak	NEGative	Detector determines the minimum of the signal within the sweep points

Because they may not find a spectral component's true peak, neither Average nor Sample detectors measure amplitudes of CW signals as accurately as Peak or Normal, but they do measure noise without the biases of peak detection.

When **Meas Method** is Fast Power, Auto, Peak and Average are selectable.

Remote Command `[:SENSe]:ACPower:DETEctor[:FUNction] NORMa1 | AVERage | POSitive | SAMPle | NEGative | RMS`
`[:SENSe]:ACPower:DETEctor[:FUNction]?`

Example `:ACP:DET NORM`
`:ACP:DET?`
`:ACP:DET RMS`

Sets the detector to **AVERage**. In ACP, **AVERage** uses RMS averaging, so this is equivalent to selecting an **RMS** detector

Notes The query returns a name that corresponds to the detector type, as shown below
The **RMS** selection sets the detector type to **AVERage** with RMS averaging. Therefore, if **RMS** has been selected, the query returns **AVER**

String Returned	Definition
NORM	Normal
AVER	Average (RMS)
POS	Peak
SAMP	Sample
NEG	Negative Peak

Couplings When "Detector Select Auto/Man" on page 939 is **Auto**, **Detector** switches aligning with the switch of

this parameter: **NORMal** with Clear Write, **AVERage** with **AVERage**, **POSitive** (Peak) with **MAXHold**, and **NEGative** (Peak) with **MINHold**

When **Detector Select Auto/Man** is **Auto**, **Detector** is set to what the Radio Standard defaults states for all conditions of Trace Type and for all traces

When **Detector Select Auto/Man** is set to **Manual**, all Traces use the same detector type

When Average State = Off then Trace Types **AVERage**, **MaxHold** and **MinHold** do not function, since Averaging must be 'on' for them to operate. Only one Detector type for all 3 traces is allowed

When "**Meas Method**" on page 719 is RBW or FAST, Detector is disabled

Preset	AVERage
State Saved	Saved in instrument state
Range	NORMal AVERage POSitive SAMPle NEGative RMS
Annotation	The four-letter mnemonic for the detector appears in the trace window next to the referenced trace
Backwards Compatibility SCPI	[:SENSe] :ACPR :SWEep :DETECTOR [:FUNCTion]

Detector Select Auto/Man

Sets the Detector mode to Auto (**ON** | **1**) or Manual (**OFF** | **0**). In Auto, the proper detector is chosen based on rules that take into account the measurement settings and other instrument settings.

When you manually select any detector, this toggle is automatically set to Manual (**OFF**).

Remote Command	[:SENSe] :ACPower :DETECTOR :AUTO ON OFF 1 0 [:SENSe] :ACPower :DETECTOR :AUTO?
Example	:ACP :DET :AUTO 1 :ACP :DET ?
Notes	When " Meas Method " on page 719 is Fast Power, Peak and Average are selectable
Couplings	When Detector Select Auto/Man is Auto , " Detector " on page 937 switches aligning with the switch of this parameter: NORMal with Clear Write, AVERage with AVERage , POSitive with MAXHold , and NEGative with MINHold When Detector Select Auto/Man is Auto , Detector is set to what the Radio Standard defaults states for all conditions of Trace Type and for all traces When Detector Select Auto/Man is set to Manual , all Traces use the same detector type When Average State = Off then Trace Types AVERage , MaxHold and MinHold do not function, since Averaging must be ON for them to operate
Preset	ON
State Saved	Yes

3.4.15.5 Trace Function

Contains controls to:

- Copy and Exchange traces
- Preset or Clear all traces

From Trace

Selects the trace to be copied to or exchanged with the **"To Trace" on page 2311** when a **"Copy" on page 2311** or **"Exchange" on page 2311** is performed

Preset 1

To Trace

Selects the trace to be copied from or exchanged with the **"From Trace" on page 2310** when a **"Copy" on page 2311** or **"Exchange" on page 2311** is performed

Preset 2

Copy

Executes a Trace Copy based on the **"From Trace" on page 2310** and **"To Trace" on page 2311** parameters. The copy operation is from the **From Trace** to the **To Trace**. The action is performed once.

The X-Axis settings and domain of a trace are also copied.

Remote Command For Swept SA Measurement in SA Mode:
`:TRACe:COPIY TRACE1 | ... | TRACE6, TRACE1 | ... | TRACE6`
 For Spectrum & PvT measurement in RTSA Mode:
`:TRACe:COPIY TRACE1 | ... | TRACE12, TRACE1 | ... | TRACE12`
 For all other measurements:
`:TRACe:<meas>:COPIY TRACe1 | TRACe2 | TRACe3, TRACe1 | TRACe2 | TRACe3`
 where <meas> is the identifier for the current measurement
 Note that the format of the `TRACe<n>` parameter differs from that for the Swept SA Measurement

Example Copy Trace 1 to Trace 3 and put Trace 3 in Update=Off, Display=On
`:TRAC:COPIY TRACE1,TRACE3`

Notes The command is of the form:

	<code>:TRACe:COPIY <source_trace>,<dest_trace></code>
Dependencies	When Signal ID is on, this key is grayed-out
Couplings	The destination trace is put in View (Update = Off, Display = On) after the copy
Preset	For Swept SA Measurement in SA Mode: <code>TRACE1, TRACE2</code> For all other measurements: <code>TRACe1, TRACe2</code>

Exchange

Executes a Trace Exchange based on the "From Trace" on page 2310 and "To Trace" on page 2311 parameters. The **From Trace** and **To Trace** values are exchanged with each other. The action is performed once.

The X-Axis settings and domain of a trace are also copied when it is exchanged with another trace.

Note that, in RTSA Mode, only traces of the same type can participate in **Copy** and **Exchange** functions.

Remote Command	For Swept SA Measurement in SA Mode: <code>:TRACe:EXCHange TRACE1 ... TRACE6, TRACE1 ... TRACE6</code> For Spectrum & PvT measurement in RTSA Mode: <code>:TRACe:EXCHange TRACE1 ... TRACE12, TRACE1 ... TRACE12</code> For all other measurements: <code>:TRACe:<meas>:EXCHange TRACE1 TRACe2 TRACe3, TRACe1 TRACe2 TRACe3</code> where <code><meas></code> is the identifier for the current measurement Note that the format of the <code>:TRACe<n></code> parameter differs from that for the Swept SA Measurement
Example	Exchange Trace 1 and Trace 2 and put both traces in Update= OFF , Display= ON : <code>:TRAC:EXCH TRACE1,TRACE2</code>
Notes	The command is of the form: <code>:TRACe:EXCHange <trace_1>,<trace_2></code>
Couplings	Both traces are put in View (Update=Off, Display=On) after the exchange

Preset All Traces

Turns on Trace 1 and blanks all other traces. This is useful when you have many traces on, and you want to return to having only Trace 1 on the display. Does not affect the trace type, detector or any other aspect of the trace system.

Remote Command	<code>:TRACe[:<meas>]:PRESet:ALL</code>
----------------	---

Example	:TRAC:PRES:ALL
Dependencies	When Signal ID is on, this key is grayed-out

Clear All Traces

Clears all traces. Does not affect the state of any function or variable in the instrument. Loads **mintracevalue** into all of the points for all traces, except traces in **Min Hold**, in which case it loads **maxtracevalue**, even if **Update = OFF**.

Remote Command	:TRACe[:<meas>]:CLEAr:ALL RTSA Mode only: :TRACe:PRESet:ALL
Example	:TRAC:CLE:ALL
Dependencies	When Signal ID is on, this key is grayed-out

Multiple Traces for EIRP

Enables you to preset the following parameters.

Multi Channel Synchronous Acquisition	Off		
From Trace	Trace 1		
To Trace	Trace 2		
	Trace 1	Trace 2	Trace 3
Trace Type	Trace Average	Trace Average	Clear / Write
View/Blank	Active	View	Active
Math Function	Off	Off	Power Sum =Trace 1 + 2
Operand 1	N/A	N/A	Trace 1
Operand 2	N/A	N/A	Trace 2

Remote Command	:TRACe:<meas>:PRESet:EIRP
Example	For OBW Meas: :TRAC:OBW:PRES:EIRP

3.4.15.6 Advanced

Contains controls for setting advanced trace functions of the instrument.

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a **:READ** or **:FETCh** query:

- Trace 1
- Trace 2
- Trace 3

Remote Command	<pre>:CALCulate:<meas>:MTRace TRACe1 TRACe2 TRACe3 :CALCulate:<meas>:MTRace? <meas> is the identifier for the current measurement; any one of CHPower ACPower OBWidth SEMask SPURious PVTime</pre>
Example	<pre>Channel Power :CALC:CHP:MTR TRAC1 :CALC:CHP:MTR?</pre>
Dependencies	In the ACP measurement, this control is grayed-out when Meas Method is set to RBW or FAST , and only Trace 1 is enabled
Preset	TRACe1
State Saved	No
Range	Trace 1 Trace 2 Trace 3

3.5 Spectrum Emissions Mask (SEM)

The Spectrum Emission Mask measurement analyzes spurious signal levels in up to six pairs of offset frequencies and relates them to the carrier power.

Measurement Commands

The general functionality of "CONFigure" on page 3824, "INITiate" on page 3825, "FETCh" on page 3825, "MEASure" on page 3827, and "READ" on page 3826 are described in the section **SCPI Operation and Results Query** in the topic **Programming the Instrument**.

The following measurement commands and queries are used to configure the measurement:

<code>:INITiate:SEMAsk</code>	Initiates a trigger cycle for the SEM measurement, but does not return any data. You must then use <code>:FETC:SEM[n]?</code> to retrieve data
<code>:CONFigure?</code>	Does not change any measurement settings Returns the long form name of current measurement, in this case, SEM
<code>:CONFigure:SEMAsk</code>	Selects SEM measurement with Meas Setup settings in preset state – same as "Meas Preset" on page 1115
<code>:CONFigure:SEMAsk:NDEFault</code>	Selects SEM measurement <i>without</i> affecting settings

The following queries are used to retrieve the results:

<code>:FETCh:SEMAsk?</code>	Retrieves the data specified by <i>n</i>
<code>:MEASure:SEMAsk [n]?</code>	Switches to SEM measurement, restores default values, starts the measurement, then retrieves the data specified by <i>n</i>
<code>:READ:SEMAsk[n]?</code>	Starts the measurement, then retrieves the data specified by <i>n</i>

Remote Command Results Overview

The following table provides an overview of the results returned by the `:FETCh`, `:MEASure`, and `:READ` queries listed above, according to the index value *n*. For Mode-specific details, click on the appropriate link for each *n* value.

Offsets that are turned off (inactive) return -999.0 or NAN when their results are queried via SCPI. The value of NAN is 9.91E+37.

n	Results
1	Result summary (Offsets A - F) Note that n = 1 returns results of 6 offsets (Offset A to F) See "Results for n = 1" on page 946

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

n	Results
2	Displayed frequency domain spectrum trace data for Trace 1 See "Results for n = 2-4" on page 949
3	Displayed frequency domain absolute limit trace data See "Results for n = 2-4" on page 949
4	Displayed frequency domain relative limit trace data See "Results for n = 2-4" on page 949
5	Offset abs power, Offset abs PSD, Offset abs peak power depending on "Measurement Type" on page 2035 (Offset A- L) See "Results for n = 5" on page 949
6	Offset rel power, Offset rel PSD, Offset rel peak power depending on "Measurement Type" on page 2035 (Offset A- L)
7, 8	Offset pass/fail (Offset A- L) See "Results for n = 7-11" on page 953
9	Offset peak power freq (Offset A- L) See "Results for n = 7-11" on page 953
10	Offset abs peak power (Offset A- L) See "Results for n = 7-11" on page 953
11	Offset rel peak power (Offset A- L) See "Results for n = 7-11" on page 953
12	Peak power of the signal in the ref channel when "Measurement Type" on page 2035 is Spectrum Peak Reference See "Results for n = 12" on page 955
13	Ref channel summary Available only in LTEAFDD, LTEATDD, MSR and 5GNR Modes See "Results for n = 13" on page 955
14	Offset result summary (Offset A- L) See "Results for n = 14" on page 957
15	Offset limit margins (Offset A- L) See "Results for n = 15" on page 958
16	Carrier powers Available only in LTEAFDD, LTEATDD, MSR, 5GNR, and WLAN Modes See "Results for n = 16" on page 959
17	Displayed frequency domain combined limit trace data Available only in LTEAFDD, LTEATDD, MSR and 5GNR Modes See "Results for n = 17" on page 959
18	Displayed frequency domain spectrum trace data for Trace 2 See "Results for n = 18-20" on page 960
19	Displayed frequency domain spectrum trace data for Trace 3

n	Results
	See "Results for n = 18-20" on page 960
20	Displayed frequency domain absolute 2 limit trace data See "Results for n = 18-20" on page 960
21	Result Summary (Offset A – L, Outer and Inner) Available only in LTEAFDD, LTEATDD, and 5GNR Modes See "Results for n = 21" on page 960
22	Offset pass/fail (Offset A- L) Available only in LTEAFDD, LTEATDD, and 5GNR Modes See "Results for n = 22" on page 965

3.5.1 Results for n = 1

Returns outer offset results when ["Non-Contiguous Meas Region" on page 2044](#) is set to **Outer** or **Outer & Inner** (5GNR, LTEAFDD, LTEATDD only), and returns inner offset results when it is set to **Inner**, in the following order:

Available Power Ref selections differ depending on the mode. For details, see ["Power Ref" on page 2036](#)

k is an index for each offset: k = 0 for offset A; k = 1 for offset B; k = 2 for offset C, etc. The number of offsets is 6 (A-F).

2k + 72, k = 0		

82	Minimum margin from limit line on the positive offset F	dB
2k + 72, k = 5		

*1: Absolute power when "Measurement Type" on page 2035 is Total Power Ref or PSD Ref; Peak power when "Measurement Type" on page 2035 is Spectrum Peak Ref

*2: Integrated power when "Measurement Type" on page 2035 is Total Power Ref or PSD Ref; Peak power when "Measurement Type" on page 2035 is Spectrum Peak Ref

3.5.2 Results for n = 2-4

n	Data
2	Returns the displayed frequency domain spectrum trace data for Trace 1 separated by commas
3	Returns the displayed frequency domain absolute limit trace data separated by commas
4	Returns the displayed frequency domain relative limit trace data separated by commas

3.5.3 Results for n = 5

The results returned depend on "Measurement Type" on page 2035:

- "Total Power Reference" on page 949
- "Power Spectral Density Reference" on page 950
- "Spectrum Peak Reference" on page 951

Total Power Reference

Returns comma-separated scalar values (in dBm) of the absolute integrated power of the segment frequencies. The length of the result depends on the number of available offset (See "Number of Offsets" on page 966)

#	Item	Unit
1	Total power reference	dBm
2	Reserved for future use, returns -999.0	
3	Absolute integrated power at negative offset frequency A	
4	Absolute integrated power at positive offset frequency A	

25	Absolute integrated power at negative offset frequency L	
26	Absolute integrated power at positive offset frequency L	

For MSR, 5G NR, LTEAFDD, and LTEATDD modes, returns outer offset results when "Non-Contiguous Meas Region" on page 2044 is set to **Outer**, and returns inner offset results when it is set to **Inner**, in the following order

For LTEAFDD, LTEATDD, 5G NR, and MSR Modes, available Power Ref selections differ depending on the mode. For details, see "[Power Ref](#)" on page 2036

#	Item	Unit
1	Reference power	dBm
	Power Ref	Result
	Left & Right Carriers	Left ref carrier power
	Max Power Carrier in Sub-block	Ref carrier power of the left sub-block
	Left & Right Sub-blocks	Integrated power in the left sub-block
2	Right reference power	dBm
	Power Ref	Result
	Left & Right Carriers	Right ref carrier power
	Max Power Carrier in Sub-block	Ref carrier power of the right sub-block
	Left & Right Sub-blocks	Integrated power in the right sub-block
	All others	-999.0
3	Absolute integrated power at negative offset frequency A	
4	Absolute integrated power at positive offset frequency A	

25	Absolute integrated power at negative offset frequency L	
26	Absolute integrated power at positive offset frequency L	

Power Spectral Density Reference

Returns comma-separated scalar values (in dBm/Hz) of the absolute integrated power of the segment frequencies. The length of the result depends on the number of available offset (See "[Number of Offsets](#)" on page 966)

#	Item	Unit
1	Power spectral density reference	dBm/Hz
2	Reserved for future use, returns -999.0	
3	Absolute integrated power at negative offset frequency A	
4	Absolute integrated power at positive offset frequency A	

25	Absolute integrated power at negative offset frequency L	
26	Absolute integrated power at positive offset frequency L	

For MSR, 5G NR, LTEAFDD, and LTEATDD modes, returns outer offset results when "[Non-Contiguous Meas Region](#)" on page 2044 is set to **Outer**, and returns inner offset results when it is set to **Inner**, in the following order

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

For LTEAFDD, LTEATDD, 5G NR, and MSR Modes, available Power Ref selections differ depending on the mode. For details, see ["Power Ref" on page 2036](#)

#	Item	Unit
1	Reference power	dBm/Hz
	Power Ref	Result
	Left & Right Carriers	Left ref carrier power
	Max Power Carrier in Sub-block	Ref carrier power of the left sub-block
	Left & Right Sub-blocks	Integrated power in the left sub-block
2	Right reference power	dBm
	Power Ref	Result
	Left & Right Carriers	Right ref carrier power
	Max Power Carrier in Sub-block	Ref carrier power of the right sub-block
	Left & Right Sub-blocks	Integrated power in the right sub-block
	All others	999.0
3	Absolute integrated power at negative offset frequency A	
4	Absolute integrated power at positive offset frequency A	

25	Absolute integrated power at negative offset frequency L	
26	Absolute integrated power at positive offset frequency L	

Spectrum Peak Reference

Returns comma-separated scalar values (in dBm) of the absolute peak power of the segment frequencies. The length of the result depends on the number of available offset (See ["Number of Offsets" on page 966](#))

#	Item	Unit
1	Spectrum Peak Power reference	dBm
2	Reserved for future use, returns -999.0	
3	Absolute peak power at negative offset frequency A	
4	Absolute peak power at positive offset frequency A	

25	Absolute peak power at negative offset frequency L	
26	Absolute peak power at positive offset frequency L	

For MSR, 5G NR, LTEAFDD, and LTEATDD modes, returns outer offset results when ["Non-Contiguous Meas Region" on page 2044](#) is set to **Outer**, and returns inner offset results when it is set to **Inner**, in the following order

For LTEAFDD, LTEATDD, 5G NR, and MSR Modes, available Power Ref selections differ depending on the mode. For details, see ["Power Ref" on page 2036](#)

#	Item	Unit
1	Spectrum Peak Power reference	dBm
	Power Ref	Result
	Left & Right Carriers	Spectrum Peak Power reference at the left reference carrier
	Max Power Carrier in Sub-block	Spectrum Peak Power reference of the left sub-block
	Left & Right Sub-blocks	Spectrum Peak Power reference in the left sub-block
2	Spectrum Peak Power reference	dBm
	Power Ref	Result
	Left & Right Carriers	Spectrum Peak Power reference at the right reference carrier
	Max Power Carrier in Sub-block	Spectrum Peak Power reference of the right sub-block
	Left & Right Sub-blocks	Spectrum Peak Power reference in the right sub-block
	All others	-999.0
3	Absolute peak power at negative offset frequency A	
4	Absolute peak power at positive offset frequency A	

25	Absolute peak power at negative offset frequency L	
26	Absolute peak power at positive offset frequency L	

3.5.4 Results for n = 6

When ["Measurement Type" on page 2035](#) is Total Power Ref or PSD Ref, returns comma-separated scalar values (in dBc or dBc/Hz) of the integrated power relative to the carrier at the segment frequencies

When ["Measurement Type" on page 2035](#) is Spectrum Peak Ref, returns comma-separated scalar values (in dB) of the peak power relative to the carrier at the segment frequencies

The length of the result depends on the number of available offset (See ["Number of Offsets" on page 966](#))

For MSR, 5G NR, LTEAFDD, and LTEATDD Modes, returns outer offset results when ["Non-Contiguous Meas Region" on page 2044](#) is set to **Outer** or **Outer & Inner**

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

(5G NR, LTEAFDD, LTEATDD only), and returns inner offset results when it is set to **Inner**

The results are in the following order:

k is an index for each offset: k = 0 for offset A; k = 1 for offset B; k = 2 for offset C, etc. The number of offsets is 12 (A-L).

#	Item
1	Reserved for future use, returns -999.0
2	Reserved for future use, returns -999.0
3	Power ^(*1) at negative offset A
2k + 3, k = 0	
4	Power ^(*1) at positive offset A
2k + 4, k = 0	

26	Power ^(*1) at positive offset L
2k + 4, k = 11	

*1: Relative integrated power when "Measurement Type" on page 2035 is Total Power Ref or PSD Ref; Relative peak power when "Measurement Type" on page 2035 is Spectrum Peak Ref

3.5.5 Results for n = 7-11

n	Data
7, 8	Returns comma-separated pass/fail test results (0 = passed, or 1 = failed) determined by testing the minimum margin point from the limit line that is determined each offset's Limits setting. The length of the result depends on the number of available offset (See "Number of Offsets" on page 966) For MSR, 5G NR, LTEAFDD, and LTEATDD Modes, returns outer offset results when "Non-Contiguous Meas Region" on page 2044 is set to Outer or Outer & Inner (5G NR, LTEAFDD, LTEATDD only), and returns inner offset results when it is set to Inner The results are in the following order:

#	Item
1	Reserved for future use, returns -999.0
2	Reserved for future use, returns -999.0
3	At negative offset A
2k + 3, k = 0	
4	At positive offset A
2k + 4, k = 0

n Data

Offsets" on page 966)

For MSR, 5G NR, LTEAFDD, and LTEATDD Modes, returns outer offset results when "Non-Contiguous Meas Region" on page 2044 is set to **Outer** or **Outer & Inner** (5G NR, LTEAFDD, LTEATDD only), and returns inner offset results when it is set to **Inner**

The results are in the following order:

#	Item
1	Reserved for future use, returns -999.0
2	Reserved for future use, returns -999.0
3	At negative offset A
2k + 3, k = 0	
4	At positive offset A
2k + 4, k = 0	

26	At positive offset L
2k + 4, k = 11	

3.5.6 Results for n = 12

When "Measurement Type" on page 2035 is Spectrum Peak reference, returns the peak power of the signal in the ref channel

Otherwise, the value returned is -999.0

3.5.7 Results for n = 13

Returns outer offset results when "Non-Contiguous Meas Region" on page 2044 is set to **Outer** or **Outer & Inner** (5G NR, LTEAFDD, LTEATDD only), and returns inner offset results when it is set to **Inner**, in the following order:

#	Item	Result	Unit
1	Power Ref	Result	dBm
	Max Power Carrier	Total Absolute power of carriers of Measure Carrier On	
	Max Power Carrier in Sub-block		
	RF Bandwidth		
	All others	NaN	

#	Item	Unit
2	Absolute reference power	When "Measurement Type" on page 2035 is PSD Ref: dBm/Hz Others: dBm
	Power Ref	Result
	Left & Right Carriers	Power ^(*1) at the left reference carrier
	Max Power Carrier in Sub-block	Power ^(*1) at the reference carrier of the left sub-block
	Left & Right Sub-blocks	Power ^(*2) in the left sub-block
3	Absolute reference power	When "Measurement Type" on page 2035 is PSD Ref: dBm/Hz Others: dBm
	Power Ref	Result
	Left & Right Carriers	Power ^(*1) at the right reference carrier
	Max Power Carrier in Sub-block	Power ^(*1) at the reference carrier of the right sub-block
	Left & Right Sub-blocks	Power ^(*2) in the right sub-block
	All others	NaN
4	Peak frequency in the reference channel spacing frequency range	
	Power Ref	Result
	Left & Right Carriers	Peak frequency in the left ref carrier frequency range
	Max Power Carrier in Sub-block	Peak frequency in the ref carrier frequency range of the left sub-block
	Left & Right Sub-blocks	Peak frequency in the left reference sub-block frequency range
	RF Bandwidth & Aggregated Channel Bandwidth	Peak frequency in the reference channel bandwidth frequency range
5	Peak frequency in the right reference channel spacing frequency range	
	Power Ref	Result
	Left & Right Carriers	Peak frequency in the right ref carrier frequency range

#	Item	Unit
	Power Ref	Result
	Max Power Carrier in Sub-block	Peak frequency in the ref carrier frequency range of the right sub-block
	Left & Right Sub-blocks	Peak frequency in the right reference sub-block frequency range
	All others	NaN

*1: Absolute power when "Measurement Type" on page 2035 is Total Power Ref or PSD Ref; Peak power when "Measurement Type" on page 2035 is Spectrum Peak Ref

*2: Integrated power when "Measurement Type" on page 2035 is Total Power Ref or PSD Ref; Peak power when "Measurement Type" on page 2035 is Spectrum Peak Ref

If the result is not available, NaN (9.91E+37) is returned

The number of values returned is subject to change in future releases

3.5.8 Results for n = 14

Returns comma-separated scalar results

For MSR, 5G NR, LTEAFDD, and LTEATDD Modes, returns outer offset results when "Non-Contiguous Meas Region" on page 2044 is set to **Outer** or **Outer & Inner** (5GNR, LTEAFDD, LTEATDD only), and returns inner offset results when it is set to **Inner**

The results are in the following order:

k is an index for each offset: k = 0 for offset A; k = 1 for offset B; k = 2 for offset C, etc. The number of offsets is 12 (A-L)

#	Item	Unit
1	Relative integrated power on the negative offset A	When "Measurement Type" on page 2035 is Total Power Ref: dBc
10k + 1, k = 0	Returns NaN when "Measurement Type" on page 2035 is Spectrum Peak Ref	When PSD: dB
2	Absolute integrated power on the negative offset A	When "Measurement Type" on page 2035 is Total Power Ref: dBm
10k + 2, k = 0	Returns NaN when "Measurement Type" on page 2035 is Spectrum Peak Ref	When PSD: dBm/Hz
3	Relative peak power on the negative offset A	When "Measurement Type" on page 2035 is Total Power Ref PSD: dBc
10k + 3, k = 0		Others: dB

#	Item	Unit
4 10k + 4, k = 0	Absolute peak power on the negative offset A	When "Measurement Type" on page 2035 is PSD Ref: dBm/Hz Others: dBm
5 10k + 5, k = 0	Peak power offset frequency from the center or carrier edge frequency in the negative offset A Depends on the setting of "Offset Freq Define" on page 1068	Hz
6 10k + 6, k = 0	Relative integrated power on the positive offset A Returns NaN when "Measurement Type" on page 2035 is Spectrum Peak Ref	When "Measurement Type" on page 2035 is Total Power Ref: dBc When PSD: dB
7 10k + 7, k = 0	Absolute integrated power on the positive offset A Returns NaN when "Measurement Type" on page 2035 is Spectrum Peak Ref	When "Measurement Type" on page 2035 is Total Power Ref: dBm When PSD: dBm/Hz
8 10k + 8, k = 0	Relative peak power on the positive offset A	When "Measurement Type" on page 2035 is Total Power Ref: dBc Others: dB
9 10k + 9, k = 0	Absolute peak power on the positive offset A	When "Measurement Type" on page 2035 is PSD Ref: dBm/Hz Others: dBm
10 10k + 10, k = 0	Peak power offset frequency from the center or carrier edge frequency in the positive offset A Depends on the setting of "Offset Freq Define" on page 1068	Hz

120 10k + 10, k = 11	Peak power offset frequency from the center or carrier edge frequency in the positive offset L Depends on the setting of "Offset Freq Define" on page 1068	Hz

If the result is not available, NaN (9.91E+37) is returned

3.5.9 Results for n = 15

Results available only when "Measurement Type" on page 2035 is Total Power Reference.

Returns comma-separated scalar results

For MSR, 5G NR, LTEAFDD, and LTEATDD Modes, returns outer offset results when "Non-Contiguous Meas Region" on page 2044 is set to **Outer** or **Outer & Inner** (5GNR, LTEAFDD, LTEATDD only), and returns inner offset results when it is set to **Inner**

The results are in the following order:

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

k is an index for each offset: k = 0 for offset A; k = 1 for offset B; k = 2 for offset C, etc. The number of offsets is 12 (A-L).

#	Item	Unit
1	Minimum margin from limit line on the negative offset A	dB
2k + 1, k = 0		
2	Minimum margin from limit line on the positive offset A	dB
2k + 2, k = 0		
3	Minimum margin from limit line on the negative offset B	dB
2k + 1, k = 1		
4	Minimum margin from limit line on the positive offset B	dB
2k + 2, k = 1		

24	Minimum margin from limit line on the positive offset L	dB
2k + 2, k = 11		

3.5.10 Results for n = 16

Returns number of carriers comma-separated scalar results, in the following order:

#	Item	Unit
1	Absolute power of carrier 1	dBm
2	Absolute power of carrier 2	dBm

number of carriers - 1	Absolute power of carrier (number of carriers) - 1	dBm
number of carriers	Absolute power of carrier (number of carriers)	dBm

If Measure Carrier of the corresponding carrier is no, **NaN** (9.91E+37) is returned

If the result is not available, **NaN** (9.91E+37) is returned

3.5.11 Results for n = 17

Returns the displayed frequency domain combined limit trace data separated by comma. Combined trace is a mixed trace of both absolute limit trace and relative limit trace according to the fail mask condition

3.5.12 Results for n = 18-20

n	Return Value
18	Returns the displayed frequency domain spectrum trace data for Trace 2 separated by commas
19	Returns the displayed frequency domain spectrum trace data for Trace 3 separated by commas
20	Returns the displayed frequency domain absolute 2 limit trace data, separated by commas

3.5.13 Results for n = 21

The results consist of seven categories:

- 1-10 (outer reference powers)
- 11-130 (outer offset results)
- 131-154 (outer minimum margins)
- 155-170 (reserved)
- 171-180 (inner reference powers)
- 181-300 (inner offset results)
- 301-324 (inner minimum margins)

"Non-Contiguous Meas Region" on page 2044	Results returned
---	------------------

Outer	Outer offset results. For items returning an inner offset result, returns NaN
Inner	Inner offset results. For items returning an outer offset result, returns NaN
Outer & Inner	Both outer and inner offset results

Available Power Ref selections differ depending on the mode. For details, see ["Power Ref" on page 2036](#)

Below, k is an index for each offset: k = 0 for offset A; k = 1 for offset B; k = 2 for offset C, etc. For these Modes, the number of offsets is always 12 (A-L).

#	Item	Unit, if any
1	Total Absolute power of carriers of Measure Carrier On if available Otherwise, NaN	
2	Reference power for outer offset	When "Measurement Type" on page

*2: Integrated power when "Measurement Type" on page 2035 is Total Power Ref or PSD Ref; Peak Power when "Measurement Type" on page 2035 is Spectrum Peak Ref

3.5.14 Results for n = 22

Returns comma-separated pass/fail test results (0 = passed, or 1 = failed) determined by testing the minimum margin point from the limit line that is determined each offset's Limits setting.

"Non-Contiguous Meas Region" on page 2044	Results returned
---	------------------

Outer	Outer offset results. For items returning an inner offset result, returns NaN
Inner	Inner offset results. For items returning an outer offset result, returns NaN
Outer & Inner	Both outer and inner offset results

Below, k is an index for each offset: k = 0 for offset A; k = 1 for offset B; k = 2 for offset C, etc. For these Modes, the number of offsets is always 12 (A-L).

#	Item
---	------

1	Reserved for future use, returns NaN
2	Reserved for future use, returns NaN
3	At negative offset A for outer
2k + 3, k = 0	
4	At positive offset A for outer
2k + 4, k = 0	

26	At positive offset L for outer
2k + 4, k = 11	
27-32	Reserved for future use, returns NaN
33	At negative offset A for inner
2k + 33, k = 0	
34	At positive offset A for inner

#	Item
2k + 34, k = 0	

56	At positive offset L for inner
2k + 34, k = 11	

3.5.15 Number of Offsets

The number of available offsets varies depending on the mode and option as below.

Mode	Number of available offsets
MSR LTEAFDD, LTEATDD, 5G NR	12 (Offset A to L)
WLAN	14 (Offset A to N)
Other Modes with option: N9060A-7FP, N9060B-2FP, N9060C-2FP, N9060EM1D, N9060EM1E, or N90EMP5MB	12 (Offset A to L)
Other Modes without option N9060A-7FP, N9060B-2FP, N9060C-2FP, N9060EM1D, N9060EM1E, or N90EMP5MB	6 (Offset A to F)

3.5.16 Views

All Modes provide three predefined views. In MSR, LTE-Advanced FDD/TDD and 5G NR Modes, there is also a fourth predefined view. The views are listed in the table below.

In the following table:

- The Enumerated ID is used with `:DISP:SEM:VIEW`
- The Numeric ID is used with `:DISP:SEM:VIEW:NSEL`

View Name	Enumerated ID	Numeric ID	Details
"Abs Pwr Freq" on page 968	APFReq	1	Displays the absolute power levels in dBm and the corresponding frequencies in the text window
"Rel Pwr Freq" on page 968	RPFReq	2	Displays the relative power levels in dBc and the corresponding frequencies in the text window
"Integrated Power" on page 968	IPOwer	3	Displays the absolute and relative power levels integrated throughout the bandwidths between the start and stop frequencies in the text window
"Carrier Info"	CINformation	4	Displays the carrier info table

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

View Name	Enumerated ID	Numeric ID	Details
on page 968			Only available in MSR, LTE-Advanced FDD/TDD and 5G NR Modes MSR is not supported in UXM

View Selection by Name

Remote Command	<code>:DISPlay:SEMask:VIEW[:SElect] APFReq RPFReq IPOWer CINformation</code> <code>:DISPlay:SEMask:VIEW[:SElect]?</code>
Example	<code>:DISP:SEM:VIEW IPOW</code> <code>:DISP:SEM:VIEW?</code>
Dependencies	In SA Mode, when Radio Standard is set to WLAN, IPOWer is not available CINformation is available only in MSR, LTE-Advanced FDD/TDD and 5G NR Modes
Preset	APFReq unless noted below RPFReq WLAN
State Saved	Saved in instrument state
Range	Abs Pwr Freq Rel Pwr Freq Integrated Power Carrier Info

Views Selection by Number

Remote Command	<code>:DISPlay:SEMask:VIEW:NSElect <integer></code> <code>:DISPlay:SEMask:VIEW:NSElect?</code>
Example	<code>:DISP:SEM:VIEW:NSEL 2</code> <code>:DISP:SEM:VIEW:NSEL?</code>
Dependencies	In SA Mode, when Radio Standard is set to WLAN, Option 3 is not available Option 4 is available only in MSR, LTE-Advanced FDD/TDD and 5G NR Modes
Preset	1 unless noted below: 2 WLAN
State Saved	Saved in instrument state
Min/Max	MSR, LTEAFDD, LTEATDD, 5G NR Modes 1/4 All other Modes 1/3

3.5.16.1 Abs Pwr Freq

Displays the absolute power levels in dBm and the corresponding frequencies in the text window.

Windows: "Graph" on page 969, "Table" on page 974

Example `:DISP:SEM:VIEW APFR`

3.5.16.2 Rel Pwr Freq

Displays the relative power levels in dBc and the corresponding frequencies in the text window.

Windows: "Graph" on page 969, "Table" on page 974

Example `:DISP:SEM:VIEW RPFR`

3.5.16.3 Integrated Power

Displays the absolute and relative power levels integrated throughout the bandwidths between the start and stop frequencies in the text window.

Windows: "Graph" on page 969, "Table" on page 974

Example `:DISP:SEM:VIEW IPOW`

3.5.16.4 Carrier Info

Only available in MSR, LTE-Advanced and 5G NR Modes.

Displays the carrier configuration information with measure powers. Sets the display to the **Carrier Info** view. The lower window is the carrier info table in this view.

Windows: "Graph" on page 969, "Table" on page 974

Example `:DISP:SEM:VIEW CINF`

Dependencies Only available in MSR, LTE-Advanced FDD/TDD and 5G NR Modes

3.5.17 Windows

There are four available window types:

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

- In all Modes, the "Graph" on page 969 and "Table" on page 974 windows are available
- In the MSR, LTE-Advanced FDD/TDD and 5G NR Modes, an additional window, **Carrier Info**, is available. For details, see the **View** topic for "Carrier Info" on page 968
- When **Gate View** is on, the "Gate" on page 984 window is available

This section describes the windows.

3.5.17.1 Graph

Used to display the spectrum being measured by the SEM measurement.

This window appears in several Views, as follows:

View	Size	Position
Abs Pwr Freq	Three fifth, full width	Top
Rel Pwr Freq	Three fifth, full width	Top
Integrated Power	Three fifth, full width	Top
Gate View	One third, full width	Middle

The Graph differs depending on which View you are in. The views differ depending on the setting of the measurement type ("Measurement Type" on page 2035) under the **Meas Setup** menu

Graph Window in Abs Pwr Freq View

Corresponding Trace yellow - Combined trace from carrier and each offset

Abs Peak Pwr & Freq (Total Pwr Ref)

Abs Peak Pwr & Freq (PSD Ref)

Abs Peak Pwr & Freq (Spectrum Pk Ref)

Graph Window in Rel Pwr Freq View

Corresponding Trace yellow - Combined trace from carrier and each offset

Rel Peak Pwr & Freq (Total Pwr Ref)

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Rel Peak Pwr & Freq (PSD Ref)

Rel Peak Pwr & Freq (Spectrum Pk Ref)

Graph Window in Integrated Power View

Corresponding Trace yellow - Combined trace from carrier and each offset

Integrated Power (Total Pwr Ref)

Integrated Power (PSD Ref)

Integrated Power (Spectrum Pk Ref)

Graph Window in Carrier Info View

Sets the display to the carrier info view. The views differ depending on the setting of "Measurement Type" on page 2035.

Spectrum trace (Total Pwr Ref)

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Spectrum trace (PSD Ref)

Spectrum trace (Spectrum Pk Ref)

3.5.17.2 Table

Displays textual results for the measurement. The Table differs depending on which View you are in.

The views differ depending on the setting of "Measurement Type" on page 2035.

View	Size	Position
Abs Pwr Freq	Two fifth, full width	Bottom
Rel Pwr Freq	Two fifth, full width	Bottom
Integrated Power	Two fifth, full width	Bottom
Gate View	One third, full width	Bottom

Table Window in Abs Pwr Freq View

Name (Measurement Type)	Unit, if any	Corresponding Results
Power		n = 1 2nd element Absolute power at the reference area
Reference		In multi-carrier applications, this column displays which carrier is reference carrier
PSD Ref (PSD Ref)		n = 5 1st element Power spectral density reference at the reference area
Spectrum Peak ref (Spectrum Pk Ref)		n = 5 1st element Spectrum peak power reference at the reference area
Measure Trace		See "Measure Trace" on page 3025
Start Freq	Hz	Start frequency for offset

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Name (Measurement Type)	Unit, if any	Corresponding Results
Stop Freq	Hz	Stop frequency for offset
Integ BW	Hz	Measurement bandwidth for offset
Lower Peak (Total Power Ref, Spectrum Pk Ref)	dBm	Absolute peak power on minimum margin point of the negative offset
Lower (PSD Ref)	dBm/Hz	Absolute power spectrum density of the negative offset
Lower Δ lim	dB	Minimum margin from limit line which is decided by Fail Mask setting on the negative offset
Lower Freq	Hz	Frequency on minimum margin point of the negative offset
Upper Peak (Total Power Ref, Spectrum Pk Ref)	dBm	Absolute peak power on minimum margin point of the positive offset
Upper (PSD Ref)	dBm/Hz	Absolute power spectrum density of the positive offset
Upper Δ lim	dB	Minimum margin from limit line which is decided by Fail Mask setting on the positive offset
Upper Freq	Hz	Frequency on minimum margin point of the positive offset

When Measurement Type is Total Power Ref

Modes other than MSR, LTE-Advanced FDD/TDD and 5G NR

2 Table		Power		Measure Trace				
		-75.08 dBm / 3.84 MHz		Trace 1				
Start Freq	Stop Freq	Integ BW	dBm	Lower Δ Limit(dB)	Lower Freq (Hz)	dBm	Upper Δ Limit(dB)	Upper Freq (Hz)
2.515 MHz	2.715 MHz	30.00 kHz	-97.53	(-83.53)	-2.650 M	-97.85	(-83.85)	2.680 M

Table Window in Rel Pwr Freq View

Name (Measurement Type)	Unit, if any	Corresponding Results
Power		n = 1 2nd element Absolute power at the reference area
Reference		In multi-carrier applications, this column displays which carrier is reference carrier
PSD Ref		n=5 1st element Power spectral density reference at the reference area
Spectrum Peak Ref		n = 5 1st element Spectrum peak power reference at the reference area
Measure Trace		See " Measure Trace " on page 3025
Start Freq	Hz	Start frequency for offset
Stop Freq	Hz	Stop frequency for offset
Integ BW	Hz	Measurement bandwidth for offset
Lower Peak (Total Pwr Ref, Spectrum Pk Ref)	dBc (Total Pwr Ref) dB (Spectrum Pk Ref)	Relative peak power on minimum margin point of the negative offset

Name (Measurement Type)	Unit, if any	Corresponding Results
Lower (PSD Ref)	dB	Relative power spectrum density of the negative offset
Lower Δ Lim	dB	Minimum margin from limit line which is decided by Fail Mask setting on the negative offset
Lower Freq	Hz	Frequency on minimum margin point of the negative offset
Upper Peak (Total Pwr Ref, Spectrum Pk Ref)	dB (Total Pwr Ref) dB (Spectrum Pk Ref)	Relative peak power on minimum margin point of the positive offset
Upper (PSD Ref)	dB	Relative power spectrum density of the positive offset
Upper Δ Lim	dB	Minimum margin from limit line which is decided by Fail Mask setting on the positive offset
Upper Freq	Hz	Frequency on minimum margin point of the positive offset

Table Window in Carrier Info View

Only available in MSR, LTE-Advanced FDD/TDD and 5G NR Modes. Carrier center frequency can be displayed in either offset or absolute frequency depending on Carrier Freq.

LTE-Advanced FDD/TDD has a different carrier info table from that in MSR in this view, which displays with measured component carrier powers and its power spectral density in the order of component carrier index in one of the view windows.

Name	Unit, if any	Corresponding Results
Total Carrier Power		The total power of all the carriers with carrier measure state set to yes. The power is calculated by integrating across the bandwidth declared by the Carrier Integ Bw parameter for each carrier and then totaling the sums. The total integration bandwidth is shown as part of the result. This will be the total of the Carrier Integ Bw of the carriers used in calculating the total carrier power. If the RRC Filter is on, then the integration bandwidth used is $(1 + \alpha)/T$ where $T = 1/(\text{Carrier Integ Bw})$ multiplied by the number of carriers with carrier measure state set to yes
RF-BW		Displays the total bandwidth from the lowest carrier to uppermost carrier
Carrier Power	dBm	The power in all the currently defined carriers with measure state is on. The power is calculated by integrating across the bandwidth declared by the Carrier Integ Bw parameter. The integration bandwidth is shown as part of the result. This is the value of the Carrier Integ Bw for the carrier unless the RRC Filter is on, then the integration bandwidth used is the displayed value, which is $(1 + \alpha)/T$ where $T = 1/(\text{Carrier Integ Bw})$
Integration Bandwidth	Hz	Shows carrier transmission bandwidth
Filter		Displays whether RRC filter is used or not
Offset Frequency	Hz	Shows the offset frequency from the carrier reference frequency in multi-carrier measurements. The carrier frequency display type determines whether the relative frequency or absolute frequency will be displayed
Sub-block		Displays which sub-block the carrier belongs to in the intra-band non-contiguous aggregation mode. The column will be displayed when Carrier Allocation is Non-contiguous
Measure		Indicates whether the carrier power is present or not

3.5.17.3 Gate

Allows you to see your Gating signal at the same time as the measured data. See the description under "[Gate View On/Off](#)" on page 3745 in **Trigger, Gate Settings**.

Views in which the **Gate** window appears:

View	Size	Position
Gate View	One third, full width	Top

3.5.18 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.5.18.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The reference line is at the top, center, or bottom of the graticule, depending on the value of "Ref Position" on page 986.

Remote Command	<code>:DISPlay:SEMask:WINDow[1]:TRACe:Y[:SCALe]:RLEVe1 <real></code> <code>:DISPlay:SEMask:WINDow[1]:TRACe:Y[:SCALe]:RLEVe1?</code>
Example	<code>:DISP:SEM:WIND:TRAC:Y:RLEV 100</code> <code>:DISP:SEM:WIND:TRAC:Y:RLEV?</code>
Couplings	When "Auto Scaling" on page 987 is ON (default), this value is automatically determined by the measurement result. If you set a value manually, Auto Scaling changes to OFF Attenuation is not coupled to Ref Value
Preset	0.00 dBm
State Saved	Saved in instrument state
Min/Max	-250.00 dBm / 250.00 dBm
Annotation	Ref <value> top left of graph
Backwards Compatibility SCPI	<code>:DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVe1</code>

Scale/Div

For measurements that support a logarithmic Y-Axis, **Scale/Div** sets the height of one division of the graticule in the current Y-Axis unit.

Scale/Div also determines the displayed amplitude range in the log plot graph. Since there are usually 10 vertical graticule division on the display, the total amplitude range of the graph is typically 10x this amount. For example, if **Scale/Div** is 10 dB, then the total range of the graph is 100 dB.

Remote Command	<code>:DISPlay:SEMask:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <rel_amp1></code> <code>:DISPlay:SEMask:WINDow[1]:TRACe:Y[:SCALe]:PDIVision?</code>
Example	<code>:DISP:SEM:WIND:TRAC:Y:PDIV 15dB</code> <code>:DISP:SEM:WIND:TRAC:Y:PDIV?</code>

Couplings	When "Auto Scaling" on page 987 is ON, this value is automatically determined by the measurement result. If you set a value manually, "Auto Scaling" on page 987 automatically changes to OFF
Preset	10.00 dB / Div
State Saved	Saved in instrument state
Min	0.10 dB
Max	20 dB
Annotation	<value> dB/ left upper of graph
Backwards Compatibility SCPI	:DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:Y[:SCALE]:PDIVision

Scale Range

Sets the Y-Axis scale range.

Remote Command	Replace <meas> with the identifier for the current measurement :DISPlay:<meas>:WINDow[1]:TRACe:Y[:SCALE]:RANGe <rel_amp> :DISPlay:<meas>:WINDow[1]:TRACe:Y[:SCALE]:RANGe?
Example	:DISP:CHP:WIND:TRAC:Y:RANG 100 :DISP:CHP:WIND:TRAC:Y:RANG?
Couplings	Coupled to Scale/Div as follows Scale Range = Scale/Div * 10 (number of divisions) When you change this value, Auto Scaling automatically changes to OFF
Preset	100 dB
State Saved	Saved in instrument state
Min	1
Max	200

Ref Position

Positions the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change "Ref Value" on page 985.

Remote Command	:DISPlay:SEMask:WINDow[1]:TRACe:Y[:SCALE]:RPOStion TOP CENTer BOTTOm :DISPlay:SEMask:WINDow[1]:TRACe:Y[:SCALE]:RPOStion?
Example	:DISP:SEM:WIND:TRAC:Y:RPOS CENT :DISP:SEM:WIND:TRAC:Y:RPOS?
Preset	TOP

State Saved	Saved in instrument state
Range	TOP CENTer BOTTom
Annotation	The greater than (>) and less than (<) symbols are displayed on both sides of the graph to indicate the Reference Position
Backwards Compatibility SCPI	:DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOsition

Auto Scaling

Toggles **Auto Scaling** On or Off.

Remote Command	:DISPlay:SEMask:WINDow[1]:TRACe:Y[:SCALe]:COUPle 0 1 OFF ON :DISPlay:SEMask:WINDow[1]:TRACe:Y[:SCALe]:COUPle?
Example	:DISP:SEM:WIND:TRAC:Y:COUP OFF :DISP:SEM:WIND:TRAC:Y:COUP?
Couplings	When Auto Scaling is ON , and the Restart front-panel key is pressed, this function automatically sets the scale per division to 10 dB and determines the reference values based on the measurement results When you set the value of either Scale/Div , Ref Value , or Scale Range manually, Auto Scaling automatically changes to OFF
Preset	1
State Saved	Saved in instrument state
Range	OFF ON
Backwards Compatibility SCPI	:DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:COUPle

3.5.18.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See ["Dual-Attenuator Configurations" on page 988](#)
- See ["Single-Attenuator Configuration" on page 989](#)

Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

Dependencies In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

Configuration 2: Mechanical attenuator, no optional electronic attenuator

Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command `[:SENSe]:POWer[:RF]:FRATten <rel_amp>`
`[:SENSe]:POWer[:RF]:FRATten?`

Note that this is the same command as that for "Atten >50 GHz" on page 2961 in N9042B

Example	<code>:POW:FRAT 14</code> <code>:POW:FRAT?</code>
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Available on N9041B UXA Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See Reference Level and " Mech Atten " on page 2954 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	<p>When the Input is RF, and the Input Port is RF Input 2, and the Full Range Attenuator is installed: On the Meas Bar, the field "Atten" displays as follows:</p> <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten + Full Range Atten - If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Full Range Atten - If the sweep straddles 50 GHz, the value shown after "Atten:" is preceded by the symbol ">=" and is equal to Full Range Atten <p>In the Amplitude, "Y Scale" on page 2948 menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows:</p> <p>"Total Atten below 50 GHz" followed by the value of Full Range Atten + Mech Atten + Elec Atten "Total Atten above 50 GHz" followed by the value of Full Range Atten</p> <p>For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:</p> <ul style="list-style-type: none"> - Attenuator summary: - Total Atten below 50 GHz: 30 dB - Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "**Internal Preamp**" on page 2979, and any External Gain that is entered, as described in the table below.

See ["Attenuator Configurations and Auto/Man" on page 993](#)

Remote Command	<code>[:SENSe]:POWer[:RF]:ATTenuation <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:ATTenuation?</code>
Example	<code>:POW:ATT 20</code> Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of "main" attenuation) In either case, if the attenuator was in Auto, it is set to Manual
Dependencies	Available on benchtop models. Some measurements do not support Auto setting of Mech Atten . In these measurements, the Auto/Man selection is not available, and the Auto/Man toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the Auto/Man toggle function is not available. The state of Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 2957 See "Attenuator Configurations and Auto/Man" on page 993 for more information on the Auto/Man functionality
Couplings	If the RF Input Port is the RF Input: <ul style="list-style-type: none"> - If the USB Preamp is connected to USB, use 0 dB for Mech Atten - Otherwise compute the auto-selected value of Mech Atten based on Reference Level, Int Preamp, External Gain, Ref Level Offset, Max Mixer Level, μW Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) - In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 2953 from the result to determine the Mech Atten. Limit the value so that it is never lower than 0 dB and so that total attenuation, including Full Range Atten, is never less than 6 dB (total attenuation, including Full Range Atten below 6 dB, can never be chosen by Auto) <p>In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when Mech Atten is in Auto, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input</p> <p>For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is <= 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB</p>
Preset	Auto value if Auto/Manual function is supported The Auto value is various 10 dB if Auto/Manual function is not supported
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input

	<p>circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased</p>						
Max	<table border="1"> <tr> <td>CXA Option 503 or 507</td> <td>50 dB</td> </tr> <tr> <td>EXA</td> <td>60 dB</td> </tr> <tr> <td>All other models</td> <td>70 dB</td> </tr> </table> <p>Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB</p>	CXA Option 503 or 507	50 dB	EXA	60 dB	All other models	70 dB
CXA Option 503 or 507	50 dB						
EXA	60 dB						
All other models	70 dB						
Annotation	<p>The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as:</p> <p><i>Atten: <total> dB (e<elec>)</i></p> <p>The letter e is in amber in Single-Attenuator configurations</p> <p>For example:</p> <p>Dual-Attenuator configuration:</p> <p><i>Atten: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB</p> <p>Single-Attenuator configuration:</p> <p><i>A: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)</p> <p>When in Manual, a # sign appears in front of Atten in the annotation</p> <p>Auto Function</p>						
Remote Command	<pre>[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF ON 0 1 [:SENSe]:POWer[:RF]:ATTenuation:AUTO?</pre>						
Example	<p>Turn Auto Mech AttenON:</p> <pre>:POW:ATT:AUTO ON</pre>						
Dependencies	<p>Available on benchtop models.</p> <p>Available in:</p> <ul style="list-style-type: none"> Spectrum Analyzer Mode – Swept SA measurement Real-Time Spectrum Analyzer Mode – Spectrum & PVT measurement Remote Language Compatibility Mode – Swept SA measurement (Remote command depends on Compatibility Model setting) SCPI Language Compatibility Mode – Swept SA measurement (Remote command depends on Compatibility Model setting) Avionics Mode – all measurements Measuring Receiver Mode – all measurements except for Audio measurements 						
Preset	<p>ON</p>						

Attenuator Configurations and Auto/Man

As described under "[Attenuation](#)" on page 2951, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using **Mech Atten** (or `:POW:ATT`) as the "main" attenuation; and the attenuation that is set by `:POW:EATT` as the "soft" attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "[Elec Atten](#)" on page 2957 for more about "soft" attenuation.

NOTE

In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see ["More Information" on page 995](#)

Remote Command	<code>[:SENSe] :POWer [:RF] :EATTenuation <rel_amp1></code> <code>[:SENSe] :POWer [:RF] :EATTenuation?</code>
Example	<code>:POW:EATT 10</code> <code>:POW:EATT?</code>
Notes	Electronic Attenuation's specification is defined only when Mech Atten is 6 dB
Dependencies	<p>Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the Attenuation control or <code>:POW:ATT</code>, and affects the total attenuation displayed on the Attenuation control and the Meas Bar</p> <p>The electronic attenuator, and the "soft" attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If "Internal Preamp" on page 2979 is ON (that is, set to Low Band or Full), the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned</p> <p>If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence</p> <p>If the electronic/soft Attenuator is enabled, then the Stop Freq of the instrument is limited to 3.6 GHz and Internal Preamp is unavailable</p> <p>If "LNA" on page 2981 is ON, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out. This coupling works in the following modes/measurements:</p> <ul style="list-style-type: none"> - Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes - Transmit On Off Power measurement in 5GNR Mode - Power vs. Time and Transmit Power measurement in GSM/EDGE Mode - Burst Power measurement in Spectrum Analyzer Mode <p>The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement</p>
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical

	Attenuator Transition Rules" on page 996
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the Mech Atten control description
Auto Function	
Remote Command	<code>[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:EATTenuation:STATe?</code>
Example	<code>:POW:EATT:STAT ON</code> <code>:POW:EATT:STAT?</code>
Preset	OFF (Disabled) for Swept SA measurement ON (Enabled) for all other measurements that support the electronic attenuator

NOTE The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See ["Using the Electronic Attenuator: Pros and Cons" on page 997](#) for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the "soft" attenuation feature replaces the Dual-Attenuator configuration's electronic attenuator. All the same couplings and limitations apply. See ["Attenuator Configurations and Auto/Man" on page 2956](#)

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Atten >50 GHz

Only appears in N9042B with Option 575 installed.

Modifies the attenuation applied to the internal frequency extender’s frequency path above 50 GHz to 75 GHz. This setting is applicable without an external frequency extender connected.

Remote Command	<code>[:SENSe]:POWer[:RF]:FRATten <rel_amp></code> <code>[:SENSe]:POWer[:RF]:FRATten?</code> Note that this is the same command as that for "Full Range Atten" on page 2953 in N9041B
Example	<code>:POW:FRAT 14</code> <code>:POW:FRAT?</code>
Dependencies	Only appears in N9042B with Option 575, if input RF is selected, and RF Input Port is selected
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB
Max	26 dB
Annotation	When Input is RF , Input Port is RF Input , and the Option 575 Internal Frequency Extender is present:

On the Meas Bar, the field “Atten” displays as follows:

- If the sweep is entirely < 50 GHz, the value shown after “Atten:” is equal to Mech Atten + Elec Atten
- If the sweep is entirely > 50 GHz, the value shown after “Atten:” is equal to Atten > 50 GHz
- If the sweep straddles 50 GHz, the value shown after “Atten:” is the Mech Atten + Elec Atten value, followed by “|” then the Atten >50 GHz. Example “Atten: 20 dB | 24 dB”

In the Amplitude, ["Y Scale" on page 2948](#) menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows:

“Attenuation below 50 GHz” followed by the value of Mech Atten + Elec Atten

“Attenuation above 50 GHz” followed by the value of Atten > 50 GHz

For example, if ["Mech Atten" on page 2954](#) = 6 dB, Elec Atten = 4 dB, Atten > 50 GHz = 20 dB, the summary below is shown:

- Attenuator summary:
- Attenuation below 50 GHz: 10 dB
- Attenuation above 50 GHz: 20 dB

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under ["Pre-Adjust for Min Clipping" on page 2963](#).

Remote Command	<code>[:SENSe] :POWer [:RF] :RANGe:OPTimize IMMEDIATE</code>
Example	<code>:POW:RANG:OPT IMM</code>
Notes	Executing Adjust Atten for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes

Restart Meas on Adjust Atten

Toggles the force restart switch for the ["Adjust Atten for Min Clipping" on page 2962](#) function.

When **ON**, pressing **Adjust Atten for Min Clipping**, or sending `[:SENSe]:POWer [:RF]:RANGe:OPTimize IMMEDIATE` restarts the measurement and then executes the function.

When **OFF**, pressing the control or sending the command neither restarts the measurement nor executes the function until you restart or continue averaging. In this case, pressing the control generates the following advisory message:

"Adjust Atten is deferred until "Restart" or "Continue Averaging" is executed"

This message is *not* generated if the command is sent.

Remote Command	<code>[:SENSe]:POWer [:RF]:RANGe:OPTimize:REStart OFF ON 0 1</code> <code>[:SENSe]:POWer [:RF]:RANGe:OPTimize:REStart?</code>
Example	<code>:POW:RANG:OPT:REST OFF</code> <code>:POW:RANG:OPT:REST?</code>
Dependencies	Available only in measurements that support continuous averaging
Preset	ON
State Saved	Saved

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer [:RF]:RANGe:OPTimize IMMEDIATE` is executed.

Remote Command	<code>[:SENSe]:POWer [:RF]:RANGe:OPTimize:TYPE EONLY COMBined</code> <code>[:SENSe]:POWer [:RF]:RANGe:OPTimize:TYPE?</code>
Example	<code>:POW:RANG:OPT:TYPE EONL</code> <code>:POW:RANG:OPT:TYPE?</code>
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	COMBined
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under "**Adjust Atten for Min Clipping**" on page 2962 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See ["Adjustment Algorithm" on page 1001](#)

Selection	SCPI	Note
Off	OFF	This is the default setting
On	ON	Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the ON parameter is supported and mapped to COMBined
Elec Atten Only	ELECtrical	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Elec+Mech Atten	COMBined	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECtrical COMBined [:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?	
Example	:POW:RANG:OPT:ATT OFF :POW:RANG:OPT:ATT?	
Notes	The parameter option ELECtrical sets this function to ON in Single-Attenuator models The parameter option COMBined is mapped to ELECtrical in Single-Attenuator models. If you send COMBined , it sets the function to ON and returns ELEC to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined	
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 2957 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 999 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes	
Preset	OFF when Elec Atten is Disabled at preset, otherwise ELEC	
State Saved	Saved in instrument state	
Range	Dual-Attenuator models:	Off Elec Atten Only Mech + Elec Atten
	Single-Attenuator models:	Off On

Backwards Compatibility Command

Notes	ON aliases to "Elec Atten Only" (:POW:RANG:OPT:ATT ELEC)
-------	---

OFF aliases to "Off" (:POW:RANG:OPT:ATT OFF)
:POW:RANG:AUTO? returns true if :POW:RANG:OPT:ATT is not OFF

Backwards [:SENSe]:POWer[:RF]:RANGe:AUTO ON | OFF | 1 | 0
Compatibility [:SENSe]:POWer[:RF]:RANGe:AUTO?
SCPI

Adjustment Algorithm

The algorithms for the adjustment are documented below:

Single-Attenuator Models

Dual-Attenuator models

"Adjust Atten for Min Clipping" on page 2962 or "Pre-Adjust for Min Clipping" on page 999 selection is Mech + Elec Atten:

vsd04

"Pre-Adjust for Min Clipping" on page 999 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.

Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command `[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

	<code>[:SENSe] :POWer [:RF] :ATTenuation :STEP [:INCRement] ?</code>
Example	<code>:POW:ATT:STEP 2</code> <code>:POW:ATT:STEP?</code>
Notes	Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.5.18.3 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved	No
-------------	----

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	<code>[:SENSe] :POWer [:RF] :RANGe <real></code> <code>[:SENSe] :POWer [:RF] :RANGe?</code>
Example	<code>:POW:RANG 10 dBm</code> <code>:POW:RANG?</code>
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency . The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min/Max	-/+100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code>
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements

Restart Meas on Adjust Range

The same as "[Restart Meas on Adjust Atten](#)" on page 2962 under "[Attenuation](#)" on page 2951.

Min Acq Time for Adjust Range

The acquisition time of auto range is set up internally, based on application/Mode. For a low-duty-cycle TDD signal, the acquisition of auto range would only capture the noise part, and the calculated range value will be unreasonable. So, in the low-duty-cycle TDD signal case, set **Min Acq Time for Adjust Range** to limit the min acquisition time of auto range. **Min Acq Time for Adjust Range** should be set to a value to make sure the auto range acquisition always covers the signal part.

The default value, 0 s, specifies that there is no user-set **Min Acq Time for Adjust Range**, and the internal calculated time will be used for acquisition. If the user-set **Min Acq Time for Adjust Range** is less than the internally calculated time, it will still result in using the internally calculated time.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TIME:MINimum <time></code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TIME:MINimum?</code>
Example	Set the Min Adjust time to 95 ms: <code>:POW:RANG:OPT:TIME:MIN 95 ms</code> <code>:POW:RANG:OPT:TIME:MIN?</code>
Preset	0 s
State Saved	Saved in instrument state

Offset for Adjust Range

Used when additional optimization is needed to the result of **Adjust Range for Min Clipping**.

When you set **Offset for Adjust Range**, then perform **Adjust Range for Min Clipping**, the new range is as follows:

Range = result of **Adjust Range for Min Clipping** + entered **Offset for Adjust Range**

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:OFFSet?</code>
Example	<code>:POW:RANG:OPT:OFFS 10 dB</code> <code>:POW:RANG:OPT:OFFS?</code>
Notes	Set Offset for Adjust Range before performing Adjust Range for Min Clipping , otherwise the result will not be applied "Input Overload" error might be reported with inappropriate negative value of Offset for Adjust Range
Preset	0 dB
State Saved	Saved in instrument state
Min/Max	-/+20 dB

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under **Adjust Range For Min Clipping** each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code>
Notes	Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELECTrical , COMBined , and ON) are honored and all are mapped to ELECTrical , so if any of these three parameters is sent, a subsequent query will return ELEC
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements
Preset	OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 2972 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:PARatio <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:PARatio?</code>	
Example	<code>:POW:RANG:PAR 12 dB</code>	
Notes	In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated	
Dependencies	Does not appear in Spectrum Analyzer Mode	
Preset	VXT Models M9410A/11A	0 dB
	All Others	10 dB
State Saved	Saved in instrument state	

Min	0 dB	
Max	VXT Models M9410A/11A	50 dB
	All Others	20 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 2975. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?</code>	
Example	<code>:POW:RANG:MIX:OFFS -5 dB</code>	
Preset	0 dB	
State Saved	Saved in instrument state	
Min	VXT Models M9410A/11A	-34 dB
	All Others	-35 dB
Max	30 dB	

3.5.18.4 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "[Software Preselection](#)" on page 2992 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy. When **Presel Center** is pressed, the instrument performs centering on the

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

measurements center frequency.

For the Swept SA measurement of the Spectrum Analyzer mode, Presel Center adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "**Preselector Adjust**" on page 2978 changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "**Proper Preselector Operation**" on page 1010.

Remote Command	<code>[:SENSe] :POWer [:RF] :PCENter</code>
Example	<code>:POW:PCEN</code>
Notes	The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command
Dependencies	Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off <ul style="list-style-type: none"> - If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken - Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz - Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in " Preselector Adjust " on page 2978
Status Bits/OPC dependencies	When centering the preselector, *OPC does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to <code>:READ</code> or <code>:MEASure</code> queries The Measuring bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "[Presel Center](#)" on page 2977 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	<code>[:SENSe] :POWer [:RF] :PADJust <freq></code> <code>[:SENSe] :POWer [:RF] :PADJust?</code>
Example	<code>:POW:PADJ 100KHz</code> <code>:POW:PADJ?</code>
Notes	The value on the control is displayed to 0.1 MHz resolution
Dependencies	<ul style="list-style-type: none"> - Does not appear in CXA-m - Does not appear in VXT Models M9410A/11A/15A/16A - Does not appear in M9410E/11E/15E/16E - Grayed-out if microwave preselector is off

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

	<ul style="list-style-type: none"> - Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz - Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz - Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Preset	0 MHz

Min/Max	-/+500 MHz
Backwards Compatibility SCPI	<code>[:SENSe] :POWer [:RF] :MW:PADJust</code> <code>[:SENSe] :POWer [:RF] :MMW:PADJust</code> Backwards Compatibility Command
Notes	The command has no effect, and the query always returns MWAVE
Backwards Compatibility SCPI	<code>[:SENSe] :POWer [:RF] :PADJust:PRESelector MWAVE MMWave EXTernal</code> <code>[:SENSe] :POWer [:RF] :PADJust:PRESelector?</code>

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	<code>:POW:GAIN OFF</code>	
Low Band	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND LOW</code>	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown

Selection	Example	Note
Full Range	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND FULL</code>	<p>Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp</p> <p>The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear</p>

NOTE

The maximum **Center Frequency for Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:BAND LOW FULL</code> <code>[:SENSe]:POWer[:RF]:GAIN:BAND?</code>
Example	<code>:POW:GAIN:BAND LOW</code> <code>:POW:GAIN:BAND?</code>

Preset	OFF

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to **"Internal Preamp" on page 2979**. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, **LNA** can be turned on *together* with **"Internal Preamp" on page 2979**, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see **"More Information" on page 1013**

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?</code>
Example	<code>:POW:GAIN:LNA ON</code>
Dependencies	Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled
Preset	OFF
State Saved	Saved in State

More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:

```
Atten: 8 dB
Pre: Int on, LNA on
µW Path: LNP, On
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to **ON**). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```

Atten: 8 dB
Pre: Int off, LNA on
μW Path: LNP, On
Source: Off
    
```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21–26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Path	SCPI	Note
Standard Path	STD	Normal setting for most measurements. μ W Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	LNPath	See " Low Noise Path Enable " on page 1018

Full Bypass Enable	FULL	See " Full Bypass Enable " on page 1021

Remote Command `[:SENSe]:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL`
`[:SENSe]:POWer[:RF]:MW:PATH?`

Example `:POW:MW:PATH LNP`
 Selects **Low Noise Path Enable**

Notes
 When "[Presel Center](#)" on page 2977 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of **μ W Path Control**
 The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is **Low Noise Path Enable** or **Full Bypass Enable**. In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled
 Alignment switching ignores the settings in this menu, and restores them when finished

Dependencies
 Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing

- The **Low Noise Path Enable** selection does not appear unless Option LNP is present and licensed
- The **μ W Preselector Bypass** selection does not appear unless Option MPB is present and licensed
- The **Full Bypass Enable** selection does not appear unless options LNP and MPB are both present as well as option FBP

In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated
Low Noise Path Enable and **Full Bypass Enable** are grayed-out if the current measurement does not support them
Low Noise Path Enable and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, "Setting Conflict; Feature not supported for this measurement"

Range	ON OFF

Low Noise Path Enable

SCPI: [LNPath](#)

Provides a lower noise floor under some circumstances, particularly when operating in the 21– 26.5 GHz region. With the Low Noise Path enabled, the low

band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

μW Preselector Bypass

SCPI: [MPBypass](#)

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

SCPI: [FULL](#)

The microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user

interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 2948 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar: "Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

Notes	Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (:POW:MW:PATH STD) The OFF parameter sets path MPB (:POW:MW:PATH MPB)
Preset	ON
Backwards Compatibility SCPI	[:SENSe] :POWer [:RF] :MW:PRESelector [:STATe] ON OFF 0 1 [:SENSe] :POWer [:RF] :MW:PRESelector [:STATe] ?

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender

Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

Type	ID	
	159	Settings Alert - DETECTED; Presel/Meas BW conflict

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 2982.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 2982 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 2948 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar: "Full Bypass Enabled, maximum safe input power reduced"

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M941xA and M941xE

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPreSel:STATe 0 1 ON OFF</code> <code>[:SENSe]:POWer[:RF]:SWPreSel:STAT?</code>
Example	<code>:POW:SWPR:STAT 1</code> <code>:POW:SWPR:STAT?</code>
Dependencies	Only appears in N9041B, N9042B+V2050A, VXT models M941xA and M941xE. Does not appear in all measurements
Couplings	Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state
Preset	N9041B OFF N9042B+V3050A ON M941xA and M941xE ON
State Saved	Saved in instrument state

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are

images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel NORMa1 ADVanced</code> <code>[:SENSe]:POWer[:RF]:SWPResel?</code>
Example	<code>:POW:SWPR NORM</code> <code>:POW:SWPR?</code>
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 2992 is OFF. The grayout message is “Unavailable unless SW Presel enabled”
Preset	N9041B ADVanced N9042B+V3050A NORMa1
State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)
- **NARRow**– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A, M9410E/11E and S9110E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	<code>[:SENSe] : <measurement> : PFILter [:STATe] ON OFF 1 0</code> <code>[:SENSe] : <measurement> : PFILter [:STATe] ?</code>							
Example	<p>Enable High Freq Prefilter for the Complex Spectrum Measurement in BASIC Mode: <code>:SPEC:PFIL ON</code></p> <p>Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes: <code>:WAV:PFIL ON</code></p> <p>Enable High Freq Prefilter for the Swept SA Measurement in SA Mode: <code>:SAN:PFIL ON</code></p>							
Dependencies	<p>Only appears in instruments based on M9410A/11A, e.g. M9411E, S9110E and S9110A. This control is only functional in limited frequency ranges:</p> <table border="1"> <thead> <tr> <th>Frequency range</th> <th>Products or Port</th> </tr> </thead> <tbody> <tr> <td>Above 1310 MHz</td> <td>M9410A/11A</td> </tr> <tr> <td>1310 MHz to 5000 MHz</td> <td>M9410E/11E RF port on S9110E</td> </tr> </tbody> </table>		Frequency range	Products or Port	Above 1310 MHz	M9410A/11A	1310 MHz to 5000 MHz	M9410E/11E RF port on S9110E
Frequency range	Products or Port							
Above 1310 MHz	M9410A/11A							
1310 MHz to 5000 MHz	M9410E/11E RF port on S9110E							
Preset	See "Prefilter Presets" on page 1028 below							

State Saved Saved in instrument state

Prefilter Presets

Meas	Mode	Preset
SPEC	BASIC	OFF
WAV	BASIC, WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
MON	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
RHO	WCDMA	OFF
CDP	WCDMA	OFF
PCON	WCDMA	OFF
EVMQ	WCDMA	OFF
CHP	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
OBW	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
ACP	WCDMA, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
SEM	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PST	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PVT	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
EVM	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
FLAT	WLAN	OFF
EVMM	WLAN	OFF
CEVM	LTEAFDD, LTEATDD	OFF
PAVT	5GNR, VMA	OFF
DDEM	VMA	OFF
OFDM	VMA	OFF
SAN	SA	ON
HARM	SA	ON

3.5.19 BW

Opens the Bandwidth (**BW**) menu, which contains controls for the Resolution Bandwidth functions of the instrument.

The Resolution BW functions control filter type. There are two filter types, Gaussian and Flattop. The Gaussian filters have a response curve that is parabolic on a log scale. The Flattop filter shape is a close approximation of a rectangular filter.

3.5.19.1 Settings

Contains basic bandwidth functions. The only tab under **BW**.

RBW Filter Type

Selects the type of bandwidth filter that is used in Carriers and Offsets:

Option	SCPI	Behavior
Gaussian	GAUSSian	The selected filter is applied to carriers and all offsets
Flattop	FLATtop	
Auto Sense	ASENSE	The filter type is automatically selected for each carrier and offset in a way such that measurement speed and accuracy are optimized Filter Auto Sense Rules: <ul style="list-style-type: none"> - Flattop is selected when "Enable Wideband IF for FFT" on page 1199 is ON - Flattop is selected for offsets close to the reference carrier - For all other cases, Gaussian is selected

Remote Command	[:SENSe] :SEMAsk :BANDwidth :SHAPE ASENSe GAUSSian FLATtop [:SENSe] :SEMAsk :BANDwidth :SHAPE?
Example	:SEM :BAND :SHAP GAUS :SEM :BAND :SHAP?
Preset	ASENSE
State Saved	Saved in instrument state
Range	Auto Sense (each offset and carrier) Gaussian (all offsets and carriers) Flattop (all offsets and carriers)

3.5.20 Display

Lets you configure display items for the current Mode, Measurement, View, or Window.

3.5.20.1 Meas Display

Contains controls for setting up the display for the current Measurement, View, or Window.

Limit Lines

Toggles Limit Lines display for this measurement On or Off.

Remote Command	:CALCulate :SEMAsk :LLINE :STATE ON OFF 1 0
----------------	---

	<code>:CALCulate:SEMask:LLINe:STATe?</code>
Example	<code>:CALC:SEM:LLIN:STAT OFF</code> <code>:CALC:SEM:LLIN:STAT?</code>
Preset	<code>ON</code>
State Saved	Saved in instrument state
Range	<code>ON OFF</code>

Carrier Frequency Type

Sets the carrier frequency display type.

- **OFFSet**- The carrier center frequencies are displayed as offset from Carrier Ref Freq
- **ABSolute**- The carrier center frequencies are displayed as absolute frequency

Remote Command	<code>:DISPlay:SEMask:VIEW[1]:WINDow[1]:CINFormation:FREQuency OFFSet ABSolute</code> <code>:DISPlay:SEMask:VIEW[1]:WINDow[1]:CINFormation:FREQuency?</code>
Example	<code>:DISP:SEM:VIEW:WIND:CINF:FREQ ABS</code> <code>:DISP:SEM:VIEW:WIND:CINF:FREQ?</code>
Preset	<code>OFFSet</code>
State Saved	Saved in instrument state
Range	<code>OFFSet ABSolute</code>

3.5.20.2 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See "[Views](#)" on page 966

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:SElect <alphanumeric></code> <code>:DISPlay:VIEW:ADVanced:SElect?</code>
----------------	--

Example	Select Baseband as the current View <code>:DISP:VIEW:ADV:SEL "Baseband"</code>
Notes	<p>You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command</p> <p>For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <p>because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu</p> <p>You <i>cannot</i> use the legacy View parameter (which in this case would be <code>TZOOM</code>) with</p> <pre>:DISP:VIEW:ADV:SEL</pre> <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <pre>:DISP:VIEW:ADV:SEL "TRACE ZOOM"</pre> <p>If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p>
Backwards Compatibility SCPI	<p>The legacy node</p> <pre>:DISPlay:VIEW[:SElect]</pre> <p>is retained for backwards compatibility, but it only supports predefined views</p>

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a "User View".

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	<code>:DISPlay:VIEW:ADVanced:NAME <alphanumeric></code>
Example	<pre>:DISP:VIEW:ADV:NAME "Baseband"</pre> <p>Creates a new View named <code>Baseband</code> from the current View, and selects it as the current View</p>

Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If <code><alphanumeric></code> name already exists as a View, the error message “-224, Illegal parameter value; View <code><alphanumeric></code> already exists” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; User View SCPI cannot be used while Display is disabled” is generated</p>
-------	---

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View’s name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	<code>:DISPlay:VIEW:ADVanced:REName <alphanumeric></code>
Example	<code>:DISP:VIEW:ADV:REN “Baseband”</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> specifying the new name is already present in the list of View names, the error message “-224, Illegal parameter value; View <code><alphanumeric></code> already exists” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot rename a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p>

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DELeTe</code>
----------------	--

Example	<code>:DISP:VIEW:ADV:DEL</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> is not present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> does not exist” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot delete a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p>

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DELeTe:ALL</code>
Example	<code>:DISP:VIEW:ADV:DEL:ALL</code>
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, `:DISPlay:VIEW[:SElect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:CATalog?</code>
Example	<code>:DISP:VIEW:ADV:CAT?</code>
Notes	<p>Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for <i>all</i> the Views, including User Views, available for the current Measurement</p> <p>Example:</p> <p><code>"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"</code></p> <p>No distinction is made between Predefined and User Views</p> <p>If you switch measurements with the display disabled (via <code>:DISP:ENAB OFF</code>), then query the list of available Views, the result is undefined</p>

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:USER:CATalog?</code>
Example	<code>:DISP:VIEW:ADV:USER:CAT?</code>
Notes	<p>Returns a quoted string of the available User Views for the current measurement, separated by commas.</p> <p>Example: <code>"Baseband,myView1,yourView1"</code></p> <p>If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 3004), then query the list of available Views, the result is undefined</p>

3.5.20.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	<code>:DISPlay:GRATicule[:STATe] OFF ON 0 1</code> <code>:DISPlay:GRATicule[:STATe]?</code>
Example	<code>:DISP:GRAT OFF</code>
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	<code>ON</code>
State Saved	Saved in instrument state
Backwards Compatibility SCPI	<p><code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1</code> <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?</code></p> <p>This command is accepted for backwards compatibility with older instruments, but the <code>WINDow</code>, <code>TRACe</code> and <code>GRID</code> parameters are ignored</p>

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	<code>:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:SCReen[:STATe]?</code>
Example	<code>:DISP:ANN:SCR OFF</code>
Dependencies	Grayed-out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

Remote Command	<code>:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0</code> <code>:DISPlay:ANNotation:TRACe[:STATe]?</code>
Example	<code>:DISP:ANN:TRAC OFF</code>
Preset	OFF
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	<code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code>
Example	<code>:DISP:ACT OFF</code>
Dependencies	Grayed out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When **OFF**, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	<code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code>
Example	<code>:DISP:ANN:MBAR OFF</code>
Dependencies	Grayed out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTEM:DEFAULTS MISC` or `:DISPLAY:ENABLE ON` (neither `*RST` nor `:SYSTEM:PRESET` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTEM:DEFAULTS MISC` or `:DISPLAY:ENABLE ON` (neither `*RST` nor `:SYSTEM:PRESET` enable the display)
- and you are using either the `:SYSTEM:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	<code>:DISPLAY:VIEW:ADVANCED:SELECT</code>
Rename User View	<code>:DISPLAY:VIEW:ADVANCED:RENAME</code>
Delete User View	<code>:DISPLAY:VIEW:ADVANCED:DELETE</code>
Create User View	<code>:DISPLAY:VIEW:ADVANCED:NAME</code>
Select Screen	<code>:INSTRUMENT:SCREEN:SELECT</code>
Delete Screen	<code>:INSTRUMENT:SCREEN:DELETE</code>
Delete All But This Screen	<code>:INSTRUMENT:SCREEN:DELETE:ALL</code>
Add Screen	<code>:INSTRUMENT:SCREEN:CREATE</code>
Rename Screen	<code>:INSTRUMENT:SCREEN:RENAME</code>
Sequencer On/Off	<code>:SYSTEM:SEQUENCER</code>

Remote Command	<code>:DISPLAY:ENABLE OFF ON 0 1</code> <code>:DISPLAY:ENABLE?</code>
Example	<code>:DISP:ENAB OFF</code>
Couplings	<code>:DISP:ENAB OFF</code> turns Backlight OFF and <code>:DISP:ENAB ON</code> turns Backlight ON , but changing Backlight settings does <i>not</i> change the state of <code>:DISP:ENAB</code>
Preset	ON Set by <code>:SYST:DEF MISC</code> , but not affected by <code>*RST</code> or <code>:SYSTEM:PRESET</code>
State Saved	Not saved in instrument state
Backwards Compatibility Notes	<code>:SYST:PRES</code> no longer turns on <code>:DISPLAY:ENABLE</code> as it did in legacy analyzers

3.5.21 Frequency

Opens the **Frequency** menu, which contains controls that allow you to control the frequency and channel parameters of the instrument.

Some features in the **Frequency** menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**. For example, the **Center Freq** setting is the same for all measurements – it does not change as you change measurements.

3.5.21.1 Settings

Contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed, and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

The center frequencies of carriers are defined as offset frequency from the **Carrier Reference Frequency** value. This reference frequency is also the reference for carrier configuration preset.

Because LTE-A, MSR and 5G NR measurements often deal with multiple carriers with distinct bandwidths, the simple **Center Frequency** parameter used in most measurements does *not* apply here. Instead, **Carrier Reference Frequency** is the key parameter. This must be distinct from the **Center Frequency** parameter used in other measurements, because **Center Frequency** can be a global parameter, and it would not make sense for **Carrier Reference Frequency** to use this global value.

In LTE-A and 5G NR Modes, if the following conditions are satisfied at the same time:

- the **Number of Component Carriers** is 1
- the **Center Freq Offset** is 0 Hz
- **Center Frequency** (SA Mode) is in **Auto** mode

then **Center Frequency** is equivalent to **Carrier Reference Frequency**. When **Center Frequency** changes in such conditions, its mode remains as **Auto**, and **Carrier Reference Frequency** is changed to the same value. The main purpose of this coupling is for backwards compatibility with legacy LTE/LTE TDD Modes, in which **:SENSe:FREQuency:CENTer** was used to set up the measurement frequency.

For more details, see ["More Information" on page 1039](#).

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Remote Command	For LTE-A, 5G NR <code>[:SENSe]:CCARrier:REFerence <freq></code> <code>[:SENSe]:CCARrier:REFerence?</code> For MSR <code>[:SENSe]:CARRier:REFerence <freq></code> <code>[:SENSe]:CARRier:REFerence?</code>
Example	For LTE-A, 5G NR <code>:CCAR:REF 2GHz</code> <code>:CCAR:REF?</code> For MSR <code>:CARR:REF 2GHz</code> <code>:CARR:REF?</code>
Dependencies	Only available in LTE-A FDD/TDD, 5G NR and MSR Modes
Preset	1GHz
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum/maximum center frequency. Same as Center Frequency

More Information

In most applications, **Center Frequency** is generally where the carrier center is located at and thus plays a very important role. However, in LTE-Advanced TDD/FDD Modes, measurements are done based on carrier center frequencies and bandwidths, both of which are calculated or obtained according to the carriers' configuration.

The **Center Frequency** defined here is only for the Monitor Spectrum, IQ Waveform and CCDF measurements, because these three are general type measurements and focus on a certain frequency range, which may be the entire BS RF bandwidth, a frequency range of one of the component carriers, or a range far away from the component carriers to see spurious. The **Center Frequency** in these three measurements has a different meaning, therefore it must be separate from **Carrier Reference Frequency**.

Carrier center frequencies are defined using offsets from **Carrier Reference Frequency** which determines absolute frequency locations, and which can be set as both absolute and relative frequency from the carrier reference frequency.

Since **Center Frequency** is only used in the Monitor Spectrum, IQ Waveform and CCDF measurements, this control only appears on the **Frequency** menu for these measurements.

To maintain legacy LTE usability in the converged LTE & LTE-A application, when **Center Frequency** mode is **Auto** and **Number of Component Carriers** is 1, and

Center Frequency Offset is 0 Hz, **Center Frequency** is equivalent to **Carrier Reference Frequency**, which is used to set up the frequencies of all measurements.

3.5.22 Marker

Lets you select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects Marker 1, sets it to **Normal (POSITION)** mode, and places it at the center of the display. If the selected marker is **OFF**, it is set to **Normal** and placed at the center of the screen, on the trace determined by the **Marker Trace** rules.

3.5.22.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

This control appears above the menu panel, indicating that it applies to all controls in the **Marker** menu panels. **Select Marker** is blanked if you select a tab whose controls do *not* depend on the selected marker (for example, **Counter**).

In any menu that includes **Select Marker**, the first control is always **Marker Frequency**.

Notes	The selected marker is remembered even when not in the Marker menu and is used if a search is done, or a Band Function is turned on, or for Signal Track, or Continuous Peak
Preset	Marker 1
State Saved	The number of the selected marker is saved in instrument state
Annunciation	Appears in the marker results block label for Normal marker

3.5.22.2 Settings

The controls on this tab include the **Marker** active function and a radio button selection of the marker control mode (**Normal**, **Delta** or **Off**) for the selected marker, as well as additional functions that help you use markers.

Marker Frequency

Sets the marker X-Axis value in the current marker X-Axis Scale unit. Has no effect if the control mode is **Off**, but is the SCPI equivalent of entering an X value if the control mode is **Normal**.

Remote Command	<code>:CALCulate:SEMask:MARKer[1] 2 ... 12:X <freq></code>
Command	<code>:CALCulate:SEMask:MARKer[1] 2 ... 12:X?</code>

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Example	<code>:CALC:SEM:MARK3:X 1.0 GHz</code> <code>:CALC:SEM:MARK3:X?</code>
Notes	If no suffix is sent, uses the fundamental units for the current marker X-Axis Scale. If a suffix is sent that does not match the current marker X-Axis Scale unit, an error “Invalid suffix” is generated The query returns the marker's absolute X-Axis value if the control mode is Normal , or the offset from the marker's reference marker if the control mode is Delta . The query is returned in the fundamental units for the current marker X-Axis scale: Hz for Frequency and Inverse Time , seconds for Period and Time
Preset	After a preset, all markers are turned OFF , so the query returns Not A Number (NAN)
State Saved	Saved in instrument state
Min/Max	-/+9.9E+37
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Marker X Axis Position (Remote Command Only)

Sets the marker X-Axis Scale position in trace points. This setting has no effect if the control mode is **Off**, but is the SCPI equivalent of entering a value if the control mode is **Normal** or **Delta** - except in trace points rather than X-Axis Scale units. The entered value is immediately translated into the current X-Axis Scale units for setting the value of the marker.

Remote Command	<code>:CALCulate:SEMAsk:MARKer[1] 2 ... 12:X:POSition <real></code> <code>:CALCulate:SEMAsk:MARKer[1] 2 ... 12:X:POSition?</code>
Example	<code>:CALC:SEM:MARK10:X:POS 1001</code> <code>:CALC:SEM:MARK10:X:POS?</code>
Notes	The query returns the marker's absolute X Axis value in trace points if the control mode is Normal , or the offset from the marker's reference marker in trace points if the control mode is Delta . The value is returned as a real number, not an integer, corresponding to the translation from X-Axis Scale units to trace points . When a Marker is turned on, it is placed center of the screen on the trace. Therefore, the default value depends on instrument condition. If the marker is Off , the response is Not A Number
Preset	After a preset, all markers are turned OFF , so the query returns Not A Number (NAN)
State Saved	Saved in instrument state
Min/Max	-/+9.9E+37

Marker Y Axis Value (Remote Command only)

Returns the marker Y-Axis value in the current marker Y Axis unit.

Remote Command	<code>:CALCulate:SEMAsk:MARKer[1] 2 ... 12:Y?</code>
Example	<code>:CALC:SEM:MARK11:Y?</code>
Notes	The query returns the marker Y-Axis result, if the control mode is Normal . If the marker is Off , the response is Not A Number

Preset	Result depends on Markers setup and signal source
State Saved	No
Backwards Compatibility SCPI	<code>:CALCulate:SEMask:MARKer[1] 2 ... 12:FUNCTION:RESult?</code>

Marker Mode

Sets the marker control mode to **POSITION** (Normal) or **OFF**.

If the selected marker is **OFF**, pressing **Marker** sets it to **POSITION** and places it at the center of the screen, on the trace determined by the **Marker Trace** rules. At the same time, **Marker X Axis Value** appears on the Active Function area. If the current control mode for the measurement is **OFF**, there is no active function, and the active function is turned off.

Remote Command	<code>:CALCulate:SEMask:MARKer[1] 2 ... 12:MODE POSITION OFF</code> <code>:CALCulate:SEMask:MARKer[1] 2 ... 12:MODE?</code>
Example	<code>:CALC:SEM:MARK:MODE POS</code> <code>:CALC:SEM:MARK:MODE?</code>
Notes	Default Active Function: the active function for the selected marker's current control mode. If the current control mode is OFF , there is no active function, and the active function is turned off
Preset	<code>OFF OFF OFF</code>
State Saved	Saved in instrument state
Range	<code>POSITION OFF</code>
Annotation	Mkr# <X value> and <Marker value> upper right of graph

All Markers Off

Turns off all markers.

Remote Command	<code>:CALCulate:SEMask:MARKer:AOFF</code>
Example	<code>:CALC:SEM:MARK:AOFF</code>

Couple Markers

When this function is **ON**, moving any marker causes an equal X-Axis movement of every other marker that is not **OFF**. By “equal X-Axis movement” we mean that we preserve the difference between each marker's X-Axis value (in the fundamental X-Axis units of the trace that marker is on) and the X-Axis value of the marker being moved (in the same fundamental X-Axis units).

This may result in markers going off-screen.

Remote Command	<code>:CALCulate:SEMask:MARKer:COUPle[:STATe] ON OFF 1 0</code> <code>:CALCulate:SEMask:MARKer:COUPle[:STATe]?</code>
Example	<code>:CALC:SEM:MARK:COUP ON</code> <code>:CALC:SEM:MARK:COUP?</code>
Preset	<code>OFF</code> Preset by Mode Preset and All Markers Off
State Saved	Saved in instrument state

3.5.22.3 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. This is the same as **"Marker Frequency" on page 1040** in the **Settings** tab.

Marker Trace

Selects the trace on which you want your marker placed. A marker is associated with one and only one trace. This trace is used to determine the placement, result, and X-Axis Scale of the marker. All markers have an associated trace; it is from that trace that they determine their attributes and behaviors, and it is to that trace that they go when they become Normal markers.

Specifying a Marker Trace manually or with this command associates the marker with the specified trace. If the marker is not **OFF**, it moves the marker from the trace it was on to the new trace. If the marker is **OFF** it stays off but is now associated with the specified trace.

The query returns the number of the trace on which the marker is currently placed.

Remote Command	<code>:CALCulate:SEMask:MARKer[1] 2 ... 12:TRACe 1 2 3</code> <code>:CALCulate:SEMask:MARKer[1] 2 ... 12:TRACe?</code>
Example	<code>:CALC:SEM:MARK2:TRAC 2</code> <code>:CALC:SEM:MARK2:TRAC?</code>
Notes	A marker may be placed on a blanked and/or inactive trace, even though the trace is not visible and/or updating An application may register a trace name to be displayed on the control instead of a trace number
Couplings	The state of Marker Trace is not affected by "Auto Couple" on page 3017

	Sending the remote command causes the addressed marker to become selected
Preset	1
State Saved	Saved in instrument state

3.5.23 Meas Setup

Contains functions for setting up the measurement parameters, and for setting up parameters global to all measurements in the Mode.

3.5.23.1 Settings

Contains frequently used **Meas Setup** functions to which you will want the fastest access.

Avg/Hold Num

Toggles averaging On or Off, in addition to enabling you to set the number of measurement averages used to calculate the measurement result. The average is displayed at the end of each sweep. After the specified number of average counts, the average mode (termination control) setting determines the average action.

In the remote mode, use "[Averaging On/Off](#)" on page 1045 to turn Averaging on or off.

Remote Command	<code>[:SENSe] :SEMAsk :AVERAge :COUNT <integer></code> <code>[:SENSe] :SEMAsk :AVERAge :COUNT?</code>
Example	<code>:SEM:AVER:COUN 100</code> <code>:SEM:AVER:COUN?</code>
Preset	10
State Saved	Saved in instrument state
Min/Max	1/10000

Continue Averaging

Designed for acquiring the trace averaging multiple sets of DUT conditions, in order to meet requirements such as OTA measurement.

NOTE

You must be in **Single** sweep/measurement to use **Continue Averaging**. Go to **Single** and press **Restart** to get your first set of averages, then **Continue Averaging** will be available.

Use **:FETCh:<meas>?** to retrieve the data as it waits for completion of **Continue Averaging**. ***OPC?** Does *not* wait for completion and returns true immediately.

Pressing this control adds a number of Averages that matches the "Avg/Hold Num" on page 1044 to the already averaged trace or measurement. Every time you press it, the terminal count increases to 2N, 3N and so on. You can change the DUT position or antenna when each set of average count is reached to the terminal count and the measurement is complete.

Since the measurement results are valid for each completed set of average conditions, there is no need to predetermine the number of sets of DUT conditions.

Remote Command	<code>[:SENSe]:SEMAsk:AVERage:CONTinue</code>
Example	<code>:SEM:AVER:CONT</code>
Dependencies	Enabled when you change the Sweep mode to Single , and the Average Count reaches the Average Number. Otherwise, grayed-out

SEM Terminal Count (Remote Query Only)

Returns the terminal count that shows the target average number after **Continue Averaging** is pressed. Every time you press **Continue Averaging**, the terminal count increases to 2N, 3N and so on. The value is the same as "Avg/Hold Num" on page 1044 unless **Continue Averaging** is pressed, and it is reset to match the Avg | Hold Number when **Restart** is pressed.

Remote Command	<code>[:SENSe]:SEMAsk:AVERage:COUNt:TERMinal?</code>
Example	<code>:SEM:AVER:COUN:TERM?</code>

Averaging On/Off

Turns Averaging on or off.

NOTE In this measurement, **Average Type** is preset to the **Log-Pwr Avg (Video)** method. Other averaging methods are not available.

Remote Command	<code>[:SENSe]:SEMAsk:AVERage[:STATe] ON OFF 1 0</code> <code>[:SENSe]:SEMAsk:AVERage[:STATe]?</code>
Example	<code>:SEM:AVER ON</code> <code>:SEM:AVER?</code>
Preset	OFF
State Saved	Saved in instrument state
Range	ON OFF

Meas Method

Sets the measurement method:

Method	Option	Description
Integration BW	0 OFF	Enables you to set the channel integration bandwidth
RRC Weighted	1 ON	Selects Root Raised Cosine (RRC) filtering of the carriers. The a value (rolloff) for the filter is set to the value of the Filter Alpha parameter

Remote Command	<code>[:SENSe] :SEMAsk :FILTer [:RRC] [:STATe] OFF ON 0 1</code> <code>[:SENSe] :SEMAsk :FILTer [:RRC] [:STATe] ?</code>
Example	<code>:SEM:FILT ON</code> <code>:SEM:FILT?</code>
Dependencies	WLAN: RRC Weight is not supported when the radio standard is WLAN 802.11ac (80+80MHz)
Preset	Other than WCDMA: OFF WCDMA: ON
State Saved	Saved in instrument state
Range	Integration BW RRC Weighted

RRC Filter Alpha

Sets the alpha value for the RRC Filter.

Remote Command	<code>[:SENSe] :SEMAsk :FILTer [:RRC] :ALPHa <real></code> <code>[:SENSe] :SEMAsk :FILTer [:RRC] :ALPHa ?</code>
Example	<code>:SEM:FILT:ALPH 0.3</code> <code>:SEM:FILT:ALPH?</code>
Preset	0.22
State Saved	Saved in instrument state
Min/Max	0.01/1.0

Non-Contiguous Meas Region

Selects the region to measure for the non-contiguous frequency allocation.

Option	SCPI	Comments
Outer	<code>OUTer</code>	
Inner	<code>INNeR</code>	
Outer & Inner	<code>OINNeR</code>	Available only in 5G NR and LTE-Advanced FDD/TDD Modes

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Remote Command	<code>[:SENSe]:SEMAsk:NCONtiguous:REGion INNer OUTer OINNer</code> <code>[:SENSe]:SEMAsk:NCONtiguous:REGion?</code>
Example	<code>:SEM:NCON:REG INN</code> <code>:SEM:NCON:REG?</code>
Dependencies	Available only in MSR, 5G NR and LTE-Advanced FDD/TDD Modes <code>OINNer</code> is available only in 5G NR and LTE-Advanced FDD/TDD Modes
Preset	<code>INNer</code>
State Saved	Yes
Range	Inner Outer Outer & Inner

Sweep Type Rules

Selects which set of rules will be used for automatic selection of "Sweep Type" on [page 1071](#) when **Sweep Type** mode is **Auto**.

Rule	Option	Description
Best Dynamic Range	<code>DRANge</code>	The instrument selects either swept or FFT analysis with the primary goal of dynamic range optimization. If the dynamic range of swept and FFT is very close, then it chooses the faster one. In determining the Swept or FFT setting, the auto rules use the following approach: <ul style="list-style-type: none"> - If the RBW > 210 Hz, use swept; for the RBW <= 210 Hz, use FFT - If Sweep Time Mode is Man, the Sweep Type is always Swept for backwards compatibility
Best Speed	<code>SPEed</code>	The instrument selects either FFT or swept analysis based on the fastest instrument speed

Remote Command	<code>[:SENSe]:SEMAsk:SWEEp:TYPE:AUTO:RULEs SPEed DRANge</code> <code>[:SENSe]:SEMAsk:SWEEp:TYPE:AUTO:RULEs?</code>
Dependencies	In modular products such as VXT, the value is always set to Best Dynamic Range, and this control does not appear
Preset	<code>DRANge</code>
State Saved	Saved in instrument state

Spur Avoidance

Because VXT models M9410A/11A/15A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the Center Frequency. **Spur Avoidance** is provided to eliminate this spur, at the

expense of some measurement speed. For **Spur Avoidance**, the instrument uses a software algorithm to remove this spur from the displayed measurement data.

Some measurements allow you to turn off **Spur Avoidance**, but in this measurement it is always enabled. Therefore, the **Spur Avoidance** switch is unavailable (grayed-out) and set to **ON**.

If you press the grayed-out switch, a popup message appears stating:

Always enabled in this measurement. See manual for details

Remote Command	<code>[:SENSe] :SEMAsk :SAVoid [:STATe] ?</code>
Example	<code>:SEM :SAV ?</code> Always returns ON
Dependencies	Only appears in VXT models M9410A/11A/15A
Preset	ON
State Saved	Saved in instrument state
Range	ON

Offset/Limits Config Table

Lets you set up the measurement parameters for offset pairs and to set the power limits for start and stop frequencies of the selected offsets. For example, you can assign the start and stop frequencies, select the resolution bandwidth, and set the sweep time.

Before UE, the LTE-Advanced FDD/TDD standards gave the test specification requirements for BS intra-band contiguous aggregation and intra-band non-contiguous aggregation modes. However, for UE, only the requirements of intra-band contiguous aggregation modes are defined. So, the standards don't support making the measurement in UE intra-band non-contiguous aggregation mode for LTE-Advanced FDD/TDD. As a result, the preset values of Inner Offset/Limits are temporarily set as those of Outer Offset/Limits for UE.

Limits for Inner Offsets

Since inner offsets are defined from the sub-block edges to the gap, limits from two sub-blocks overlap each other. Therefore, the limit used for inner offsets are the cumulative sum of limits from both sub-blocks. Offsets can have different RBWs, which must be compensated when accumulated.

For example, when offset A and D overlap, the limit of offset A is calculated as follows.

$$\text{Cumulated Limit of Offset A} = 10^{\frac{[\text{Offset A Limit in dBm}]}{10}} + \frac{\text{Offset A RBW}}{\text{Offset D RBW}} 10^{\frac{[\text{Offset D Limit in dBm}]}{10}}$$

3 5G NR/5G-A Mode

3.5 Spectrum Emissions Mask (SEM)

The diagram below depicts what inner offset limits look like.

Offset (Bandwidth)

Lets you set up the bandwidth measurement parameters for offset pairs. For example, you can assign the start and stop frequencies, and select the resolution bandwidth.

Offset Freq Define

Lets you select offset frequency definition. Each standard defines each offset frequency from Carrier.

For example, 3GPP2 requires the “Carrier Center to Meas BW Edge” definition. LTE conformance test requires “Carrier Edge to Meas BW Center” and/or “Carrier Edge to Meas BW Edge” definition. The MSR standard requires “RF BW Edge to Meas BW Center” and/or “RF BW Edge to Meas Edge” definition.

“Meas BW Edge” means the edge frequency of resolution bandwidth closer to the carrier that is represented by Meas BW and Res BW settings. Actual center frequency of Meas BW and the limit line have $\frac{1}{2}$ Meas BW offset when the Meas BW Edge is selected.

Note that the outermost (lowermost, uppermost) carrier at each side is determined by which carrier edge frequency is located outermost within the RF BW or each sub-block bandwidth, instead of which carrier center frequency is located outermost.

See also ["Diagrams for Offset Freq Define" on page 1052](#).

Modes other than MSR, LTE-A, 5G NR

Options:

CTOCenter	From carrier center to the center of offset measuring filter*
CTOEdge	From carrier center to the nominal -3 dB point of the offset measuring filter* closer to the carrier
ETOCenter	From Center Frequency - Span of Ref Channel / 2 (for lower offset), Center Frequency + Span of Ref Channel / 2 (for upper offset) of the carrier closest to each offset to the center of offset measuring filter *
ETOEdge	From Center Frequency - Span of Ref Channel / 2 (for lower offset), Center Frequency + Span of Ref Channel / 2 (for upper offset) of the carrier closest to each offset to the nominal -3 dB point of the offset measuring filter * closer to the carrier

*Measuring filter = Meas BW (N) x Res BW

** RF BW = $BW_{\text{channel,CA}}$ which is defined in each 3GPP standard, regardless of "Measure Carrier" for the uppermost and the lowermost carriers being Enabled or Disabled. When **Number of Component Carriers** = 1, RF BW = $BW_{\text{channel}} = 2 \times F_{\text{offset,RAT}}$

Remote Command	<code>[:SENSe] :SEMAsk :OFFSet [1] 2 :TYPE CTOCenter CTOEdge ETOCenter ETOEdge</code> <code>[:SENSe] :SEMAsk :OFFSet [1] 2 :TYPE ?</code>
Example	<code>:SEM :OFFS :TYPE ETOC</code> <code>:SEM :OFFS :TYPE ?</code>
Notes	OFFSet1 is for BTS, 2 for MS. Default is BTS Note that OFFSet2 is supported only in non-SA Modes. In SA Mode, OFFSet1 is used for both BTS and MS When Offset Freq Define is set to CTOEdge or ETOEdge, there is a case where the peak frequency is detected outside the specified offset range. This occurs because when the above Offset Freq Define is selected, the actual starting point of the Offset Start Freq is shifted to the left (for lower offset) or right (for upper offset) by Meas BW/2 compared to the case when Offset Freq Define is set to CTOCenter
Preset	CTOCenter
State Saved	Saved in instrument state
Range	Carrier Center to Meas BW Center Carrier Center to Meas BW Edge Carrier Edge to Meas BW Center Carrier Edge to Meas BW Edge

Mode: MSR, LTEAFDD, LTEATDD

Options:

CTOCenter	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the center of offset measuring filter*
CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the nominal -3 dB point of the offset measuring filter* closer to the carrier
ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of offset measuring filter*
ETOEdge	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the nominal -3 dB point of the offset measuring filter* closer to the carrier
RTOCenter	From either the lower or upper RF BW** edge frequency to the center frequency of offset measuring filter*
RTOEdge	From either the lower or upper RF BW** edge frequency to the nominal -3 dB point of the offset measuring filter* closer to the carrier
RCTOCenter	From the center frequency of RF BW to the center frequency of offset measuring filter*

5G NR Mode only

*Measuring filter = Meas BW (N) x Res BW

** RF BW = $BW_{channel,CA}$ which is defined in each 3GPP standard, regardless of "Measure Carrier" for the uppermost and the lowermost carriers being Enabled or Disabled. When **Number of Component Carriers** = 1, RF BW = $BW_{channel} = 2 \times F_{offset,RAT}$

Diagrams for Offset Freq Define

Details depend on the selected mode.

Diagrams for Modes other than MSR, LTEAFDD/LTEATDD, 5G NR

Note:
 • $MeasBW = N \times RBW$

Diagrams for MSR, LTEAFDD/LTEATDD, 5G NR

Notes:

- $MeasBW = N \times RBW$
- RF BW Edge and Outermost Carrier Edge are not always same. e.g.) 5G NR (3GPP) defines $BW_{channel,CA}$ which calculates $F_{offset,high}$ and $F_{offset,low}$ asymmetrically with SCS shift. (*) For MSR, $F_{offset,high (or,low)} = F_{offset,RAT,high (or,low)}$

Offset Detector

Enables you to control the detector for offsets. The following choices are available:

- AUTO** The detector selected depends on marker functions, trace functions, average type, and the trace averaging function
- NORMa1** The detector determines the peak of the CW-like signals, and it yields alternating maximums and minimums of noise-like signals. This is also referred to as Rosenfell detection
- AVERage** The detector determines the average of the signal within the sweep points. The

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

	averaging method depends upon the Average Type selection (voltage, power or log scales)
POSitive Peak	The detector determines the maximum of the signal within the sweep points
SAMPle	The detector indicates the instantaneous level of the signal at the center of the sweep points represented by each display point
NEGative Peak	The detector determines the minimum of the signal within the sweep points

Remote Command	<code>[:SENSe]:SEMAsk:DETEctor:OFFSet[:FUNction] AVERAge NEGative NORMAl POSitive SAMPle</code> <code>[:SENSe]:SEMAsk:DETEctor:OFFSet[:FUNction]?</code> <code>[:SENSe]:SEMAsk:DETEctor:OFFSet:AUTO ON OFF 1 0</code> <code>[:SENSe]:SEMAsk:DETEctor:OFFSet:AUTO?</code>
Example	<code>:SEM:DET:OFFS AVER</code> <code>:SEM:DET:OFFS?</code> <code>:SEM:DET:OFFS:AUTO OFF</code> <code>:SEM:DET:OFFS:AUTO?</code>
Notes	When you manually select a detector (instead of selecting Auto), that detector is used regardless of other instrument settings Note that this detector setting affects all offsets; there is no per-trace detector
Couplings	See Couplings in "Trace Type" on page 2927
Preset	<code>POSitive</code> <code>ON</code>
State Saved	Saved in instrument state
Range	<code>AVERAge NEGative NORMAl POSitive SAMPle</code>

Offset Average Type (Remote Command Only)

Select trace average type for the offsets.

Remote Command	<code>[:SENSe]:SEMAsk:AVERAge:OFFSet:TYPE RMS LOG</code> <code>[:SENSe]:SEMAsk:AVERAge:OFFSet:TYPE?</code>
Example	<code>:SEM:AVER:OFFS:TYPE LOG</code> <code>:SEM:AVER:OFFS:TYPE?</code>
Preset	<code>RMS</code>
State Saved	Saved in instrument state

Start Freq

Specifies the start frequency for the currently selected offset. Also enables you to toggle that offset between On and Off.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:FREQuency:START <freq>, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:FREQuency:START?</code>														
Example	<code>:SEM:OFFS2:LIST:FREQ:STAR 2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz</code> <code>:SEM:OFFS2:LIST:FREQ:STAR?</code>														
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS Note that OFFSet2 is supported only in non-SA Modes. In SA Mode, OFFSet1 is used for both BTS and MS If the offset is outside of the frequency range, the result spectrum will be invalid														
Couplings	Coupled to Stop Freq. When the start freq goes above the stop freq, the stop freq is automatically adjusted to the start freq plus 100 Hz														
Preset	When the max number of offsets is 6: <table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>SA</td> <td>2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz</td> </tr> <tr> <td>WCDMA</td> <td>2.515 MHz, 2.715 MHz, 3.515 MHz, 4.000 MHz, 8.000 MHz, 12.50 MHz 2.515MHz, 4.000 MHz, 7.500 MHz, 8.500 MHz, 12.5 MHz, 15 MHz</td> </tr> </tbody> </table> <p>When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value</p> <table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>MSR</td> <td>15 kHz, 215kHz, 1.015MHz, 1.5MHz, 10.5MHz, 15.00MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz 15kHz, 215kHz, 1.015MHz, 1.5MHz, 10.5MHz, 15.00MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz</td> </tr> <tr> <td>LTEAFDD, LTEATDD</td> <td>50 kHz, 5.05 MHz, 10.5 MHz, 15.00 MHz, 30 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz 15.00 kHz, 1.5 MHz, 5.5 MHz, 6.5 MHz, 10 MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz</td> </tr> <tr> <td>5G NR</td> <td>50 kHz, 5.05 MHz, 10.5 MHz, 40.00 MHz, 100 MHz 15.00 kHz, 1.5 MHz, 5.5 MHz, 100.50 MHz, 105.00 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz</td> </tr> </tbody> </table>	Mode	Values	SA	2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz	WCDMA	2.515 MHz, 2.715 MHz, 3.515 MHz, 4.000 MHz, 8.000 MHz, 12.50 MHz 2.515MHz, 4.000 MHz, 7.500 MHz, 8.500 MHz, 12.5 MHz, 15 MHz	Mode	Values	MSR	15 kHz, 215kHz, 1.015MHz, 1.5MHz, 10.5MHz, 15.00MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz 15kHz, 215kHz, 1.015MHz, 1.5MHz, 10.5MHz, 15.00MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz	LTEAFDD, LTEATDD	50 kHz, 5.05 MHz, 10.5 MHz, 15.00 MHz, 30 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz 15.00 kHz, 1.5 MHz, 5.5 MHz, 6.5 MHz, 10 MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz	5G NR	50 kHz, 5.05 MHz, 10.5 MHz, 40.00 MHz, 100 MHz 15.00 kHz, 1.5 MHz, 5.5 MHz, 100.50 MHz, 105.00 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz

802.11ax(80 MHz + 80MHz)	0MHz, 0 MHz, 40 MHz, 79 MHz, 159 MHz, 161 MHz, 200 MHz, 240 MHz
802.11af(6MHz)	2.85 MHz, 3.15 MHz, 6 MHz, 9 MHz
802.11af(7MHz)	3.325 MHz, 3.675 MHz, 7 MHz, 10.5 MHz
802.11af(8MHz)	3.8 MHz, 4.2 MHz, 8 MHz, 12 MHz

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Radio Std	Presets
802.11be/bn (320MHz)	159.5 MHz, 160.5 MHz, 320 MHz, 480 MHz, 490 MHz, 490 MHz, 490 MHz, 490 MHz, 490MHz, 490 MHz, 490 MHz, 490 MHz, 490 MHz, 490 MHz

WLAN Mode Auto Function Presets

For X Series:

Radio Std	Presets
802.11b/g(DSSS/CCK/PBCC)	ON, ON, OFF, OFF
802.11a/g/j/p 20MHz (OFDM/DSSS-OFDM)	ON, ON, ON, ON, OFF, OFF
802.11j/p 10MHz	
802.11p 5MHz/802.11n (20MHz/40MHz)	
802.11ac/ax/be/bn (20 MHz/ 40 MHz/ 80 MHz/ 160 MHz)	ON, ON, ON, ON, OFF, OFF
802.11be/bn (320 MHz)	ON, ON, ON, ON, OFF, OFF
802.11ac/ax (80 MHz + 80 MHz)	OFF, ON, ON, ON, ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF
802.ah (1MHz/ 2MHz/ 4MHz/ 8MHz/ 16MHz)	ON, ON, ON, ON, OFF, OFF
802.11af (6 MHz/ 7 MHz/ 8 MHz)	ON, ON, ON, ON, OFF, OFF

For E6630A, E6640A, and M90XA:

Radio Std	Presets
802.11a/g(OFDM/DSSS-OFDM)	ON, ON, ON, OFF, OFF
802.11n(20MHz/40MHz)	
802.11ac/ax/be/bn (20 MHz/ 40 MHz/ 80 MHz/ 160 MHz)	ON, ON, ON, OFF, OFF
802.11be/bn (320 MHz)	ON, ON, ON, OFF, OFF
802.11ac/ax (80 MHz + 80 MHz)	ON, ON, ON, OFF, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11af (6 MHz/ 7 MHz/ 8 MHz)	ON, ON, ON, ON, OFF, OFF

Stop Freq

Specifies the stop frequency for the currently selected offset.

WLAN Mode Presets

Radio Std	Presets
802.11a/g (OFDM/DSSS-OFDM)	11 MHz, 20 MHz, 30 MHz, 40 MHz, 100 MHz, 250 MHz
802.11n (20MHz)	
802.11b/g (DSSS/CCK/PBCC)	22 MHz, 50 MHz, 70 MHz, 90 MHz, 100 MHz, 120 MHz
802.11n (20MHz)	11 MHz, 20 MHz, 30 MHz, 40 MHz, 100 MHz, 200 MHz
802.11n (40MHz)	21 MHz, 40 MHz, 60 MHz, 70 MHz, 100 MHz, 200 MHz, 300 MHz
802.11ac (20MHz)	11 MHz, 20 MHz, 30 MHz, 40 MHz, 50 MHz
802.11ac (40MHz)	21 MHz, 40 MHz, 60 MHz, 70 MHz, 100 MHz
802.11ac (80MHz)	41 MHz, 80 MHz, 120 MHz, 125 MHz, 200 MHz
802.11ac (160MHz)	81 MHz, 160 MHz, 240 MHz, 250 MHz, 400 MHz
802.11ac (80 MHz + 80MHz)	100MHz, 40 MHz, 79 MHz, 81 MHz, 161 MHz, 200 MHz, 240 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz
802.11ah (1MHz)	0.6MHz, 1 MHz, 1.5 MHz, 2.5MHz, 2.5 MHz, 2.5 MHz
802.11ah (2MHz)	1.1 MHz, 2 MHz, 3 MHz, 5MHz, 5 MHz, 5 MHz
802.11ah (4MHz)	2.1 MHz, 4 MHz, 6 MHz, 10 MHz
802.11ah (8MHz)	4.1 MHz, 8 MHz, 12 MHz, 20 MHz
802.11ah (16MHz)	8.1 MHz, 16 MHz, 24 MHz, 40 MHz
802.11j/p (20MHz)	10MHz, 11 MHz, 20 MHz, 30 MHz, 50MHz, 50 MHz, 50 MHz
802.11j/p (10MHz)	5MHz, 5.5 MHz, 10 MHz, 15 MHz, 25MHz, 250MHz, 250MHz, 250MHz, 250 MHz, 250MHz, 250MHz, 250MHz, 250MHz, 250MHz
802.11p (5MHz)	2.5MHz, 2.75MHz, 5 MHz, 7.5 MHz, 12.5MHz, 250MHz, 250MHz, 250MHz, 250 MHz, 250MHz, 250MHz, 250MHz, 250MHz, 250MHz
802.11ax/be/bn (20MHz)	10.5 MHz, 20 MHz, 30 MHz, 40 MHz, 50 MHz
802.11ax/be/bn	20.5 MHz, 40 MHz, 60 MHz, 70 MHz, 100 MHz

Radio Std	Presets
(40MHz)	MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz
802.11ax/be/bn (80MHz)	40.5 MHz, 80 MHz, 120 MHz, 125 MHz, 200 MHz
802.11ax/be/bn (160MHz)	80.5 MHz, 160 MHz, 240 MHz, 250 MHz, 400 MHz
802.11ax (80 MHz + 80MHz)	100Hz, 40 MHz, 79 MHz, 81 MHz, 161 MHz, 200 MHz, 240 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz
802.11af (6MHz)	3.15MHz, 6 MHz, 9 MHz, 15MHz, 15 MHz, 15 MHz
802.11af (7MHz)	3.675 MHz, 7 MHz, 10.5 MHz, 17.5MHz, 17.5 MHz, 17.5 MHz
802.11af (8MHz)	4.2 MHz, 8 MHz, 12 MHz, 20 MHz
802.11be/bn (320MHz)	160.5 MHz, 320 MHz, 480 MHz, 490 MHz, 800 MHz

Res BW

Specifies which Resolution BW filter to use when measuring the currently selected offset.

Offset Res BW Mode allows the instrument to determine the optimum Resolution BW filter to use when measuring the currently selected offset.. When changing the Meas BW parameter, if the Res BW needs to be changed to adhere to the rule:

$(N \times \text{Res BW}) \leq (\text{Stop freq of the offset} - \text{Start freq of the offset})$,

where N is the multiplier, this setting will automatically be changed to manual.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	<code>[:SENSE] :SEMAsk:OFFSet[1] 2 [:OUTer] :LIST:BAWdwidth [:RESolution] <bandwidth>, ...</code> <code>[:SENSE] :SEMAsk:OFFSet[1] 2 [:OUTer] :LIST:BAWdwidth [:RESolution] ?</code>
Example	<code>:SEM:OFFS2:LIST:BAWd 30.0 kHz, 30.0 kHz, 30.0 kHz, 1.00 MHz, 1.00 MHz, 1.00 MHz</code> <code>:SEM:OFFS2:LIST:BAWd?</code>
Notes	Comma-separated list of values <code>OFFSet1</code> is for BTS, 2 for MS Note that <code>OFFSet2</code> is supported only in non-SA Modes. In SA Mode, <code>OFFSet1</code> is used for both BTS and MS

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Couplings	Coupled to Start and Stop offset and Meas BW multiplier. This parameter must adhere to the rule $(N \times \text{Res BW}) \leq (\text{Stop freq of the offset} - \text{Start freq of the offset})$, where N is the multiplier. If the multiplier is changed, the Res BW will change to ensure this. When set manually, Res BW Coupling is set to manual																
Preset	When the max number of offsets is 6: <table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>SA</td> <td>30.0 kHz, 30.0 kHz, 30.0 kHz, 1.00 MHz, 1.00 MHz, 1.00 MHz</td> </tr> <tr> <td>WCDMA</td> <td>30.00 kHz, 30.00 kHz, 30.00 kHz, 100.00 kHz, 1.000 MHz, 1.00 MHz 30.00 kHz, 1.000 MHz, 1.000 MHz, 1.000 MHz, 1.000 MHz, 1.00 MHz</td> </tr> </tbody> </table> <p>When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value</p> <table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>LTEAFDD, LTEATDD, 5G NR</td> <td>51 kHz, 100 kHz, 1.0 MHz, 1.0 MHz 15.0 kHz, 510 kHz, 1.0 MHz, 1.0 MHz</td> </tr> <tr> <td>MSR</td> <td>30kHz, 30kHz, 30kHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz 30kHz, 30kHz, 30kHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz</td> </tr> </tbody> </table> <table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>WLAN</td> <td>100 kHz, 100 kHz</td> </tr> </tbody> </table>	Mode	Values	SA	30.0 kHz, 30.0 kHz, 30.0 kHz, 1.00 MHz, 1.00 MHz, 1.00 MHz	WCDMA	30.00 kHz, 30.00 kHz, 30.00 kHz, 100.00 kHz, 1.000 MHz, 1.00 MHz 30.00 kHz, 1.000 MHz, 1.000 MHz, 1.000 MHz, 1.000 MHz, 1.00 MHz	Mode	Values	LTEAFDD, LTEATDD, 5G NR	51 kHz, 100 kHz, 1.0 MHz, 1.0 MHz 15.0 kHz, 510 kHz, 1.0 MHz, 1.0 MHz	MSR	30kHz, 30kHz, 30kHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz 30kHz, 30kHz, 30kHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz	Mode	Values	WLAN	100 kHz, 100 kHz

Meas BW

Allows you to specify a multiplier of Res BW for the measurement integration bandwidth.

Meas BW is multiplier integer number. It shows a ratio between Integration BW and Resolution BW of the measurement result.

$$\text{Integ BW} = \text{Meas BW} * \text{Resolution BW}$$

Integration BW is desired resolution bandwidth and Resolution BW is actual bandwidth for sweep. Measurement sweeps with Resolution BW and Meas BW compensates sweep resolution bandwidth to Integration BW.

If you set this value greater than 1, you can set Resolution BW narrower to avoid carrier power leakage effect to the offset power integration.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:BANDwidth:IMULti <integer>, ... [:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:BANDwidth:IMULti?
Example	:SEM:OFFS2:LIST:BAND:IMUL 1,1,1,1,1,1 :SEM:OFFS2:LIST:BAND:IMUL?
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS Note that OFFSet2 is supported only in non-SA Modes. In SA Mode, OFFSet1 is used for both BTS and MS
Preset	When the max number of offsets is 6:

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Mode	Values
SA	1, 1, 1, 1, 1, 1
WCDMA	1, 1, 1, 10, 1, 1 1, 1, 1, 1, 1

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

Offset (Sweep)

Accesses a menu that enables you to set up the sweep measurement parameters for offset pairs.

Offset Freq Define

Same as "Offset Freq Define" on page 2046 under Offset (Bandwidth).

Offset Detector

Same as "Offset Detector" on page 1054 under Offset (Bandwidth).

Start Freq

Same as "Start Freq" on page 2062 under Offset (Bandwidth).

Stop Freq

Same as "Stop Freq" on page 2066 under Offset (Bandwidth).

Sweep Time

Specifies the **Sweep Time** for the currently selected offset and lets you toggle the Sweep Time mode between Auto and Man.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

NOTE

On non-sweeping hardware, this column is grayed out. The value shown on this column is an estimate. It is the turnaround time to complete the measurement of the entire offset span, which is the sum of signal acquisition time, FFT time, and other overhead time. If you need to specify the same "Sweep Time" as you would for sweeping hardware, send `[:SENSe]:SEMAsk:OFFSet[1]|2[:OUTer]:LIST:SWEp:TIME <time>`. The measurement emulates the "Sweep Time" effect, but this emulation is not straightforward, and therefore the behavior is not specified. Instead, we recommend using **Minimum Acquisition Time**, which provides better control.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:SWEp:TIME <time>, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:SWEp:TIME?</code>
Example	<code>:SEM:OFFS2:LIST:SWE:TIME 1.0 ms, 3.4 ms, 2.08 ms, 1.0 ms, 1.0 ms, 1.0 ms</code> <code>:SEM:OFFS2:LIST:SWE:TIME?</code>

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS Note that OFFSet2 is supported only in non-SA Modes. In SA Mode, OFFSet1 is used for both BTS and MS
Dependencies	On non-sweeping hardware, this column is grayed out and the Auto/Man checkbox is invisible. The read-only value shows the estimated sweep time In those instruments, " Minimum Acquisition Time " on page 1070 is available
Couplings	When you manually set a value when in the Auto state, the state automatically changes to Man
Preset	Automatically calculated
State Saved	Saved in instrument state
Min	Other than non-sweeping hardware Depends on Sweep Type: <ul style="list-style-type: none"> - Sweep Type "Swept": 1 ms - Sweep Type "FFT": 100 ns Non-sweeping hardware: N/A

Range	Auto Man
Backwards Compatibility SCPI	[:SENSe] :SEMAsk:OFFSet[1] 2 :LIST:SWEep[:TIME] :AUTO

Minimum Acquisition Time

Available on non-sweeping hardware.

Specifies the minimum acquisition time for each “chunk” of the measurement result. The instrument automatically divides Span into multiple chunks if needed. Therefore, the total signal acquisition time for the entire offset span is $\sim(\sim\text{Minimum Acquisition Time}) * (\text{The number of chunks})$.

When in Auto, this parameter’s value is determined by other parameters, such as Offset Start, Offset Stop, RBW and VBW.

You can manually increase this parameter value from this Auto value.

If increased, the instrument acquires signal for the specified time duration for each chunk. It performs additional FFTs, and averages or peak-holds the FFT results for a chunk, depending on Detector settings.

Note that the actual acquisition time for each chunk may exceed the Minimum Acquisition Time value, in order to satisfy FFT time required by other parameters, and to perform an integer number of FFTs.

Remote Command	[:SENSe] :SEMAsk:OFFSet[1] 2 [:OUTer] :LIST:SWEep:ACQuisition:TIME <time>, ... [:SENSe] :SEMAsk:OFFSet[1] 2 [:OUTer] :LIST:SWEep:ACQuisition:TIME?
Example	:SEM:OFFS2:LIST:SWE:ACQ:TIME 1.0 ms, 3.4 ms, 2.08 ms, 1.0 ms, 1.0 ms, 1.0 ms :SEM:OFFS2:LIST:SWE:ACQ:TIME?
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS Note that OFFSet2 is supported only in non-SA Modes. In SA Mode, OFFSet1 is used for both BTS and MS
Dependencies	Available only on non-sweeping hardware
Couplings	Coupled to Offset Start Freq, Offset Stop Freq, RBW, and VBW when in the Auto state When you manually set a value when in the Auto state, the state automatically changes to Man
Preset	Automatically calculated

Min	100 ns
Max	4000 s

Auto Function

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:SWEep:ACQuisition:TIME:AUTO ON OFF 1 0, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:SWEep:ACQuisition:TIME:AUTO?</code>
Example	<code>:SEM:OFFS2:LIST:SWE:ACQ:TIME:AUTO ON, ON, ON, ON, OFF, OFF</code> <code>:SEM:OFFS2:LIST:SWE:ACQ:TIME:AUTO?</code>
Preset	ON

Sweep Time Annotation (Remote Query Only)

Returns the Sweep Time Annotation value. Available only on non-sweeping hardware.

The value returned is the estimated turnaround time of each acquisition, in seconds. The turnaround time is the sum of the signal acquisition time, FFT time, and other overhead time, to complete the entire offset span of each measurement cycle.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:SWEep:ETIME?</code>
Example	<code>:SEM:OFFS2:LIST:SWE:ETIM?</code>
Dependencies	Available only on non-sweeping hardware
Preset	Automatically calculated

Sweep Type

Specifies the **Sweep Type** for the currently selected offset, and enables you to toggle the **Sweep Type** mode between **Auto** and **Man**.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

How to define Sweep Time and Sweep Type:

Sweep Type mode	Behavior
Auto	Sweep Type is automatically selected according to " Sweep Type Rules " on page 1047
	Sweep Time is automatically calculated according to the selected Sweep Type
Man	Sweep Type is user-selected
–	

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:SWEep:TYPE SWEep FFT, ...</code>
----------------	--

	<code>[:SENSe]:SEMask:OFFSet[1] 2[:OUTer]:LIST:SWEep:TYPE?</code>
Example	<code>:SEM:OFFS2:LIST:SWE:TYPE FFT,FFT,SWE</code> <code>:SEM:OFFS2:LIST:SWE:TYPE?</code>
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS Note that OFFSet2 is supported only in non-SA Modes. In SA Mode, OFFSet1 is used for both BTS and MS
Dependencies	Not available in modular products, such as VXT
Couplings	When Sweep Type is set manually, Sweep Type mode is set to OFF (Manual)
Preset	Automatically calculated
State Saved	Saved in instrument state

Range	<code>Auto Man</code>

Offset Side

Specifies which offset side to measure.

You can turn off (not use) specific offsets with `[:SENSe]:SEMask:OFFSet[n] [:OUTer]:LIST:STATe`.

BOTH Both of the negative (lower) and positive (upper) sidebands

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

NEGative Negative (lower) sideband only
POSitive Positive (upper) sideband only

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, and 12 values for other Modes.

The figure below shows the relation between the negative/positive offset side setups and the upper/lower results in the MSR, LTE-Advanced FDD/TDD and 5G NR Modes.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:SIDE BOTH NEGative POSitive, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:SIDE?</code>
Example	<code>:SEM:OFFS:LIST:SIDE BOTH, NEG, NEG, POS, POS, POS</code> <code>:SEM:OFFS:LIST:SIDE?</code>
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS Note that OFFSet2 is supported only in non-SA Modes. In SA Mode, OFFSet1 is used for both BTS and MS
Preset	Modes LTEAFDD,LTEATDD, 5G NR, MSR: <code>BOTH, BOTH, BOTH BOTH, BOTH</code> Mode WLAN: <code>BOTH, BOTH, BOTH</code> All Other Modes: When the max number of offsets is 6: <code>BOTH, BOTH, BOTH, BOTH, BOTH, BOTH</code> When the max number of offsets is 12: <code>BOTH, BOTH, BOTH</code>

State Saved	Saved in instrument state
Range	<code>BOTH NEGative POSitive</code>

Limits

Lets you set the power limits for start and stop frequencies of the selected offsets.

Start Freq

Same as "Start Freq" on page 2062 under **Offset (Bandwidth)**.

Stop Freq

Same as "Stop Freq" on page 2066 under **Offset (Bandwidth)**.

Abs Start

Sets the absolute power level limit at the start frequency for the selected offset. The absolute power level limit ranges from -200 to +50 dBm.

The fail condition for each offset channel is set remotely by `CALCulate:SEMAsk:OFFSet[n][:OUTer]:LIST:TEST`.

You can turn off (not use) specific offset channels remotely with `[:SENSe]:SEMAsk:OFFSet[n][:OUTer]:LIST:STATe`.

The query returns values currently set to the absolute power test limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	<code>:CALCulate:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:START:ABSolute <ampl>, ...</code> <code>:CALCulate:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:START:ABSolute?</code>
Example	<code>:CALC:SEM:OFFS2:LIST:STAR:ABS -12.50 dBm, -12.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm</code> <code>:CALC:SEM:OFFS2:LIST:STAR:ABS?</code>
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS Note that OFFSet2 is supported only in non-SA Modes. In SA Mode, OFFSet1 is used for both BTS and MS
Preset	When the max number of offsets is 6:

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Mode	Values
SA	-14.00 dBm , -14.00 dBm , -26.00 dBm , -13.00 dBm , -13.00 dBm, -13.00 dBm
WCDMA	-12.50 dBm, -12.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm -69.6 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm
LTE, LTE-TDD	-5.5 dBm, -12.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm -13.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

Mode	Values
LTE-A FDD, LTE-A TDD	-5.5 dBm, -12.5 dBm, -15.0 dBm -13.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm
5G NR	-5.5 dBm, -12.5 dBm, -15.0 dBm -22.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm
MSR	-12.5 dBm, -12.5 dBm, -24.5 dBm, -11.5 dBm, -15.0 dBm -12.5 dBm, -12.5 dBm, -24.5 dBm, -11.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm

WLAN Mode: See the table of "WLAN Mode Presets" on page 1075 below

WLAN Mode Presets

Radio Std	Presets
802.11b/g(DSSS/CCK/PBCC)	-63.00 dBm, -63.00 dBm
802.11a/g(OFDM/DSSS-OFDM)	-63.00 dBm, -63.00 dBm
802.11n/ac/ax/be/bn (20MHz)	-63.00 dBm, -63.00 dBm, -63.00 dBm, -63.00 dBm
802.11n/ac/ax/be/bn (40MHz)	-66.00 dBm, -66.00 dBm

Abs Stop

Sets the absolute power level limit at the stop frequency for the selected offset. The absolute power level limit ranges from -200 to +50 dBm. You can also toggle this function between **Couple** (**COUPle** = **ON**) and **Manual** (**COUPle** = **OFF**). If set to **Couple**, the **Abs Stop** power level limit is coupled to **Abs Start** to result in a flat limit line. If set to **Man**, Abs Start and Abs Stop take different values, resulting in a sloped limit line.

The query returns values currently set to the offset stop absolute power limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Fail Mask

Selects one of the logics for fail conditions between the measurement results and the test limits:

- **ABSolute** and **RELative** both check the results against the respective limit
- **OR** checks against both limits, failing if either of the limits is broken
- **AND** only displays a fail if both of the limits are broken

The absolute or relative power limit value for each offset channel can be set remotely with the following commands.

- `CALCulate:SEMask:OFFSet[n][:OUTer]:LIST:START:ABSolute`
- `CALCulate:SEMask:OFFSet[n][:OUTer]:LIST:STOP:ABSolute`
- `CALCulate:SEMask:OFFSet[n][:OUTer]:LIST:START:RCARrier`
- `CALCulate:SEMask:OFFSet[n][:OUTer]:LIST:STOP:RCARrier`

You can turn off (not use) specific offset channels remotely with `[:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:STATe`.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	<code>:CALCulate:SEMask:OFFSet[1] 2[:OUTer]:LIST:TEST ABSolute AND OR RELative, ...</code> <code>:CALCulate:SEMask:OFFSet[1] 2[:OUTer]:LIST:TEST?</code>

Show Abs2 Limit

Shows or hides Abs2 limit parameters.

Remote Command	<code>:DISPlay:SEMask:OFFSet:SABSolute ON OFF 1 0</code> <code>:DISPlay:SEMask:OFFSet:SABSolute?</code>
Example	<code>:DISP:SEM:OFFS:SABS 1</code> <code>:DISP:SEM:OFFS:SABS?</code>
Preset	0
State Saved	Yes
Range	ON OFF

Abs2 Start

Sets the 2nd absolute power level limit at the start frequency for the selected offset, ranging from -200 to +50 dBm.

The fail condition for each offset channel is set remotely using:

`CALCulate:SEMask:OFFSet[n][:OUTer]:LIST:TEST:SABSolute`

You can turn off (not use) specific offset channels remotely using:

`[:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:STATE`

The query returns values currently set to the 2nd absolute power test limits.

When sending the command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	<code>:CALCulate:SEMask:OFFSet[1] 2[:OUTer]:LIST:START:SABSolute <ampl>, ...</code> <code>:CALCulate:SEMask:OFFSet[1] 2[:OUTer]:LIST:START:SABSolute?</code>
Example	<code>:CALC:SEM:OFFS:LIST:STAR:SABS -12.50 dBm, -12.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm</code> <code>:CALC:SEM:OFFS:LIST:STAR:SABS?</code>
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS Note that OFFSet2 is supported only in non-SA Modes. In SA Mode, OFFSet1 is used for both BTS and MS
Preset	For WLAN Mode: 0 dBm, 0 dBm

	For other Modes: 0 dBm, 0 dBm 0 dBm, 0 dBm
State Saved	Saved in instrument state
Min	-200 dBm
Max	50 dBm
Backwards Compatibility SCPI	<code>[:SENSe] :SEMAsk:OFFSet[1] 2[:OUTer] :LIST:START:SABSolute</code>

Abs2 Stop

Sets the 2nd absolute power level limit at the stop frequency for the selected offset, ranging from -200 to +50 dBm. You can also toggle this function between **Couple** and **Manual**. If **Couple = ON**, the **Abs2 Stop** power level limit is coupled to "**Abs2 Start**" on page 2082, resulting in a flat limit line. If set to **Man (Couple = OFF)**, **Abs2 Start** and **Abs2 Stop** take different values, resulting in a sloped limit line.

The query returns values currently set to the offset stop absolute2 power limits.

When sending the command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	<code>:CALCulate:SEMAsk:OFFSet[1] 2[:OUTer] :LIST:STOP:SABSolute <ampl>, ...</code> <code>:CALCulate:SEMAsk:OFFSet[1] 2[:OUTer] :LIST:STOP:SABSolute?</code>
Example	<code>:CALC:SEM:OFFS:LIST:STOP:SABS -12.50 dBm, -24.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm</code> <code>:CALC:SEM:OFFS:LIST:STOP:SABS?</code>
Notes	Comma separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS Note that OFFSet2 is supported only in non-SA Modes. In SA Mode, OFFSet1 is used for both BTS and MS
Couplings	Coupled to Abs2 Start if Auto is selected, that is, the Stop value is equal to the Start value
Preset	For WLAN Mode: 0 dBm, 0 dBm For other Modes: 0 dBm, 0 dBm 0 dBm, 0 dBm
State Saved	Saved in instrument state

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Min	-200 dBm
Max	50 dBm
Backwards Compatibility SCPI	<code>[:SENSe]:SEMask:OFFSet[1] 2[:OUTer]:LIST:STOP:SABSolute</code>
Auto Function	
Remote Command	<code>:CALCulate:SEMask:OFFSet[1] 2[:OUTer]:LIST:STOP:SABSolute:COUPle ON OFF 1 0, ...</code> <code>:CALCulate:SEMask:OFFSet[1] 2[:OUTer]:LIST:STOP:SABSolute:COUPle?</code>
Example	<code>:CALC:SEM:OFFS:LIST:STOP:SABS:COUP ON, ON, ON, ON, ON, ON, ON</code> <code>:CALC:SEM:OFFS:LIST:STOP:SABS:COUP?</code>
Preset	For WLAN Mode: <code>ON, ON, ON</code> For other Modes: <code>ON, ON, ON ON, ON</code>
State Saved	Saved in instrument state
Range	<code>Auto Man</code>
Backwards Compatibility SCPI	<code>[:SENSe]:SEMask:OFFSet[1] 2[:OUTer]:LIST:STOP:SABSolute:COUPle</code>

Fail Mask2

Selects the logic operation for fail conditions between the measurement results and the test limits:

(Primary Fail Mask selection) OR Abs2	OR	Checks against both Primary and Abs2 limits. The test fails if either of the limits is broken
(Primary Fail Mask selection) AND Abs2	AND	Checks against both Primary and Abs2 limits. The test fails if both of the limits are broken
Abs2 Disabled	OFF	Fail Mask2 is disabled

Note that the Primary Fail Mask selection is set by ["Fail Mask" on page 2080](#).

Examples:

- when Fail Mask is Abs **AND** Rel and Fail Mask2 is **OR** Abs2, “(Abs AND Rel) OR Abs2” is displayed in the column
- when Fail Mask is Absolute and Fail Mask2 is And Abs2, “(Absolute) AND Abs2” is displayed in the column

You can turn off (not use) specific offset channels remotely using:

`[:SENSe] :SEMAsk :OFFSet [n] [:OUTer] :LIST :STATE`

When sending the command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	<code>:CALCulate:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:TEST:SABSolute AND OR OFF, ...</code> <code>:CALCulate:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:TEST:SABSolute?</code>

Range	OR Abs2 AND Abs2 Abs2 Disabled
Backwards Compatibility SCPI	<code>[:SENSe] :SEMAsk :OFFSet [1] [2 [:OUTer] :LIST :TEST :SABSolute</code>

Inner Offset (BW)

Accesses a menu that enables you to set up the bandwidth measurement parameters for inner offset pairs.

Offset Freq Define

Enables you to select offset frequency definition. Each standard defines each offset frequency from Carrier.

For example, 3GPP2 requires the “Carrier Center to Meas BW Edge” definition, and LTE conformance test requires “Carrier Edge to Meas BW Center” and/or “Carrier Edge to Meas BW Edge” definition. MSR standard requires “RF BW Edge to Meas BW Center” and/or “RF BW Edge to Meas Edge” definition.

“Meas BW Edge” means the edge frequency of resolution bandwidth closer to the carrier that is represented by Meas BW and Res BW settings. Actual center

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

frequency of Meas BW and the limit line have ½ Meas BW offset when the Meas BW Edge is selected.

Option	SCPI	Definition
Carrier Center to Meas BW Center	CTOCenter	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the center of offset measuring filter*
Carrier Center to Meas BW Edge	CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the nominal -3 dB point of the offset measuring filter* closer to the carrier
Carrier Edge to Meas BW Center	ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of offset measuring filter*
Carrier Edge to Meas BW Edge	ETOEdge	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the nominal -3 dB point of the offset measuring filter* closer to the carrier
Sub-block Edge to Meas BW Center	STOCenter	From either the lower or upper sub-block edge frequency to the center frequency of offset measuring filter*
Sub-block Edge to Meas BW Edge	STOEdge	From either the lower or upper sub-block edge frequency to the nominal -3 dB point of the offset measuring filter* closer to the carrier
Sub-block Center to Meas BW Center	SCTOCenter	From the center frequency of sub-block to the center frequency of offset measuring filter*

5G NR Mode only

*Measuring filter = Meas BW (N) x Res BW

** sub-block (bandwidth) = $BW_{channel,block}$ which is defined in each 3GPP standard, regardless of "Measure Carrier" for the uppermost and the lowermost carriers being Enabled or Disabled. When the **Number of Component Carriers** within each sub-block = 1, sub-block (bandwidth) = $BW_{channel} = 2 \times F_{offset,RAT}$.

See "Diagrams for Offset Freq Define" on page 1093.

Mode: MSR, LTEAFDD, LTEATDD

Diagrams for Offset Freq Define

Notes:

- $MeasBW = N \times RBW$
- Sub-block Edge and Outermost Carrier Edge in the Sub-block are not always same. e.g.) 5G NR (3GPP) defines $BW_{channel,block}$ which calculates $F_{offset,high}$ and $F_{offset,low}$ asymmetrically with SCS shift.
 (*) For MSR, $F_{offset,high (or,low)} = F_{offset,RAT,high (or,low)}$

Offset Detector

See "Offset Detector" on page 1054.

Cumulate Mask

Selects whether inner offset limit masks are cumulated or not.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:CMASk[:STATe] ON OFF 0 1</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:CMASk[:STATe]?</code>

Preset	<code>1 0</code>
State Saved	Yes
Range	<code>ON OFF</code>

Cumulate Mask Stop Frequency

Specifies stop frequency of summing limit masks. For outside of the stop frequency, the limit masks are not cumulated.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:CMASk:FREQuency:STOP <freq></code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:CMASk:FREQuency:STOP?</code>
Example	<code>:SEM:OFFS:INN:CMAS:FREQ:STOP 500E6</code> <code>:SEM:OFFS:INN:CMAS:FREQ:STOP?</code>
Notes	OFFSet1 is for BTS, 2 for MS. Default is BTS
Dependencies	Valid only when " Cumulate Mask " on page 2088 is ON
Preset	10.5 MHz
State Saved	Yes
Min/Max	0 Hz / 10 GHz

Start Freq

Specifies the start frequency for the currently selected offset. Also, enables you to toggle that offset between On and Off. When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:FREQuency:STARt <freq>, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:FREQuency:STARt?</code>
Example	<code>:SEM:OFFS2:INN:LIST:FREQ:STAR 2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz</code> <code>:SEM:OFFS2:INN:LIST:FREQ:STAR?</code>
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

	If the offset is outside the frequency range, the result spectrum will be invalid	
Couplings	Coupled to "Stop Freq" on page 2096. If Start Freq exceeds Stop Freq, Stop Freq is automatically adjusted to (Start Freq + 100 Hz)	
Preset	Mode	Values
	MSR	15 kHz, 215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 15.00 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz 15 kHz, 215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 15.00 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz
	5G NR	50 kHz, 5.05 MHz, 10.5 MHz, 40.00 MHz, 100 MHz 15.00 kHz, 1.5 MHz, 5.5 MHz, 100.50 MHz, 105.00 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz
	LTEAFDD, LTEATDD	50 kHz, 5.05 MHz, 10.5 MHz, 15.00 MHz, 30 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz 15.00 kHz, 1.5 MHz, 5.5 MHz, 6.5 MHz, 10 MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz
State Saved	Saved in instrument state	
Min/Max	0 Hz / Depends on instrument maximum frequency. Always Offset Stop Freq -100 Hz	
	Auto Function	
Remote Command	[:SENSe]:SEMAsk:OFFSet[1] 2:INNER:LIST:STATe ON OFF 1 0, ... [:SENSe]:SEMAsk:OFFSet[1] 2:INNER:LIST:STATe?	
Example	:SEM:OFFS:INN:LIST:STAT ON, ON, ON, OFF, OFF, OFF :SEM:OFFS:INN:LIST:STAT?	
Preset	Mode	Values
	MSR	ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF
	5GNR	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF

State Saved	Saved in instrument state	
Range	ON OFF	

Stop Freq

Specifies the stop frequency for the currently selected offset.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6 you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:FREQuency:STOP <freq>, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:FREQuency:STOP?</code>								
Example	<code>:SEM:OFFS:INN:LIST:FREQ:STOP 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz, 15.0 MHz</code> <code>:SEM:OFFS:INN:LIST:FREQ:STOP?</code>								
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS If the offset is outside the frequency range, the result spectrum will be invalid								
Couplings	Coupled to " Start Freq " on page 2095. If Stop Freq is lower than Start Freq , Start Freq is automatically adjusted to (Stop Freq - 100 Hz)								
Preset	<table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>MSR</td> <td>215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz</td> </tr> <tr> <td>5G NR</td> <td>5.05 MHz, 10.05 MHz, 40 MHz, 100 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz 985.0 kHz, 4.50 MHz, 99.500 MHz, 104.5 MHz, 500 MHz</td> </tr> <tr> <td>LTEAFDD, LTEATDD</td> <td>5.05 MHz, 10.05 MHz, 15 MHz, 30 MHz, 40 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz 985.0 kHz, 4.50 MHz, 5.5001 MHz, 9.50 MHz, 20 MHz, 40 MHz</td> </tr> </tbody> </table>	Mode	Values	MSR	215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz	5G NR	5.05 MHz, 10.05 MHz, 40 MHz, 100 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz 985.0 kHz, 4.50 MHz, 99.500 MHz, 104.5 MHz, 500 MHz	LTEAFDD, LTEATDD	5.05 MHz, 10.05 MHz, 15 MHz, 30 MHz, 40 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz 985.0 kHz, 4.50 MHz, 5.5001 MHz, 9.50 MHz, 20 MHz, 40 MHz
Mode	Values								
MSR	215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz								
5G NR	5.05 MHz, 10.05 MHz, 40 MHz, 100 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz 985.0 kHz, 4.50 MHz, 99.500 MHz, 104.5 MHz, 500 MHz								
LTEAFDD, LTEATDD	5.05 MHz, 10.05 MHz, 15 MHz, 30 MHz, 40 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz 985.0 kHz, 4.50 MHz, 5.5001 MHz, 9.50 MHz, 20 MHz, 40 MHz								
State Saved	Saved in instrument state								
Min/Max	100 Hz / Depends on instrument maximum frequency. Same as the Max Span on Swept SA Measurement								

Res BW

Specifies which Resolution BW filter to use when measuring the currently selected offset.

Offset Res BW Mode allows the instrument to determine the optimum Resolution BW filter to use when measuring the currently selected offset. using front panel and all the offsets using SCPI. When changing the Meas BW parameter, if the Res BW needs to be changed to adhere to the rule:

$$(N \times \text{Res BW}) \leq (\text{Stop freq of the offset} - \text{Start freq of the offset}),$$

where N is the multiplier, this setting will automatically be changed to manual.

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>[[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:BANdwidth[:RESolution]<bandwidth>, ...</code> <code>[[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:BANdwidth[:RESolution]?</code>						
Example	<code>:SEM:OFFS2:INN:LIST:BA ND 30.0 kHz, 30.0 kHz, 30.0 kHz, 1.00 MHz,1.00 MHz, 1.00 MHz</code> <code>:SEM:OFFS2:INN:LIST:BA ND?</code>						
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS						
Couplings	Coupled to Start and Stop offset and " Meas BW " on page 2093 multiplier. This parameter must adhere to the rule: $(N \times \text{Res BW}) \leq (\text{Stop freq of the offset} - \text{Start freq of the offset})$, where N is the multiplier If the multiplier is changed, the Res BW changes to ensure conformance to the rule. When set manually, Res BW Coupling is set to manual						
Preset	<table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>MSR</td> <td>30 kHz, 30 kHz, 30 kHz, 1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz 30 kHz, 30 kHz, 30 kHz, 1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz,1.0 MHz</td> </tr> <tr> <td>LTEAFDD, LTEATDD, 5G NR</td> <td>51 kHz, 100 kHz, 1.0 MHz, 1.0 MHz,1.0 MHz, 1.0 MHz,1.0 MHz, 1.0 MHz,1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz 15.0 kHz, 510 kHz,1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz</td> </tr> </tbody> </table>	Mode	Values	MSR	30 kHz, 30 kHz, 30 kHz, 1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz 30 kHz, 30 kHz, 30 kHz, 1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz,1.0 MHz	LTEAFDD, LTEATDD, 5G NR	51 kHz, 100 kHz, 1.0 MHz, 1.0 MHz,1.0 MHz, 1.0 MHz,1.0 MHz, 1.0 MHz,1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz 15.0 kHz, 510 kHz,1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz

State Saved	Saved in instrument state						
Min	1 Hz						
Max	When Option FS1 or FS2 is installed:10 MHz Otherwise: 8 MHz Auto Function						
Remote Command	<code>[[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:BA Ndwidth[:RESolution]:AUTO OFF ON 1 0, ...</code> <code>[[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:BA Ndwidth[:RESolution]:AUTO?</code>						
Example	<code>:SEM:OFFS:INN:LIST:BA ND:AUTO 1,1,1,1,1,1</code> <code>:SEM:OFFS:INN:LIST:BA ND:AUTO?</code>						
Couplings	The resolution bandwidth is coupled to the offset width, determined by " Start Freq " on page 2095 and " Stop Freq " on page 2096						
Preset	<code>OFF, OFF, OFF OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF</code>						
State Saved	Saved in instrument state						
Range	<code>Auto Man</code>						

Meas BW

Allows you to specify a multiplier of Res BW for the measurement integration bandwidth.

Meas BW is multiplier integer, which defines a ratio between Integration BW and **Res BW** of the measurement result:

$$\text{Integration BW} = \text{Meas BW} * \text{"Res BW" on page 2091}$$

Integration BW is the desired resolution bandwidth, and **Res BW** is the actual bandwidth for sweep. Measurement sweeps with **Res BW**, and **Meas BW** compensates sweep resolution bandwidth to Integration BW.

If you set this parameter greater than 1, you can set **Res BW** narrower to avoid carrier power leakage effect to the offset power integration.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:BANdwidth:IMULti <integer>, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:BANdwidth:IMULti?</code>						
Example	<code>:SEM:OFFS2:INN:LIST:BA ND:IMUL 1,1,1,1,1,1</code> <code>:SEM:OFFS2:INN:LIST:BA ND:IMUL ?</code>						
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS						
Couplings	This parameter must adhere to the rule: (N x Res BW) <= (Stop freq of the offset - Start freq of the offset), where N is the multiplier If Res BW is changed, the multiplier changes to conform to the rule						
Preset	<table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>MSR</td> <td>1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1</td> </tr> <tr> <td>LTEAFDD, LTEATDD, 5G NR</td> <td>2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1</td> </tr> </tbody> </table>	Mode	Values	MSR	1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1	LTEAFDD, LTEATDD, 5G NR	2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1

MSR	1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1						
LTEAFDD, LTEATDD, 5G NR	2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1						
State Saved	Yes						
Min/Max	1/1000						

Video BW

Changes the instrument post-detection filter.

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNER:LIST:BANDwidth:VIDeo <freq>, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNER:LIST:BANDwidth:VIDeo?</code>
Example	<code>:SEM:OFFS2:INN:LIST:BAND:VID 3.00 kHz, 3.00 kHz, 3.00 kHz, 100.0 kHz,100.0 kHz, 100.0 kHz</code> <code>:SEM:OFFS2:INN:LIST:BAND:VID?</code>
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS
Preset	Automatically Calculated
State Saved	Saved in instrument state
Min/Max	1 Hz / 50 MHz Auto Function
Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNER:LIST:BANDwidth:VIDeo:AUTO OFF ON 0 1, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNER:LIST:BANDwidth:VIDeo:AUTO?</code>
Example	<code>:SEM:OFFS2:INN:LIST:BAND:VID:AUTO ON, ON, ON, ON, ON, ON</code> <code>:SEM:OFFS2:INN:LIST:BAND:VID:AUTO?</code>
Couplings	When the Auto state is ON , Video BW is basically coupled with other parameters
Preset	<code>ON, ON, ON ON, ON</code>
State Saved	Saved in instrument state
Range	<code>Auto Man</code>

Inner Offset (Sweep)

Accesses a menu that lets you set up the sweep measurement parameters for inner offset pairs.

Offset Freq Define

Same as ["Offset Freq Define" on page 2085](#) under **Inner Offset (BW)**

Offset Detector

Same as ["Offset Detector" on page 1054](#) under **Inner Offset (BW)**

Cumulate Mask

Same as "[Cumulate Mask](#)" on page 2088 under Inner Offset (BW)

Cumulate Mask Stop Frequency

Same as "[Cumulate Mask Stop Frequency](#)" on page 2089, under Inner Offset (BW)

Start Freq

Same as "[Start Freq](#)" on page 2095, under Inner Offset (BW)

Stop Freq

Same as "[Stop Freq](#)" on page 2096, under Inner Offset (BW)

Sweep Time

Specifies the sweep time for the currently selected offset and enables you to toggle the **Sweep Time** mode between **Auto** and **Man**.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

NOTE

On non-sweeping hardware, this column is grayed-out. The value shown on this column is an estimate of the turnaround time to complete the measurement of the entire offset span, which is the sum of signal acquisition time, FFT time, and other overhead time. If you need to specify the same **Sweep Time** as you would for sweeping hardware, send `[:SENSe] :SEMAsk:OFFSet [1] | 2 :INNeR:LISt:SWEEp:TIME <time>`. The measurement emulates the **Sweep Time** effect, but this emulation is not straightforward, and therefore the behavior is not specified. Instead, we recommend using "[Minimum Acquisition Time](#)" on page 1101, which provides better control.

Remote Command	<code>[:SENSe] :SEMAsk:OFFSet[1] 2 :INNeR:LISt:SWEEp:TIME <time>, ...</code> <code>[:SENSe] :SEMAsk:OFFSet[1] 2 :INNeR:LISt:SWEEp:TIME ?</code>
Example	<code>:SEM:OFFS2:INN:LIST:SWE:TIME 1.0 ms, 3.4 ms, 2.08 ms, 1.0 ms, 1.0 ms, 1.0 ms</code> <code>:SEM:OFFS2:INN:LIST:SWE:TIME ?</code>
Notes	<code>OFFSet1</code> is for BTS, 2 for MS. Default is BTS

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Dependencies	On non-sweeping hardware, this column is grayed-out and the Auto/Man checkbox is invisible. The read-only column shows estimated sweep time In those instruments, " Minimum Acquisition Time " on page 1101 is available						
Couplings	When you manually set a value while in Auto , the state automatically changes to Man						
Preset	Automatically calculated						
State Saved	Saved in instrument state						
Min/Max	Depends on " Sweep Type " on page 1071: <table border="1" data-bbox="389 583 1404 714"> <thead> <tr> <th>Sweep Type</th> <th>Min/Max</th> </tr> </thead> <tbody> <tr> <td>Swept</td> <td>1ms/10 s</td> </tr> <tr> <td>FFT</td> <td>100ns/10 s</td> </tr> </tbody> </table> Non-sweeping hardware: N/A Auto Function	Sweep Type	Min/Max	Swept	1ms/10 s	FFT	100ns/10 s
Sweep Type	Min/Max						
Swept	1ms/10 s						
FFT	100ns/10 s						
Remote Command	<code>[:SENSe] :SEMAsk:OFFSet[1] 2:INNeR:LIST:SWEEp:TIME:AUTO ON OFF 1 0, ...</code> <code>[:SENSe] :SEMAsk:OFFSet[1] 2:INNeR:LIST:SWEEp:TIME:AUTO?</code>						
Example	<code>:SEM:OFFS2:INN:LIST:SWE:TIME:AUTO ON, ON, ON, ON, OFF, OFF</code> <code>:SEM:OFFS2:INN:LIST:SWE:TIME:AUTO?</code>						
Preset	<table border="1" data-bbox="389 1050 1404 1207"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>MSR</td> <td>ON, ON, ON</td> </tr> <tr> <td>LTEAFDD, LTEATDD, 5G NR</td> <td>ON, ON, ON ON, ON</td> </tr> </tbody> </table>	Mode	Values	MSR	ON, ON	LTEAFDD, LTEATDD, 5G NR	ON, ON ON, ON
Mode	Values						
MSR	ON, ON						
LTEAFDD, LTEATDD, 5G NR	ON, ON ON, ON						
State Saved	Saved in instrument state						

Minimum Acquisition Time

Available on non-sweeping hardware.

Specifies the minimum acquisition time for each “chunk” of the measurement result. The instrument automatically divides **Span** into multiple chunks if needed. Therefore, the total signal acquisition time for the entire offset span is:

$$\sim(\sim\text{Minimum Acquisition Time}) * (\text{The number of chunks}).$$

When in **Auto**, this parameter’s value is determined by other parameters, such as **Offset Start**, **Offset Stop**, **RBW** and **VBW**.

You can manually increase this parameter value from this **Auto** value.

If increased, the instrument acquires signal for the specified time duration for each chunk. It performs additional FFTs, and averages or peak-holds the FFT results for a chunk, depending on **Detector** settings.

Note that the actual acquisition time for each chunk may exceed the **Minimum Acquisition Time** value, in order to satisfy FFT time required by other parameters, and to perform an integer number of FFTs.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNER:LIST:SWEep:ACQuisition:TIME <time>, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNER:LIST:SWEep:ACQuisition:TIME?</code>
Example	<code>:SEM:OFFS2:INN:LIST:SWE:ACQ:TIME 1.0 ms, 3.4 ms, 2.08 ms, 1.0 ms, 1.0 ms, 1.0 ms</code> <code>:SEM:OFFS2:INN:LIST:SWE:ACQ:TIME?</code>
Notes	OFFSet1 is for BTS, 2 for MS. Default is BTS
Dependencies	Available only on non-sweeping hardware
Couplings	Coupled to Offset Start Freq , Offset Stop Freq , RBW , and VBW when in the Auto state When you manually set a value while in Auto , the state automatically changes to Man
Preset	Automatically calculated
State Saved	Saved in instrument state
Min	100 ns
Max	4000 s
Auto Function	
Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNER:LIST:SWEep:ACQuisition:TIME:AUTO ON OFF 1 0, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNER:LIST:SWEep:ACQuisition:TIME:AUTO?</code>
Example	<code>:SEM:OFFS2:INN:LIST:SWE:ACQ:TIME:AUTO ON, ON, ON, ON, OFF, OFF</code> <code>:SEM:OFFS2:INN:LIST:SWE:ACQ:TIME:AUTO?</code>
Preset	ON

Sweep Time Annotation (Remote Query Only)

Returns the **Sweep Time Annotation** value. Available only on non-sweeping hardware.

The value returned is the estimated turnaround time of each acquisition, in seconds. The turnaround time is the sum of the signal acquisition time, FFT time, and other overhead time, to complete the entire offset span of each measurement cycle.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNER:LIST:SWEep:ETIME?</code>
Example	<code>:SEM:OFFS2:INN:LIST:SWE:ETIM?</code>
Notes	OFFSet1 is for BTS, 2 for MS. Default is BTS

Dependencies	Available only on non-sweeping hardware
Preset	Automatically calculated

Sweep Type

Specifies the **Sweep Type** for the currently selected offset and enables you to toggle **Sweep Type** mode between **Auto** and **Man**.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

How to define Sweep Time and Sweep Type

Sweep Type Mode	Behavior
Auto	Sweep Type is automatically selected depending on Rules Sweep Time is automatically calculated, according to the selected Sweep Type
Man	Sweep Type is user-selected
–	

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:SWEEp:TYPE SWEEp FFT, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:SWEEp:TYPE?</code>
Example	<code>:SEM:OFFS2:INN:LIST:SWE:TYPE FFT,FFT,SWE</code> <code>:SEM:OFFS2:INN:LIST:SWE:TYPE?</code>
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS
Dependencies	Not available in modular products, such as VXT
Couplings	When Sweep Type is set manually, Sweep Type Mode is set to MANua1
Preset	Automatically calculated
State Saved	Saved in instrument state

Auto Function

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:SWEEp:TYPE:AUTO ON OFF 1 0, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:SWEEp:TYPE:AUTO?</code>
Example	<code>:SEM:OFFS2:INN:LIST:SWE:TYPE:AUTO ON, ON, ON, ON, OFF, OFF</code> <code>:SEM:OFFS2:INN:LIST:SWE:TYPE:AUTO?</code>
Couplings	When Sweep Type Mode is Auto , Sweep Type is automatically selected according to " Sweep Type Rules " on page 1047
Preset	<code>ON, ON, ON</code>
Range	<code>Auto Man</code>

Offset Side

Specifies which offset side to measure.

You can turn off (not use) specific offsets with `[:SENSe]:SEMAsk:OFFSet [n]:INNer:LIST:STATe`.

- BOTH** Both sides in the sub-block gap are enabled
- NEGative** The upper side in the sub-block gap only (i.e., negative sideband of the upper sub-block) is enabled
- POSitive** The lower side in the sub-block gap only (i.e., positive sideband of the lower sub-block) is enabled

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

The figure below shows the relation between the negative/positive offset side setups and the upper/lower results in the MSR and LTE-Advanced FDD/TDD Modes.

Remote Command `[:SENSe]:SEMAsk:OFFSet[1]|2:INNer:LIST:SIDE BOTH | NEGative | POSitive, ...`

`[:SENSe]:SEMAsk:OFFSet[1]|2:INNer:LIST:SIDE?`

Example `:SEM:OFFS:INN:LIST:SIDE BOTH, NEG, NEG, POS, POS, POS`

`:SEM:OFFS:INN:LIST:SIDE?`

Notes
Comma-separated list of values
`OFFSet1` is for BTS, 2 for MS. Default is BTS

Preset	Mode	Values
	MSR	BOTH, BOTH
	LTEAFDD, LTEATDD, 5GNR	BOTH, BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH

State Saved	Saved in instrument state
Range	BOTH NEGative POSitive

Inner Offset (Limits)

Accesses a menu that lets you set the power limits for start and stop frequencies of the selected inner offsets.

Start Freq

Same as "Start Freq" on page 2095 under Inner Offset (BW)

Stop Freq

Same as "Stop Freq" on page 2096 under Inner Offset (BW)

Abs Start

Sets the absolute power level limit at the start frequency for the selected inner offset, ranging from -200 to +50 dBm.

The fail condition for each inner offset channel is set remotely by
:CALCulate:SEMAsk:OFFSet[n]:INNER:LIST:TEST.

You can turn off (not use) specific inner offset channels remotely with
[:SENSe]:SEMAsk:OFFSet[n]:INNER:LIST:STATe.

The query returns values currently set to the absolute power test limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	:CALCulate:SEMAsk:OFFSet[1] 2:INNER:LIST:START:ABSolute <ampl>, ... :CALCulate:SEMAsk:OFFSet[1] 2:INNER:LIST:START:ABSolute?
Example	:CALC:SEM:OFFS2:INN:LIST:STAR:ABS -12.50 dBm, -12.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm :CALC:SEM:OFFS2:INN:LIST:STAR:ABS?
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Preset	Mode	Values
	MSR	-12.5 dBm, -24.5 dBm, -11.5 dBm, -15.0 dBm, -12.5 dBm, -24.5 dBm, -11.5 dBm, -15.0 dBm
	5G NR	-12.5 dBm, -12.5 dBm, -15.0 dBm, -22.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm
	LTEAFDD, LTEATDD	-12.5 dBm, -12.5 dBm, -15.0 dBm, -13.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm

State Saved Saved in instrument state

Min/Max -200 dBm/50 dBm

Backwards Compatibility SCPI `[:SENSE] :SEMAsk:OFFSet[1] | 2 :INNER:LIST:STOP:ABSolute`

Auto Function

Remote Command `:CALCulate:SEMAsk:OFFSet[1] | 2 :INNER:LIST:STOP:ABSolute:COUple ON | OFF | 1 | 0, ...`

`:CALCulate:SEMAsk:OFFSet[1] | 2 :INNER:LIST:STOP:ABSolute:COUple?`

Example `:CALC:SEM:OFFS:INN:LIST:STOP:ABS:COUP ON, OFF, ON, ON, ON, ON`

`:CALC:SEM:OFFS:INN:LIST:STOP:ABS:COUP?`

Preset	Mode	Values
	MSR	ON, OFF, OFF, OFF, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF ON, OFF, OFF, OFF, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
	LTEAFDD, LTEATDD, 5G NR	OFF, ON, ON ON, ON

Range `Auto | Man`

Backwards Compatibility SCPI `[:SENSE] :SEMAsk:OFFSet[1] | 2 :INNER:LIST:STOP:ABSolute:COUple`

Rel Start

Sets a relative power level limit at the start frequency for the selected inner offset, ranging from -200 to +50 dBc.

The fail condition is set remotely by `:CALCulate:SEMask:OFFSet [n]:INNER:LIST:TEST` for each inner offset channel test.

You can turn off (not use) specific inner offset channels remotely with `[:SENSe]:SEMask:OFFSet[n]:INNER:LIST:STATe`.

The query returns values currently set to the relative power test limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:START:RCARrier <rel_amp1>, ...</code> <code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:START:RCARrier?</code>
Example	<code>:CALC:SEM:OFFS:INN:LIST:STAR:RCAR -30, -30, -30, -30, -30, -30</code> <code>:CALC:SEM:OFFS:INN:LIST:STAR:RCAR?</code>
Notes	Comma-separated list of values <code>OFFSet1</code> is for BTS, 2 for MS. Default is BTS
Preset	0 dB, 0 dB 0 dB, 0 dB
State Saved	Saved in instrument state
Min/Max	-200 dB / 50 dB
Backwards Compatibility SCPI	<code>[:SENSe]:SEMask:OFFSet[1] 2:INNER:LIST:START:RCARrier</code>

Rel Stop

Sets a relative power level limit at the stop frequency for the selected inner offset, ranging from -200 to +50 dBc.

The fail condition is set remotely by `[:SENSe]:SEMask:OFFSet [n]:INNER:LIST:TEST` for each inner offset channel.

You can turn off (not use) specific inner offset channels remotely with `[:SENSe]:SEMask:OFFSet[n]:INNER:LIST:STATe`.

The query returns values currently set to the inner offset stop relative power limits.

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:STOP:RCARrier <rel_ampl>, ...</code> <code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:STOP:RCARrier?</code>
Example	<code>:CALC:SEM:OFFS:INN:LIST:STOP:RCAR -30, -30, -30, -30, -30, -30</code> <code>:CALC:SEM:OFFS:INN:LIST:STOP:RCAR?</code>
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS
Couplings	Coupled to Rel Start if "Auto" is selected, that is, Start is made the same as Stop
Preset	0 dB, 0 dB 0 dB, 0 dB
State Saved	Saved in instrument state
Min/Max	-200 dB / 50 dB
Backwards Compatibility SCPI	<code>[:SENSe] :SEMask:OFFSet[1] 2:INNER:LIST:STOP:RCARrier</code>

Auto Function

Remote Command	<code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:STOP:RCARrier:COUple ON OFF 1 0, ...</code> <code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:STOP:RCARrier:COUple?</code>
Example	<code>:CALC:SEM:OFFS:INN:LIST:STOP:RCAR:COUP ON, ON, ON, ON, ON, ON</code> <code>:CALC:SEM:OFFS:INN:LIST:STOP:RCAR:COUP?</code>

Backwards Compatibility SCPI	<code>[:SENSe] :SEMask:OFFSet[1] 2:INNER:LIST:STOP:RCARrier:COUple</code>

Fail Mask

Selects one of the logics for fail conditions between the measurement results and the test limits:

- **ABSolute** and **RELative** both check the results against the respective limit
- **OR** checks against both limits, failing if either of the limits is broken
- **AND** only displays a fail if both of the limits are broken

The absolute or relative power limit value for each inner offset channel can be set remotely with the following commands

- `CALCulate:SEMask:OFFSet[n]:INNER:LIST:START:ABSolute`
- `CALCulate:SEMask:OFFSet[n]:INNER:LIST:STOP:ABSolute`
- `CALCulate:SEMask:OFFSet[n]:INNER:LIST:START:RCARrier`
- `CALCulate:SEMask:OFFSet[n]:INNER:LIST:STOP:RCARrier`

You can turn off (not use) specific inner offset channels remotely with `[:SENSe]:SEMask:OFFSet[n]:INNER:LIST:STATe`.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:TEST ABSolute AND OR RELative, ...</code> <code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:TEST?</code>
Example	<code>:CALC:SEM:OFFS:INN:LIST:TEST ABS, ABS, ABS, ABS, ABS, ABS</code> <code>:CALC:SEM:OFFS:INN:LIST:TEST?</code>
Notes	Comma-separated list of values <code>OFFSet1</code> is for BTS, 2 for MS. Default is BTS
Preset	<code>ABS, ABS, ABS</code>
State Saved	Saved in instrument state
Range	Absolute Relative Abs AND Rel Abs OR Rel
Backwards Compatibility SCPI	<code>[:SENSe]:SEMask:OFFSet[1] 2:INNER:LIST:TEST</code>

Show Abs2 Limit

Same as ["Show Abs2 Limit" on page 1110](#) under Limits.

Abs2 Start

Sets the 2nd absolute power level limit at the start frequency for the selected inner offset, ranging from -200 to +50 dBm.

The fail condition for each inner offset channel is set remotely using:

`CALCulate:SEMask:OFFSet[n]:INNER:LIST:TEST:SABSolute`

You can turn off (not use) specific inner offset channels remotely using:

`[:SENSe]:SEMask:OFFSet[n]:INNER:LIST:STATe`

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

The query returns values currently set to the 2nd absolute power test limits.

When sending the command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query always returns 12 values.

Remote Command	<code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:START:SABSolute <ampl>, ...</code> <code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:START:SABSolute?</code>
Example	<code>:CALC:SEM:OFFS:INN:LIST:STAR:SABS -12.50 dBm, -12.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm</code> <code>:CALC:SEM:OFFS:INN:LIST:STAR:SABS?</code>
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS
Preset	0 dBm, 0 dBm 0 dBm, 0 dBm
State Saved	Saved in instrument state
Min	-200 dBm
Max	50 dBm
Backwards Compatibility SCPI	<code>[:SENSe]:SEMask:OFFSet[1] 2:INNER:LIST:START:SABSolute</code>

Abs2 Stop

Sets the 2nd absolute power level limit at the stop frequency for the selected inner offset, ranging from -200 to +50 dBm. You can also toggle this function between **Couple** and **Manual**. If set to **Couple = ON**, the **Abs2 Stop** power level limit is coupled to "**Abs2 Start**" on page 2102, resulting in a flat limit line. If set to **Man (Couple = OFF)**, **Abs2 Start** and **Abs2 Stop** take different values, resulting in a sloped limit line.

The query returns values currently set to the offset stop 2nd absolute power limits.

When sending the command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query always returns 12 values.

Remote Command	<code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:STOP:SABSolute <ampl>, ...</code> <code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:STOP:SABSolute?</code>
Example	<code>:CALC:SEM:OFFS:INN:LIST:STOP:SABS -12.50 dBm, -24.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm</code> <code>:CALC:SEM:OFFS:INN:LIST:STOP:SABS?</code>
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS
Couplings	Coupled to Abs Start if Auto is selected, that is, the Stop value is equal to the Start value

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Remote Command	<code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:TEST:SABSolute AND OR OFF,</code> ...
Example	<code>:CALCulate:SEMask:OFFSet[1] 2:INNER:LIST:TEST:SABSolute?</code> <code>:CALC:SEM:OFFS:INN:LIST:TEST:SABS AND, AND, OR, OFF, OFF, OFF</code> <code>:CALC:SEM:OFFS:INN:LIST:TEST:SABS?</code>
Notes	Comma-separated list of values <code>OFFSet1</code> is for BTS, 2 for MS. Default is BTS
Preset	<code>OFF, OFF, OFF OFF, OFF,</code> <code>OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF</code>
State Saved	Saved in instrument state
Range	OR Abs2 AND Abs2 Abs2 Disabled
Backwards Compatibility SCPI	<code>[:SENSE] :SEMask:OFFSet[1] 2:INNER:LIST:TEST:SABSolute</code>

Meas Setup Summary Table

Lets you view and access many of the parameters in the **Meas Setup** menus on one screen.

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see ["Measurement-Specific Details" on page 1114](#) below.

Remote Command	<code>:COUPle ALL</code>
Example	<code>:COUP ALL</code>
Backwards Compatibility SCPI	<code>:COUPLE ALL NONE</code>
Backwards Compatibility Notes	<code>:COUP:NONE</code> puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is <i>not</i> recommended for making measurements or new designs

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple** *does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all the measurement parameters to their default values.

Remote Command	<code>:CONFigure:SEMAsk</code>
Example	<code>:CONF:SEM</code>
Couplings	Restores all measurement parameters to their default values

3.5.23.2 Carrier

Used to set up parameters that define how the reference channel is measured.

Integ BW

Specifies the integration bandwidth used to calculate the power in the reference channel.

Remote Command	<code>[:SENSe]:SEMAsk:BANDwidth[1] 2:INTEgration <bandwidth></code> <code>[:SENSe]:SEMAsk:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:SEM:BAND:INT 10 MHz</code> <code>:SEM:BAND:INT?</code>
Notes	10% . 100% of Channel Span Parameter Value Note that Bandwidth sub op code 2 is supported only in non-SA Modes. In SA Mode, Bandwidth sub op code 1 is used for both BTS and MS If the ref channel is outside the frequency range, the result spectrum will be invalid
Dependencies	Not shown in MSR, LTE-Advanced FDD/TDD and 5G NR Modes To maintain backwards compatible with legacy LTE FDD/TDD Modes, the remote command is supported in LTE & LTE-A converged application
Couplings	Cannot be higher than the channel Span . If lower than 1/10 of channel Span , then the channel Span is

	reduced to be 10 times the Integ BW								
Preset	<table border="1"> <thead> <tr> <th>Mode</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>SA</td> <td>3.84 MHz</td> </tr> <tr> <td>WCDMA</td> <td>3.84 MHz 3.84 MHz</td> </tr> <tr> <td>WLAN</td> <td>See the table of "WLAN Mode Presets" on page 1116 below</td> </tr> </tbody> </table>	Mode	Value	SA	3.84 MHz	WCDMA	3.84 MHz 3.84 MHz	WLAN	See the table of "WLAN Mode Presets" on page 1116 below

WLAN Mode Presets

Radio Std	Presets
802.11a/g (OFDM/DSSS-OFDM)	18 MHz
802.11n/ac (20 MHz)	
802.11b/g (DSSS/CCK/PBCC)	22 MHz
802.11n (40MHz)/ 802.11ac (40 MHz)	38 MHz
802.11ac (80 MHz)	78 MHz
802.11ac (160 MHz)	158 MHz
802.11ac (80 MHz + 80 MHz)	78 MHz
802.11ah (1 MHz)	0.9 MHz
802.11ah (2 MHz)	1.8 MHz
802.11ah (4 MHz)	3.8 MHz
802.11ah (8 MHz)	7.8 MHz
802.11ah (16 MHz)	15.8 MHz
802.11j/p (20 MHz)	18 MHz
802.11j/p (10 MHz)	9 MHz
802.11p (5 MHz)	4.5 MHz
802.11ax/be/bn (20 MHz)	19.5 MHz
802.11ax/be/bn (40 MHz)	39.0 MHz
802.11ax/be/bn (80 MHz)	79.0 MHz
802.11ax/be/bn (160 MHz)	159.0 MHz
802.11be/bn (320 MHz)	319.0 MHz
802.11ax (80 MHz + 80 MHz)	79.0 MHz
802.11af (6 MHz)	5.7 MHz

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Radio Std	Presets
802.11af (7 MHz)	6.65 MHz
802.11af (8 MHz)	7.6 MHz

Span

Specifies the span used to calculate the power in the reference channel.

Remote Command	<code>[:SENSe]:SEMAsk:FREQuency[1] 2:SPAN <freq></code> <code>[:SENSe]:SEMAsk:FREQuency[1] 2:SPAN?</code>												
Example	<code>:SEM:FREQ:SPAN 3MHz</code> <code>:SEM:FREQ:SPAN?</code>												
Notes	Note that Frequency sub op code 2 is supported only in non-SA Modes. In SA Mode, Frequency sub op code 1 is used for both BTS and MS If the ref channel is outside the frequency range, the result spectrum will be invalid												
Dependencies	Not shown in MSR Mode To maintain backwards compatible with legacy LTE FDD/TDD Modes, the channel span key is supported in LTE & LTE-A converged application. The Auto/Man toggle is added to this key. This key is enabled and can be changed only in single carrier. The span state is always Auto in Multi-carriers												
Couplings	Range 1 kHz to 50 MHz (although restricted by Chan Integ BW). If you set the channel Span lower than channel Integ BW , they will both track each other. As you increase the channel Span , Integ BW also increases if it is less than 1/10 of the channel Span For WLAN 802.11ac (80 + 80 MHz), the channel span is coupled with the difference between the center frequencies of the two carriers. When the difference is either less than 80 MHz, or greater than 565 MHz, a "setting conflict" error message is displayed Chan Span = Carrier Spacing + Chan IntegBW												
Preset	<table border="1"> <thead> <tr> <th>Mode</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>SA</td> <td>5.0 MHz</td> </tr> <tr> <td>WCDMA</td> <td>5.0 MHz 5.0 MHz</td> </tr> <tr> <td>LTEAFDD, LTEATDD</td> <td>5 MHz</td> </tr> <tr> <td>5GNR</td> <td>Automatically calculated</td> </tr> <tr> <td>WLAN</td> <td>See the table of "WLAN Mode Presets" on page 1118 below</td> </tr> </tbody> </table>	Mode	Value	SA	5.0 MHz	WCDMA	5.0 MHz 5.0 MHz	LTEAFDD, LTEATDD	5 MHz	5GNR	Automatically calculated	WLAN	See the table of " WLAN Mode Presets " on page 1118 below
Mode	Value												
SA	5.0 MHz												
WCDMA	5.0 MHz 5.0 MHz												
LTEAFDD, LTEATDD	5 MHz												
5GNR	Automatically calculated												
WLAN	See the table of " WLAN Mode Presets " on page 1118 below												
State Saved	Saved in instrument state												
Min/Max	1 kHz / Depends on instrument maximum frequency												
Auto Function													
Remote Command	<code>[:SENSe]:SEMAsk:FREQuency[1] 2:SPAN:AUTO ON OFF 1 0</code> <code>[:SENSe]:SEMAsk:FREQuency[1] 2:SPAN:AUTO?</code>												

Example	<code>:SEM:FREQ:SPAN:AUTO OFF</code> <code>:SEM:FREQ:SPAN:AUTO?</code>
Dependencies	Span Auto/Man state is only available in LTE/LTE-Advanced FDD/TDD and 5G NR Modes
Couplings	When the state of Span is Auto , the span value is automatically determined by multi-carrier configuration. Otherwise, the span value depends on user input When the span value is set manually, the state of span is automatically changes to Man This key is enabled and can be changed only in single carrier. The span state is always Auto in Multi-carriers
Preset	ON
State Saved	Yes
Range	Auto Man

WLAN Mode Presets

Radio Std	Presets
802.11a/g (OFDM/DSSS-OFDM)	18 MHz
802.11n/ac (20 MHz)	
802.11b/g (DSSS/CCK/PBCC)	22 MHz
802.11n/ac (40 MHz)	38 MHz
802.11ac (80 MHz)	78 MHz
802.11ac (160 MHz)	158 MHz
802.11ac (80 MHz + 80 MHz)	320 MHz
802.11ah (1 MHz)	0.9 MHz
802.11ah (2 MHz)	1.8 MHz
802.11ah (4 MHz)	3.8 MHz
802.11ah (8 MHz)	7.8 MHz
802.11ah (16 MHz)	15.8 MHz
802.11j/p (20 MHz)	18 MHz
802.11j/p (10 MHz)	9 MHz
802.11p (5 MHz)	4.5 MHz

802.11ax/be/bn (40 MHz)	39.0 MHz
802.11ax/be/bn (80 MHz)	79.0 MHz
802.11ax/be/bn (160 MHz)	159.0 MHz
802.11be/bn (320 MHz)	319.0 MHz
802.11ax (80 MHz + 80 MHz)	320.0 MHz
802.11af (6 MHz)	5.7 MHz

Radio Std	Presets
802.11af (7 MHz)	6.65 MHz
802.11af (8 MHz)	7.6 MHz

Sweep Time

Used to calculate the power in the reference channel. **Sweep Time** can be set manually or put into **Auto** mode.

For instruments with non-sweeping acquisitions, such as VXT, the time value is the acquisition time for an individual FFT segment, not the cumulated time for all FFT segments in the channel.

NOTE

On non-sweeping hardware, this control is grayed-out. The value shown on this control is an estimate, which is the turnaround time to complete the measurement of the entire carrier span, which is the sum of signal acquisition time, FFT time, and other overhead time. If you need to specify the same **Sweep Time** as you would for sweeping hardware, send `[:SENSe]:SEMAsk:SWEEp[1]|2:TIME <time>`. The measurement emulates the **Sweep Time** effect, but this emulation is not straightforward, and therefore the behavior is not specified. Instead, we recommend using "**Minimum Acquisition Time**" on page 1120, which provides better control.

Remote Command	<code>[:SENSe]:SEMAsk:SWEEp[1] 2:TIME <time></code> <code>[:SENSe]:SEMAsk:SWEEp[1] 2:TIME?</code>
Example	<code>:SEM:SWE:TIME 9ms</code> <code>:SEM:SWE:TIME?</code>
Notes	Note that Sweep sub op code 2 is supported only in non-SA Modes. In SA Mode, Sweep sub op code 1 is used for both BTS and MS
Dependencies	On non-sweeping hardware, this control is grayed out and the Auto/Man checkbox is invisible. The read-only value shows the estimated sweep time In those instruments, " Minimum Acquisition Time " on page 1120 is available
Couplings	When the time is set manually, Auto is set to OFF If state is Auto , coupled with Channel Detector selection, Channel Resolution BW , Channel Video BW
Preset	Automatically calculated
State Saved	Saved in instrument state
Min	Sweeping hardware Depends on Channel " Sweep Type " on page 1121:

	Sweep Type	Min
	Swept	1 ms
	FFT	100 ns
	Non-sweeping hardware: N/A	
Max	Sweeping hardware: 4000 s Non-sweeping hardware: N/A	
Backwards Compatibility SCPI	[:SENSe]:SEMAsk:SWEep[1] 2[:TIME]	
	Auto Function	
Remote Command	[:SENSe]:SEMAsk:SWEep[1] 2:TIME:AUTO OFF 0 ON 1 [:SENSe]:SEMAsk:SWEep[1] 2:TIME:AUTO?	
Example	:SEM:SWE:TIME:AUTO OFF :SEM:SWE:TIME:AUTO?	
Couplings	When set to Auto , the Time is automatically calculated	
Preset	ON	
State Saved	Yes	
Range	OFF ON	
Backwards Compatibility SCPI	[:SENSe]:SEMAsk:SWEep[1] 2[:TIME]:AUTO	

Minimum Acquisition Time

Available on non-sweeping hardware.

Specifies the minimum acquisition time for each “chunk” of the measurement result. The instrument automatically divides **Span** into multiple chunks if needed. Therefore, the total signal acquisition time for the entire carrier span is:

$\sim(\sim\text{Minimum Acquisition Time}) * (\text{The number of chunks})$

When in **Auto**, this parameter’s value is determined by other parameters, such as **Span**, **RBW** and **VBW**.

You can manually increase this parameter value from this **Auto** value.

If increased, the instrument acquires signal for the specified time duration for each chunk. It performs additional FFTs, and averages or peak-holds the FFT results for a chunk, depending on **Detector** settings.

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Note that the actual acquisition time for each chunk may exceed the **Minimum Acquisition Time** value, in order to satisfy FFT time required by other parameters, and to perform an integer number of FFTs.

Remote Command	<code>[:SENSe]:SEMAsk:SWEEp:ACQuisition:TIME <time></code> <code>[:SENSe]:SEMAsk:SWEEp:ACQuisition:TIME?</code>
Example	<code>:SEM:SWE:ACQ:TIME 500 ms</code> <code>:SEM:SWE:ACQ:TIME?</code>
Dependencies	Available only on non-sweeping hardware
Couplings	Coupled to Span , RBW , and VBW when in the Auto state If you manually set a value when in the Auto state, the state automatically changes to Man
Preset	Automatically calculated
State Saved	Saved in instrument state
Min	100 ns
Max	4.00 ks
Auto Function	
Remote Command	<code>[:SENSe]:SEMAsk:SWEEp:ACQuisition:TIME:AUTO OFF ON 0 1</code> <code>[:SENSe]:SEMAsk:SWEEp:ACQuisition:TIME:AUTO?</code>
Example	<code>:SEM:SWE:ACQ:TIME:AUTO OFF</code> <code>:SEM:SWE:ACQ:TIME:AUTO?</code>
Preset	ON

Sweep Time Annotation (Remote Query Only)

Returns the **Sweep Time Annotation** value. Available only on non-sweeping hardware.

The value returned is the estimated turnaround time of each acquisition, in seconds. The turnaround time is the sum of the signal acquisition time, FFT time, and other overhead time, to complete the entire carrier span of each measurement cycle.

Remote Command	<code>[:SENSe]:SEMAsk:SWEEp:ETIME?</code>
Example	<code>:SEM:SWE:ETIM?</code>
Dependencies	Available only on non-sweeping hardware
Preset	Automatically calculated

Sweep Type

Sets the **Sweep Type** used to calculate the power in the reference channel. **Sweep Type** can be set manually or put into **Auto** mode.

How to define Channel Sweep Time and Channel Sweep Type:

Channel Sweep Type Mode	Behavior
Auto	Channel Sweep Type is automatically selected depending on Sweep Type Rules Channel Sweep Time is automatically calculated depending on the selected sweep type
Man	Channel Sweep Type is user-selected
–	

Remote Command	<code>[:SENSe] :SEMAsk :SWEep [1] 2 :TYPE SWEep FFT</code> <code>[:SENSe] :SEMAsk :SWEep [1] 2 :TYPE ?</code>
Example	<code>:SEM :SWE :TYPE FFT</code> <code>:SEM :SWE :TYPE ?</code>
Notes	Note that Sweep sub op code 2 is supported only in non-SA Modes. In SA Mode, Sweep sub op code 1 is used for both BTS and MS
Dependencies	Grayed-out in VXT models M9410A/11A
Couplings	If Sweep Type is set manually, Sweep Type mode is set to MANua1
Preset	Automatically calculated
State Saved	Saved in instrument state

Auto Function

Remote Command	<code>[:SENSe] :SEMAsk :SWEep [1] 2 :TYPE :AUTO OFF 0 ON 1</code> <code>[:SENSe] :SEMAsk :SWEep [1] 2 :TYPE :AUTO ?</code>
Example	<code>:SEM :SWE :TYPE :AUTO OFF</code> <code>:SEM :SWE :TYPE :AUTO ?</code>
Couplings	When Channel Sweep Type mode is Auto , Sweep Type is automatically selected according to Sweep Type Rules
Preset	ON
State Saved	Yes
Range	OFF ON

Res BW

Sets the resolution bandwidth used to calculate the power in the reference channel. The Channel Resolution BW can be set manually or put into auto mode.

MSR Auto RBW:

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

In the MSR Mode, resolution bandwidth is predefined for each radio format. When carriers are configured with multiple radio formats, the narrowest RBW is selected.

Radio Format		RBW (kHz)
LTE	1.4 MHz	13 kHz
	3 MHz	27 kHz
	5 MHz	47 kHz
	10 MHz	91 kHz
	15 MHz	150 kHz
	20 MHz	180 kHz
	200 kHz (NB-IoT, only available in FDD)	10 kHz
	W-CDMA	75 kHz

5G NR Auto RBW:

Radio Format		RBW
5G NR	5 MHz	47 kHz
	10 MHz	91 kHz
	15 MHz	150 kHz
	20 MHz	180 kHz
	25 MHz	240 kHz
	30 MHz	270 kHz
	35 MHz	330 kHz
	40 MHz	390 kHz
	45 MHz	430 kHz
	50 MHz	470 kHz
	60 MHz	560 kHz
	70 MHz	680 kHz
	80 MHz	750 kHz
	90 MHz	820 kHz
	100 MHz	910 kHz
	200MHz	1.8 MHz
	400 MHz	3 MHz
	800 MHz	3 MHz
1600 MHz	3 MHz	
2000 MHz	3 MHz	

In the LTE-Advanced (both FDD and TDD) and 5G NR modes, the resolution bandwidth is predefined based on the corresponding bandwidth of the single carrier, which is listed above. When **Res BW** mode is **Auto**, the narrowest RBW is selected.

Remote Command	<code>[:SENSe]:SEMask:BANDwidth[1] 2[:RESolution] <bandwidth></code> <code>[:SENSe]:SEMask:BANDwidth[1] 2[:RESolution]?</code>												
Example	<code>:SEM:BAND 100 kHz</code> <code>:SEM:BAND?</code>												
Notes	Note that Bandwidth sub op code 2 is supported only in non-SA modes. In SA Mode, Bandwidth sub op code 1 is used for both BTS and MS												
Couplings	If Res BW is set manually, Channel Resolution BW mode is set to MANua1 Coupled with Channel Detector selection, Channel Sweep Time and Channel Video BW												
Preset	<table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>SA</td> <td>100 kHz</td> </tr> <tr> <td>WCDMA</td> <td>75 kHz</td> </tr> <tr> <td>LTE, LTETDD, MSR, LTEAFDD, LTEATDD</td> <td>Auto (47 kHz)</td> </tr> <tr> <td>5G NR</td> <td>Auto</td> </tr> <tr> <td>WLAN</td> <td>100 kHz</td> </tr> </tbody> </table>	Mode	Values	SA	100 kHz	WCDMA	75 kHz	LTE, LTETDD, MSR, LTEAFDD, LTEATDD	Auto (47 kHz)	5G NR	Auto	WLAN	100 kHz

Min/Max	1 Hz/50 MHz								
Backwards Compatibility SCPI	<code>[:SENSe] :SEMAsk :BWIDth [1] 2 :VIDeo</code>								
Auto Function									
Remote Command	<code>[:SENSe] :SEMAsk :BANDwidth [1] 2 :VIDeo :AUTO OFF ON 1 0</code> <code>[:SENSe] :SEMAsk :BANDwidth [1] 2 :VIDeo :AUTO ?</code>								
Example	<code>:SEM :BAND :VID :AUTO ON</code> <code>:SEM :BAND :VID :AUTO ?</code>								
Couplings	When set to Auto , the video bandwidth is automatically calculated								
Preset	ON								
State Saved	Yes								
Range	Auto Man								
Backwards Compatibility SCPI	<code>[:SENSe] :SEMAsk :BWIDth [1] 2 :VIDeo :AUTO</code>								

VBW/RBW

Sets the Video BW/Resolution BW ratio to calculate the Channel Resolution BW and Channel Video BW. The VBW/RBW Ratio can be set manually or put into **Auto** mode.

Remote Command	<code>[:SENSe]:SEMAsk:BAWidTh[1] 2:VIDeo:RATio <real></code> <code>[:SENSe]:SEMAsk:BAWidTh[1] 2:VIDeo:RATio</code>
Example	<code>:SEM:BAW:VID:RAT 0.1</code> <code>:SEM:BAW:VID:RAT?</code>
Notes	Note that Bandwidth sub op code 2 is supported only in non-SA Modes. In SA Mode, Bandwidth sub op code 1 is used for both BTS and MS
Couplings	When Video BW/Res BW is set manually, Channel VBW/RBW Ratio mode is set to MANua1
Preset	SA, WCDMA: 1.0 LTE, LTEFDD, LTEAFDD, LTEATDD, 5G NR, WLAN, MSR: Auto
State Saved	Saved in instrument state
Min/Max	1. 0.01 3000000
Backwards Compatibility SCPI	<code>[:SENSe]:SEMAsk:BWIDTh[1] 2:VIDeo:RATio</code>

Auto Function

Remote Command	<code>[:SENSe]:SEMAsk:BAWidTh[1] 2:VIDeo:RATio:AUTO OFF ON 1 0</code> <code>[:SENSe]:SEMAsk:BAWidTh[1] 2:VIDeo:RATio:AUTO?</code>
Example	<code>:SEM:BAW:VID:RAT:AUTO ON</code> <code>:SEM:BAW:VID:RAT:AUTO?</code>
Couplings	When set to Auto , the VBW/RBW Ratio is automatically calculated
Preset	ON
State Saved	Saved in instrument state
Range	Auto Man
Backwards Compatibility SCPI	<code>[:SENSe]:SEMAsk:BWIDTh[1] 2:VIDeo:RATio:AUTO</code>

Channel Detector

Accesses a menu of functions that enable you to control the detectors for reference channel. The following choices are available:

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

AUTO	The detector selected depends on marker functions, trace functions, average type, and the trace averaging function
NORMal	The detector determines the peak of the CW-like signals, and it yields alternating maximums and minimums of noise-like signals. This is also referred to as Rosenfell detection
AVERage	The detector determines the average of the signal within the sweep points. The averaging method depends upon the Average Type selection (voltage, power or log scales)
POSitive Peak	The detector determines the maximum of the signal within the sweep points
SAMPle	The detector indicates the instantaneous level of the signal at the center of the sweep points represented by each display point
NEGative Peak	The detector determines the minimum of the signal within the sweep points

Remote Command	<code>[:SENSe] :SEMAsk :DETector :CARRier [:FUNction] AVERage NEGative NORMal POSitive SAMPle</code> <code>[:SENSe] :SEMAsk :DETector :CARRier [:FUNction] ?</code>
Example	<code>:SEM:DET:CARR NEG</code> <code>:SEM:DET:CARR?</code>
Notes	When you manually select a detector (instead of selecting Auto), that detector is used regardless of other instrument settings Note: This detector setting affects the reference channel. There is no per-trace detector
Couplings	See Couplings in "Trace Type" on page 2927
Preset	AVERage
State Saved	Saved in instrument state
Range	AVERage NEGative NORMal POSitive SAMPle Auto Function
Remote Command	<code>[:SENSe] :SEMAsk :DETector :CARRier :AUTO ON OFF 1 0</code> <code>[:SENSe] :SEMAsk :DETector :CARRier :AUTO?</code>
Example	<code>:SEM:DET:CARR:AUTO OFF</code> <code>:SEM:DET:CARR:AUTO?</code>
Preset	ON

Reference Carrier Average Type (Remote Command Only)

Select trace average type for the reference carrier.

Remote Command	<code>[:SENSe] :SEMAsk :AVERage :CARRier :TYPE RMS LOG</code> <code>[:SENSe] :SEMAsk :AVERage :CARRier :TYPE?</code>
----------------	---

Example	<code>:SEM:AVER:CARR:TYPE LOG</code> <code>:SEM:AVER:CARR:TYPE?</code>
Preset	RMS
State Saved	Saved in instrument state

Offset/Limits Config Table

This function is the same as "Offset/Limits Config Table" on page 1048 under the "Settings" on page 1044 tab.

Sets the power reference in the carrier that will be used to compute the relative values for the offsets.

3.5.23.3 Reference

Lets you set the Reference Power and parameters related to the Reference Power for SEM measurements.

Measurement Type

Accesses a menu that enables you to select one of the following measurement reference types:

Total Pwr Ref	TPRef	Sets the reference to the total carrier power and the measured data is shown in dBc and dBm
PSD Ref	PSDRef	Sets the reference to the mean power spectral density of the carrier and the measured data is shown in dB and dBm/Hz
Spectrum Peak Ref	SPRef	Sets the reference to the spectrum peak power of the carrier and the measured data is shown in dB and dBm

Remote Command	<code>[:SENSe] :SEMAsk :TYPE PSDRef TPRef SPRef</code> <code>[:SENSe] :SEMAsk :TYPE?</code>
Example	<code>:SEM:TYPE PSDR</code> <code>:SEM:TYPE?</code>
Preset	WLAN Mode: SPRef All other Modes: TPRef
State Saved	Saved in instrument state
Range	Total Pwr Reference PSD Reference Spectrum Peak Reference

Power Ref

Selects the power reference type:

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Option	SCPI	Description				
Left & Right Carriers	LRCarriers	<p>Powers of leftmost and rightmost carriers with Measure Carrier On in a sub-block are the references of left and right sides respectively. Only the frequency ranges of leftmost and rightmost carriers are swept and measured. Other frequency ranges in the RFBW are not measured. Left and right carriers are determined based on the carrier center frequencies</p> <p>If Measure Carriers of all the carriers in a sub-block are off, the reference power in a sub-block and all the relative power results are NaN. Relative limits are not evaluated</p>				
Max Power Carrier	MPCarrier	<p>Maximum carrier power is the reference of measurement. All the configured carriers are measured</p> <p>If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NaN. Relative limits are not evaluated</p>				
Carrier Index	CINdex	<p>Power of the specified carrier is the reference of measurement. Only the frequency range of the specified carrier is swept and measured, and other frequency ranges in the RFBW are not measured</p> <p>If Measure Carriers of this carrier index is off, the reference power and all the relative power results are NaN. Relative limits are not evaluated</p>				
Manual	MANual	<p>Power or PSD specified by the user is the reference of measurement. No carriers are measured and the manually specified value is used as reference</p>				
Max Power Carrier in Sub-block	MPCSubblock	<p>Maximum carrier power among the sub-block carriers with Measure Carrier On is the reference of measurement. All the configured carriers are measured</p> <p>If Measure Carriers of all the carriers in a sub-block are off, the reference power of the sub-block and all the relative power results referring to this sub-block are NaN, and these relative limits are not evaluated</p>				
RF Bandwidth	RFBandwidth	<p>Power or PSD of total of the RF bandwidth is the reference of measurement. Power not only in the carrier bands but also carrier gaps is integrated into the reference power. Measure Carrier On/Off does not affect the reference power frequency range because RF bandwidth is determined by the carrier configuration</p>				
Aggregated Chan BW LTE-A and 5G NR Modes only	ACBandwidth	<p>The assigned aggregated channel bandwidth power which is measured with a rectangular filter with measurement bandwidth specified as aggregated channel bandwidth based on the definition of each 3GPP standard. Calculated from the carrier configuration including SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier. Measure Carrier On/Off affects the reference power frequency range</p> <p>If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NaN and Relative limits are not evaluated</p>				
Left & Right Sub-blocks 5G NR Mode only	LRSubblocks	<p>The reference depends on the Number of Component Carriers (CC) and Carrier Allocation as follows:</p> <table border="1"> <thead> <tr> <th>Number of CCs</th> <th>Reference</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>The carrier power is the reference</td> </tr> </tbody> </table>	Number of CCs	Reference	1	The carrier power is the reference
Number of CCs	Reference					
1	The carrier power is the reference					

Option	SCPI	Description						
		<table border="1"> <thead> <tr> <th>Number of CCs</th> <th>Reference</th> </tr> </thead> <tbody> <tr> <td>2 or more, <i>and</i> Carrier Allocation is Contiguous</td> <td>Aggregated Channel power is the reference</td> </tr> <tr> <td>2 or more, <i>and</i> Carrier Allocation is Non-Contiguous</td> <td>Aggregated powers of left and right sub-blocks are the references. Left and right sub-blocks are determined by component carrier configuration</td> </tr> </tbody> </table>	Number of CCs	Reference	2 or more, <i>and</i> Carrier Allocation is Contiguous	Aggregated Channel power is the reference	2 or more, <i>and</i> Carrier Allocation is Non-Contiguous	Aggregated powers of left and right sub-blocks are the references. Left and right sub-blocks are determined by component carrier configuration
Number of CCs	Reference							
2 or more, <i>and</i> Carrier Allocation is Contiguous	Aggregated Channel power is the reference							
2 or more, <i>and</i> Carrier Allocation is Non-Contiguous	Aggregated powers of left and right sub-blocks are the references. Left and right sub-blocks are determined by component carrier configuration							

The powers of carriers are not included in the reference power when their Measure Carriers are **Off**. When Measure Carriers of all the carriers in a sub-block are **Off**, the reference power and all the relative power results are **NaN**. Therefore, relative limits are not evaluated.

Meas Type = Total Power Ref

Meas Type = PSD Ref

Remote Command `[[:SENSe]:SEMAsk:CARRier:PREFerence:TYPE LRCarriers | MPCarrier | CINDEX | MANual | MPCSubblock | RFBandwidth | ACBandwidth | LRSubblocks`

For option details, see above

`[[:SENSe]:SEMAsk:CARRier:PREFerence:TYPE?`

Example `:SEM:CARR:PREF:TYPE CIND`

`:SEM:CARR:PREF:TYPE?`

Notes `LRSubblocks` is available only in 5G NR Mode

`ACBandwidth` is available only in LTE-A and 5G NR Modes

Dependencies Only available in MSR, LTE-A and 5G NR Modes

Preset `MPCarrier`

State Saved Saved in instrument state

Range Left & Right Carriers | Max Power Carriers | Carrier Index | Manual | Max Power Carrier in Sub-block | RF Bandwidth | Aggregated Chan BW | Left & Right Sub-blocks

Auto Function

Remote Command `[[:SENSe]:SEMAsk:CARRier:AUTO[:STATE] OFF | ON | 1 | 0`

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

	<code>[:SENSe]:SEMAsk:CARRier:AUTO[:STATe]?</code>
Example	<code>:SEM:CARR:AUTO OFF</code> <code>:SEM:CARR:AUTO?</code>
Preset	ON
State Saved	Saved in instrument state
Range	Auto Man

Carrier Index

Sets carrier index of the reference power. The power of the carrier selected by this index becomes reference power when "[Power Ref](#)" on page 2036 is Carrier Index.

Remote Command	<code>[:SENSe]:SEMAsk:CARRier:INDex <integer></code> <code>[:SENSe]:SEMAsk:CARRier:INDex?</code>
Example	<code>:SEM:CARR:IND 1</code> <code>:SEM:CARR:IND?</code>
Dependencies	Available only in MSR, LTE-A and 5G NR Modes
Preset	1
State Saved	Saved in instrument state
Min/Max	MSR Mode: 1/100 LTEAFDD,LTEATDD Mode:1/5 5G NR Mode: 16

Total Power Ref

Sets the power in the carrier (ref channel) that is used to compute the relative power values for the offsets. For modes other than MSR, LTEAFDD, LTEATDD, and 5GNR, when **Reference Power** is set to Measured, this value is set to the measured carrier reference power. When set to Manual, the result takes on the last measured value, or can be manually entered.

For WLAN 802.11ac (80 MHz + 80 MHz), the higher of the power readouts of the two carriers is used for computing the relative power values for the offset.

Remote Command	<code>[:SENSe]:SEMAsk:CARRier[:POWer] <real></code> <code>[:SENSe]:SEMAsk:CARRier[:POWer]?</code>
Example	<code>:SEM:CARR 100dBm</code> <code>:SEM:CARR?</code>
Notes	The min and max values given are for " Measurement Type " on page 2035 = Total Pwr Ref
Couplings	Coupled with Measurement Type . Active when Measurement Type is set to Total Power Ref. Otherwise,

	grayed-out In MSR, LTE-A and 5G NR Modes, the control is active when Measurement Type is set to Total Power and Power Ref is set to Manual
Preset	Measured carrier reference power
State Saved	Saved in instrument state
Min/Max	-200 dBm / 200 dBm
Annotation	Value is displayed on the left top of the Results window with the Channel Integ BW

PSD Ref

Sets the power spectral density in the carrier that is used to compute the relative power spectral density values for the offsets when "**Measurement Type**" on page 2035 is set to PSD Ref. When the state is set to **Auto**, this will be set to the measured carrier power spectral density.

For WLAN 802.11ac (80 MHz + 80 MHz), the higher of the power density readouts of the two carriers is used for computing the relative PSD values for the offset.

Remote Command	<code>[:SENSe] :SEMAsk :CARRier :CPSD <real></code> <code>[:SENSe] :SEMAsk :CARRier :CPSD?</code>
Example	<code>:SEM :CARR :CPSD -80</code> <code>:SEM :CARR :CPSD?</code>
Notes	Although the default value is defined, the value is recalculated by the measurement result just after completing the measurement
Couplings	Coupled with " Measurement Type " on page 2035. Active if Measurement Type is PSD. Otherwise, grayed-out In MSR, LTE-A and 5G NR Modes, active when Measurement Type is PSD and Power Ref is Manual
Preset	Measured carrier PSD reference power
State Saved	Saved in instrument state
Min/Max	-/+200
Annotation	Value is displayed on the right top of the Results window. If Meas Type selection is PSD Ref, the string is "PSD Ref" with BOLD font, otherwise, hide annotation

Spectrum Pk Ref

Sets the spectrum peak power in the carrier that is used to compute the relative power spectral density values for the offsets when "**Measurement Type**" on page 2035 is Spectrum Peak. When the state is set to **Auto**, this is set to the measured carrier spectrum peak power. When set to **Manual**, the result takes on the last measured value, or can be manually entered

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Remote Command	<code>[:SENSe]:SEMAsk:CARRier:PEAK[:POWer] <real></code> <code>[:SENSe]:SEMAsk:CARRier:PEAK[:POWer]?</code>
Example	<code>:SEM:CARR:PEAK -80</code> <code>:SEM:CARR:PEAK:POWER?</code>
Notes	Although the default value is defined, the value is recalculated by the measurement result just after completing the measurement
Couplings	Coupled with " Measurement Type " on page 2035. Active when Measurement Type is "Spectrum Peak Ref". Otherwise, grayed-out In MSR, LTE-A and 5G NR Modes, active when Measurement Type is Spectrum Peak Ref and Power Ref is Manual
Preset	Measured carrier Spectrum Peak reference power
State Saved	Saved in instrument state
Min/Max	-200 / 200
Annotation	Value is displayed on the right top of the Results window. If Meas Type selection is Spectrum Peak Ref, the string is "Spectrum Peak Ref" with BOLD font, otherwise, hide annotation

Measure All Ref Carriers

When **ON**, all reference carriers configured are always measured irrespective of Measure Carrier on/off settings.

Remote Command	<code>[:SENSe]:SEMAsk:CARRier:MEASure:ALL ON OFF 1 0</code> <code>[:SENSe]:SEMAsk:CARRier:MEASure:ALL?</code>
Example	<code>:SEM:CARR:MEAS:ALL 1</code> <code>:SEM:CARR:MEAS:ALL?</code>
Dependencies	Only available in MSR, LTE-A and 5G NR Modes
Preset	0
State Saved	Saved in instrument state

Offset/Limits Config Table

This function is the same as "[Offset/Limits Config Table](#)" on page 1048 under the "[Settings](#)" on page 1044 tab.

Sets the power reference in the carrier that will be used to compute the relative values for the offsets.

3.5.23.4 Radio

The Radio tab contains controls to select link direction.

Direction

Direction specifies whether the 5G NR signal is an uplink signal or a downlink signal. This control allows you to set the Direction of the signal being measured.

Remote Command	<code>[:SENSe]:RADio:STANdard:DIRection DLINK ULINK</code> <code>[:SENSe]:RADio:STANdard:DIRection?</code>
Example	<code>:RAD:STAN:DIR DLIN</code>
Dependencies	When N9085EM0E is not installed and N9085EM4E is installed, only Uplink is available
Couplings	Changing the direction affects the gate source as follows <ul style="list-style-type: none"> - If changed to uplink: RF burst - If changed to downlink: External 1 <p>In Transmit On Off Power, changing the direction affects the trigger source as follows</p> <ul style="list-style-type: none"> - If changed to uplink: Periodic - If changed to downlink: External 1 except for models with the H1G option. With the H1G option, the trigger source changes as follows. <ul style="list-style-type: none"> - External 1, when Info BW \leq 255 MHz - External 3, when Info BW \geq 256 MHz <p>Changing the direction affects many other modulation analysis setup parameters</p>
Preset	ULINK when N9085EM0E is not installed and N9085EM4E is installed Otherwise, DLINK
State Saved	Yes
Range	Uplink only when N9085EM0E is not installed and N9085EM4E is installed Otherwise, Downlink Uplink

MIMO

Indicates input Signal is MIMO (including MISO) or SISO.

NOTE

This setting is available for EVM.

Remote Command	<code>[:SENSe]:RADio:MIMO[:STATe] ON OFF 0 1</code> <code>[:SENSe]:RADio:MIMO[:STATe]?</code>
Example	<code>:RAD:MIMO ON</code> <code>:RAD:MIMO?</code>

Preset	OFF
State Saved	Yes
Range	ON OFF

When input signal is MIMO, there are two use models depends on input data channel number.

- Input data channel number = 1

This means the MIMO signal has been combined into one channel (MISO), in this condition only part of measurements results are valid:

MIMO Info table

Spectrum trace

Raw Main Time trace

- Input data channel number > 1

Input data channels may come from:

Recall IQ data for multiple channels

Reference Input Channel

Specifies reference channel in MIMO mode.

NOTE

This setting is available for EVM when "MIMO" on page 3020 is set to On.

Remote Command	<code>[:SENSe] :RADio:MIMO:CHANnel:REFerence CHANnel1 ... CHANnel8</code> <code>[:SENSe] :RADio:MIMO:CHANnel:REFerence?</code>
Example	<code>:RAD:MIMO:CHAN:REF CHAN1</code> <code>:RAD:MIMO:CHAN:REF?</code>
Couplings	This key is grayed-out when MIMO is off The available selections depend on Total input channel number
Preset	CHAN1
State Saved	Yes

Multi Channel Synchronous Acquisition (UXM Only)

Enables you to perform multiple synchronous acquisition. When On, acquires signals simultaneously from multiple inputs specified in the Multi Channel Config dialog. The acquired data is assigned to each trace according to the Channel Assignment settings in the Trace Settings Table dialog.

Remote Command	<code>[:SENSe]:RADio:MCHannel:SACQuisition[:STATe] ON OFF 1 0</code> <code>[:SENSe]:RADio:MCHannel:SACQuisition[:STATe]?</code>
Example	<code>:RAD:MCH:SACQ ON</code> <code>:RAD:MCH:SACQ?</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition
Preset	<code>OFF</code>
State Saved	Yes

Multi Channel Config

Lets you perform a detailed configuration of each input channel. This will be used for three cases:

- MIMO (EVM only): Meas Setup > Radio (N9042B and UXM model E7515B only)
- ccEVM (EVM only): Meas Setup > Advanced
- Multiple Synchronous Acquisition (PowerSuite measurements supporting multi-channel synchronous acquisition): Meas Setup > Radio (UXM model E7515B only)

Multi Channel Configuration

Enables you to configure multiple channel receiver. Different hardware platforms have different parameters.

This menu is available for the following measurements:

- EVM in N9042B, VXT2/3, UXM model E7515B
- PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "[Multi Channel Synchronous Acquisition \(UXM Only\)](#)" on page 3021

Input Port (UXM)

Select input port for channel configuration.

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Remote Command	<code>[:SENSe]:RADio:MCHannel:PORT[1] 2 RFI01 ... RFI08</code> <code>[:SENSe]:RADio:MCHannel:PORT[1] 2?</code>
Example	<code>:RAD:MCH:PORT2 RFI02</code> <code>:RAD:MCH:PORT2?</code>
Dependencies	This control appears only in the EVM and PowerSuite measurement supporting multiport synchronous acquisition in the UXM model E7515B When "Lock (UXM)" on page 3023 is On, the selections are grayed out and cannot be changed. When "Lock (UXM)" on page 3023 is OFF, the label "Channel x" changes to "Unused" Selections are the same as those of RF Input Port and either RFI01 to RFI08 or RFI01 to RFI016 depending on the hardware configuration
Preset	RFIO1 RFIO2
State Saved	Yes
Range	RFIO 1 RFIO 2 RFIO 3 RFIO 4 RFIO 5 RFIO 6 RFIO 7 RFIO 8 or RFIO 1 RFIO 2 RFIO 3 RFIO 4 RFIO 5 RFIO 6 RFIO 7 RFIO 8 RFIO 9 RFIO 10 RFIO 11 RFIO 12 RFIO 13 RFIO 14 RFIO 15 RFIO 16
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2</code>

Lock (UXM)

Enables you to lock/unlock the input port. When locked, the selected input port is assigned to a channel.

Remote Command	<code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed?</code>
Example	<code>:RAD:MCH:PORT2:LOCK ON</code> <code>:RAD:MCH:PORT2:LOCK?</code>
Dependencies	This control appears only in the EVM and PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2:LOCKed</code>

Input Channel IP address

Set instrument IP address for channel configuration, "local" is used for current instrument.

Remote Command	<code>[:SENSe]:RADio:MCHannel:IPAddress[1] 2 ... 4 <String></code>
----------------	---

	<code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4?</code>
Example	<code>:RAD:MCH:IPAD '192.168.1.2'</code>
Dependencies	Appears only in the EVM measurement
Preset	local
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4</code>

Input Channel Instrument port

Set instrument port for channel configuration.

Remote Command	<code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:PORT <int></code> <code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:PORT?</code>
Example	<code>:RAD:MCH:IPAD:PORT 3574</code>
Dependencies	Available only for the EVM measurement. Only visible on VXT platforms
Preset	3574
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4:PORT</code>

Lock

Lock instrument and assign to a channel in sequence.

Remote Command	<code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADio:MCHannel:IPADdress[1] 2 ... 4:LOCKed?</code>
Example	<code>:RAD:MCH:IPAD1:LOCK 1</code> <code>:RAD:MCH:IPAD1:LOCK?</code>
Dependencies	Appears only in the EVM measurement
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4:LOCKed</code>

Channel Configuration Information (Remote Query only)

This SCPI query reads back channel configuration information.

Remote Command	<code>[:SENSe]:RADio:MCHannel:CHANnel:INFO?</code>
----------------	---

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Example	<code>:RAD:MCH:CHAN:INFO?</code>
Dependencies	Available only for the EVM measurement
Backwards Compatibility SCPI	<code>[:SENSe] :RADio:MIMO:CHANnel:INFO</code>

Trace Settings Table

Lets you set a configuration of multiport synchronous acquisition.

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition
--------------	---

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "[Multi Channel Synchronous Acquisition \(UXM Only\)](#)" on page 3021

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a `:READ` or `:FETCh` query:

- Trace 1
- Trace 2
- Trace 3

Remote Command	<code>:CALCulate:<meas>:MTRace TRACe1 TRACe2 TRACe3</code> <code>:CALCulate:<meas>:MTRace?</code> <code><meas></code> is the identifier for the current measurement; any one of <code>CHPower</code> <code>ACPower</code> <code>OBwidth</code> <code>SEMask</code> <code>SPURious</code> <code>PVTime</code>
----------------	--

Example	Channel Power
---------	---------------

	<code>:CALC:CHP:MTR TRAC1</code> <code>:CALC:CHP:MTR?</code>
Dependencies	In the ACP measurement, this control is grayed-out when Meas Method is set to RBW or FAST , and only Trace 1 is enabled
Preset	<code>TRACe1</code>
State Saved	No
Range	Trace 1 Trace 2 Trace 3

Channel Assignment

Selects the channel for each trace in the specified measurement. A port selected at ["Input Port \(UXM\)" on page 3022](#) is assigned to a trace. This setting is valid when ["Multi Channel Synchronous Acquisition \(UXM Only\)" on page 3025](#) is ON.

Multi Channel Synchronous Acquisition is performed under the following conditions:

- All Input Port Channel Lock is set to ON
- Multi Channel Synchronous Acquisition is set to ON

The selected input port is shown in the Trace Setup Summary table, on the trace and at the bottom of the Trace Control menu panel.

Remote Command	<code>:TRACe[1] 2 3:<meas>:CHANne1 CHANne11 CHANne12</code> <code>:TRACe[1] 2 3:<meas>:CHANne1?</code>
Example	For the ACP measurement Trace 2 <code>:TRAC2:ACP:CHAN CHAN2</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3025 is On The unlocked channel is grayed-out
Preset	CHAN1 CHAN2 CHAN1
State Saved	Yes
Range	Channel 1 Channel 2

Input Port

Read-only information. Indicates which input data is displayed in each trace. This setting is valid when Multi Channel Synchronous Acquisition is ON.

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition
--------------	---

Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 3021 is On
 This column is blank when Math Function is other than Off

Advanced Acquisition

This is the same as "Advanced Acquisition" on page 3072 in the Configure Comp Carriers dialog. See "Advanced Acquisition" on page 3072.

EIRP (Synchronous Acquisition) (UXM Only)

Enables you to preset the following parameters. Preset is made such that Trace 3 becomes the sum of Trace 1 and Trace 2 to which data from Channel 1 and Channel 2 are assigned. The measurement result is calculated based on Trace 3.

This parameter is useful when performing the EIRP measurement by acquiring signals from two ports simultaneously.

Multi Channel Synchronous Acquisition	On
--	-----------

Target trace parameters are those of the PowerSuite measurements supporting multi channel synchronous acquisition in the UXM model E7515B.

	Trace 1	Trace 2	Trace 3
Channel Assignment	Channel 1	Channel 2	Channel 1
Trace Type	Trace Average	Trace Average	Clear / Write
View/Blank	Active	Active	Active
Math Function	Off	Off	Power Sum
Operand 1	N/A	N/A	Trace 1
Operand 2	N/A	N/A	Trace 2
Math Trace	Trace 3		

Remote Command	<code>[:SENSe]:RADio:MCHannel:PRESet:EIRP</code>
Example	<code>:RAD:MCH:PRES:EIRP</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Restore Defaults (UXM Only)

Enables you to preset the following parameters.

Multi Channel Synchronous Acquisition	Off
Measure Trace	Trace1

	Trace 1	Trace 2	Trace 3
View/Blank	Active	Blank	Blank
Math Function	Off	Off	Off

Remote Command	<code>[:SENSe]:RADio:MCHannel:PRESet:DEFault</code>
Example	<code>:RAD:MCH:PRES:DEF</code>
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Interfering Signal Present

Sets whether interference signal for the intermodulation tests exists or not. If exists, limits are not evaluated over the interference signal frequency range specified by the span and the center frequency parameters in Adjacent Channel, Spectrum Emission Mask and Spurious Emissions measurements.

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference[:STATe] OFF ON 0 1</code> <code>[:SENSe]:RADio:IMODulation:INTerference[:STATe]?</code>
Example	<code>:RAD:IMOD:INT 1</code> <code>:RAD:IMOD:INT?</code>
Preset	OFF
State Saved	Saved in instrument state
Range	On Off

Freq Offset From Edge

Sets the center frequency of the interference signal for intermodulation tests. The frequency is set as offset frequency from the BS RF bandwidth edge. Interference Offset Side determines on which side of the BS RF bandwidth the interference signal exists.

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet <freq></code> <code>[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet?</code>
Example	<code>:RAD:IMOD:INT:FREQ:OFFS 5MHz</code> <code>:RAD:IMOD:INT:FREQ:OFFS?</code>

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Preset	5MHz
State Saved	Saved in instrument state
Min	0 Hz
Max	400 MHz

Span

Sets the span of the interference signal for intermodulation tests.

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:SPAN <freq></code> <code>[:SENSe]:RADio:IMODulation:INTerference:SPAN?</code>
Example	<code>:RAD:IMOD:INT:SPAN 5MHz</code> <code>:RAD:IMOD:INT:SPAN?</code>
Preset	5 MHz
State Saved	Saved in instrument state
Min	200 kHz
Max	400 MHz

Offset Side

Sets which side of the BS RF bandwidth the interference signal exists on.

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:SIDE NEGative POSitive</code> <code>[:SENSe]:RADio:IMODulation:INTerference:SIDE?</code>
Example	<code>:RAD:IMOD:INT:SIDE POS</code> <code>:RAD:IMOD:INT:SIDE?</code>
Preset	POSitive
State Saved	Saved in instrument state

Non-Contiguous Interference Region

Sets the region the interfering signal exists at in the Non-Contiguous mode:

- Inner – The interfering signal exists at the inner region. This setting is only effective when Carrier Alloc is Non-Contiguous. When in Contiguous, the interference region is always outside regardless of the selection of this parameter
- Outer – The interfering signal exists at either of the outer regions

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:REGion INNer OUTer</code> <code>[:SENSe]:RADio:IMODulation:INTerference:REGion?</code>
Example	<code>:RAD:IMOD:INT:REG OUT</code> <code>:RAD:IMOD:INT:REG?</code>
Preset	<code>OUTer</code>
State Saved	Saved in instrument state

Interfering Signal Exclude Range

Enables you to select the offset range to be excluded from the measurement.

- Offset Integ BW (OIBW) - Exclude an entire ACP offset range where the interfering signal is allocated
- Interfering Signal Span (ISSP) - Exclude only the span where the interfering signal is occupied

NOTE This setting is available only for the ACP and Modulation Analysis measurements.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:RANGe:EXCLude[1] 2 OIBW ISSPan</code> <code>[:SENSe]:RADio:IMODulation:INTerference:RANGe:EXCLude[1] 2?</code>
Example	<code>RAD:IMOD:INT:RANG:EXCL OIBW</code> <code>RAD:IMOD:INT:RANG:EXCL?</code>
Notes	Subopcode 1 for Downlink, 2 for Uplink. Default is Downlink.
Preset	Downlink: ISSPan Uplink: OIBW
State Saved	Saved in instrument state
Range	Offset Integ BW Interfering Signal Span

3.5.23.5 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your 5G NR signal.

Number of Component Carriers

Specifies how many component carriers are included in the 5G NR measurements. The 5G NR supports the maximum of 16 component carriers.

Remote Command	<code>[:SENSe]:CCARrier:COUNT <integer></code> <code>[:SENSe]:CCARrier:COUNT?</code>
Example	<code>:CCAR:COUN 1</code> <code>:CCAR:COUN?</code>
Preset	1
State Saved	Yes
Min	1
Max	16

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous NCONtiguous</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation?</code>
Example	<code>:CCAR:CONF:ALL CONT</code> <code>:CCAR:CONF:ALL?</code>
Preset	<code>CONTiguous</code>
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 ... CC15</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?</code>
Example	<code>:CCAR:CONF:ALL:NCON:ABP CC0</code> <code>:CCAR:CONF:ALL:NCON:ABP?</code>
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	<code>CC0</code>
State Saved	Saved in instrument state
Range	<code>CC0 ... CC15</code>

Configure Comp Carriers

This dialog lets you perform a detailed configuration of your component carriers, including number of carriers, bandwidth, offset, integration bandwidth, and so on.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

More Information

"Measure Carrier" on page 3057	"Sidelink" on page 1627	"Bandwidth" on page 3057	"Freq Range" on page 3058
"Freq Offset" on page 3058	"Cell ID Auto" on page 3059	"Cell ID Value" on page 3059	"Demod Spectrum" on page 3060

"SCS (Power Meas)" on page 3063			

Number of Component Carriers

This is the same as the control on the menu panel. See ["Number of Component Carriers" on page 3052](#).

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	<code>[:SENSe]:CCARrier:AFOffset OFF ACRA100K ACRA15K ACRA60K CARA100K CARA15K CARA60K</code> <code>[:SENSe]:CCARrier:AFOffset?</code>		
Example	<code>:CCAR:AFOF ACRA100K</code> <code>:CCAR:AFOF?</code>		
Notes	When you change the value to OFF , nothing happens		
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate frequency offset unless OFF is selected When CC's Frequency Offset is manually changed, this parameter is set to OFF This feature isn't supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CCO Freq Offset is automatically adjusted to 0 Hz		
Preset	OFF		
State Saved	Yes		
Range	The cascading list is shown below		
	<table border="1"> <tr> <td>Channel Spacing for Adjacent NR Carriers</td> <td>Channel Raster 100 kHz</td> </tr> </table>	Channel Spacing for Adjacent NR Carriers	Channel Raster 100 kHz
Channel Spacing for Adjacent NR Carriers	Channel Raster 100 kHz		

Carrier Aggregation	15 kHz
Off	60 kHz
Channel Spacing for Adjacent NR Carriers	Channel Raster 100 kHz
Carrier Aggregation	15 kHz
Off	60 kHz
Channel Spacing for Adjacent NR Carriers	Channel Raster
Carrier Aggregation	
Off	

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous NCONTiguous</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation?</code>
Example	<code>:CCAR:CONF:ALL CONT</code> <code>:CCAR:CONF:ALL?</code>
Preset	<code>CONTiguous</code>
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that

sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALlocation:NCONtiguous:ABPoint CC0 ... CC15</code> <code>[:SENSe]:CCARrier:CONFig:ALlocation:NCONtiguous:ABPoint?</code>
Example	<code>:CCAR:CONF:ALL:NCON:ABP CC0</code> <code>:CCAR:CONF:ALL:NCON:ABP?</code>
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	<code>CC0</code>
State Saved	Saved in instrument state
Range	<code>CC0 ... CC15</code>

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe] OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe]?</code>
Example	<code>:CCAR0 ON</code> <code>:CCAR0?</code>
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action "Apply Preset (to All CCs)" is executed
Preset	ON
State Saved	Saved in instrument state

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth B3M B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth?</code>
Example	<code>:CCAR4:RAD:STAN:BAND B50M</code>
Dependencies	When " Sidelink " on page 1627 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	B100M unless noted below <ul style="list-style-type: none"> - Option B25: B20M - Option B40: B35M - Option B85: B80M
State Saved	Yes
Range	3 MHz 5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge FR1 FR2</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge?</code>
Example	<code>:CCAR1:RAD:STAN:FRAN FR1</code>
Dependencies	Available selections differ depending on " Bandwidth " on page 3057 as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Couplings	This value will be preset to the Frequency Range value in the Meas Standard menu when the action “Apply Preset (to All CCs)” is executed
Preset	FR1
State Saved	Yes
Range	FR1 FR2

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	<code>[:SENSe]:CCARrier<n>:FREQUency:OFFSet <freq></code> <code>[:SENSe]:CCARrier<n>:FREQUency:OFFSet?</code>
Example	<code>:CCAR4:FREQ:OFFS 10MHz</code> <code>:CCAR4:FREQ:OFFS?</code>
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers Frequency Offset of CC0 to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly Also, in some cases, make sure if the “Non-Contiguous Break at” parameter is set to the intended value since it’s often left unchanged after Frequency Offset of CCs are changed
Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Cell ID Auto

Enable and disable Cell ID auto detection based on SSB.

NOTE

This setting is available for EVM measurement only.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15 :CID:MODE AUTO MANua1</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15 :CID:MODE?</code>
Example	<code>:EVM:CCAR:CID:MODE MAN</code> <code>:EVM:CCAR:CID:MODE?</code>

Preset	MANual
State Saved	Saved in instrument state

Cell ID Value

Specify Cell ID for the component carrier.

NOTE This setting is available for EVM measurement only.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID?</code>
Example	<code>:EVM:CCAR4:CID 0</code> <code>:EVM:CCAR4:CID?</code>
Couplings	Invalid when Cell ID Auto is on
Preset	0
State Saved	Saved in instrument state
Min	0
Max	1007

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum NORMal INVert</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum?</code>
Example	<code>:CCAR0:SPEC INV</code> <code>:CCAR0:SPEC?</code>
Preset	NORM
State Saved	Yes
Range	Normal Invert

CHP Power Integration Bandwidth

This column specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

NOTE This setting is *not* available for EVM.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration?</code>
Example	<code>:CCAR0:CHP:BAND:INT 20MHz</code> <code>:CCAR0:CHP:BAND:INT?</code>
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration?</code>	
Example	<code>:CCAR0:ACP:BAND:INT 20MHz</code> <code>:CCAR0:ACP:BAND:INT?</code>	
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS	
Couplings	When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table When Freq Range is FR1	
	Bandwidth	Uplink ACP Meas Noise BW (MHz)
		Downlink ACP Meas Noise BW (MHz)
	3 MHz	2.715
	5 MHz	4.515
	10 MHz	9.375
	15 MHz	14.235
	20 MHz	19.095
	25 MHz	23.955
	30 MHz	28.815
	35 MHz	33.855

40 MHz	38.880	38.895
45 MHz	43.560	43.575
50 MHz	48.600	48.615
60 MHz	58.320	58.350
70 MHz	68.040	68.070
80 MHz	78.120	78.150
90 MHz	88.200	88.230
100 MHz	98.280	98.310
When Freq Range is FR2		
Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
50 MHz	47.520	47.580
100 MHz	95.040	95.160
200 MHz	190.080	190.20
400 MHz	380.160	380.280
800 MHz	714.24	715.20
1600 MHz	1428.48	1429.44
2000 MHz	1704.96	1705.92
Preset	98.280 MHz 98.310 MHz	
State Saved	Yes	
Min	100 kHz	
Max	2000 MHz	

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk: BANDwidth[1] 2:INTegration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk: BANDwidth[1] 2:INTegration?</code>
Example	<code>:CCAR0:SEM: BAND: INT 20MHz</code> <code>:CCAR0:SEM: BAND: INT?</code>
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Min	100 kHz
Max	2000 MHz

N_Grid_Size (Display Only)

Display Max RB Number for each available numerology. To adjust this setting please switch to Resource Grid tab.

NOTE This setting is available for EVM measurement only.

3GPP TS38.104 or TS38.101-1 Table 5.3.2-1: Maximum transmission bandwidth configuration N_{RB} for FR1

	3	5	1	1	2	2	3	3	4	4	5	6	7	8	9	1

3GPP TS38.104 Tables 5.3.2-2 and 5.3.2-3 or TS38.101-2 Table 5.3.2-1: Maximum transmission bandwidth configuration N_{RB} for FR2

SCS	50 MHz	100 MHz	200 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	66	132	264	N.A	N.A	N.A	N.A
120	32	66	132	264	N.A	N.A	N.A
480	N.A	N.A	N.A	66	124	248	N.A
960	N.A	N.A	N.A	33	62	124	148

NOTE: For the “N.A” value in above table, the value will be set to 0 and displayed as “_”.

SCS (Power Meas)

Queries the SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier set with ["SCS Enabled" on page 3066](#).

It is used to calculate the aggregated channel bandwidth when Power Reference is set to Aggregated Chan BW.

Power Integration Bandwidth values are not affected even if SCS (Power Meas) is changed.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RGRid:PMSCs?</code>
Example	<code>:CCAR3:RGR:PMSC?</code>
Notes	Query-only Returns one of the following values: NONE, SCS15K, SCS30K, SCS60K, SCS120K, SCS240K, SCS480K, SCS960K

Resource Grid

Enables you to configure resource grid for each available numerology of each component carrier.

NOTE This tab and the following controls are available only for Modulation Analysis measurement.

Component Carrier (GUI only)

Selects the Component Carrier to configure its resource grid for each available numerology.

Bandwidth

This is the same as the Bandwidth column in the Configure CCs table. See ["Bandwidth" on page 3057](#).

Freq Range

This is the same as the Freq Range column in the Configure CCs table. See ["Freq Range" on page 3058](#)

Configuration Mode

Selects the configuration mode for resource grid table:

- Auto – always reset N_grid_start and N_grid_size when the frequency range and bandwidth of component carrier are changed. SCS enable/disable state will not be changed, unless enabled SCS is invalid for new frequency range and bandwidth. If all enabled SCS are invalid for new frequency range and bandwidth, 30K SCS will be enabled for frequency range 1 and 120K SCS will be enabled for frequency range 2
- Man – keep the value in grid table when the frequency range and bandwidth of component carrier are changed, unless a value is invalid for new frequency range and bandwidth

Remote Command	<code>[:SENSE]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO ON OFF 1 0</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO?</code>
Example	<code>:EVM:CCAR:RGR:CONF:AUTO 0</code> <code>:EVM:CCAR:RGR:CONF:AUTO?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON 0 1

When the configuration mode is Auto, the default N_grid_start is set to 0 and N_grid_size is set according to tables below:

Table 5.3.2-1: Transmission bandwidth configuration N_{RB} for FR1

S	5	1	1	2	2	3	3	4	4	5	6	7	8	9	1

960	N.A	N.A	N.A	33	62	124	148

SCS Enabled

The Enabled column lets you enable or disable selected SCS for current component carrier.

Remote Command	<pre>[:SENSe][:EVM]:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k [:STATe] OFF ON 0 1 [:SENSe][:EVM]:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k [:STATe]?</pre>
Example	<pre>:EVM:CCAR:RGR:SCS15 ON :EVM:CCAR:RGR:SCS15?</pre>
Notes	<p>Only valid numerology for selected frequency range and bandwidth will be visible. Some SCS are disabled if they are "N.A" in Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104)" in the Section 3.2.5.1.15, N_{Grid_Size} (Display Only)</p> <p>In EVM, if Configuration Mode is Auto and Freq Range is changed, the Grid Start and Grid Size will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p> <p>In measurements other than EVM, when Freq Range is changed, the parameter will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p>
Preset	<pre>SCS 15k : OFF SCS 30k : ON SCS 60k : OFF SCS 120k: OFF SCS240K: OFF SCS480K: OFF SCS960K: OFF</pre>
State Saved	Yes

N_{grid_start}

This column lets you set the Grid Start value for the selected numerology.

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Remote Command	<code>[[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:START <integer> [:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:STAR- t?</code>
Example	<code>:EVM:CCAR:RGRid:SCS15k:STAR 0 :EVM:CCAR:RGRid:SCS15k:STAR?</code>
Preset	Depends on frequency range, bandwidth and numerology
State Saved	Yes
Min	0
Max	Depends on frequency range, bandwidth and numerology

N_grid_size

This column lets you set the Grid Size for the selected numerology.

Remote Command	<code>[[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE E <integer> [:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE- E?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:SIZE 270 :EVM:CCAR:RGR:SCS15k:SIZE?</code>
Notes	Grid Size should not exceed the Nrb in Table 5.3.2-1 or Table 5.3.2-2 of 3GPP TS38.104 and TS38.101-1 & -2
Preset	Depends on frequency range and bandwidth
State Saved	Yes
Min	6
Max	Depends on frequency range, bandwidth and numerology
Backwards Compatibility SCPI	<code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:RBNumber:SCS15k SCS30k SCS60k SCS120k SCS240k</code>

k0 (Display Only)

This column displays the k0 value for the selected Numerology.

Remote Command	<code>[[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:k0?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:k0?</code>

More Information

See picture below for illustration how k_0 is calculated.

Intra-Cell Guard Band

Enter a comma-separated string to set guard band. Consecutive numbers will be merged into one guard band. At most, 4 guard bands are allowed and the rest will be omitted. Colon-separated numbers represent the start and stop of a guard band.

Remote Command	<code>[:SENSE]:EVM:CCARrier[0] 1 ... 15:RGRid:SCS15k SCS30k:GBAND <string></code>
Example	<code>:EVM:CCAR:RGR:SCS15k:GBAN "0:9"</code> <code>:EVM:CCAR:RGR:SCS15k:GBAN?</code>
Couplings	Only visible for Uplink and only available for 15kHz/30kHz numerology
State Saved	Yes

RB Set (Display Only)

Display the RB set according to Intra-Cell Guard Band setting.

Point A Frequency (Display Only)

This figure displays the Point A Freq for the resource grid.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:REFA?</code>
Example	<code>:EVM:CCAR:RGR:REFA?</code>

LTE Coexistence

This tab and the following controls are available only for Modulation Analysis measurement, and it will only appear for DL FR1 component carriers.

Add LTE (GUI only)

Pressing this control inserts a new LTE-CRS configuration into the list, the maximum number of LTE-CRS configurations is 4.

Delete LTE (GUI only)

Pressing this control deletes selected LTE-CRS configuration from the list.

Clear All (GUI only)

Pressing this control deletes all LTE-CRS configurations from the list.

Effective LTE Number (Remote Command only)

Specifies how many LTE-CRS configurations are effective. This SCPI only command is used to provide similar functions such as “Add LTE” and “Delete LTE”.

Note that all 4 LTE-CRS configurations can be modified through SCPI, but ineffective LTE-CRS configurations (index > Effective LTE Number) will not be included in the measurement no matter whether its state is “On” or “Off”.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:NUMBER:LTE <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:NUMBER:LTE?</code>
Example	<code>:EVM:CCAR:NUMB:LTE 2</code> <code>:EVM:CCAR:NUMB:LTE?</code>
Couplings	Max value is 4 If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	4

State

Enable or disable the LTE coexistence.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATe]?</code>
Example	<code>:EVM:CCAR:LTE1 OFF</code>

	<code>:EVM:CCAR:LTE1?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message This control is available only when 15K SCS is enabled in the resource grid
Preset	<code>OFF</code>
State Saved	Yes

Bandwidth

Set the LTE bandwidth.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW B1M4 B3M B5M B10M B15M B20M</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW?</code>
Example	<code>:EVM:CCAR:LTE1:BW B20M</code> <code>:EVM:CCAR:LTE1:BW?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	<code>B5M</code>
State Saved	Yes
Range	1.4 MHz 3 MHz 5 MHz 10 MHz 15 MHz 20 MHz

Carrier Offset to Point A

Sets the LTE carrier center subcarrier location determined by the offset from point A using 15K SCS.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset?</code>
Example	<code>:EVM:CCAR:LTE1:COFF 0</code> <code>:EVM:CCAR:LTE1:COFF?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	0
State Saved	Yes
Min	0
Max	16383

MBSFN Subframes

Sets the subframe index that can be configured as MBSFN subframes in LTE.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame <string></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame?</code>
Example	<code>:EVM:CCAR:LTE:MBSF:SFR "2:9"</code> <code>:EVM:CCAR:LTE:MBSF:SFR?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
State Saved	Yes

Number of CRS Antenna Ports

Set the number of antenna ports for LTE-CRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer N1 N2 N4</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB N1</code> <code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	N1
State Saved	Yes
Range	1 2 4

v-shift

Set the v-shift value for LTE-CRS; it is given by LTE Cell ID mod 6.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:VSH 0</code> <code>:EVM:CCAR:LTE1:CRS:VSH?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error

	message
Preset	0
State Saved	Yes
Min	0
Max	5

Advanced Acquisition

This menu is available only for the Modulation Analysis measurement. It enables you to configure selected RF settings for each component carrier and channel.

Number of Component Carriers

This is the same as the control on the menu panel. See ["Number of Component Carriers" on page 3052](#).

Input Channel (GUI Only)

Select the input channel to configure its settings.

State Saved	No
-------------	----

Use Advanced Acquisition Table

Specify if the settings in Advanced Acquisition Table will be applied.

Remote Command	<code>[:SENSe]:RF:ACQuistion:ATABle OFF ON 0 1</code> <code>[:SENSe]:RF:ACQuistion:ATABle?</code>
Example	<code>:RF:ACQ:ATAB 1</code> <code>:RF:ACQ:ATAB?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON

IF Path Auto

Specify if the IF path in Advanced Acquisition Table will be automatically or manually selected.

Remote	<code>[:SENSe]:RF:ACQuistion:ATABle:IFPath:AUTO ON OFF 1 0</code>
--------	--

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Command	<code>[:SENSe]:RF:ACQuisition:ATABle:IFPath:AUTO?</code>
Example	<code>:RF:ACQ:ATAB:IFP:AUTO 1</code> <code>:RF:ACQ:ATAB:IFP:AUTO?</code>
Preset	ON
State Saved	Yes
Range	OFF ON

Mechanical Attenuation

Set mechanical attenuation for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:ATT 20</code>
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. To get to a value below 6 dB it has to be directly entered from the keypad or via SCPI. This protects from adjusting the attenuation to a dangerously small value which can put the instrument at risk of damage to input circuitry. However, if the current mechanical attenuation is below 6 dB it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB

Elec Attenuation

Set electronic attenuation for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:EATT 20</code>
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual attenuator configuration: 24 dB Single attenuator configuration: the total of ATT and EATT cannot exceed 50 dB, so if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB

LNA

Turn on/off Low Noise Amplifier (LNA) for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:LNA ON</code>
Dependencies	Requires option LNA
Preset	OFF
State Saved	Saved in State

Internal Preamp

Turn on/off internal preamp for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:PREamp OFF LOW FULL</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:PREamp?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:PRE LOW</code> <code>:CCAR0:RF:CHAN1:GAIN:PRE?</code>
Dependencies	Preamp is not available on all hardware platforms. If the preamp is not present or is unlicensed, the control is not shown
Preset	OFF
State Saved	Saved in instrument state

uW Path Control

Select uW Path for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH STD LNPath MPBypass FULL</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH?</code>
Example	<code>:CCAR0:RF:CHAN1:MW:PATH LNP</code> <code>:CCAR0:RF:CHAN1:MW:PATH?</code>
Preset	MPB option present and licensed: MPB MPB option not present and licensed: STD
State Saved	Save in instrument state
Range	Standard Path Low Noise Path Enable μW Presel Bypass Full Bypass Enable

IF Gain

Set IF Gain for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:IF:GAIN:LEVel <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:IF:GAIN:LEVel?</code>
Example	<code>:CCAR0:RF:CHAN1:IF:GAIN:LEV -10</code> <code>:CCAR0:RF:CHAN1:IF:GAIN:LEV?</code>
Notes	Not available for B25 IF bandwidth option
Preset	0
State Saved	Save in instrument state
Min	Depends on CC Bandwidth
Max	Depends on CC Bandwidth

IF Path

Specify IF path manually for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath B10M B25M B40M B85M B125M B140M B160M B255M B510M B1G B1500M B2G B4G</code> <code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath?</code>
Example	<code>:CCAR0:RF:CHAN1:IFP B160M</code> <code>:CCAR0:RF:CHAN1:IFP?</code>
Notes	B10M = 10 MHz B25M = 25 MHz B40M = 40 MHz B85M = 85 MHz B125M = 125 MHz B140M = 140 MHz B160M = 160 MHz B255M = 255 MHz B510M = 510 MHz B1G = 1 GHz B1500M = 1.5 GHz B2G = 2 GHz B4G = 4 GHz In cases where the path is not available but is selected from SCPI, it generates an error - 241, "Hardware missing; Option not installed"

Dependencies	Gray out if IF Path Auto is On
Preset	Automatically selected IF path according to measurement required IFBW and available HW bandwidth
State Saved	Saved in instrument state

Measure CC

Selects the component carrier to be measured in the uplink time mask measurement.

NOTE The parameter is available only for the Transmit On|Off Power measurement.

Remote Command	<code>[:SENSe]:PVTime:ULINK:CCARrier CC0 ... CC15</code> <code>[:SENSe]:PVTime:ULINK:CCARrier?</code>
Example	<code>:PVT:ULINK:CCAR CC0</code> <code>:PVT:ULINK:CCAR?</code>
Dependencies	Available only when Radio Direction is Uplink
Preset	<code>CC0</code>
State Saved	Yes
Range	CC0 CC1 CC2 CC3 CC4 CC5 CC6 CC7 CC8 CC9 CC10 CC11 CC12 CC13 CC14 CC15

3.5.23.6 Meas Standard

The tab contains settings which let you configure the analyzer to match the measurement standard in your 5G NR signal.

The section entitled “Configure Preset” lets you configure the preset values for the Component Carriers. Once you have set all the controls in the “Configure Preset” section to the desired value, press the “Apply Preset (to all CCs)” control and your presets will be applied to each Component Carrier. Furthermore, any new Component Carriers will take on the same values you have applied.

NOTE You must press **Apply Preset (to all CCs)** or the values on the controls will *not* affect the Component Carriers.

When you need to configure more parameters, select Advanced Preset Parameters to open a dialog and set advanced parameters for multiple measurements on one screen.

Bandwidth

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **"Bandwidth" on page 3057** of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “**Configure Preset**” section then press **Apply Preset (to all CCs)**.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the **Component Carriers**.

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 3052** will also take on this value.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth] B3M B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth]?</code>
Example	<code>:RAD:STAN:PRES:CARR B5M</code> <code>:RAD:STAN:PRES:CARR?</code>
Dependencies	Selections other than 10 MHz, 20 MHz, 30 MHz, and 40 MHz are unavailable when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X If you change "Uplink Carrier Mode" on page 3041 to Sidelink - V2X when this parameter is set to a value other than 10 MHz, 20 MHz, 30 MHz, or 40 MHz, it is forcefully set to 10 MHz
Preset	When N9085EMOE is not installed and N9085EM4E is installed: B10M Otherwise: B100M
State Saved	Yes
Range	3MHz 5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet[:BANDwidth]</code>

Frequency Range

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **"Freq Range" on page 3058** of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “**Configure Preset**” section then press **Apply Preset (to all CCs)**.

NOTE

You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 3052 will also take on this value.

Remote Command `[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe FR1 | FR2 | FR21 | FR22`
`[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe?`

Example `:RAD:STAN:PRES:FREQ:RANG FR1`
`:RAD:STAN:PRES:FREQ:RANG?`

Notes SCPI enum "FR2" is retained for backwards compatibility. When you change Bandwidth, this parameter changes as shown in "Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility" on page 1174 depending on the currently selected value.

Dependencies Available selections differ depending on Bandwidth as follows:

Bandwidth	FR
3 MHz, ..., 100 MHz	FR1
50 MHz, 100 MHz, 200 MHz, 400 MHz	FR2, FR2-1
100 MHz, 400 MHz, 800 MHz, 1600 MHz, 2000 MHz	FR2, FR2-2

When "Uplink Carrier Mode" on page 3041 is Sidelink - V2X, FR2 is unavailable

Preset `FR1`

State Saved Yes

Range `FR1|FR2|FR2-1|FR2-2`

Backwards Compatibility SCPI `[:SENSe]:RADio:STANdard:PRESet:FRANGe`

Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility

Current FR value	Bandwidth selection changes to:					
	3,...,45 MHz	50 MHz	100 MHz	200 MHz	400 MHz	800,...2000 MHz
FR1	FR1	FR1	FR1	FR2	FR2	FR2
FR2	FR1	FR2	FR2	FR2	FR2	FR2
FR2-1	FR1	FR2-1	FR2-1	FR2-1	FR2-1	FR2
FR2-2	FR1	FR2	FR2-2	FR2	FR2-2	FR2-2

FR2 behaves as A.35.00 backwards compatibility mode.

Duplex Mode

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Duplex Mode of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 3052** will also take on this value.

FDD, TDD, User Defined are supported.

- FDD: RB allocation is filled with all slots and symbols
- TDD: When the Direction is Downlink and any of NR Test Models is selected for RB Alloc Preset, then, RB allocation is filled with the specified TDD slots and symbols only, based on the 3GPP Tx Conformance Test specification definition
- User Defined: Allows you to configure Transmission Periodicity, Number of Slots and Symbols where RB allocation is filled with in TDD slots and symbols

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DMODE FDD TDD UDEFined</code> <code>[:SENSe]:RADio:STANdard:PRESet:DMODE?</code>
Example	<code>:RAD:STAN:PRES:DMOD TDD</code> <code>:RAD:STAN:PRES:DMOD?</code>
Dependencies	Available selections depend on Frequency Range When FR1 is selected, all three selections are available. When FR2, FR2-1, or FR2-2 is selected, only TDD and User Defined are available
Preset	TDD
State Saved	Yes
Range	FDD TDD User Defined

TDD / User Def. Configuration

Lets you access TDD slot configuration parameters on one screen.

Duplex Mode

This is the same as **"Duplex Mode" on page 3033** in the Meas Standard menu panel.

DL FR1 NR-TM Reference Standard Selection

This is the same as "DL FR1 NR-TM Reference Standard Selection " on page 3041 in Meas Standard > Advanced Preset Parameters.

Transmission Periodicity

Allows you to select transmission periodicity that determines the User Defined TDD slot configuration pattern repetition period.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmiSSion:PERiodicity P0_5MS P0_625MS P1MS P1_25MS P2MS P2_5MS P5MS P10MS</code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmiSSion:PERiodicity?</code>
Example	<code>:RAD:STAN:PRES:TRAN:PER P0_5MS</code> <code>:RAD:STAN:PRES:TRAN:PER?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	P5MS
State Saved	Yes
Range	0.5 ms 0.625 ms 1 ms 1.25 ms 2 ms 2.5 ms 5 ms 10 ms

Number of Downlink Slots

Specifies how many downlink slots are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SLOT:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SLOT:COUNT?</code>
Example	<code>:RAD:STAN:PRES:DLIN:SLOT:COUN 1</code> <code>:RAD:STAN:PRES:DLIN:SLOT:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	7
State Saved	Yes
Min	1
Max	Max slot count in the transmission periodicity

Number of Downlink Symbols

Specifies how many downlink symbols are included in one transmission periodicity.

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SYMBol:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINK:SYMBol:COUNT?</code>
Example	<code>:RAD:STAN:PRES:DLIN:SYMB:COUN 1</code> <code>:RAD:STAN:PRES:DLIN:SYMB:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	6
State Saved	Yes
Min	1
Max	14

Number of Uplink Slots

Specifies how many uplink slots are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SLOT:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SLOT:COUNT?</code>
Example	<code>:RAD:STAN:PRES:ULIN:SLOT:COUN 1</code> <code>:RAD:STAN:PRES:ULIN:SLOT:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	2
State Saved	Yes
Min	1
Max	Max slot count in the transmission periodicity.

Number of Uplink Symbols

Specifies how many uplink symbols are included in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SYMBol:COUNT <integer></code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINK:SYMBol:COUNT?</code>
Example	<code>:RAD:STAN:PRES:ULIN:SYMB:COUN 1</code> <code>:RAD:STAN:PRES:ULIN:SYMB:COUN?</code>
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	4

State Saved	Yes
Min	1
Max	14

Number of Special Slots (Remote Query Only)

Queries the number of special slots in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SPECial:SLOT:COUNT?</code>
Example	<code>:RAD:STAN:PRES:SPEC:SLOT:COUN?</code>
Preset	1
Min	1
Max	Max slot count in the transmission periodicity - 1

TDD Slot Allocation(Remote Query Only)

Queries TDD slot allocation in one transmission periodicity.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SLOT:ALLocation?</code>
Example	<code>:RAD:STAN:PRES:SLOT:ALL?</code>
Preset	"DDDDDDDSUU"

Ignore Duplex Mode for Fulfilled RB Alloc

This is the same as "[Ignore Duplex Mode for Fulfilled RB Alloc](#)" on page 3050.

SCS

This control is part of the "Configure Presets" section of **Meas Standard**. It lets you set the subcarrier spacing of each component carrier. Set the value you want for this control and the other controls in the "Configure Preset" section then press "Apply Preset (to all CCs)".

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the "[Number of Component Carriers](#)" on page 3052 will also take on this value.

3 5G NR/5G-A Mode
 3.5 Spectrum Emissions Mask (SEM)

In 5G, subcarrier spacing is governed by $2^n * 15$ kHz subcarrier spacings (where n is 0, 1, 2, or 3). 15, 30, and 60 kHz subcarrier spacings are used for the lower frequency bands, and 60 and 120 kHz subcarrier spacings are used for the higher frequency bands.

Remote Command	<pre>[:SENSe]:RADio:STANdard:PRESet:SCS SCS15K SCS30K SCS60K SCS120K SCS480K SCS960K</pre> <p>For option details, see "Selections & Dependencies" on page 1179</p> <pre>[:SENSe]:RADio:STANdard:PRESet:SCS?</pre> <pre>[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe] OFF ON 0 1</pre> <pre>[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe]?</pre>

	800, 1600 MHz	480K*/960K	SCS480K, SCS960K
	2000 MHz	960K*	SCS960K

(*) When in Auto, the narrowest available SCS is selected.

RB Alloc Preset

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Resource Block Allocation Preset of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the ["Number of Component Carriers" on page 3052](#) will also take on this value.

The RB Alloc Preset presets the Resource Block (RB) allocation mapping to a selected predefined pattern in the list:

“Fulfilled-xxx” is to fill out all maximum available RBs in each CC with one specified modulation type (Pi/2-BPSK | QPSK | 16 QAM | 64 QAM | 256 QAM | 1024 QAM), and “DL-NR-TM x.x” is to map RBs in each CC based on the NR Test Model definition according to the section 4.9.2 in 3GPP TS38.141-1 or -2.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:RBALloc FQPSK FQAM16 FQAM64 FQAM256 FQAM1024 DLTM1DOT1 DLTM1DOT2 DLTM2 DLTM2Q16 DLTM2QPS DLTM2A DLTM2B DLTM3DOT1 DLTM3DOT1Q16 DLTM3DOT1QPS DLTM3DOT1A DLTM3DOT1B DLTM3DOT2 DLTM3DOT3 FPIBPSK DLTM1DOT1P1 DLTM1DOT1L2</code>

Advanced Preset Parameters

Lets you access advanced preset parameters on one screen.

Uplink Carrier Mode

Allows you to select the uplink carrier mode: either Normal Uplink or Sidelink - V2X.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CARRier NORMal V2X</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CARRier?</code>
Example	<code>:RAD:STAN:PRES:ULIN:CARR NORM</code> <code>:RAD:STAN:PRES:ULIN:CARR?</code>
Dependencies	Available when the required license is installed and Direction is Uplink
Preset	When N9085EM0E is not installed and N9085EM4E is installed: V2X Otherwise: NORMal
State Saved	Saved
Range	Normal Uplink Sidelink-V2X

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:NRTM TS38 TS37CS1617</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:NRTM?</code>
Example	<code>RAD:STAN:PRES:DLIN:NRTM TS38</code> <code>RAD:STAN:PRES:DLIN:NRTM?</code>
Dependencies	Grayed out when Radio Direction is Uplink.
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed.
Preset	TS38

State Saved	Yes
Range	TS38.141-1 TS37.141 BC3 CS16/17

OFDM Type

This control is part of the “Preset for Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you specify the OFDM Type to configure preset values for the Component Carriers:

- CP-OFDM
- DFT-s-OFDM

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press *Apply Preset (to all CCs)* or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the Number of Component Carriers will also take on this value.

This parameter is valid only for the Modulation Analysis measurement.

Remote Command	<code>[:SENSe] :RADio :STANdard :PRESet :OTYPe CPOFdm DFTSoFdm</code> <code>[:SENSe] :RADio :STANdard :PRESet :OTYPe ?</code>
Example	<code>:RAD :STAN :PRES :OTYP CPOF</code> <code>:RAD :STAN :PRES :OTYP ?</code>
Dependencies	DFT-s-OFDM is grayed out when Radio Direction is Downlink DFT-s-OFDM is grayed-out when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	<code>CPOFdm</code>
State Saved	Yes
Range	CP-OFDM DFT-s-OFDM

Adjust Limit Mask for Freq Range

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the frequency range for preset.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0. Values to be preset will be preset to the values described in the Values for Meas Standard section when Apply Preset is executed.

When in Manual, values to be preset will be preset to the values described in Values or Meas Standard according to this value when Apply Preset is executed.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<pre>[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge NONE FT01 F1T03 F3T04P2 F4P2T06 F6T07 F24P25T029P5 F37T040 F43T048 F52T071</pre> <p>For option details, see "Selections & Dependencies" on page 1185</p> <pre>[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge?</pre> <pre>[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge:AUTO OFF ON 0 1</pre> <pre>[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge:AUTO?</pre>

FR2-2	$52.6 < f \leq 71.0$ GHz	F52T071

BS Type

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Type for preset:

- 1-C (FR1 Conducted)
- 1-O (FR1 Radiated)
- 2-O (FR2 Radiated)

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE FR1C FR1O FR2O</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE?</code>
Example	<code>:RAD:STAN:PRES:DLIN:BS:TYPE FR1C</code> <code>:RAD:STAN:PRES:DLIN:BS:TYPE?</code>
Dependencies	Grayed out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed

Preset	FR1C
State Saved	Yes
Range	1-C (FR1 Conducted) 1-0 (FR1 Radiated) 2-0 (FR2 Radiated)

BS Category

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Category for preset:

- Category A Wide Area BS
- Category B Wide Area BS
- Category A Medium Range BS
- Category B Medium Range BS
- Category A Medium Range BS (Low Power rated)
- Category B Medium Range BS (Low Power rated)
- Category A Local Area BS
- Category B Local Area BS

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:CATegory AWARea BWARea AMRange BMRRange AMRLow BMRLow ALARea BLARea</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:CATegory?</code>
Example	<code>:RAD:STAN:PRES:DLIN:BS:CAT BWAR</code> <code>:RAD:STAN:PRES:DLIN:BS:CAT?</code>
Dependencies	Grayed-out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed
Preset	BWARea

State Saved	Yes
Range	Category A Wide Area BS Category B Wide Area BS Category A Medium Range BS Category B Medium Range BS Category A Medium Range BS (Low Power rated) Category B Medium Range BS (Low Power rated) Category A Local Area BS Category B Local Area BS

Assumed Adjacent Channels

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you set the Assumed Adjacent Channels for carrier configuration preset. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Downlink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE] NR EUTRa NREutra</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:DLIN:ACH NR</code> <code>:RAD:STAN:PRES:DLIN:ACH?</code>
Dependencies	UTRA and NR+UTRA are grayed-out when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X
Preset	NR
State Saved	Yes
Range	NR (same BW) E-UTRA NR + E-UTRA

Uplink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE] NR UTRa NRUTra</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:ULIN:ACH NR</code> <code>:RAD:STAN:PRES:ULIN:ACH?</code>
Preset	NR
State Saved	Yes
Range	NR (same BW) UTRA NR + UTRA

UE Power Class

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you select the UE Power Class for preset from Power Class 1 to 4.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP and Mod Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PCLass CLASS1 ... CLASS4</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PCLass?</code>
Example	<code>:RAD:STAN:PRES:ULIN:PCL CLASS3</code> <code>:RAD:STAN:PRES:ULIN:PCL?</code>
Dependencies	Grayed out when Radio Direction is Downlink Power Class 4 is grayed out when Frequency Range is FR1 Power Class 1, 2, and 4 are grayed-out when "Uplink Carrier Mode" on page 3041 is Sidelink - V2X
Preset	CLASS3
State Saved	Yes
Range	1 2 3 4

Uplink Channel Type

This control is part of the “Preset for Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you set the Uplink Channel Type to preset parameters for the Transmit On|Off Power measurement. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe NONE PUS PRA4 PRA160S15 PRA160S30 PRA12 PRA123S15 PRA123S30 SRS PRA0S60 PRA0S120</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe?</code>
Example	<code>:RAD:STAN:PRES:ULIN:CTYP PUS</code> <code>:RAD:STAN:PRES:ULIN:CTYP?</code>
Dependencies	Available selections differ depending on the combination of Freq Range and Duplex Mode as follows: When Freq Range is FR1 and Duplex Mode is FDD: - PUSCH, PRACH Config Index4, PRACH Config Index160 and SRS When Freq Range is FR1 and Duplex Mode is TDD: - PUSCH, PRACH Config Index12, PRACH Config Index123 and SRS When Freq Range is FR2: - PUSCH, PRACH Config Index0, SRS
Preset	PUS

State Saved	Yes

Apply Preset (to All CCs)

This is the same as the Apply Preset (to All CCs) control on the Meas Standard menu panel tab under Meas Standard.

See ["Apply Preset \(to All CCs\)" on page 3051](#).

More Advanced Preset Parameters

Enables you to configure more advanced Apply Preset features.

Include RB Alloc Preset for Mod Analysis

Enables you to select whether or not RB Alloc Preset is preset when “Apply Preset (to All CCs)” is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc?</code>
Example	<code>:RAD:STAN:PRES:INCL:EVM:RBAL 1</code> <code>:RAD:STAN:PRES:INCL:EVM:RBAL?</code>
Notes	When Exclude is selected, the indicator “Exclude EVM RB Alloc” appears on the Meas Setup menu panel
Preset	ON
State Saved	Yes

Include Gate Source

Enables you to select whether or not Gate Source is preset when “Apply Preset (to All CCs)” is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce?</code>
Example	<code>:RAD:STAN:PRES:INCL:EGAT:SOUR 1</code> <code>:RAD:STAN:PRES:INCL:EGAT:SOUR?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Period

Enables you to select whether or not Periodic Timer Period is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:PER 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:PER?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Source

Enables you to select whether or not Periodic Timer Sync Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce] OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce]?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:SYNC?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Holdoff

Enables you to select whether or not Periodic Timer Sync Holdoff is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD?</code>
Preset	ON
State Saved	Yes

Ignore Duplex Mode for Fulfilled RB Alloc

Enables you to select in Modulation Analysis measurement whether or not to ignore Duplex Mode for Fulfilled preset when “Apply Preset (to All CCs)” is executed. This parameter is valid only for the TDD duplex mode.

On: for fulfill preset FDD preset will be applied to modulation analysis measurement regardless of Duplex Mode setting

Off: for fulfill preset TDD preset based on the DL NR-TM will be applied to modulation analysis measurement

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDCon-fig]:RBALloc:FULFilled:IGNore:DMODE OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDCon-fig]:RBALloc:FULFilled:IGNore:DMODE?</code>
Example	<code>:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD 1</code> <code>:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD?</code>
Notes	Only apply to Modulation Analysis measurement
Dependencies	Unavailable when Duplex Mode is FDD, or Duplex Mode is User Defined, or Frequency Range is FR2, or RB Alloc Preset is DL NR TM
Preset	ON
State Saved	Yes

Adjust Meas Time Length for TM

Enables you to select in Modulation Analysis measurement whether or not to adjust Meas Time settings when Test Model preset is selected and “Apply Preset (to All CCs)” is executed.

None: do not adjust Meas Time settings for Test Model

1 Frame: adjust Meas Time settings for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
All	22 msec	10 Sub Frame	10 Sub Frame	Frame

3GPP: adjust Meas Time Setting for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
FR1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-2 (120K SCS)	32 msec	160 slots	160 slots	slot

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

FR2-2 (480K SCS)	17 msec	160 slots	160 slots	slot
FR2-2 (960K SCS)	14.5 msec	160 slots	160 slots	slot

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth NONE FRAME GPP</code> <code>[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth?</code>
Example	<code>:RAD:STAN:PRES:RBAL:TIME:LENG GPP</code> <code>:RAD:STAN:PRES:RBAL:TIME:LENG?</code>
Notes	Only apply to Modulation Analysis measurement
State Saved	Yes

Apply Preset (to All CCs)

When you press this control, parameters of each component carrier are configured to the values of parameters in the Meas Standard menu. These values will also be used for any subsequent Component Carriers created.

NOTE You must press **“Apply Preset (to all CCs)”** or the values on the controls in the **“Configure Presets”** section of the menu panel will *not* affect the Component Carriers.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:IMMEDIATE</code>
Example	<code>:RAD:STAN:PRES:IMM</code>
Notes	Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until “Apply Preset” is executed again <ul style="list-style-type: none"> - Start-up - Mode Preset - Recall

3.5.23.7 Values for Meas Standard

For parameters to be preset when executing "Apply Preset", see ["Values for Meas Standard" on page 2614](#) and its subsections under **Monitor Spectrum**.

3.5.23.8 Advanced

Contains controls for setting advanced instrument functions.

This tab does not appear in EXM, VXT.

Noise Floor Extension

Lets you configure **Noise Floor Extension** (NFE). All Modes that support NFE let you set it on or off. Additionally, some Modes support two “on” states for NFE, **Full** and **Adaptive**, as described below.

Adaptive Option Support

At present (Release: X-Apps 2024), support for **Adaptive** NFE is as follows:

Mode	Measurements	Supports Adaptive NFE?
BT	ACP, IBEM, IBSP	No
CQM	MON	Yes
EDGE GSM	EORF, ETSP, MON	No
EMI	APD, DAN, FSC, MON, RTSC, SCH	Yes
LTEAFDD	PVT	No
LTEATDD	PVT	No
MSR	ACP, CHP, MON, OBW, SEM, SPUR	Yes
NR5G	PVT	No
PNOISE	LPL, MON, SFR	No
SA	SAN	Yes
SRCOMMS	ACP, CHP, MON, OBW, SEM, SPUR	Yes
VMA	ACP, CHP, OBW, SEM, SPUR	Yes
WCDMA	ACP, CHP, MON, OBW, SEM, SPUR	Yes
WLAN	CHP, MON, OBW, SEM, SPUR	Yes

The menus and command options are as follows:

NFE State	Modes with Adaptive NFE	Modes without Adaptive NFE	SCPI
Off	Off	Off	See "NFE On/Off Command" on page 1196
On	Full	On	
Adaptive	Adaptive	n/a	See "Adaptive NFE Command" on page 1196

As shown in the table above, the **On** state (in Modes that do not support **Adaptive** NFE) matches the **Full** state in Modes that *do* support **Adaptive** NFE.

To maintain SCPI backwards compatibility, the existing command to turn NFE on or off is retained, and a new command is added to set the state to turn **AdaptiveON** or **OFF**:

- `[[:SENSe]:CORRection:NOISe:FLOor ON|OFF|1|0]` is retained, with the default changed to **ON** for Modes that support **Adaptive** NFE
- `[[:SENSe]:CORRection:NOISe:FLOor:ADAPtive ON|OFF|1|0]` is added (for certain Modes), default = **ON**

When NFE is **On** or **Full**, the expected noise power of the instrument (derived from a factory calibration) is subtracted from the trace data. This will usually reduce the apparent noise level by about 10 dB in low band, and 8 dB in high band (>~3.6 GHz).

NFE works with any RBW, VBW, detector, any setting of **Average Type**, any amount of trace averaging, and any signal type. It is ineffective when the trace is not smoothed (smoothing processes include narrow VBWs, trace averaging, and long sweep times with the detector set to **Average** or **Peak**). It works best with extreme amounts of smoothing, and with the average detector, with the **Average Type** set to **Power**.

In those cases where the cancellation is ineffective, it nonetheless has no undesirable side-effects. There is no significant speed impact to having **Noise Floor Extension** on.

The best accuracy is achieved when substantial smoothing occurs in each point before trace averaging. Thus, when using the **Average** detector, results are better with long sweep times and fewer trace averages. When using the **Sample** detector, the VBW filter should be set narrow with less trace averaging, instead of a wide VBW filter with more trace averaging.

NOTE

Noise Floor Extension has no effect unless the RF Input is selected, so when **External Mixing** is selected, it does nothing.

For more details, see "[Optimal Detector & Averaging Selections](#)" on page 1197 and "[Recalibration of Noise Floor](#)" on page 1198.

Pros & Cons of Adaptive NFE

Adaptive NFE provides an alternative to fully-on or fully-off NFE. Fully-on NFE can, notably in cases with little or no averaging of the spectrum, result in a display that is distractingly unfamiliar in the variability in response to low level signals. Fully-off NFE fails to achieve the potential improvement in dynamic range and associated accuracy of measurement of low-level signals. **Adaptive** NFE controls the degree of potential improvement in the noise floor to give more improvement for those instrument settings that can make good use of the potential improvement—those settings with high degrees of variance reduction through some variant of averaging. When the potential improvement is small, the display acts like the fully-off case, and when it is high, it acts like the fully-on case, and in-between, application is a compromise between attractiveness and effectiveness.

In **Adaptive** NFE, there is not the same dramatic visual impact on the noise floor as there is in **Full** NFE. **Adaptive** NFE controls the amount of correction that is applied based on other instrument settings like RBW, averaging and sweep time. **Adaptive** NFE controls the degree of potential improvement in the noise floor to give more improvement for those instrument settings that can make good use of the potential improvement, such as settings that provide more averaging. The result is that when not much averaging is being performed, the signal displays more like the fully-off case; and when lots of averaging is being performed, the signal displays more like the **Full** NFE case.

Adaptive NFE is recommended for general-purpose use. For fully-ATE (automatic test equipment) applications, where possible distraction of the instrument user is not a risk, **Full** NFE is recommended.

NFE On/Off Command

Remote Command	<code>[:SENSe] :CORRection:NOISe:FLOor ON OFF 1 0</code> <code>[:SENSe] :CORRection:NOISe:FLOor?</code>
Example	<code>:CORR:NOIS:FLO ON</code>
Dependencies	Only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear. In those cases, the SCPI command is accepted without error, but has no effect
Couplings	When NFE is enabled in any Mode manually, a prompt is displayed reminding you to perform the Characterize Noise Floor operation if it is needed When NFE is enabled through SCPI, and a Characterize Noise Floor operation is needed, an error is entered in the system error queue
Preset	Unaffected by Mode Preset . Turned ON at startup and by Restore Mode Defaults in Modes that support Adaptive . Turned OFF at startup and by Restore Mode Defaults in Modes that do <i>not</i> support Adaptive In Modes that support Adaptive NFE, the default (preset) state of NFE is Adaptive . In Modes that do not support Adaptive NFE, the default state of NFE is Off
State Saved	No

Adaptive NFE Command

Only effective in instruments with the NFE or NF2 license installed, and in Modes that support **Adaptive** NFE. For coverage, see "[Adaptive Option Support](#)" on page 1194 above.

For all other cases, the SCPI command below is accepted without error, but has no effect.

Remote	<code>[:SENSe] :CORRection:NOISe:FLOor:ADApTive ON OFF 1 0</code>
--------	---

Command	<code>[:SENSe] :CORRection:NOISe:FLOor:ADAPtive?</code>
Example	First turn NFE on, this is Full mode <code>:CORR:NOIS:FLO ON</code> Then set it to Adaptive <code>:CORR:NOIS:FLO:ADAP ON</code>
Couplings	To maintain backwards compatibility, sending <code>:CORR:NOIS:FLO ON</code> turns NFE AdaptiveOFF . To turn Adaptive on, you must issue the commands in the proper order, as shown in the example above
Preset	Not affected by Mode Preset , but set to ON at startup and by Restore Mode Defaults
State Saved	No

Optimal Detector & Averaging Selections

Note that some measurements do not allow you to switch the **Detector** type (which is set by default to **Average**), so the discussion of detector types here is irrelevant for those measurements. Similarly, some measurements do not allow you to set **Average Type** (set by default to **LOG**), so that discussion here is irrelevant in those cases.

The instrument is characterized in the factory (or during a field calibration) with a model of the noise, referred to the input mixer, versus frequency in each band and path combination. Bands are 0 (low band) and 1 through 4 (high band) in a 26.5 GHz instrument, for example. Paths include normal paths, preamp paths, the electronic attenuator, etc.

In most band/path combinations, the noise can be well characterized based on just two parameters and the instrument frequency response before compensation for frequency-dependent losses.

After the noise density at the input mixer is estimated, the effects of the input attenuator, RBW, detector, etc. are computed to obtain the estimated input-port-referred noise level.

In the simplest case, the measured power (signal plus analyzer noise) in each display point (bucket) is compensated by subtracting the estimated noise power, leaving just the signal power. This is the operation when **Detector** is **Average** and **Average Type** is set to **Power (RMS)**.

For best operation, **AverageDetector** (default) and **Average Type** = **Power** are recommended, as already stated. In other cases, operation is often not quite as good but still highly effective. Other **Detector** options, when available, behave as follows:

- Positive Peak** The noise floor is estimated based on the RBW and the duration of the bucket using the same equations used in the noise marker function. The voltage of the noise is subtracted from the voltage of the observed signal-plus-noise measurement to compute the estimated signal voltage
Positive Peak is one example of processing that varies with detector to give good

	estimates of the signal level without the analyzer noise
	For pulsed-RF, Positive Peak can still give excellent effectiveness
	FFT analysis does not work well, and does not perform NFE well, with pulsed-RF signals, so this combination is <i>not</i> recommended
Negative Peak	Not very useful
Sample	Works well, but never better than Average , because it does not smooth as well
Normal	A combination of peak and negative peak behaviors, and works about as well as these

For best operation, extreme smoothing is desirable, as already stated. Using narrow VBWs works well, but using very long bucket durations and the average detector works best. Reducing the number of trace points makes the buckets longer.

For best operation, **Average Type = Power (RMS)** is optimal (when this option is available). When making CW measurements in the presence of noise without NFE, averaging on the decibel scale has the advantage of reducing the effect of noise. Using NFE with **Average Type = Log-Power (LOG)** is not synergistic, though; NFE with **Average Type = Power (RMS)** works a little better than NFE with **LOG**.

The results from NFE with internal preamp can often be lower than the theoretical noise in a signal source at room temperature, a noise density of -174 dBm/Hz. This is expected and useful behavior, because NFE is designed to report the amount of input signal that exceeds the thermal noise, not the amount that includes the thermal noise. This can be a useful behavior because thermal noise often interferes with what you want to measure, instead of being part of what you want to measure. Note that NFE is not adequately accurate to always be able to read below kTB.

Recalibration of Noise Floor

In instruments with the NF2 license installed, the calibrated noise floor used by **Noise Floor Extension** should be refreshed periodically. Keysight recommends that the **Characterize Noise Floor** operation be performed after the first 500 hours of operation, *and* once every calendar year. To do this, use "**Characterize Noise Floor**" on page 3196, under **System, Alignments, Advanced**. If you have not done this yourself at the recommended interval, then when you turn on **Noise Floor Extension**, the instrument will prompt you to do so with a dialog stating:

This action will take several minutes to perform. Please disconnect all cables from the RF input and press Enter to proceed. Press ESC to cancel, or Postpone to postpone for a week

If you cancel, you will be prompted again the next time you turn NFE on. If you postpone, you will be prompted again after a week passes and you then turn NFE on.

Enable Wideband IF for FFT

When **OFF**, the maximum FFT BW is limited to 40 MHz. When **ON**, FFT with more wideband IF is supported depending on the instrument. For example, the max FFT BW is 510 MHz with option B5X. When ON for R10/R20/R40, the max FFT BW is 1GHz.

When this parameter is on and the following conditions are met, the measurement is performed with a single I/Q acquisition.

- Stop Freq of the outermost Offset range is within the available IQ acquisition BW
- Same RBW, VBW, Detector Type settings across all Offset ranges and Carrier
- Sweep Type = FFT and Sweep Time = Auto across all Offset ranges and Carrier

Remote Command	<code>[:SENSe]:SEMAsk:WBFFt:ENABle ON OFF 1 0</code> <code>[:SENSe]:SEMAsk:WBFFt:ENABle?</code>
Example	<code>:SEM:WBFF:ENAB 1</code> <code>:SEM:WBFF:ENAB?</code>
Dependencies	The maximum FFT BW depends on the μ W preselector and the current frequency. In hi-band, the μ W preselector must be disabled to apply the FFT with wideband IF. Otherwise, the maximum FFT BW is limited to 40 MHz
Preset	OFF
State Saved	Saved in instrument state
Range	ON OFF

3.5.23.9 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, "**Global Center Freq**" on page 3077) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to **ON**, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched **ON**, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is **ON**, modifies the **Global Center Freq**.

When **Global Center Freq** is switched **OFF**, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is **ON**, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to **OFF** when "**Restore Defaults**" on page 3079 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTRument:COUPlE:FREQuency:CENTer ALL NONE</code> <code>:INSTRument:COUPlE:FREQuency:CENTer?</code>
Example	<code>:INST:COUP:FREQ:CENT ALL</code> <code>:INST:COUP:FREQ:CENT?</code>
Preset	Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes
Range	ALL NONE
Preset	OFF
Backwards Compatibility SCPI	<code>:GLOBal:FREQuency:CENTer[:STATe] 1 0 ON OFF</code> <code>:GLOBal:FREQuency:CENTer[:STATe]?</code>

Global EMC Std

When this control is switched **ON**, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the **Global EMC Std**, so you can switch between any of these Modes and the EMC Std remains unchanged.

Adjusting the EMC Std of any Mode that supports Global settings, while **Global EMC Std** is **ON** modifies the **Global EMC Std**.

When **Global EMC Std** is switched **OFF**, the EMC Std of the current Mode remains unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is **ON**, **Global EMC Std** is preset to the preset EMC Std of the current Mode.

This function resets to **OFF** when "**Restore Defaults**" on page 3079 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTRument:COUPlE:EMC:STANdard ALL NONE</code> <code>:INSTRument:COUPlE:EMC:STANdard?</code>
Example	<code>:INST:COUP:EMC:STAN ALL</code> <code>:INST:COUP:EMC:STAN?</code>
Dependencies	Only available if Option EMC is installed
Preset	Set to OFF on Global Settings , Restore Defaults and System, Restore Defaults, All Modes
Range	ALL NONE

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned **ON**, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System > Service > Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function resets to **OFF** when "**Restore Defaults**" on page 3079 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTRument:COUPlE:FREQuency:BAND:EXTend 0 1 ON OFF</code> <code>:INSTRument:COUPlE:FREQuency:BAND:EXTend?</code>
Example	<code>:INST:COUP:FREQ:BAND:EXT 1</code> <code>:INST:COUP:FREQ:BAND:EXT?</code>
Preset	Set to OFF by Global Settings > Restore Defaults and System > Restore Defaults > All Modes
Range	ON OFF

Restore Defaults

Resets all functions in the **Global** settings menu to **OFF**. Pressing **System, Restore Defaults, All Modes** has the same effect.

Remote Command	<code>:INSTRument:COUPlE:DEFault</code>
Example	<code>:INST:COUP:DEF</code>
Backwards Compatibility SCPI	<code>:GLOBal:DEFault</code>

3.5.24 Sweep

Accesses controls to configure and control the acquisition of data, and the X-axis parameters of the instrument.

Depending on the selected mode and measurement, these controls might include: **Sweep Time**, **Continuous/Single**, **Pause/Resume**, **X Scale** and **Number of Points**.

3.5.24.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See ["More Information" on page 1203](#)

Remote Command	<code>:INITiate:CONTinuous OFF ON 0 1</code> <code>:INITiate:CONTinuous?</code>
Example	Put instrument into Single measurement operation: <code>:INIT:CONT 0</code> <code>:INIT:CONT OFF</code> Put instrument into Continuous measurement operation: <code>:INIT:CONT 1</code> <code>:INIT:CONT ON</code>
Preset	ON Note that <code>:SYST:PRES</code> sets <code>:INIT:CONT</code> to ON , but <code>*RST</code> sets <code>:INIT:CONT</code> to OFF
State Saved	Saved in instrument state
Annunciation	The Single/Continuous icon in the Meas Bar changes depending on the setting: <ul style="list-style-type: none">- A line with an arrow is Single- A loop with an arrow is Continuous
Backwards Compatibility Notes	X-Series A-models had Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and <code>INIT:CONT ON</code>) switched to continuous measurement, but never restarted a measurement and never reset a sweep

X-Series B-models have a **Cont/Single** toggle control instead of **Single** and **Cont** hardkeys, but it is still true that, if in single measurement, the **Cont/Single** toggle control never restarts a measurement and never resets a sweep

More Information

Continuous Mode	<p>The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num, the count stops incrementing, but the instrument keeps sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>
Single Mode	<p>The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num, then the count stops incrementing, and the instrument stops sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- **:INIT:CONT 1** has no effect
- **:INIT:CONT 0** places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See "**Restart**" on page 3081 for details of **:INIT:IMMEDIATE**.

If the instrument is already in **Single** sweep, **:INIT:CONT OFF** has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending **:INIT:IMM** does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending **:CALC: AVER: TCON UP**.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending **:INIT: IMM**
- Sending **:INIT: REST**

See "[More Information](#)" on page 1205

Remote Command	:INITiate[:IMMEDIATE] :INITiate:REStart
Example	:INIT: IMM :INIT: REST
Notes	:INIT: REST and :INIT: IMM perform exactly the same function
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The STATUS:OPERation register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The STATUS:QUESTionable register bit 9 (INTEgrity sum) is cleared The SWEEPING bit is set The MEASURING bit is set
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the :INIT: REST command restarted trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold In X-Series, the Restart hardkey and the :INIT: REST command restart not only Trace Average , but MaxHold and MinHold traces as well

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in

application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k . This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N , as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K , shows the count for the sweep (data acquisition) in progress. $K = k + 1$, with a limit of N . The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** unpauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command `:INITiate:PAUSE`

	<code>:INITiate:RESume</code>
Example	<code>:INIT:PAUS</code> <code>:INIT:RES</code>
Dependencies	Not displayed in Modes that do not support pausing
Annotation	Only on control

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when `:ABORt` is sent, the alignment finishes *before* the abort function is performed, so `:ABORt` does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an `:INIT:IMM` command is received.

Remote Command	<code>:ABORt</code>
Example	<code>:ABOR</code>
Notes	If <code>:INIT:CONT</code> is ON , then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met If <code>:INIT:CONT</code> is OFF , then <code>:INIT:IMM</code> is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met
Dependencies	For continuous measurement, <code>:ABORt</code> is equivalent to the Restart key Not all measurements support this command
Status Bits/OPC dependencies	The <code>STATUS:OPERation</code> register bits 0 through 8 are cleared, <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The <code>STATUS:QUESTionable</code> register bit 9 (INTegrity sum) is cleared Since all the bits that feed into OPC are cleared by <code>:ABORt</code> , the Abort command will cause the <code>*OPC</code> query to return true

3.5.24.2 X Scale

Accesses controls that let you set the horizontal scale parameters.

Ref Value

Sets the X reference value.

Remote Command	<code>:DISPlay:SEMask:WINDow[1]:TRACe:X[:SCALe]:RLEVe1 <freq></code> <code>:DISPlay:SEMask:WINDow[1]:TRACe:X[:SCALe]:RLEVe1?</code>
Example	<code>:DISP:SEM:WIND:TRAC:X:RLEV 10</code> <code>:DISP:SEM:WIND:TRAC:X:RLEV?</code>
Couplings	If "Auto Scaling" on page 987 is ON , this value is automatically determined by the measurement result. If you set this value manually, Auto Scaling automatically changes to OFF
Preset	1.0 GHz
State Saved	Saved in instrument state
Min/Max	-/+1000 GHz
Backwards Compatibility SCPI	<code>:DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:RLEVe1</code>

Scale/Div

Sets the horizontal scale.

Remote Command	<code>:DISPlay:SEMask:WINDow[1]:TRACe:X[:SCALe]:PDIVision <freq></code> <code>:DISPlay:SEMask:WINDow[1]:TRACe:X[:SCALe]:PDIVision?</code>
Example	<code>:DISP:SEM:WIND:TRAC:X:PDIV 500</code> <code>:DISP:SEM:WIND:TRAC:X:PDIV?</code>
Couplings	If Auto Scaling is ON , this value is automatically determined by the measurement result. When you set this value manually, Auto Scaling automatically changes to OFF
Preset	Automatically Calculated
State Saved	Yes Saved in instrument state
Min	1 Hz
Max	100 GHz
Backwards Compatibility SCPI	<code>:DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:PDIVision</code>

Ref Position

Sets the reference position for the X axis to Left, Center or Right.

Remote Command	<code>:DISPlay:SEMask:WINDow[1]:TRACe:X[:SCALe]:RPOStion LEFT CENTer RIGHT</code> <code>:DISPlay:SEMask:WINDow[1]:TRACe:X[:SCALe]:RPOStion?</code>
Example	<code>:DISP:SEM:WIND:TRAC:X:RPOS LEFT</code> <code>:DISP:SEM:WIND:TRAC:X:RPOS?</code>

3 5G NR/5G-A Mode
3.5 Spectrum Emissions Mask (SEM)

Preset	CENTer
State Saved	Saved in instrument state
Range	Left Center Right
Backwards Compatibility SCPI	:DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:RPOStion

Auto Scaling

Toggles the scale coupling function On or Off.

Remote Command	:DISPlay:SEMask:WINDow[1]:TRACe:X[:SCALe]:COUPle 0 1 OFF ON :DISPlay:SEMask:WINDow[1]:TRACe:X[:SCALe]:COUPle?
Example	:DISP:SEM:WIND:TRAC:X:COUP ON :DISP:SEM:WIND:TRAC:X:COUP?
Couplings	When Auto Scaling is ON and the Restart front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results When you set a value to either " Scale/Div " on page 1208 or " Ref Value " on page 1207 manually, Auto Scaling automatically changes to OFF
Preset	ON
State Saved	Saved in instrument state
Range	OFF ON
Backwards Compatibility SCPI	:DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:COUPle

3.5.24.3 Sweep Config

Accesses controls that let you configure the Sweep and Control functions of the instrument, such as Sweep Rules.

Points

Sets the number of points displayed in the traces. The current value of points is displayed in the bottom-right corner of the display.

Remote Command	[:SENSe]:SEMask:SWEep:POINts <integer> [:SENSe]:SEMask:SWEep:POINts?
Example	:SEM:SWE:POIN 4001 :SEM:SWE:POIN?

Preset	2001
State Saved	Saved in instrument state
Min	201
Max	10001
Annotation	On second line of annotations in bottom right corner

IF Dithering

Lets you turn IF Dithering on or off. This is a technique used in unpreselected instruments (such as Keysight's modular instruments) to enhance the rejection of images and internally-generated spurious signals.

Remote Command	<code>[:SENSe]:SWEep:IF:DITHer OFF ON 0 1</code> <code>[:SENSe]:SWEep:IF:DITHer?</code>
Dependencies	Only appears in Spectrum Analyzer Mode in VXT models
Preset	OFF
State Saved	Saved in instrument state

Image Protection

Lets you turn IF Protection on or off. This is a technique used in unpreselected instruments (such as Keysight's modular instruments) to detect and suppress images and spurs that may be present in non-preselected hardware.

IF Protection takes two sweeps and by correlating the data between them, provides a single, correct power-versus-frequency trace.

Remote Command	<code>[:SENSe]:SWEep:IMAGeprot OFF ON 0 1</code> <code>[:SENSe]:SWEep:IMAGeprot?</code>
Dependencies	Only appears in Spectrum Analyzer Mode in VXT model M9421A
Preset	ON
State Saved	Saved in instrument state

3.5.25 Trace

Lets you control the acquisition, display, storage, detection and manipulation of trace data for the available traces. The Trace Control tab of this menu contains radio-button selections for the trace type (**Clear/Write**, **Trace Average**, **Max Hold**, **Min Hold**) and **View/Blank** setting for the selected trace.

3.5.25.1 Select Trace

Specifies the *selected trace*, which is the trace that will be affected when you change trace settings.

Select Trace appears above the menu panel, indicating that it applies to *all* controls in the menu panel. **Select Trace** is blanked if you select a tab whose controls do *not* depend on the selected trace (for example, **Trace Function**).

Notes	The selected trace is remembered even when not in the Trace menu
Dependencies	For the Swept SA measurement: <ul style="list-style-type: none"> - In Image Suppress mode, when you select a trace it becomes the active trace, and the formerly active trace goes into View - When you turn on Image Suppress, Update turns off for all traces except the selected trace For the ACP measurement, when Meas Method is RBW , FAST or FPOwer , Select Trace is disabled
Preset	Trace 1
State Saved	Yes

3.5.25.2 Trace Control

The controls on this tab allow you to set the "Trace Type" on page 2927 and its update mode.

There are up to four **Trace Types** (although some measurements do not support all types):

- **Clear/Write**
- **Trace Average**
- **Max Hold**
- **Min Hold**

Each type handles data in a different way.

Each trace also has two values that determine whether it is being written or not, and whether it is being displayed or not. These values, **Update** and **Display**, are described fully in the "View/Blank" on page 2932 control description. Essentially, when **Update** is **ON**, a trace is updating, and when **Update** is **OFF** it is not. When **Display** is **ON**, it is visible and when **Display** is **OFF** it is not. These terms are used throughout the descriptions in this section.

Trace Type

There are four trace Types:

Option	Parameter	SCPI Example	Details
Clear/Write	WRITe	:TRAC2:TYPE WRIT	See: "Clear/Write" on page 1215
Trace Average	AVERage	:TRAC2:TYPE AVER	See: "Trace Average" on page 1215
Maximum Hold	MAXHold	:TRAC3:TYPE MAXH	See: "Max Hold" on page 1216
Minimum Hold	MINHold	:TRAC5:TYPE MINH	See: "Min Hold" on page 1216

NOTE

Some measurements do not support the **Trace Average** or **Min Hold** options.
