# **Definitions and Conditions**

This data sheet provides performance information for Keysight N9042B Signal Analyzers.

**Specifications** describe the performance of parameters covered by the product warranty and apply to temperature ranges 15 to 40 °C, unless otherwise noted.

**95<sup>th</sup> percentile** values indicate the breadth of the population (approx.  $2 \sigma$ ) of performance tolerances expected to be met in 95 percent of the cases with a 95 percent confidence, for any ambient temperature in the range of 20 to 30 °C. In addition to the statistical observations of a sample of instruments, these values include the effects of the uncertainties of external calibration references. These values are not warranted. These values are updated occasionally if a significant change in the statistically observed behavior of production instruments is observed.

**Typical values (typ)** describe additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level over the temperature range 20 to 30 °C. Typical performance does not include measurement uncertainty.

**Nominal values (nom)** indicate expected performance or describe product performance that is useful in the application of the product but are not covered by the product warranty.

The analyzer will meet its specifications when:

- It is within its calibration cycle
- Under auto couple control, except that Auto Sweep Time Rules = Accy
- For signal frequencies < 10 MHz, DC coupling applied.
- Analyzer is used in environment that falls within allowed operating range; and has been in that environment at least 2 hours before being turned on.
- Analyzer has been turned on at least 30 minutes with AutoAlign set to Normal; or, if Auto Align is set to Off or Partial, alignments must have been run recently enough to prevent an Alert message. Note that factory default is with the AutoAlign set to Light, which (compared to Normal) allows wider temperature changes before causing Alignments to run automatically. The benefit is that Alignments interrupt less frequently. The user can change AutoAlign to Normal if desired, and this setting will persist after power cycle or PRESET. If the Alert condition is changed from "Time and Temperature" to one of the disabled duration choices, the analyzer may fail to meet specifications without informing the user. In practice, the impact of such choices is primarily on Absolute Amplitude Accuracy.
- The term "mixer level" is used as a condition for many specifications in this document. This term is a conceptual quantity that is defined as follows: Mixer Level (dBm) = RF Input Power Level (dBm) (Mechanical Attenuation) (dB) (Electronic Attenuation) (dB).
- The term "attenuation" is used for many specifications in this document; this refers to the Mechanical Attenuator, unless otherwise stated.

Common abbreviations	
BW	bandwidth
FBP	full bypass path
FFT	fast Fourier transform
IQ	in-phase quadrature-phase (sample data)
IVL	Individual validated license (for export to restricted countries)
LNA	low-noise amplifier
LNP	low-noise path
LO	local oscillator
PA	pre-amplifier
MPB	microwave preselector bypass
RBW	resolution bandwidth (filter)
VBW	video bandwidth (filter)

# **Frequency and Time Specifications**

Frequency option		Frequency range		
526		2 Hz to 26.5 GHz		
544		2 Hz to 44 GHz		
550		2 Hz to 50 GHz		
Minimal frequency				
PA off, LNA off		2 Hz		
PA on		9 kHz		
LNA on		30 MHz		
	s (these bands are no	t applicable to wide-bandwidth IQ analysis)		
Swept frequency band	LO multiple (N)	Frequency range		
0	1	2 Hz to 3.6 GHz		
1	1	3.5 to 8.4 GHz		
2	2	8.3 to 13.6 GHz		
3	2	13.5 to 17.1 GHz		
4	4	17.0 to 26.5 GHz		
5	4	26.4 to 34.5 GHz		
6	8	34.4 to 50 GHz		
Frequency reference				
Accuracy (total)		± [ (Initial accuracy) + (aging rate x time since last adjustment) + (temperature stability)]		
Aging rate		$\pm 3 \times 10^{-8}$ / year		
Temperature stability, full te	emperature range	± 4.5 x 10-9		
Achievable initial calibration		± 3.1 x 10-8		
Example frequency referen 1 year after last adjustment	ce accuracy	$= \pm (3 \times 10^{-8} + 4.5 \times 10^{-9} + 3.1 \times 10^{-8})$ = $\pm 6.6 \times 10^{-8}$		
Residual FM				
(Center frequency = 1 GHz, 10 Hz RBW, 10 Hz VBW)		$\leq$ (0.25 Hz x N) p-p in 20 ms nominal (N = LO multiple, see band table above)		
Frequency readout accu	uracy (start, stop, cent			
· ·	• •	y + 0.10 % x span + 5 % x RBW + 2 Hz + 0.5 x horizontal resolution) where horizontal resolution		
Marker frequency count	er			
Accuracy		± (marker frequency x frequency reference accuracy + 0.100 Hz)		
Delta counter accuracy		± (delta frequency x frequency reference accuracy + 0.141 Hz)		
Counter resolution		0.001 Hz		
Frequency span (FFT ar	nd swept mode)			
Range		0 Hz (zero snan) 10 Hz to maximum frequency of instrument		
Resolution		0 Hz (zero span), 10 Hz to maximum frequency of instrument 2 Hz		
		L 112		
Accuracy		. (0.1.9) y anon a horizontal recolution) where have a state recolution is a set (assume the state of )		
Stepped/Swept		$\pm$ (0.1 % x span + horizontal resolution) where horizontal resolution is span/(sweep points -1)		
FFT		$\pm$ (0.1 % x span + horizontal resolution) where horizontal resolution is span/(sweep points -1)		
Sweep time and triggeri	-			
Range	Span = 0 Hz	1 µs to 6000 s		
U -	Span ≥ 10 Hz	1 ms to 4000 s		
	Span ≥ 10 Hz, swept	± 0.01% nominal		
Accuracy	Span ≥ 10 Hz, FFT	± 40% nominal		
	Span = 0 Hz	± 0.01% nominal		
TIDI	Span = 0 Hz or FFT	-150 to +500 ms		
Trigger Delay	Span ≥ 10 Hz, swept	0 to 500 ms		
	Resolution	0.1 µs		

Time gating	
Gate methods	Gated LO; gated video; gated FFT
Gate length range (except method = FFT)	1 µs to 5.0 s
Gate delay range	0 to 100.0 s
Gate delay jitter	33.3 ns p-p nominal
Sweep (trace) point range	
All spans	3 to 100,001
Resolution bandwidth (RBW) (see also IQ Analy	
Range (with –3 dB bandwidth, standard)	1 Hz to 3 MHz (10% steps), 4, 5, 6, 8, 10 MHz
Bandwidth accuracy (power)	
	A
RBW range	
1 Hz to 100 kHz	± 0.5% (± 0.022 dB)
110 kHz to 1.0 MHz (< 3.6 GHz center frequency)	± 1.0% (± 0.044 dB)
1.1 to 2 MHz (< 3.6 GHz center frequency)	± 0.07 dB (nominal)
2.2 to 3 MHz (< 3.6 GHz center frequency)	± 0.10 dB (nominal)
4 to 10 MHz (< 3.6 GHz center frequency)	± 0.20 dB (nominal)
Bandwidth accuracy (-3 dB)	
RBW range	Accuracy
1 Hz to 1.3 MHz	± 2% (nominal)
1.5 MHz to 3 MHz	
<ul> <li>(≤ 3.6 GHz center frequency)</li> </ul>	± 7% (nominal)
(> 3.6 GHz center frequency)	± 8% (nominal)
4 MHz to 10 MHz	
<ul> <li>(≤ 3.6 GHz center frequency)</li> </ul>	± 15% (nominal)
(> 3.6 GHz center frequency)	± 20% (nominal)
Selectivity (-60 dB/-3 dB)	4.1: 1 (nominal)
EMI bandwidths (CISPR 16-1-1; requires N90EMEMCB or N6141EM0E)	200 Hz, 9 kHz, 120 kHz, 1 MHz
EMI bandwidths (MIL-STD-461; requires N90EMEMCB or N6141EM0E)	10 Hz, 100 Hz, 1 kHz, 10 kHz, 100 kHz, 1 MHz
Preselector bandwidth	
The preselector can have a significant passband rippl	e. To avoid ambiguous results, the -4 dB bandwidth is characterized
Center frequency	Mean bandwidth (- 4 dB)
5 GHz	46 MHz
10 GHz	52 MHz
15 GHz	53 MHz
20 GHz	55 MHz
25 GHz	56 MHz
35 GHz	62 MHz
44 GHz	70 MHz
50 GHz	76 MHz
Video bandwidth (VBW) filters	
Range	1 Hz to 3 MHz (10% steps), 4, 5, 6, 8 MHz, and wide open (labeled 50 MHz)
Accuracy	± 6%, nominal
Detector types	
Normal, peak, sample, negative peak, log power aver	age, RMS average, and voltage average
With Option N90EMEMCB or N6141EM0E	Add quasi-peak and EMI average to above

# **Triggers and Gating**

### Trigger/Gate sources

	Swept trigger	Gate source	Wide bandwidth IQ trigger	Supplemental information
Free Run	Y		Y	
External 1	Y	Y	Y	
External 2	Y	Y	Y	Jitter up to ~33 ns p-p (nominal)
External 3			Y	Jitter < 20 ps (nominal)
RF Burst	Y	Y		IF path ≤ 40 MHz only
Video (IF Mag)	Y		Y	In 255 MHz IF path only; at greater bandwidths, ADC trigger is similar
ADC			Y	Similar to Video, but operates digitally on mag[I,Q], prior to decimation filtering, and corrections. Available for bandwidth > 255 MHz.
Line	Y	Y	Y	
Periodic	Y	Y	Y	Repetitive "frame" trigger, at precise interval, following an External or RF Burst trigger
TV	Y	Y		
Triggers				
Video (independe Reference Level)		Scaling and	Specifications	Supplemental information
Minimum settable le			-170 dBm	Useful range limited by noise
Maximum usable le	vel			Highest allowed mixer level (the highest allowed mixer level depends on the IF gain. It is nominally –10 dBm for preamp off and IF gain = low) + 2 dB (nominal)
Detector and swe	ep type relatio	onships		
			Supplemental info	ormation
Sweep Type = Swe	pt			
	ctor = Normal, Peak, Sample or Negative Triggers on the sid		Triggers on the sign	al before detection, which is similar to the displayed signal
Detector = Average				al before detection, but with a single-pole filter added to give similar the average detector
Sweep Type = FFT			Triggers on the sign	al envelope in a bandwidth wider than the FFT width
RF Burst Specifications		Specifications	Supplemental information	
Level range		-40 to -10 dBm plus attenuation (nominal)	Noise will limit trigger level range at high frequencies, such as above 15 GHz	
Level accuracy				
With positive slope	trigger. Trigger I	evel with negati	ve slope is nominally 1 t	to 4 dB lower than positive slope.
Absolute			± 2 dB + absolute a	mplitude accuracy (nominal)
Relative			± 2 dB (nominal)	
Bandwidth (-10 d	B)			
Most cases			> 80 MHz	
(including RF Burst	Level Type = R	elative)	(nominal)	
Start Freq < 650 MI	Hz			
RF Burst Level Typ				
<ul> <li>Sweep Type = Sv</li> </ul>			16 MHz (nominal)	
<ul> <li>Sweep Type = FF</li> </ul>				
FFT Width 8 to 25 MHz		30 MHz (nominal)		
<ul> <li>FFT Width &lt; 8 MF</li> </ul>	Ηz		16 MHz (nominal)	
Frequency limitations			If the start or center frequency is too close to zero, LO feedthrough ca degrade or prevent triggering. How close is too close depends on the bandwidth listed above.	
Amplitude requirem	onte			-65 dBm minimum video carrier power at the input mixer, nominal

# **Amplitude Accuracy and Range Specifications**

Amplitude characteristics vary by user-selectable front-end path. Swept SA measurements are normally made with preselector on (in circuit). These settings impact amplitude accuracy and range.

#### Front end settings

1a		Preselector	Default selection following power-on, boot-up, or PRESET. Settings provide best dynamic range and lowest internally-generated distortion. Suitable for harmonics, IMD, spurious in presence of large signals, etc. unless noise-limited.
1b	Standard path	Preselector, LNA on	Requires P26, P44, P4L, P50, or P5L. Settings provide lower DANL, compared to 1a, while preserving very good dynamic range. Suitable for distortion measurements (harmonics, IMD, etc.) when a lower noise floor is needed. Operates down to 10-20 MHz
1c		Preselector, PA on	Requires P26, P44, P4L, P50, or P5L. Settings provide lower DANL, compared to 1b. Allows tuning down to 100 kHz.
1d		Preselector, LNA on, PA on	Requires P26, P44, P4L, P50, or P5L. Settings provide lowest possible DANL, compared to 1c. Best for finding low-level spurs, oscillations, etc. near the noise floor. Allows use of wider RBW setting to achieve equivalent noise floors, so can make spur searching faster.
2a	Low-noise path	Preselector, LNP	Bypasses the preamplifier. Settings provide the lowest distortion and best dynamic range, yet with lower DANL at higher frequencies, when compared with 1a. Path not active below 3.6 GHz.
2b	(LNP) Preselector, LNP, LNA on		Bypasses the preamplifier. Requires P26, P44, P4L, P50, or P5L. Settings provide the lower DANL, compared to 2a, while preserving very good dynamic range. Path not active at below 3.6 GHz.
3a		MPB	Bypasses preselector. Settings provide very good EVM floor at mid-high input power region (using attenuation), including below 3.6 GHz. Good for wideband digitizer and FFT measurements. Recommend using path 4a if above 3.6 GHz.
3b	Microwave	LNA on	Bypasses preselector. Requires P26, P44, P4L, P50, or P5L. Settings provide best EVM at low input power for below 3.6 GHz. Good for wideband digitizer and FFT measurements. Otherwise use path 4b if above 3.6 GHz.
3c	preselector bypass path (MPB)	PA on	Bypasses preselector. Requires P26, P44, P4L, P50, or P5L. Good for wideband digitizer and FFT measurements. Settings allowed only for very low power levels since preselector is bypassed. Not generally recommended for digital demodulation.
3d		LNA on, PA on	Bypasses preselector. Requires P26, P44, P4L, P50, or P5L. Good sensitivity for narrowband swept measurements only. Not generally recommended for digital demodulation.
4a	Full burgers and	LNP, MPB	Bypasses both preamplifier and preselector. Settings provide best EVM floor for mid-high input power region (using attenuation) for above 3.6 GHz. Best for wideband digitizer and FFT measurements. Otherwise use path 3a if below 3.6 GHz.
4b	Full bypass path (FBP)	LNP, MPB, LNA on	Bypasses both preamplifier and preselector. Requires P26, P44, P4L, P50, or P5L. Settings provide best EVM floor for low input power region (using attenuation) for above 3.6 GHz. Best for wideband digitizer and FFT measurements. Otherwise use path 3b if below 3.6 GHz.

Amplitude range			
	Displayed average noise level (DANL) to +30 dBm (for preamp off)		
Measurement range	DANL to +24 dBm (for frequency o	pts $\leq$ 526 with preamp on)	
	DANL to +20 dBm (for frequency of	pts > 526 with preamp on)	
Input mechanical attenuator range (2 Hz to 50 GHz)	0 to 70 dB in 2 dB steps		
Electronic attenuator (option EA3)			
Frequency range	2 Hz to 3.6 GHz		
Attenuation range			
Electronic attenuator range	0 to 24 dB, 1 dB steps		
Full attenuation range (mechanical + electronic)	0 to 94 dB, 1 dB steps		
Maximum safe input level (max applied to RF input connector)			
Average total power (with and without preamp)	+30 dBm (1 W)		
Peak pulse power (< 10 $\mu$ s pulse width, < 1% duty cycle, and input attenuation $\geq$ 30 dB)	+50 dBm (100 W)		
DC Bias at RF Input	0 VDC max (DC coupled)	Use external DC block as	
	0.2 VDC max in full bypass path	needed	
DC volts			
DC coupled	± 0.2 Vdc		
Display range			
Log scale	0.1 to 1 dB/division in 0.1 dB steps 1 to 20 dB/division in 1 dB steps (10 display)		
Linear scale	10 divisions		
Scale units	dBm, dBmV, dBµV, dBmA, dBµA, V	/, W, A	

### **Frequency Response**

1a. Standard path frequency response (swept, preselector on, LNA off, PA off)

10 dB input attenuation, relative to reference conditions (50 MHz), preselector centering applied above 3.6 GHz

Frequency	Full range	20 to 30 °C	Typical, unless stated otherwise
9 kHz to 20 MHz	± 0.54 dB	± 0.50 dB	± 0.15 dB
> 20 MHz to 50 MHz	± 0.44 dB	± 0.40 dB	± 0.12 dB
> 50 MHz to 3.6 GHz	± 0.58 dB	± 0.52 dB	± 0.22 dB
> 3.6 to 5.2 GHz	± 2.70 dB	± 1.90 dB	± 0.98 dB
> 5.2 GHz to 8.4 GHz	± 2.50 dB	± 1.40 dB	± 0.58 dB
> 8.4 to 13.6 GHz	± 2.00 dB	± 1.50 dB	± 0.54 dB
> 13.6 to 17.1 GHz	± 2.00 dB	± 1.70 dB	± 0.68 dB
> 17.1 to 26.5 GHz	± 2.32 dB	± 1.90 dB	± 0.74 dB
> 26.5 to 34.5 GHz	± 2.70 dB	± 2.30 dB	± 0.94 dB
> 34.5 to 50 GHz	± 4.35 dB	± 3.00 dB	± 1.22 dB

#### 1b. Standard path, LNA on frequency response (swept, preselector on, LNA on, PA off)

10 dB input attenuation, relative to reference conditions (50 MHz), preselector centering applied above 3.6 GHz

Frequency	Full range	20 to 30 °C	Typical, unless stated otherwise
30 MHz to 3.6 GHz	± 0.68 dB	± 0.54 dB	± 0.25 dB
> 3.6 to 5.2 GHz	± 2.90 dB	± 2.28 dB	± 1.14 dB
> 5.2 to 8.4 GHz	± 2.80 dB	± 2.06 dB	± 0.98 dB
> 8.4 to 13.6 GHz	± 2.40 dB	± 2.02 dB	± 0.88 dB
> 13.6 to 17.1 GHz	± 2.40 dB	± 2.16 dB	± 0.88 dB
> 17.1 to 26.5 GHz	± 2.86 dB	± 2.42 dB	± 0.98 dB
> 26.5 to 34.5 GHz	± 3.10 dB	± 2.60 dB	± 1.18 dB
> 34.5 to 50 GHz	± 5.25 dB	± 4.30 dB	± 2.04 dB

• 1c. Standard path, PA on frequency response (swept, preselector on, LNA off, PA on)

• 10 dB input attenuation, relative to reference conditions (50 MHz), preselector centering applied above 3.6 GHz

Frequency	Full range	20 to 30 °C	Typical, unless stated otherwise
9 kHz to 1 MHz	N/A	N/A	± 0.82 dB
> 1 to 50 MHz	± 0.80 dB	± 0.78 dB	± 0.25 dB
> 50 MHz to 3.6 GHz	± 0.68 dB	± 0.50 dB	± 0.18 dB
> 3.6 to 5.2 GHz	± 2.80 dB	± 2.30 dB	± 1.20 dB
> 5.2 GHz to 8.4 GHz	± 2.60 dB	± 1.64 dB	± 0.64 dB
> 8.4 to 13.6 GHz	± 2.30 dB	± 1.80 dB	± 0.60 dB
> 13.6 to 17.1 GHz	± 2.30 dB	± 2.00 dB	± 0.70 dB
> 17.1 to 26.5 GHz	± 2.86 dB	± 2.22 dB	± 0.72 dB
> 26.5 to 34.5 GHz	± 3.10 dB	± 2.44 dB	± 1.02 dB
> 34.5 to 50 GHz	± 5.06 dB	± 3.85 dB	± 1.78 dB

1d. Standard path, LNA on, PA on frequency response (swept, preselector on, LNA on, PA on)

10 dB input attenuation, relative to reference conditions (50 MHz), preselector centering applied above 3.6 GHz

Frequency	Full range	20 to 30 °C	Typical, unless stated otherwise		
< 3.6 GHz	If tuning < 3.6 GHz, then	If tuning < 3.6 GHz, then standard path with LNA on is used.			
3.6 GHz to 8.4 GHz	± 3.00 dB	± 2.50 dB	± 1.36 dB		
> 8.4 to 13.6 GHz	± 2.50 dB	± 2.20 dB	± 0.96 dB		
> 13.6 to 17.1 GHz	± 2.30 dB	± 2.20 dB	± 0.94 dB		
> 17.1 to 26.5 GHz	± 2.85 dB	± 2.40 dB	± 1.00 dB		
> 26.5 to 34.5 GHz	± 3.20 dB	± 2.80 dB	± 1.32 dB		
> 34.5 to 50 GHz	± 5.30 dB	± 4.50 dB	± 2.26 dB		

2a. Low-noise path (LNP) frequency response (low-noise path enabled, preselector on, LNA off, PA off) 10 dB input attenuation, relative to reference conditions (50 MHz), preselector centering applied above 3.6 GHz

Frequency	Full range	20 to 30 °C	Typical, unless stated otherwise
3.6 GHz to 8.4 GHz	± 3.10 dB	± 2.30 dB	± 1.00 dB
> 8.4 to 13.6 GHz	± 2.12 dB	± 1.72 dB	± 0.56 dB
> 13.6 to 17.1 GHz	± 2.00 dB	± 1.78 dB	± 0.66 dB
> 17.1 to 26.5 GHz	± 2.52 dB	± 1.92 dB	± 0.64 dB
> 26.5 to 34.5 GHz	± 2.80 dB	± 2.45 dB	± 0.94 dB
> 34.5 to 50 GHz	± 3.58 dB	± 2.84 dB	± 1.20 dB

2b. Low-noise path (LNP) frequency response (low-noise path enabled, preselector on, LNA on, PA off) 10 dB input attenuation, relative to reference conditions (50 MHz), preselector centering applied above 3.6 GHz

Frequency	Frequency response (nominal)
3.6 to 8.4 GHz	± 0.80 dB
> 8.4 to 13.6 GHz	± 0.70 dB
> 13.6 to 17.1 GHz	± 0.70 dB
> 17.1 to 26.5 GHz	± 0.70 dB
> 26.5 to 34.5 GHz	± 1.00 dB
> 34.5 to 50 GHz	± 1.40 dB

### 3a. Microwave preselector bypass (MPB) path frequency response (MPB enabled, LNA off, PA off) 10 dB input attenuation, relative to reference conditions (50 MHz)

Frequency	Full range	20 to 30 °C	Typical, unless stated otherwise
3.6 GHz to 8.4 GHz	± 1.50 dB	± 1.44 dB	± 0.40 dB
> 8.4 to 13.6 GHz	± 1.66 dB	± 1.50 dB	± 0.50 dB
> 13.6 to 17.1 GHz	± 2.00 dB	± 1.62 dB	± 0.56 dB
> 17.1 to 26.5 GHz	± 2.52 dB	± 1.80 dB	± 0.56 dB
> 26.5 to 34.5 GHz	± 2.55 dB	± 2.10 dB	± 0.78 dB
> 34.5 to 50 GHz	± 4.20 dB	± 2.90 dB	± 1.12 dB

3b, 3c, 3d. Microwave preselector bypass (MPB) path frequency response (MPB path enabled)

	3b. MPB, LNA on (10 dB input attenuation) (nominal)	3c. MPB, PA on (10 dB input attenuation) (nominal)	3d. MPB, LNA on, PA on (10 dB input attenuation) (nominal)
3.6 GHz to 8.4 GHz	± 0.40 dB	± 0.30 dB	± 0.40 dB
> 8.4 to 13.6 GHz	± 0.50 dB	± 0.30 dB	± 0.45 dB
> 13.6 to 17.1 GHz	± 0.50 dB	± 0.40 dB	± 0.45 dB
> 17.1 to 26.5 GHz	± 0.50 dB	± 0.40 dB	± 0.50 dB
> 26.5 to 34.5 GHz	± 0.50 dB	± 0.50 dB	± 0.60 dB
> 34.5 to 50 GHz	± 0.90 dB	± 1.20 dB	± 1.00 dB

#### 4a, 4b. Full bypass (FBP) path frequency response (full bypass path enabled)

	4a. FBP (10 dB input attenuation) (nominal)	4b. FBP, LNA on (10 dB input attenuation) (nominal)
3.6 GHz to 8.4 GHz	± 0.20 dB	± 0.30 dB
> 8.4 to 13.6 GHz	± 0.25 dB	± 0.50 dB
> 13.6 to 17.1 GHz	± 0.30 dB	± 0.50 dB
> 17.1 to 26.5 GHz	± 0.30 dB	± 0.50 dB
> 26.5 to 34.5 GHz	± 0.40 dB	± 0.50 dB
> 34.5 to 50 GHz	± 0.60 dB	± 1.00 dB

### Electronic attenuator frequency response (10 dB mechanical input attenuation, relative to reference conditions (50 MHz)

Maximum error relative to reference conditions (50 MHz). Mechanical attenuation set to default/calibrated setting of 10 dB.				
EA3 frequency	Full range	20 to 30 °C	Typical, unless stated otherwise	
Attenuation = 4 to 24 dB, even steps				
9 kHz to 50 MHz	± 0.80 dB	± 0.65 dB	± 0.18 dB

#### Total absolute amplitude accuracy (at 50 MHz)

At 50 MHz, 10 dB attenuation, RBW ≤ 1 MHz, input signal -10 to -50 dBm, all settings auto-coupled except Auto Swp Time = Accy, any reference revel, any vertical scale.

Path	Full range	20 to 30 °C	Typical	AutoAlign = Light, nominal
1a. Std	± 0.34 dB	± 0.32 dB	± 0.12 dB	± 0.18 dB
1b. Std (LNA on, preamp off)	± 0.44 dB	± 0.40 dB	± 0.16 dB	± 0.19 dB
1c. Std (LNA off, preamp on)	± 0.42 dB	± 0.38 dB	± 0.12 dB	± 0.17 dB

### With electronic attenuator

(at 50 MHz, 10 dB attenuation, RBW < = 1 MHz, input signal -7 to -25 dBm, all settings auto-coupled except auto swp time = accy, any reference level, any vertical scale)

	± 0.37 dB	± 0.32 dB	± 0.12 dB	± 0.17 dB
For absolute amplitude accuracy at any frequency, use the following formulas:				
At any frequency	± (abs amp at 50 MHz + frequency response)			
Wide range of signal levels, resolution bandwidths, reference levels, attenuation = 10 dB, 10 Hz to 3.6 GHz	± 0.25 dB, 95 <sup>th</sup> perc	entile		

Note1: Absolute amplitude accuracy is the total of all amplitude measurement errors, and applies over the following subset of settings and conditions:

- $1 \text{ Hz} \leq \text{RBW} \leq 1 \text{ MHz}$
- Input signal -10 to -50 dBm (details below)
- Input attenuation 10 dB
- Span < 5 MHz (nominal additional error for span ≥ 5 MHz is is 0.02 dB)
- All settings auto-coupled except Swp Time Rules = Accuracy
- Combinations of low signal level and wide RBW use VBW ≤ 30 kHz to reduce noise
- When using FFT sweeps, the signal must be at the center frequency.

This absolute amplitude accuracy specification includes the sum of the following individual specifications under the conditions listed above: Scale Fidelity, Reference Level Accuracy, Display Scale Switching Uncertainty, Resolution Bandwidth Switching Uncertainty, 50 MHz Amplitude Reference Accuracy, and the accuracy with which the instrument aligns its internal gains to the 50 MHz Amplitude Reference. The only difference between signals within the range above –50 dBm and those signals below that level is the scale fidelity. Our specifications and experience show no difference between signals above and below this level. The only reason our Absolute Amplitude Uncertainty specification does not go below this level is that noise detracts from our ability to verify the performance at all levels with acceptable test times and yields. So, the performance is not warranted at lower levels, but we fully expect it to be the same.

Note 2: Absolute amplitude accuracy for a wide range of signal and measurement settings, covers the 95th percentile proportion with 95% confidence. Here are the details of what is covered and how the computation is made:

- The wide range of conditions of RBW, signal level, VBW, reference level and display scale are described above.
- There are 44 quasi-random combinations used, tested at a 50 MHz signal frequency.
- We compute the 95th percentile proportion with 95% confidence for this set observed over a statistically significant number of instruments.
- Also, the frequency response relative to the 50 MHz response is characterized by varying the signal across a large number of quasi-random verification frequencies that are chosen to not correspond with the frequency response adjustment frequencies.
- We again compute the 95th percentile proportion with 95% confidence for this set observed over a statistically significant number of instruments.
- We also compute the 95th percentile accuracy of tracing the calibration of the 50 MHz absolute amplitude accuracy to a national standards organization.
- We also compute the 95th percentile accuracy of tracing the calibration of the relative frequency response to a national standards organization
- · We take the root-sum-square of these four independent Gaussian parameters
- To that RSS we add the environmental effects of temperature variations across the 20 to 30°C range.
- These computations and measurements are made with the mechanical attenuator only in circuit, set to the reference state of 10 dB.

A similar process is used for computing the result when using the electronic attenuator under a wide range of settings: all even settings from 4 through 24 dB inclusive, with the mechanical attenuator set to 10 dB. The 95th percentile result was 0.21 dB.

### VSWR (voltage standing wave ratio) at RF Input (95th Percentile)

Standard path, 10 dB input a	ttenuation, 50 MHz (reference condition)	1.07:1 (nominal)

Reference level	
Range	
Log scale	-170 to +30 dBm in 0.01 dB steps
Linear scale	707 pV to 7.07 V with 0.11% (0.01 dB) resolution
Accuracy (Only affects the display, not the measurement, so it causes no additional error in measurement results from trace data or markers.)	0 dB
Display scale switching uncertainty	
Switching between linear and log (Only affects the display, not the measurement, so it causes no additional error in measurement results from trace data or markers.)	0 dB
Log scale/div switching (Only affects the display, not the measurement, so it causes no additional error in measurement results from trace data or markers.)	0 dB

Display scale fidelity (log-linear fidelity, relative to the reference condition -25 dBm input through 10 dB attenuation, thus -35 dBm at the input mixer)

Input mixer level	Full range	Typical
$-18 \text{ dBm} \le \text{ML} \le -10 \text{ dBm}$	± 0.10 dB total	± 0.04 dB
ML < -18 dBm input mixer level	± 0.07 dB	± 0.02 dB

### Preamplifiers (2 stages: Low-Noise Amplifier LNA, Pre-Amplifier PA)

	Low-Noise Amplifier (LNA)	Pre-Amplifier (PA)
Option P44, P4L	20 MHz to 44 GHz	9 kHz to 44 GHz
Option P50, P5L	20 MHz to 50 GHz	9 kHz to 50 GHz
	For options P4L/P5L: ≥ 43.5 GHz both LNA and PA cannot be used simultaneously	
Noise figure	4 to 8 dB (nominal) (see DANL)	10 dB (nominal)
Gain	20 dB (nominal)	30 dB (nominal)
Gain	When LNA and PA are used simultaneou	usly, gain = 40 dB (nominal)

# **Dynamic Range Specifications**

### 1 dB Gain Compression

Notes:

- Large signals, even at frequencies not shown on the screen, can cause the analyzer to mismeasure on-screen signals because of two-tone gain compression. This specification tells how large an interfering signal must be in order to cause a 1 dB change in an on-screen signal.
- Specified at 1 kHz RBW with 100 kHz tone spacing. The compression point will nominally equal the specification for tone spacing greater than 5 times the prefilter bandwidth. At smaller spacings, ADC clipping may occur at a level lower than the 1 dB compression point.
- Reference level and off-screen performance: The reference level (RL) behavior differs from some • earlier analyzers in a way that makes this analyzer more flexible. In other analyzers, the RL controlled how the measurement was performed as well as how it was displayed. Because the logarithmic amplifier in these analyzers had both range and resolution limitations, this behavior was necessary for optimum measurement accuracy. The logarithmic amplifier in this signal analyzer, however, is implemented digitally such that the range and resolution greatly exceed other instrument limitations. Because of this, the analyzer can make measurements largely independent of the setting of the RL without compromising accuracy. Because the RL becomes a display function, not a measurement function, a marker can read out results that are off-screen, either above or below, without any change in accuracy. The only exception to the independence of RL and the way in which the measurement is performed is in the input attenuation setting: When the input attenuation is set to auto, the rules for the determination of the input attenuation include dependence on the reference level. Because the input attenuation setting controls the tradeoff between large signal behaviors (third-order intermodulation, compression, and display scale fidelity) and small signal effects (noise), the measurement results can change with RL changes when the input attenuation is set to auto.
- Mixer power level (dBm) = total power at the input (dBm) input attenuation (dB).
- Total power at the preamp (dBm) = total power at the input (dBm) input attenuation (dB).
- The low noise path, when in use, does not substantially change the compression-to-noise dynamic range or the TOI-to-noise dynamic range because it mostly just reduces losses in the signal path in front of all significant noise, TOI and compression-affecting circuits. In other words, the compression threshold and the third-order intercept both decrease and to the same extent as that to which the DANL decreases.

### Large signals, even at frequencies not shown on the screen, can cause the analyzer to mismeasure on-screen signals because of two-tone gain

Standard path: 1 dB gain compression (swept, standard, preselector on)

compression. This specification tells how large an interfering signal must be in order to cause a 1 dB change in an on-screen signal. Mixer power level (dBm) = total power at the input (dBm) – input attenuation (dB).

Contor froquency	Gain compressior	Gain compression (nominal)				
Center frequency	1a. PA off	1b. LNA	1c. PA	1d. LNA PA		
20 to 40 MHz	+2 dBm	-14 dBm	-14 dBm	-14 dBm		
> 40 MHz to 3.6 GHz	+5 dBm	-14 dBm	-14 dBm	-14 dBm		
> 3.6 to 13.5 GHz	+8 dBm	-14 dBm	-22 dBm	-28 dBm		
> 13.5 to 26.5 GHz	+3 dBm	-14 dBm	-24 dBm	-32 dBm		
> 26.5 to 50 GHz	+6 dBm	-10 dBm	-23 dBm	-33 dBm		

#### Low-Noise Path (LNP): 1 dB gain compression (swept, LNP, preselector on)

Large signals, even at frequencies not shown on the screen, can cause the analyzer to mismeasure on-screen signals because of two-tone gain compression. This specification tells how large an interfering signal must be in order to cause a 1 dB change in an on-screen signal. Mixer power level (dBm) = total power at the input (dBm) – input attenuation (dB).

Contor froquency	Gain compression (nominal)	Gain compression (nominal)		
Center frequency	2a. Preselector LNP	2b. Preselector LNP LNA		
> 3.6 to 13.5 GHz	+2 dBm	-14 dBm		
> 13.5 to 26.5 GHz	+0 dBm	-18 dBm		
>26.5 to 50 GHz	+3 dBm	-16 dBm		

#### Microwave preselector bypass path (MPB): 1 dB gain compression ( swept, preselector bypass)

Large signals, even at frequencies not shown on the screen, can cause the analyzer to mismeasure on-screen signals because of two-tone gain compression. This specification tells how large an interfering signal must be in order to cause a 1 dB change in an on-screen signal. Mixer power level (dBm) = total power at the input (dBm) – input attenuation (dB).

Frequency	Gain compression (nominal)		
Frequency	3a. MPB	3b. MPB LNA	
20 to 40 MHz	+2 dBm	-14 dBm	
> 40 MHz to 3.6 GHz	+5 dBm	-14 dBm	
> 3.6 to 13.5 GHz	+2 dBm	-17 dBm	
> 13.5 to 26.5 GHz	+0 dBm	-17 dBm	
>26.5 to 50 GHz	+0 dBm	-15 dBm	

#### Full bypass path (FBP): 1 dB gain compression ( swept, full bypass)

Large signals, even at frequencies not shown on the screen, can cause the analyzer to mismeasure on-screen signals because of two-tone gain compression. This specification tells how large an interfering signal must be in order to cause a 1 dB change in an on-screen signal. Mixer power level (dBm) = total power at the input (dBm) – input attenuation (dB).

Fraguanay	Gain compression (nomi	Gain compression (nominal)		
Frequency	4a. FBP	4b. FBP LNA		
> 3.6 to 13.5 GHz	-4 dBm	-20 dBm		
> 13.5 to 26.5 GHz	-5 dBm	-23 dBm		
>26.5 to 50 GHz	-5 dBm	-22 dBm		

#### IF prefilter bandwidth

This table applies without Option FS1 or FS2, fast sweep. With Option FS1 or FS2, which is a standard option in the UXA, this table applies for sweep rates that are manually chosen to be the same as or slower than "traditional" sweep rates, instead of the much faster sweep rates, such as autocoupled sweep rates, available with FS1 or FS2. Sweep rate is defined to be span divided by sweep time. If the sweep rate is  $\leq 1.1$  times RBW-squared, the table applies. Otherwise, compute an "effective RBW" = span / (sweeptime × RBW). To determine the IF Prefilter bandwidth, look up this effective RBW in the table instead of the actual RBW. For example, for RBW = 3 kHz, Span = 300 kHz, and sweep time = 42 ms, we compute that sweep rate = 7.1 MHz/s, while RBW-squared is 9 MHz/s. So the sweep rate is < 1.1 times RBW-squared and the table applies; row 1 shows the IF prefilter bandwidth is nominally 8.9 kHz. If the sweep time is 1 ms, then the effective RBW computes to 100 kHz. This would result in an IF prefilter bandwidth from the third row, nominally 303 kHz.

Zero span or swept, RBW=	Sweep type = FFT, FFT width =	–3 dB bandwidth (nominal)
≤ 3.9 kHz	< 4.01 kHz	8.9 kHz
4.3 to 27 kHz	< 28.81 kHz	79 kHz
30 to 160 kHz	< 167.4 kHz	303 kHz
180 to 390 kHz	< 411.9 kHz	966 kHz
430 kHz to 10 MHz	< 7.99 MHz	10.9 MHz

# **Displayed Average Noise Level (DANL)**

Input terminated, Sample or Average detector, Averaging type set to Log, IF Gain = High, 1 Hz Resolution Bandwidth, 0 dB input attenuation.

Noise Floor Extension (Optio	n NF2) improves DANL by 8 to	11 dB, for standard path.	
Frequency	Full range	20 to 30 °C	Typical, unless otherwise stated

	1 MHz	–144 dBc/Hz	–145 dBc/Hz	–146 dBc/Hz
	10 MHz	–154 dBc/Hzss	–155 dBc/Hz	–157 dBc/Hz

**Figure 7.** Nominal UXA phase noise at various center frequencies. 50 GHz curve is the predicted phase noise computed from the 25.2 GHz observation. RBW curves added to show impact of analyzer phase noise in resolving two closely spaced signals for various RBW filter choices.

# **IQ** Analyzer

All specifications based on preselector by-passed (RF path either Microwave Preselector Bypass or Full Bypass) (except < 3.6 GHz), unless otherwise noted. IF paths at 10, 25, 40, and 255 MHz are enabled by any of R10, R15, R20, or R40. Each bandwidth option includes and enables all others with lesser bandwidth; e.g. instruments with R20 also have R15 and R10 licenses, plus B2X, B40, and B25 paths.

## 10 MHz Analysis Bandwidth (Standard)

Specifications on this bandwidth apply with center frequencies of 10 MHz and higher. All specifications apply under the following settings unless otherwise specified: preselector bypassed, PA off, LNA off, IF gain = Auto, IF gain offset = 0 dB.

#### 10 MHz analysis bandwidth (standard)

Analysis bandwidth range	10 Hz to 10 MHz	
Tuning range	2 Hz to 50.0 GHz	In practice, low end of tuning range limited to < (½*BW), by image folding and LO feedthrough.
runnig range	50.0 to 110 GHz w/ V3050A	Over-range tuning to 50.5 GHz allowed, but without corrections, performance not specified
IF frequency	5122.5 MHz (1st IF, center freq ≤ 3.6 GHz)	
	322.5 MHz (Final IF)	
ADC sample rate	100 MSa/sec	
ADC resolution	16 bits	
Final data format	I & Q pairs, 32 bits each, 64 bits/Sa	
Capture memory	2 GB	
IQ Analyzer	32,000,001 sample pairs	
	536.8 MSa (229 Sa) with 32-bit data packing	
Length (IQ sample pairs)	268.4 MSa (228 Sa) with 64-bit data packing	
Maximum conturn time (time record length)	35.8 sec at full 10 MHz BW with 32-bit data	Capture time increases linearly with
Maximum capture time (time record length)	packing	decrease in bandwidth

#### IF frequency response

Center frequency	Span (MHz)	Preselector	Amplitude max error	Amplitude midwidth error (95%)	Slope (dB/MHz) (95%)	Amplitude RMS (nominal)
≤ 3.6 GHz	≤ 10 MHz	NA	± 0.20 dB	± 0.12 dB	± 0.10 dB	± 0.03 dB
> 3.6 to 26.5 GHz	≤ 10 MHz	Off	± 0.25 dB	± 0.12 dB	± 0.10 dB	± 0.02 dB
> 26.5 to 50 GHz	≤ 10 MHz	Off	± 0.35 dB	± 0.12 dB	± 0.10 dB	± 0.03 dB

IF phase linearity

Center frequency	Span (MHz)	Preselector	RMS (nominal)
≤ 3.6 GHz	≤ 10 MHz	NA	0.032
> 3.6 GHz	≤ 10 MHz	Off	0.057

# 25 MHz Analysis Bandwidth (Option B25)

Specifications on this bandwidth apply with center frequencies of 15 MHz and higher. All specifications apply under the following settings unless otherwise specified: preselector bypassed, PA off, LNA off, IF gain = Auto, IF gain offset = 0 dB.

Analysis bandwidth range	Analysis bandwidth range			
Tuning range		2 Hz to 50.0 GHz		<ul> <li>In practice, low end of tuning range limited to &lt; (½*BW), by image folding and LO feedthrough.</li> <li>Over-range tuning to 50.5 GHz allowed, but without corrections, performance not specified</li> </ul>

65 MHz to 3.6 GHz	f + 2 * 1st IF MHz f + 2 * Final IF MHz

# 255 MHz Analysis Bandwidth (Option B2X)

Specifications on this bandwidth apply with center frequencies of 400 MHz and higher. All specifications apply under the following settings unless otherwise specified: preselector bypassed, PA off, LNA off, IF gain = Auto, IF gain offset = 0 dB.

Analysis bandwidth range	10 Hz to 255 MHz	
Tuning range	2 Hz to 50.0 GHz	<ul> <li>In practice, low end of tuning range limited to &lt; (½*BW), by image folding and LO feedthrough</li> <li>Over-range tuning to 50.5 GHz allowed, but without corrections, performance not specified.</li> </ul>
	50.0 to 110 GHz w/V3050A	
IF frequency	5490 MHz (1st IF, center freq ≤ 3.3 GHz)	
IF frequency	690 MHz (Final IF)	
ADC sample rate	4.8 GSa/sec	
ADC resolution	14 bits	
Final data format	I & Q pairs, 32 bits each, 64 bits/Sa	
Capture memory	16 GB	
IQ Analyzer	32,000,001 sample pairs	
Length (IQ sample pairs)	2,147,483,640 samples with 32-bit data packing	
Maximum capture time (time record length)	14.3 sec at full 255 MHz BW with 32-bit data packing	Capture time increases linearly with decrease in bandwidth

## 2 GHz Analysis Bandwidth (Option R20)

All specifications apply under the following settings unless otherwise specified: preselector bypassed, PA off, LNA off, IF gain = Auto, IF gain offset = 0 dB.

2.0 GHz analysis bandwidth (option	R20)		
Analysis bandwidth range	10 Hz to 2 GHz		
Tuning range	3.5 GHz to 50.0 GHz	In practice, low end of tuning range limited to < (½*BW), by image folding and LO feedthrough.	
	50.0 to 110 GHz w/ V3050A	Over-range tuning to 50.5 GHz allowed, but without corrections performance not specified	
IF frequency	1200 MHz (Final IF)		
ADC sample rate	4.8 GSa/sec		
ADC resolution	14 bits		
Final data format	I & Q pairs, 32 bits each, 64 bits/Sa		
Capture memory	16 GB		
IQ Analyzer	32,000,001 sample pairs		
Length (IQ sample pairs)	4,294,967,280 samples with 32-bit data packing		
Capture time (time record length)	1.79 s at full 2.0 GHz BW with 32-bit data packing	Capture time increases with each full power-of-2 decrease in bandwidth	

IF frequency response (span ≤ 2 GHz) microwave preselector bypass path (MPB)

3a. MPB (10 dB attenuation)			3b. LNA on (	) dB attenuation)	3c. PA on (0 dB attenuation)

> 25 GHz	≤ 2000 MHz		Off	2.2°
IF dynamic range (IF gain = high) (nominal)				
SFDR (spurious-free d (ADC related spurious	, ,	-65 dBc		Signal at -22 dBFS, anywhere in full IF width

IF residual responses (relative to full scale, input terminated, IF gain = high) (nominal)

**Center frequency** 

3.5 to 50 GHz

-75 dBFS

### Full scale (ADC clipping) (nominal)

Full scale (ADC clipping level) is a rough estimate of the signal level at which ADC overload occurs. Actual clipping levels vary significantly; this is only a guide. Mixer level is RF input level less attenuation setting.

Center frequency	Mixer level for IF gain = low		Mixer level for IF gain = high	
3.5 to 8.9 GHz	-7 dBm		-15 dBm	
> 8.9 to 24.0 GHz	-7 dBm		-16 dBm	
> 24.0 to 50 GHz	-7 dBm		-10 dBm	
Effect of signal frequency ≠ CF	Up to ± 4 dB nominal			
Signal to noise ratio (ratio of clipp	ing level to noise level, log ave	eraged, 1 Hz RBW, IF gain	= low) (nominal)	
Center frequency				
3.5 to 8.9 GHz	147 di	147 dB		
> 8.9 to 24.0 GHz	143 dł	143 dB		
> 24.0 to 50 GHz	137 di	3		
TOI (3rd-order intermodulation dis (nominal)	tortion in the IF, 2 tones of eqι	ıal level @ -19 dBFS, 10 N	/Hz tone separation, IF gain = high)	
Center frequency				
3.5 to 8.9 GHz	-75 dE	-75 dBc		
> 8.9 to 50 GHz	-70 dE	-70 dBc		
Noise density in IE (characterized	at contar of PE band and conta	r of IE 0 dB attanuation)		

Noise density in IF (characterized at center of RF band and center of IF, 0 dB attenuation)

The noise level in the IF will change for frequencies away from the center of the IF.

The IF part of the total noise is nominally ± 2.0 dB worse at the worst frequency within the IF bandwidth.

3a. MPB		3b. LNA on		4a. FBP

## 11 GHz Analysis Bandwidth (Option EDC; requires option CRW)

Specifications on this bandwidth apply with center frequencies specified in table. All specifications apply under the following settings unless otherwise specified: preselector bypassed, PA off, LNA off, IF Gain = Auto, IF Gain Offset = 0 dB.

Requires options CRW and EDC; connected to Keysight M8131A 16/32 GSa/s Digitizer.

11 GHz analy	ysis bandwidth	(option El	DC: requires o	option CRW)
	yolo ballamatli	(option E	bo, roquiroo (	

Analysis bandwidth range	40 MHz to 11.0 GHz	
Tuning range	20.5 to 46 GHz using RF Input connector	
	55.5 to 104.5 GHz using V3050A	
IF frequency	6200 MHz (Final IF)	
ADC sample rate	32 GSa/sec	
ADC resolution	10 bits	
Final data format	I & Q pairs, 32 bits each, 64 bits/Sa	
Capture memory	1 GB	
Length (IQ sample pairs)	800 MSa (229 Sa)	
Maximum capture time (time record length)	26 ms at full 11.0 GHz BW	

# **Real-time Spectrum Analyzer (RTSA)**

A/D Converter Sample Rate	4.8 Gsa/s (2.4 GHz co	4.8 Gsa/s (2.4 GHz complex)					
Supported detectors	Peak, Negative Peak,	Sample, Average Voltag	e, Average Power (R	MS)			
Number of display traces	Up to 6						
Available types of traces	Clear Write, Max Hold	Min Hold					
Window types	Hanning, Blackman-Ha	arris, Rectangular, Flatto	p, Kaiser, Gaussian				
Resolutions bandwidths (RBW) (Default window type = Kaiser)	6 RBWs available for each window type for spans Approximate Span: RBW ratio for windows (Note: not applicable for spans from 240 to 255 MHz, 960 MHz to 1 GHz and from 1.9 to 2 GHz) Flattop = 7 to 212 Gaussian, Blackman-Harris = 13 to 417 Kaiser = 13 to 418 Hanning = 17 to 551

# **General Specifications**

Temperature range						
Operating	0 to 40°C	0 to 40°C				
Storage	-40 to +70 °C					
	Operating: Up to 3,000 meters (9,842 feet)					
Altitude	De-rate maximum temperature (40°C) by 1°C for every 200 meters above 2,000 meters.					
	Non-operating: up to 4,600 m (approx. 15,091 fe	et)				
Maximum relative humidity	95% up to 40°C, non-condensing					
Environment						
Indoor use						
Power requirements						
	100/120 V, 50/60/400 Hz	<b>T</b>				
Voltage and frequency (nominal)	220/240 V, 50/60 Hz	The instruments can operate with mains supply				
Deted innut neuron	900W with C20 input connector (maximum)	voltage fluctuations up to $\pm$ 10% of the nominal				
Rated input power	850W with C14 input connector (maximum) voltage					
Power consumption, on	811W (typical)					
Power consumption, standby	30 W					
Display						
Resolution	1280 x 800					
Size	357 mm (14.1 in.) diagonal (nominal) capacitive	multi-touch screen				
Data storage						
Internal	Removable solid-state drive (≥ 256 GB)					
External	Supports USB 3.0/2.0 compatible memory device	es				
CPU	Modular, upgradeable; Intel i7, 6-core, 1.9 GHz of	clock, 32 GB DDR4 DRAM; includes secure memory				
	for instrument calibration data					
Operating system	Windows-10, Enterprise					
Weight (without option R40)						
Net	38.6 kg (85 lbs) (nominal)					
Shipping	44.5 kg (98 lbs) (nominal)					
Dimensions						
Height	281 mm (11 in)					
Width	459 mm (18 in)					
Length	575 mm (22.6 in)					
Calibration cycle						
•	one year; calibration services are available through Ke	vsiaht service centers.

USB ports					
Туре	Description	Connector	Output current		
Standard (2)	Compatible with USB 2.0	USB Type-A female	0.5 A		
USB 3.0 (2)	Compatible with USB 3.0	USB Type-A female (blue)	0.9 A		
USB C (1)	Compatible with USB Type-C	USB Type-C female	5 V, 3.0 A 15 V, 3.0 A		
Wide IF out (enabled by option CRW	)				
Connector	SMA, female, 50 Ω nominal				
External frequency extender, wide ba	andwidth (option EXW), interface	e for use with V3050A			
High LO Out	2.4 mm female; licensed as option		al analyzer frequency extender		
High LO out power	,		,		
Frequency range	Full range				
9.8 to 50 GHz	4.9 to 13.7 dBm				
External mixing (option EXM)					
Connector	SMA, female, 50 Ω, (nominal) at II	E and L O frequencies			
Functions	Diplexer, LO output and IF input				
IF input					
Maximum safe level	+7 dBm				
	IF BW ≤ 25 MHz		322.5 MHz		
	40 MHz IF path		250 MHz		
Center frequency	255 MHz IF path	· ·			
	1 GHz IF path	690 MHz			
Bandwidth	Supports all optional IFs up to and	l including R10			
ADC clipping level	25, 255, or 1 GHz IF paths		-15 dBm (nominal)		
	40 MHz IF path		-20 dBm (nominal)		
1 dB gain compression	-2 dB (nominal)				
Gain accuracy (The amplitude accuracy of a measurement includes this term	IF BW	Full range	20 to 30 °C		
and the accuracy with which the settings of corrections model the loss of	IF BW ≤ 25 MHz (swept and narrowband)	± 2.5 dB	± 1.2 dB		
the external mixer.)	Wider IF BW	± 1.2 dB (nominal)			
	Center frequency	Width	RMS (nominal)		
	322.5 MHz	± 5 MHz	0.05 dB		
IF frequency response	322.5 MHz	± 12.5 MHz	0.07 dB		
in inequency response	250 MHz	± 20 MHz	0.10 dB		
	690 MHz	± 127.5 MHz	0.12 dB		
	690 MHz	± 500 MHz	0.18 dB		
Noise figure (322.5 MHz, swept operation high IF gain)	11 dB (nominal)				
VSWR	See plot below				

LO output					
Frequency range	3.75 to 14.1 GHz				
	The LO output port power is compatible with Keysight M1970 and 11970 Series mixers except for the 11970K. The power is specified at the connector. Cable loss will affect the power available at the mixer. With non-Keysight/Agilent mixer units, supplied loss calibration data may be valid only at a specified LO power that may differ from the power available at the mixer. In such cases, additional uncertainties apply.				
Output power	Center frequency	Full range	20 to 30°C		
	3.75 to 8.72 GHz (LO Doubler = Off settings)	+13.5 to 19 dBm	+15 to 18 dBm		
	7.8 to 14.1 GHz (LO Doubler = On setting. Fundamental frequency = 3.9 to 7.05 GHz)	N/A	+14 to 18.5 dBm		
Second harmonic	-20 dB (nominal) (LO Doubler = Off settings)				
Fundamental feedthrough and	-30 dB (nominal)				
undesired harmonics	(LO Doubler = On setting. Fundamental frequency = 3.9 to 7.05 GHz)				
VSWR (The reflection coefficient has a Rayleigh probability distribution from 3.75 GHz to 14.1 GHz with a median VSWR of 1.22:1.)	(LO Doubler = On setting. Fundamental frequency = 3.9 to 7.05 GHz) 1.8:1 (nominal)				

Figure 8. External mixer IF input VSWR

Trailer bit support		Overrange Spectral inversion Incomplete packet				
Data format class IDs supporte	ed		See table below			
Signal data packet size		Data size 65,536 bytes 16,384 16-bit IQ samples per packet 8,192 32-bit IQ samples per packet				
Supported data format and	class ID table					
Item packing field width	Data item (signed)	Real or IQ	Data type identifier	Notes		
32-bit	16-bit	IQ	0x18	16-bit I&Q for bandwidths > 255.176 MHz		
64-bit	32-bit	IQ	0x20	32-bit I&Q for bandwidths ≤ 255.176MHz		
AUX IF output	02 51	iq	0/20			
•		ONA female al		11/		
Connector		SMA female, shared by CR3, CRP and ALV				
mpedance		50 Ω nominal				
AUX IF output, second IF o	utput, licensed as o	otion CR3 (includ	ed as standard), IF patl	n ≤ 40 MHz)		
SA mode		322.5 MHz cen	ter frequency			
Q analyzer with IF bandwidth	≤ 25 MHz	322.5 MHz center frequency				
Q analyzer with IF path 40 MF		250 MHz center frequency				
Conversion gain (SA mode an bandwidth, 0 dB attenuation)	d up to 40 MHz	-1 to +4 dB (nominal) plus RF frequency response				
Bandwidth (-6 dB)						
< 3.6 GHz		Up to 1 GHz no	ominal			
> 3.6 GHz, with preselector		Depends on RF center frequency				
> 3.6 GHz, with preselector by	pass	100 - 800 MHz ± 3 dB (nominal) IF frequency range				
	•		· · ·	m analysis or IF path $\leq$ 40 MHz)		
IF Range			user selectable)			
Resolution Conversion gain at RF center t attenuation	frequency with 0 dB	0.5 MHz -1 to +4 dB (no	minal) plus RF frequency	response		
Lower output frequencies		Subject to folding				

Bandwidth					
Highpass corner frequency	5 MHz (nominal) at -3 dB				
Lowpass corner frequency	120 MHz (nominal) at -3 dB				
Bandwidth with output at 70 MHz					
< 3.6 GHz or > 3.6 GHz with preselector bypassed	100 MHz nominal				
Preselected band	Depends on RF center frequency				
AUX IF output, Fast Log Video, licensed as opti		MHz)			
General port specifications					
Connector	SMA female				
Impedance	50 Ω nominal	Shared with other options			
Fast Log Video output (preamp off, preselector	bypass for > 3.6 GHz)				
Output voltage	Open-circuit voltages shown				
Maximum	1.6 V at –10 dBm nominal				
Slope	25 ± 1 mV/dB nominal				
Rise Time	15 ns nominal				
Fall Time	40 ns nominal				
	Other cases, depends on bandwidth.				
Y-axis video output, licensed as option YAV					
General port specifications					
Connector	BNC female	Charad with other antions			
Impedance	50 Ω nominal	Shared with other options			
Screen video					
Display scale types	Log or Lin	"Lin" is linear in voltage			
Log scales	All (0.1 to 20 dB/div)				
Modes	Spectrum analyzer only				
Gating	Gating must be off				
Output scaling	0 to 1.0 V open circuit, representing bot	tom to top of screen			
Offset	± 1% of full scale nominal				
Gain accuracy	± 1% of output voltage nominal				
Log video (Log envelope) output					
Amplitude range (terminated with 50 $\Omega$					
Maximum	1.0 V nominal for -10 dBm at the mixer				
Scale factor	Output changes 1 V per 192.66 dB cha	nge in the signal envelope			
Bandwidth	Set by RBW				
Operating conditions	Select Sweep Type = Swept				
Linear video (AM demod) output					
Amplitude ranger (terminated with 50 $\Omega$					
Maximum	1.0 V nominal for signal envelope at the	e reference level			
Minimum	0 V				
Scale factor	If carrier level is set to half the reference level in volts, the scale factor is 200% of carrier level per volt. Regardless of the carrier level, the scale factor is 100% of reference level				
	per volt. Set by RBW				

# **Regulatory Information**

This product is designed for use in INSTALLATION CATEGORY II and POLLUTION DEGREE 2 and MEASUREMENT CATEGORY NONE per IEC 61010-1, and 664 respectively.

This product has been designed and tested in accordance with accepted industry standards and has been supplied in a safe condition. The instruction documentation contains information and warnings which must be followed by the user to ensure safe operation and to maintain the product in a safe condition.

This product is intended for indoor use.

Safety and regulatory markings which may be on the proc	luct
---	------

CE	The CE mark is a registered trademark of the European Community (if accompanied by a year, it is the year when the design was proven). This product complies with all relevant directives.
ccr.keysight@keysight.com	The Keysight email address is required by EU directives applicable to our product.
CAN ICES/NMB-001(A)	Canada EMC label. Interference-Causing Equipment Standard for industrial, scientific and medical (ISM) equipment. Matériel industriel, scientifique et médical (ISM)
ISM 1-A (GRP.1 CLASS A)	This is a symbol of an Industrial Scientific and Medical Group 1 Class A product. (CISPR 11, Clause 4)
c to us	The CSA mark is a registered trademark of the CSA International.
	The RCM mark is a registered trademark of the Australian Communications and Media Authority.
UK CA	UK conformity mark is a UK government owned mark. Products showing this mark comply with all applicable UK regulations.
X	This symbol indicates separate collection for electrical and electronic equipment mandated under EU law as of August 13, 2005. All electric and electronic equipment are required to be separated from normal waste for disposal (Reference WEEE Directive 2002/96/EC). The crossed out wheeled bin symbol indicates that separate collection for waste electric and electronic equipment (WEEE) is required, as obligated by the EU DIRECTIVE and other National legislation.
	Please refer to keysight.com/go/takeback to understand your Trade in options with Keysight in addition to product takeback instructions.
40)	China Restricted Substance Product Label. The EPUP (environmental protection use period) number in the center indicates the time period during which no hazardous or toxic substances or elements are expected to leak or deteriorate during normal use and generally reflects the expected useful life of the product.
	Universal recycling symbol. This symbol indicates compliance with the China standard GB 18455-2001 as required by the China RoHS regulations for paper/fiberboard packaging.
<b>≦</b>	More than one person is required to safely lift or carry this instrument. Alternately a mechanical lift can be used to eliminate the risk of personal injury.
	South Korean Certification (KC) mark; includes the marking's identifier code.
*	This symbol indicates the presence of a class 1 Laser device

#### Regulatory, environmental and certifications

EMC	Complies with the essential requirements of the European EMC Directive and the UK Electromagnetic Compatibility Regulations 2016 as well as current editions of the following standards (dates and editions are cited in the Declaration of Conformity): IEC/EN 61326-1 CISPR 11 Group 1, Class A <b>Caution</b> : This equipment is not intended for use in residential environments and may not provide adequate protection to radio reception in such environments.AS/NZS CISPR 11 ICES/NMB-001 This ISM device complies with Canadian ICES-001 Cet appareil ISM est conforme a la norme NMB-001 du Canada NOTE: This is a sensitive measurement apparatus by design and may have some performance loss (up to 25 dBm above the Spurious Responses, Residual specification of -100 dBm) when exposed to 3V/m ambient continuous electromagnetic phenomenon in the range of 80 MHz to 6 GHz (similar to those used in testing per IEC 61000-4-3).
South Korean Class A EMC declaration	This equipment has been conformity assessed for use in business environments. In a residential environment this equipment may cause radio interference. This EMC statement applies to the equipment only for use in business environment.
Safety	Complies with the essential requirements of the European Low Voltage Directive as well as current editions of the following standards (dates and editions are cited in the Declaration of Conformity): IEC/EN 61010-1 Canada: CSA C22.2 No. 61010-1 USA: UL std no. 61010-1 WARNING "WARNING: EMBEDDED CLASS 1 INVISIBLE LASER RADIATION. DO NOT EXPOSE USERS OR VIEW DIRECTLY WITH TELESCOPES"
Acoustic statement (European Machinery Directive)	Acoustic noise emission LpA < 70 dB Operator position Normal operation mode per ISO 7779 Acoustic noise - more information (Values given are per ISO 7779 standard in the "Operator Sitting" position) Ambient temperature (< 40 °C) Nominally under 55 dBA Sound Pressure. Ambient temperature (≥ 40 °C) Nominally under 65 dBA Sound Pressure.
Environmental stress	Samples of this product have been type tested in accordance with the Keysight Environmental Test Manual and verified to be robust against the environmental stresses of storage, transportation, and end-use; those stresses include, but are not limited to, temperature, humidity, shock, vibration, altitude, and power line conditions; test methods are aligned with IEC 60068-2 and levels are similar to MILPRF-28800F Class 3.

To find a current Declaration of Conformity for a specific Keysight product, go to: http://www.keysight.com/go/conformity

### **Additional resources**

The N9042B UXA X-Series signal analyzer isn't the only thing that will bring you to RF breakthroughs. Powerful software drives your measurements while finely tuned hardware takes them to new heights. In order to move the measurement plane to your device under test, reach even higher levels of measurement accuracy, and achieve 4 GHz of signal analysis and generation, the N9042B UXA partners with the:

- PathWave X-Series measurement applications and PathWave Vector Signal Analysis (VSA)
- V3050A frequency extender for an unbanded, preselected frequency range to 110 GHz
- U9361 RCal receiver calibrator for improved receiver test system accuracy by 10X
- M9383B VXG signal generator for wideband stimulus and response testing
- N9042B UXA Signal Analyzer Configuration Guide (3121-1036.EN)

## **Confidently Covered by Keysight Services**

Prevent delays caused by technical questions and reduce system downtime due to instrument maintenance and repairs with Keysight Services. Keysight Services are here to support your test needs with expert technical support, instrument repair and calibration, software support, training, alternative acquisition program options, and more.

A KeysightCare agreement provides dedicated, proactive support through a single point of contact for instruments, software, and solutions. KeysightCare covers an extensive group of instruments, application software, and solutions and ensures optimal uptime, faster response, faster access to experts, and faster resolution.

Offering	Benefits
KeysightCare	KeysightCare provides elevated support for Keysight instruments and software, with access to technical support experts that respond within a specified time and ensure committed repair and calibration turnaround times (TAT).
🥵 KEYSIGHTCARE	KeysightCare offers multiple service agreement tiers, including KeysightCare Assured, Enhanced, and Application Software Support. See the KeysightCare data sheet for details.
KeysightCare Assured	KeysightCare Assured goes beyond basic warranty with repair services that include committed TAT and unlimited access to technical experts.
KeysightCare Enhanced	KeysightCare Enhanced includes all the benefits of KeysightCare Assured plus Keysight's accurate and reliable Calibration Services, accelerated, and committed TAT, and technical response.
Keysight Support Portal & Knowledge Center	All KeysightCare tiers include access to the Keysight Support Portal where you can manage support and service resources related to your assets such as service requests, and status, or browse the Knowledge Center.
Education Services	Build confidence and gain new skills to make accurate measurements, with flexible Education Services developed by Keysight experts. Including Start-up Assistance.
Alternative acquisition options	3
KeysightAccess	Reduce budget challenges with a leased-based subscription service, that offers low monthly payments, enabling you to get the instruments, software, and technical support you want for your test needs.

### **Keysight services**

### **Recommended services**

Maximize your test system up-time by securing technical support, repair, and calibration services with committed response and turnaround times. 1-year KeysightCare Assured is included in every new instrument purchase. Obtain multi-year KeysightCare upfront to eliminate the need for lengthy and tedious paperwork and yearly requests for maintenance budget. Plus, you benefit from secured service for 2, 3, or 5 years.

Service	Function
KeysightCare Enhanced <sup>1</sup>	Includes tech support, warranty and calibration
R-55B-001-1	KeysightCare Enhanced – Upgrade 1 year
R-55B-001-2	KeysightCare Enhanced – Extend to 2 years
R-55B-001-3	KeysightCare Enhanced – Extend to 3 years (Recommended)
R-55B-001-5	KeysightCare Enhanced – Extend to 5 years (Recommended)
KeysightCare Assured	Includes tech support and warranty
R-55A-001-2	KeysightCare Assured – Extend to 2 years
R-55A-001-3	KeysightCare Assured – Extend to 3 years
R-55A-001-5	KeysightCare Assured – Extend to 5 years
Start-Up Assistance	
PS-S40-01	Included – instrument fundamentals and operations starter
PS-S40-04	Recommended – instrument fundamentals and operations starter
PS-S40-02	Optional, technology & measurement science standard learning

1. Available in select countries. For details, please view the datasheet. R-55B-001-2/3/5 must be ordered with R-55B-001-1.

Keysight enables innovators to push the boundaries of engineering by quickly solving design, emulation, and test challenges to create the best product experiences. Start your innovation journey at www.keysight.com.
